The Independent

VOL. LXIV NEW YORK, THURSDAY, JANUARY 2, 1908

No. 3083

Entered at the New York Post Office as second-class mail matter.

The Year at Home and Abroad

The President's Influence

In the United States the year was one of good wages and good crops and marked prosperity, until the sudden financial panic following the discovery in certain New York banks and trust companies of misuse of deposits for the benefit of officers and owners. Of this we have treated in our issue of last week. It is enough to say here that while many opponents of President Roosevelt's policy in holding the railroads and corporations to obedience to the law charged that the crash was due to his policy, there was yet no sign of a disturbance until the discovery of irregularities which compelled the Heinze, Morse and Thomas combinations to withdraw from their banks, succeeded by other presidents and directors. For a while the West declared that this was a mere Wall Street panic, but before long the entire country was involved, and the stringency extended to the money centers all over the world. As in 1906 so in 1907 the personality of President Roosevelt has dominated the situation, but particularly previously to the panic. In many speeches, on his vacation trip to Louisiana, at Provincetown and Cambridge and elsewhere, he advocated strict obedience to the Sherman and other laws for the control of large public corporations, and thru the Attorney-General brought suits against various railroads and trusts, so that he was charged with being the enemy of productive wealth. Of these suits the most extraordinary was that against the Standard Oil of Indiana, a branch of the Standard Oil Trust, on

which Judge Landis, of Chicago, imposed a fine of \$29,240,000, being \$2,000 on each count of the indictment. It was, of course, appealed. Following the lead of President Roosevelt in a number of States the legislatures enacted laws limiting the passenger fares on railroads. Governor Hughes vetoed the law in New York, on the sole ground that the Legislature had not sufficiently investigated whether a universal two cent a mile rate would be remunerative. In a number of Southern States in which the railroads resisted such a rate as confiscatory, and brought an injunction thru a Federal court, a final agreement was reached thru a conference of Governors.

Presidential Candidates

On the evening of the day on which Mr. Roosevelt was chosen President he had announced that he should regard the three and a half years after President McKinley's death as his first term, and would not be a candidate for re-election. But not a few refused to accept this as final, and insisted that he should be a candidate in 1908. Meanwhile he made no further sign until late in the year, when he repeated emphatically his refusal to stand again. Meanwhile he had definitely indicated his desire that Secretary Taft should be the Republican candidate, and to this Mr. Taft consented, altho expressing his personal preference for a judicial position. Thruout the year Mr. Taft has thus remained the leading candidate for the Republican nomination in Chicago next June. He has not taken

an active part in the campaign for the nomination, but has been much of the year out of the country, visiting the Panama Canal and Porto Rico and the Philippines. The election for the first Philippine Legislature brought out only about 100,000 votes out of a population of 7,000,000 Christians. The two parties favoring speedy independence secured nearly three-fourths of the votes. Mr. Taft attended the opening of the first Legislature, and his presence did much to quiet the ardor for speedy escape from American control. He was able to report remarkable progress since annexation, and his continued faith in giving political power to the people. During the few days since his return there has not been time for him to take any active steps for his nomination. Meanwhile there has been opposition to him in Ohio among the friends of Senator Foraker, who has consented to be a candidate. Mr. Foraker has actively opposed President Roosevelt, and especially in the matter of the Brownsville raid. Several companies of colored soldiers had been sent to Brownsville in camp, but the people resented their presence. On one night a number of persons supposed to be soldiers "shot up" the town, and several persons were killed or wounded. The President sent an officer to investigate and received the report that the crime was doubtless committed by some of these soldiers, but that they stood by each other and refused to expose the guilty parties. Thereupon the President discharged the whole squadron of soldiers "without honor." Senator Foraker secured the appointment of a committee of the Senate to investigate the case and see whether the soldiers had been justly discharged. Much testimony was gathered, and the large majority of the committee has reported their conclusion that the soldiers were really guilty. A result of the President's action has been that the negroes of the country are very largely opposed to President Roosevelt and to Mr. Taft as one who as Secretary of War carried out the President's decision. Meanwhile a number of other "favorite sons" have appeared who are offered as candidates for the Presidential succession. Of these the chief ones are Speaker Cannon, of Illinois; Vice-President Fairbanks, of In-

diana. Governor Hughes, of New York, has hardly yet appeared as a favorite son—as there has been serious opposition to him from the Republican machine, and an effort has been made to show that Mr. Roosevelt is not on good terms with him. Mr. Hughes has absolutely refused to do anything else than attend to the duties of his office, and has given no encouragement to those who have wished to boom his candidacy. His success in appealing to the people has so won favor that he is likely to control the vote of the delegates of the State, and has gained much favor elsewhere. On the Democratic side Mr. Bryan remains the only prominent candidate. He has announced himself as ready to run if the party will stand on such a progressive platform as he approves. He frankly admits that in certain important respects President Roosevelt has adopted the same policy as himself.

The Elections

The November elections were unexpectedly favorable to the Republican party. In Massachusetts, following a disgraceful scene in the Democratic convention and the division of the party, the Republicans carried the State by 105,000 plurality, and even carried Boston for the first time in years. In Pennsylvania the Republican ticket was elected by 175,000 majority, and in Nebraska the Republican majority was 20,000. New Jersey went Republican by 7,000; and even in Kentucky a Republican candidate for Governor was elected by 14,000 majority and Louisville elected a Republican mayor. Maryland went Democratic by 7,000 and Rhode Island by 2,400. Of the city elections special interest attached to the effort, under the lead of Congressman Burton, to defeat Mr. Johnson as Mayor of Cleveland. Mayor Johnson represented the heavy reduction of street car fares, with the view of city ownership or control. He was successful by a majority of 9,313. A second important municipal election was that in San Francisco, where Mayor Schmitz had been convicted of bribery and sentenced to five years in prison. A succession of the principal grafters had been convicted by the testimony of those who confessed, and the city was under a provisional government.

The late election showed the re-election by 10,000 majority of the provisional reform mayor. Of special interest has been the success of prohibition, especially in the South. Georgia and Alabama have enacted strict prohibition, and other Southern States are following suit. In Massachusetts the number of prohibition cities has increased; and the associations of liquor dealers have shown great alarm to the extent of shutting up certain saloons which served as vicious resorts.

Labor Until the November panic labor conditions in the United States were never so satisfactory; wages at the maximum and employment was never so steady. Of course since the panic large numbers of men have been discharged and numerous shops have shut down to half-time or even closed altogether. In January a strike that would have involved 500,000 trainmen was happily averted. In February Congress passed a bill of far-reaching effect forbidding railways from working their men more than sixteen hours at a stretch. In June the great telegraphers' strike was begun. It started over the discharge of a union telegrapher, but the men soon made their issue a demand for an eight-hour day, the abolition of the sliding scale, and no discrimination against union men. At first all the telegraph business of the country was tied up, but later the companies got men and have now practically won out. About the same time the whole country was stirred up over the trial of William D. Haywood, an officer of the Western Federation of Miners, charged with the murder of ex-Governor Frank Steunenberg, of Idaho. The trial was made a class issue by the Socialists and labor unionists, and President Roosevelt, in advance of the trial, added fuel to the feeling by calling Moyer and Haywood, as well as Harriman, "undesirable citizens." The issues of the case are too complicated to tell here, but there seems to have been no doubt whatever that what practically amounted to a state of war existed in Colorado and the neighboring mining States during the labor troubles out of which the crime grew and many acts of violence were committed on both

sides. The trial began on May 9th, though before that mass meetings were held throughout the land by labor unions, who pledged support and sent money for the defense of the indicted. The jury, consisting of farmers, listened to the testimony till July 28th, when they rendered a verdict of not guilty, though it was understood on the first ballot that eight were for acquittal, two for conviction and two declined to vote. This verdict was arrived at despite the testimony of Harry Orchard, who confessed to an appalling list of crimes, including forgery, arson, bigamy and murder, in some of which he claimed that he acted as a tool for Haywood. Altho in the case of Haywood the prosecution has been unable to prove, as it claimed it could, that the murder was the result of a conspiracy of the "inner circle" of the Western Federation of Miners, still there are other cases yet to be tried. At present about 2,000 miners are on strike at Goldfield, Nev. The Governor of Nevada requested Federal troops to protect life and property, and these were sent by the President. The origin of the strike was because the companies paid their employees in scrip instead of currency.

Various Items The decision of the President to send the principal portion of our fleet to the Pacific made not a little excitement in international circles. It followed the action of the San Francisco authorities in shutting out Japanese children from the public schools and other acts of violence which were resented in Japan. It was admitted that our Western coasts, as well as Hawaii and the Philippines, were not prepared to resist a sudden attack by Japan, and it was a prudent precaution to transfer our battleships to the Pacific. It was, however, declared that this action was not at all hostile, but was intended to give the fleet practice in fleet formation. The vessels left Fortress Monroe on December 16th, in two squadrons, each of four divisions, consisting in all of sixteen battleships ranging from 11,525 to 16,000 tons each, and accompanied by torpedo boats, destroyers, supply ships, etc. At last report the fleet was leaving Trinidad, on the Venezuelan coast, to continue its voyage around Cape Horn. The imme-

diate objective point is San Francisco, but it is believed that the fleet will visit Hawaii, the Philippines and Japan, and will return, if at all, by way of the Suez Canal. Rear Admiral Evans is in command, and it was necessary to send 130,000 tons of coal to the Pacific Coast, nearly all in British bottoms, as no American vessels were available. The American navy is now regarded as second in strength to that of Great Britain.—The President has added 17,000,000 acres to the forest reserves of the country, in 32 reserves.—After long discussion and much public opposition the Senate admitted Mr Smoot, of Utah, as a Senator. He showed that altho himself a Mormon he was not a polygamist and had opposed polygamy.—Congress having past an enabling act allowing Oklahoma to be admitted as a State, the President accepted its constitution, and Senators and Representatives have been received, all Democrats, and two of them with Indian blood. The constitution is extraordinarily elaborate and includes prohibition of liquors, the referendum and discrimination against negroes. The effort to bring in New Mexico and Arizona as a single State failed by the refusal of the people to accept it.—Some extraordinarily large gifts have been made during the year to benevolent causes. Mr. Rockefeller has increased his gifts to the General Education Board to \$32,000,000, which can be used for higher education, both North and South. Mrs. Russell Sage has given \$10,000,000 for a charitable foundation for the purpose of relieving poverty. Mr. Carnegie has added \$8,000,000 to the endowment of the Carnegie Institute at Pittsburg.—The Jamestown Exhibition, notwithstanding its subvention from the Government, was a financial failure and went into the hands of a receiver.—The exposure of the enormous frauds in connection with the building and equipping of the Pennsylvania Capitol showed that the building cost \$4,000,000 and the furnishing \$9,000,000, the profits to the contractors being often more than five times the cost.—It has been a year of unusual disasters by accident. Of these the most sensational was the fall of the St. Lawrence Bridge, below Quebec, by which 84 workmen were

killed. The defect was due to insufficient strength in one span of the cantilever. There have been several fearful explosions in coal mines, resulting in the death of about a thousand men.—During the year there was no falling off in immigration, the total number of immigrants reaching 1,285,349, which is 184,614 more than in 1906, and 258,850 more than in 1905. But with the financial panic and the shutting down of mills there was an unusual number of immigrants returning to their native country, so many as to exceed the capacity of the vessels.—The Nobel Prize for Peace was given to President Roosevelt in honor of his work for ending the Russo-Japanese War. The prize for physical research was given to Professor Michelsen.—The effort for the union of the Congregationalists, United Brethren and Methodist Protestants in one denomination has been halted by the decision of the Congregational National Council to decline the plan proposed and to seek fresh negotiations.

Latin America On the whole our southern sister republics have had an unusually quiet and peaceful year. Despite the prevailing opinions to the contrary most of these republics enjoy a high degree of civilization; and Mexico, Brazil, Argentina and Chile have governments that do not compare unfavorably with those of the average European state. The South American delegates gained golden honors at The Hague Conference, and their weight was always thrown on the side of justice and progress. The erection of the Pan-American building at Washington, thru the gift of Mr. Carnegie, has been begun this year, and it promises to do for Pan-America what the Palace of Peace at The Hague will do for the world. The Hon. John Barrett, the Director of the Bureau of American Republics, is doing useful work in spreading a knowledge of the greatness and civilization of Latin America thruout the United States, and we refer our readers to his speeches and writings for further information on Pan-American progress. In Mexico there was a considerable labor riot early in the year, and before the troops could

put it down thirty strikers were killed and eighty wounded. In Venezuela General Castro still rules with undiminished sway. He caught in the spring General Antonio Peredes and a band of nineteen revolutionists who were plotting for his overthrow, and lined them up against a stone wall and shot them to death. Later, after refusing Secretary Root's request to arbitrate the asphalt claims of the New York and Bermudez Company, which have been the subject of so much discussion, the "Court of the First Instance" imposed a fine of \$5,000,000 on the company for complicity in aiding the Matos revolution. For reasons which have never been officially stated, but which have been surmised, the United States is in no position to force Castro to arbitrate these claims, and Judge Calhoun's report on the Venezuela situation, which was written some two years ago, still slumbers in the archives of the State Department, despite the intermittent calls for its publication. In February the Santo Domingo treaty was ratified by the Senate and later by the Dominican Congress. This gives the President of the United States the right to appoint a receiver of customs, who will collect the revenue from customs and reserve \$1,200,000 a year to pay interest and principal on the debt which has been scaled down to \$17,000,000. Bonds have been issued at 5 per cent. to cover this indebtedness. All above \$3,000,000 received from customs will go to pay the debt. This secures American control against revolution for at least ten years. In Central America there has been some real fighting. In February Nicaragua was invaded by Honduran troops in pursuit of political refugees. This led to a war, despite the good offices of the United States, Mexico and the other three Central American States. Nicaragua was successful in most of the engagements, winning at least four important battles and capturing two seaports. In the meantime the United States had sent two warships to protect American interests, and in one instance American troops were landed and the belligerents were ordered to do their fighting outside of the cities. Finally, after President Bonilla, of Honduras, fled, the Honduran army surrendered on April 12th, and

on the 23d the Treaty of Amapala was signed. In the meantime trouble was brewing over nothing in particular in Guatemala, so the United States and Mexico stepped in and called a peace conference of the five Central American republics. This was convened in Washington on the 14th of November, and has just closed its successful session after providing for the establishment of an international court—judicial rather than arbitral in character—which has power to settle all disputes that may arise between the five republics. In addition the delegates agreed to take necessary measures to prevent future wars, revolutions and dictatorships, and, in fact, took the longest step forward in the path of peace yet taken in the world. Secretary Root has intimated in no ambiguous language that he expects the treaties formulated by the conference to be ratified and lived up to.

The Hague Conference Undoubtedly the most important event in Europe this year was the assembling of the Second Conference of the Nations at The Hague. On June 15th, 1907, for the first time in the annals of history, the nations of the world assembled together to discuss affairs common to all. This fact in itself has been considered by many as ample justification in itself for calling the conference. The official program for discussion had been arranged by Russia (President Roosevelt, who originally called the conference, having withdrawn in her favor) and included—First, improvements in arbitration and peaceful settlements of disputes; second, additions to the provisions of the Convention of 1899 relative to warfare on land; third, framing a convention relative to the laws and customs of maritime warfare, and, fourth, additions to be made to the Convention of 1899 to perfect the Geneva Convention of 1864 in respect to maritime law. In addition to this program most of the great Powers reserved to themselves the right to suggest other topics for discussion. Russia, on the opening of the Conference, divided it into four commissions—First, arbitration; second, war on land; third, war on sea, and, fourth, maritime law. M. Nelidoff, of Russia, was president of the whole

Conference. After sitting continuously for eighteen weeks the Conference adjourned on October 19th. The work of the first commission, which was the only commission charged with abolishing or finding substitutes for war, resulted in, first, the creation of an International High Court of Justice, to supplement the present Hague court. This court is modeled after the United States Supreme Court, but, owing to the impossibility of reconciling the differences between the large and small nations in the method of selecting the judges (there are three times as many nations as judges) the court will not be finally established until the nations solve the problem by diplomacy or otherwise. Still, the idea is accepted in all the chancelleries of the world, and the court will doubtless soon be inaugurated. Second, a universal obligatory arbitration treaty was past in committee, but was defeated in plenary session by Germany and Austria. Nevertheless, all the nations voted for the principal of *compulsory* arbitration, thus taking a great step beyond the Conference of 1899, when not a nation of the world would go beyond *voluntary* arbitration. Third, all the nations—debtor and creditor alike—agreed that hereafter no nation should use force in collecting money debts from another nation until after arbitration or an offer of arbitration. This means that the chief cause of war between Europe and America will be averted in the future. Fourth, a third Conference was provided for, to meet in 1915—the centennial of the battle of Waterloo—and that two years before the Administrative Council at The Hague (consisting of all the diplomats there) should prepare a program for the Conference and notify the governments to send in their propositions. The question of disarmament was also taken up, but, despite all Great Britain could do, the matter was not seriously discussed, and all that was done was to pass a pious resolution to the effect that the matter should be studied further. The work of the last three commissions was more clearly to define the rules of war and to mitigate its horrors. These committees established an International Prize Court, whose existence is expected to do away with frequent causes of war. They also improved international law with refer-

ence to the rights and duties of neutrals, the laying of submarine mines, bombardment of towns, transformation of merchantmen into warships, treatment of captured crews, the inviolability of fishing boats and of the postal service, etc. Owing to the failure of the disarmament question, the press of the world has generally taken a pessimistic attitude as to the results of the Conference, but those who are competent to express an opinion hold that the work was splendidly done, and this view will undoubtedly prevail as time goes on.

Great Britain

The Liberal Ministry has been unable to carry thru much legislation on account of the opposition of the House of Lords to its most important measures, and the party has, in consequence of its failure to carry out its pre-election promises, lost ground politically during the year. The Laborites and Irish, who assisted to put the party in power, have become disaffected, woman suffragists have worked against the Liberals, and many seats have been gained by Labor, Conservative or Socialist candidates in districts once safely Liberal. The only thing to be done was to continue the passage of bills to be rejected by the Upper House and so arouse public indignation against that body. The campaign was begun early in the year when at the opening of Parliament, February 18th, the Premier, Sir Henry Campbell-Bannerman, announced a measure for the restriction of the veto power exercised by the House of Lords. His plan provided for a joint conference of a small equal number of representatives of the two Houses in case a disagreement between them, to be followed by a second passage by the House of Commons, a second conference, and, if still rejected by the House of Lords, a third passage thru the Lower House would make the bill a law. The efforts made by the members of the Government thru their speeches in various parts of the country to excite a popular movement against the Lords do not seem to have been very successful. Among the bills past by the Lower House and rejected or materially changed by the Upper were those for the prevention of the depopula-

tion of the rural districts of Scotland by the compulsory lease of small holdings, for the reinstatement of evicted tenants in Ireland, and for the disestablishment and disendowment of the Church of England, to which should be added the bills abolishing plural voting and freeing the public schools from denominational control which were defeated last year. The bill legalizing marriage with a deceased wife's sister, which has for some twenty years been a point of contention between the two Houses, was this year past by both. The bishops all voted against it and many of them have encouraged their clergy in refusing their churches or services in uniting such couples.—The Imperial Conference of the premiers of the self-governing colonies was practically fruitless. Australia backed by New Zealand, Natal and Cape Town favored Mr. Chamberlain's plan of a preferential tariff for the promotion of commerce between Great Britain and her colonies, but the Liberal Government would not consider such proposals because it would involve an infraction of the principle of free trade.—Ireland has given a great deal of trouble to the Government during the year. Cattle have been systematically driven from the grazing lands by the peasants in order to make the business unprofitable and so restore the land to cultivation. A long and determined strike of the dockmen and truckers of Belfast was complicated by the disaffection of the constabulary, who took advantage of the occasion to demand higher pay. Seven thousand troops were brought into Belfast and in conflicts with the mobs in the streets several lives were lost. The Government introduced a bill to place the administration of Ireland in the hands of a council consisting of 82 elected and 24 appointed members, but the measure was scornfully rejected by the convention of the National party held at Dublin May 21st, and was accordingly withdrawn.—The woman suffrage movement has taken a new form, that of public demonstrations by a group of determined women who have come to be called "suffragettes." They attempted to invade the House of Commons and when arrested preferred to go to prison rather than promise to keep the peace. They interrupted the speeches of members of the

Cabinet by demands for the fulfilment of their promise to give women the right to vote.—A hot campaign was waged against the Progressives, who have been in control of the London County Council, and they were charged with mismanagement and extravagance in their numerous municipal enterprises and with the falsification of accounts to conceal their losses thru unwise investment. Their opponents, the Municipal Reformers or Moderates, won in the election of May 2d and will restrict municipal activities in the future.

France The separation of Church and State has been practically accomplished and has ceased to be the dominant political issue. A large proportion of the French bishops were inclined to make some compromise with the Government and so save part of the property to the Church, but in accordance with the instructions from Rome, the Plenary Council held on January 16th declared that it was impossible to accept the cultural associations. Accordingly the dispossession proceedings have been continued during the year, altho the Government has so far found the property a burden rather than profit.—Labor troubles of various kinds have been the most conspicuous events in France. The law requiring that a weekly day of rest be granted all employees of most industries gave rise to a series of boycotts, strikes, lockouts and riots on account of the determination of the employees to force Sunday closing of shops and factories. A strike of electricians put Paris in darkness for two nights and interfered with the publication of papers by shutting off their power. It was settled by a compromise and the threat of manning the plants with military electricians. Bakers, café waiters, printers and other trades attempted to improve their condition by simultaneous strikes at inconvenient moments, but without much success. On the whole the experience of the year shows that a union, even in the industries whose continuance is most essential to the community, has not unlimited power to compel compliance with its demand by a simultaneous strike. Premier Clemenceau by the tactful employ-

ment of troops on critical occasions has maintained order without bloodshed and has checked the revolutionary tendencies of the General Federation of Labor. He has taken the ground that Government employees, such as postal clerks, school teachers and workmen in the arsenals, have no right to strike or to form militant unions, and the Chamber of Deputies have supported him in his policy. The most serious strike in its effect on French commerce was that of the seamen, who demanded an increase in the old-age pensions due them as members of the naval reserve. For a week French ships could not leave any of the ports because their petty officers and crew had deserted. The vine-growers in the south of France were driven to desperation because they were dependent on a single industry and the demand for their wines had fallen off, chiefly, as they believed, thru the extensive sale of artificial wine. The peasants of the four provinces on the Mediterranean next to Spain united under the leadership of one of their number, Marcelin Albert, in a series of demonstrations on a large scale, often as many as 100,000 assembling in one of the cities of the Midi to demand relief from the Government. They declared a political strike of the whole people, refusing to pay taxes or to vote; the mayors and officials of the various municipalities resigned and no successors could be elected. Some laws were past against adulteration, and thru the discrediting of its leaders the movement collapsed.—On the patriotic fête of July 14th an attempt was made to assassinate President Fallières.

This has been an exciting year in German politics. Chancellor von Bülow has broken with the clerical Center, which has for years been the support of the Government, and created a new parliamentary majority out of the Conservative and Liberal parties. With the active and undisguised aid of the Emperor he made an energetic campaign and appealed to the country to overthrow the Social Democrats and Centrists, who had been sharply criticising the colonial administration and opposing the policy of expansion.

As a result of the election the representation of the Social Democrats in the Reichstag was cut down nearly one-half, because of the gerrymandering of the German Empire, for their popular vote was not decreased. The strength of the Center in the Reichstag was not reduced, but it became an opposition party, the Chancellor frankly declaring that his continuance in office depended upon the support of the Government measures by the coalition, an attitude which carries the implication that Germany has for the first time a Ministry responsible to the representatives of the people. The naval program, which involves the expenditure of immense sums of money to bring Germany into the front rank of sea powers, will probably now have a free passage. Another marked departure from tradition was the appointment as Colonial Secretary of Herr Dernburg, a Jewish banker of American training, instead of the usual aristocratic official. The new Secretary visited German East Africa in person, and is apparently determined to reform the abuses of the service, in which many cases of extravagance and cruelty have come to light during the year thru newspaper controversy and court proceedings. A court scandal of serious and offensive character was divulged by the articles in the *Zukunft*, in which Harden, the editor, charged that the Emperor was surrounded by a camarilla which indulged in immoral practices and perverted the Imperial policy. Count Kuno von Moltke and Prince Philip Eulenberg, the parties most seriously involved, have brought libel suits against Harden, which are still in the courts.

Reaction has had full sway in Russia. Russia and the bureaucracy has pursued relentlessly a policy of repression and vengeance. Two Dumas have met during the year, but have been unable to exert any power in the Government. The Duma which met last year, the first in the history of Russia, took a position of opposition to the Government which could be easily interpreted as revolutionary, but the second Duma, which met on March 5th, altho

composed of an even larger proportion of radical members, was careful to avoid provocative acts. It was under the control of the Constitutional Democrats, a party believing in reform by orderly methods, and the extreme resolutions offered by the Monarchists and Socialists were successfully suppressed. A thorough discussion of the budget presented by the Government was undertaken, altho the committee of the Duma came into conflict with Premier Stolypin thru his refusal to permit the committee to call in the aid of financial experts. Practically the only measure past was an appropriation for the famine relief. The Government did nothing to aid the Duma in its work or to make co-operation possible, even refusing access to the books relating to the expenditure of the famine relief funds. On the most important question before the Duma, that of the buying up of large estates and distributing them among the peasants, the final break was made with the Government, thru the refusal of Premier Stolypin to consider any measures involving the compulsory expropriation of land. The Premier demanded the surrender of fifty five members to be tried for treason, and on being refused, the Duma was dissolved without warning June 16th. By imperial edict the electoral law was so changed as to cut down the representation of the peasant and working classes, and in the third Duma, which was convoked November 14th, the number of Monarchists and Reactionaries was greatly increased and the dominant party was the Octobrists, a more conservative party than the Constitutional Democrats. So far this Duma has accomplished no more than its predecessors. The members of the second Duma, whose arrests Stolypin had demanded, were tried secretly without the presence of the prisoners or their counsels, and many of them condemned to exile in Siberia or hard labor in the mines for long periods. Now the Government is prosecuting the members of the first Duma for signing the Viborg Manifesto after the dismissal of the Duma. Summary courts-martial, against which the second Duma protested in vain, have increased in frequency and severity, execution following immediately upon hasty trials by military officers sent

to disaffected districts. Thousands of persons have been executed in this way for revolutionary acts or proclivities. The rebels of the Baltic Provinces have been persecuted with especial severity. In retaliation there have been numerous assassinations of hated officials. Treasury wagons have been robbed to obtain funds for revolutionary purposes and stores of bombs and arms have been found in the rooms of students. The Russian radicals and socialists who held a secret caucus in London for the purpose of discussing revolutionary methods are being prosecuted.—Generals Stoessel and Fock are on trial for treason in surrendering the fortress of Port Arthur to the Japanese.—Finland has a new constitution which is surprisingly liberal and progressive. The Emperor of Russia, as Duke of Finland, is to govern thru Finnish subjects exclusively; the consent of the Diet is necessary for all legislation and administrative acts must be countersigned by Finnish officials. The first Diet of Finland, elected by universal suffrage, contained nineteen women members and a large proportion of socialists. One of its acts was the passage of a stringent prohibitive law imposing a severe penalty upon the manufacture, sale, use or possession of alcoholic liquors in any form.

Persia The newly established representative government has been engaged in a continuous struggle for existence. Five times in the last year and a half the Shah of Persia has expressed his approval of the constitution and sworn upon the Koran to maintain it, but the struggle between the Court Party and the Parliamentarians still goes on, and has at times threatened to develop into a civil war. On January 8th the old Shah, Muzaffer-ed-Din, died and was succeeded by Mohammed Ali, who, however, proved to be equally reactionary and opposed to the new order of things. His principal supporter, the Grand Vizier Ali Asghar Khan, was assassinated by a member of one of the numerous secret societies, who immediately committed suicide and has since been honored as a patriotic hero and a martyr. The Turks have taken advantage of the unsettled state of the country

to raid the disputed territory on the northwestern boundary of Persia, and to threaten Urumia. By the agreement between Russia and Great Britain the rivalry of these two Powers in Central Asia has been stopped. Persia is divided into three zones. In the northern Russian influence will predominate, as British in the southern, whereas the strip in the middle will remain neutral. This practically excludes Russia from the Persian Gulf, long the object of her ambitions. The agreement also provides that neither Power shall ask for concessions in Tibet or send representatives to Lhasa. Afghanistan is acknowledged to be within the British sphere of influence.

Other Foreign Events

Austria and Hungary have concluded a new treaty concerning their tariff and commercial relations. The effect of the adoption of universal suffrage in Austria, doing away with the old complicated system of voting by classes, was to increase both the Socialist and Clerical vote. In Hungary there is an increasing demand for the same change in the electoral system, but the Magyars fear that if granted their power will be overthrown by the minor races.—Oscar II, King of Sweden, died December 8th, at the age of seventy-nine, and was succeeded by his son as Gustaf V.—An extensive and determined strike of dock laborers of Antwerp, accompanied by much violence, threatened to paralyze the shipping of that port, but was crushed by the Ship Owners' Federation thru the importation of a corps of international strike-breakers.—Portugal has been practically under a dictatorship during the year, for Premier Franco, with the approval of King Carlos, dissolved the Cortes, which had been inefficient and factional, and refused to convene another. What little opposition was manifested was suppressed by the suspension of newspapers and the occasional use of troops.—India has suffered from the plague which has caused over a million deaths—more than in any previous year. Agitators have taken advantage of this by telling the natives that the Government is causing the disease by poisoning

the wells. The anti-British movement is growing in power and violence of expression. Some relief was felt when the fiftieth anniversary of the mutiny past without an outbreak, but the Government has had great difficulty in suppressing seditious utterances at public meetings and thru the vernacular press. A lawyer of the Punjab, who had been active in the Swadeshi movement, was seized and imprisoned in Mandalay.—China has been the scene of a confused conflict of progressive and conservative interests. A succession of important but contradictory decrees have issued from Peking, where Yuan Shih-kai, the energetic Viceroy of Chi-li, and Chang Chih-tung, an aged Confucian scholar, have been struggling for the ear of the dying Empress Dowager. The anti-foreign movement has grown, altho no longer taking the form of Boxer riots or boycott. Concessions for railroads and mines have been canceled and undertaken by the Chinese themselves. The anti-opium decree is being enforced. Schools have been opened in all parts of the country and many young men are being educated abroad. The Centenary Missionary Conference at Shanghai, with an attendance of over a thousand, resolved to encourage the natives in the formation of their own churches and disclaimed any permanent right of spiritual or administrative control.—Japan has practically annexed Korea. The Emperor, who sent a futile appeal to The Hague for recognition and help, was forced to resign and the Yi-Syek installed in his place. Prince Yong, a son of Lady Om, was selected as heir apparent and has been taken to Japan to be educated. The Korean troops were disarmed without much resistance and the army disbanded. Japanese will occupy all the higher administrative and judicial positions and Marquis Ito, as Resident Adviser, is virtually supreme. Japan has come into conflict with China over Manchurian railroads and postal service and on the question of the Chientao province, which she claims belongs to Korea. Treaties have been concluded with Russia, settling all matters resulting from the war, and with France mutually recognizing Japan's claims in Korea and France's in Indo-China and Siam.

Postal Savings Banks

BY GEORGE VON L. MEYER

POSTMASTER-GENERAL OF THE UNITED STATES

IT behooves us as a Government to do everything that is possible to encourage among our own people the habits of thrift. American wastefulness and extravagance are well recognized, and we should acquire to a greater extent the art of husbanding our resources and of making a little go a great way.

Within the past seven years more than seven millions of foreigners have come to our shores, and in twenty-five years 12,640,397 have arrived. A great number of these people are setting us an example of what small savings can do by sending to European countries \$72,000,000 in the last fiscal year. Within a period of six months—from May 15th to November 15th, 1907—the amount which went out to replenish foreign coffers was \$49,621,000. These figures represent only the amounts that have been forwarded thru the medium of postal money orders, and do not take into account the vast sums which are remitted to foreign lands by banks and express companies.

It is startling to contemplate the class of immigrants which has come to this country in the last twenty-five years.

John R. Commons, Professor of Political Economy at the University of Wisconsin, in his book entitled "Races

and Immigrants in America," draws an imaginary line across the Continent of Europe from northeast to southwest, separating the Scandinavian Peninsula, British Isles, Germany and France, from Russia, Austria - Hungary, Italy and

Turkey. It separates countries not only of distinct races, but of distinct civilization. It separates countries of representative institutions and popular government from absolute monarchies; it separates lands where education is universal from lands where illiteracy predominates; it separates manufacturing countries, progressive agriculture, and skilled labor from primitive hand industries, backward agriculture, and unskilled labor; it separates an educated, thrifty peasantry from a peasantry scarcely a single generation removed from serfdom; it separates Teutonic races from Latin, Slav, Semitic and Mon-

golian races. The sources of American immigration have shifted from the Western countries so nearly allied to our own to Eastern countries so remote in the main attributes of Western civilization. This change is one that should challenge the attention of every citizen. Such a change has occurred, and it needs only a comparison of the statistics of immigration for the year 1882 with

POSTMASTER GENERAL MEYER.

those of 1902 and 1906 to see its extent. While the total number of immigrants from Europe and Asiatic Turkey was approximately equal in 1882 and 1902, yet in 1882 Western Europe furnished 87 per cent. of the immigrants, and in 1902 only 22 per cent., while the share of Southeastern Europe and Asiatic Turkey increased from 13 per cent. in 1882 to 78 per cent. in 1902. During twenty years the immigration of the Western races most nearly related to those which have fashioned American institutions declined more than 75 per cent., while the immigrants of Eastern and Southern races, untrained in self-government, increased nearly sixfold. For the year 1906 the proportions remain the same, altho in the four years the total immigration had increased two-thirds.

A striking fact is that 92 per cent. of the money on deposit in savings banks is in eleven States of the Union—the New England States (comprising Maine, New Hampshire, Vermont, Massachusetts, Connecticut and Rhode Island), New York, Pennsylvania, Illinois, Iowa and California, thus leaving thirty-five States representing deposits of only 8 per cent. This demonstrates plainly that the opportunities for depositing money in savings banks has not been sufficiently developed, especially in the South and West.

Every facility should be open to our people, and every man, woman and child should be able to deposit savings in any portion of the country at any time of the day. This can be afforded by the Post Office Department, because the post office is established in every city, town and village, there being exactly 61,814 post offices. The postal savings banks, besides encouraging economy and thrift, would afford a place of deposit, free from any possibility of doubt or suspicion, for vast sums of money which might otherwise be hoarded and kept out of circulation thru ignorance or lack of confidence. Wherever it may be this money has lost its proper functions, and the business of the nation not only receives no benefit from it, but even the prosperity of the country suffers, and may be eventually destroyed.

The laboring man going home at the

end of the week would frequently put his money in the savings banks if the opportunity were open to him, but he returns from his employment at a time of the day when the banks are closed and the saloons are open.

In the annual report I have recommended a postal savings bank system based on the experience of Canada for the last forty years, so far as the detail of arrangement is concerned. Therefore, we are profiting by their experience in applying the system to the United States, with this important exception—in Canada the money is put into the Treasury, the amount now on deposit being \$50,000,000. *Our plan is to obtain authority from Congress to deposit the money received at the post office in the national banks of that particular State.* In that way each locality would be benefited by having this new money (which had been hoarded and had lost its functions) led back into the channels of trade to the mutual benefit of capital and labor.

As an evidence of good faith that there is no intention or desire to compete with existing savings banks the rate of interest recommended is 2 per cent., the amount of deposit being limited to \$500 for any individual or society. The Government (Post Office Department) is a preferred creditor, and the Postmaster-General does not ask that any Government bonds shall be given as collateral for the deposits, as it is not desirable to absorb the bonds for that purpose, but that they be left free for currency. The Post Office Department would be secured as being a preferred creditor and by reason of the liability of the stockholders of national banks for double the amount of stock held by them, and the facility (thru the Comptroller of the Currency) of examining the banks at any time.

In answer to the point which has been raised in a very few instances, that this would tend to encourage depositors to take their money from State or national banks, it is self-evident that any individual who has the intelligence to go to a national or State bank with his deposit does so for the advantage of having it subject to payment by check, and in order to obtain accommodations in

the way of discounts of his own paper or that of his business clients. No business accommodations of any kind or description would be obtained at a postal savings bank, not even that of drawing the money by check.

As to the effect it would have on savings banks it requires but very little thought to convince one that a depositor who has his money in a savings bank (where he is receiving 3, or 4 per cent.) will not withdraw it and place it with the postal savings bank, thus reducing his interest by one-third or one-half, except, possibly, in times of crises or flurries such as we have experienced lately; and at such moments the great advantages of the postal savings banks would be felt because of the guarantee of the Government behind the deposits. The Government would be enabled to lead the money back instantly into the channels of trade thru the national banks in the same locality, and be instrumental in overcoming sudden stringencies due to large numbers of depositors taking their money out of circulation or hoarding it.

Another advantage of the system in Canada is the fact that it does not require any additional clerk hire to enforce it. Money order clerks at the various post offices have been able to handle the deposits, the practice being to enter the amounts immediately in the passbooks of the depositors.

It has cost about \$40,000 annually for the Division of Savings at the capital of Canada, and in the past thirty-nine years the sum of \$450,000,000 has been deposited and paid out, with a loss of only \$25,000.

Under the system proposed for our country the postmaster would forward to Washington daily a report of the name of the depositor and the amount of the deposit. Upon receipt of such report the Department at Washington would send an acknowledgment to the depositor. This would be a guarantee to the individual that the money had been

received, and would be a check on the post office for the reason that all depositors would be instructed to inform Washington if no advices were received by them within a stated period. The Postmaster-General should be given authority to designate all money order post offices, and such other post offices as may be deemed necessary, to receive deposits of money for savings, deposits to be accepted in multiples of a dollar, one dollar being the minimum. The money deposited in the postal savings banks should not be liable to demand, seizure or detention under legal process against the depositor. Withdrawals should be allowed at any time, subject to certain regulations.

As the Post Office Department can count upon receiving $2\frac{1}{2}$ per cent. upon its deposits in national banks, $\frac{1}{2}$ per cent. would be left to cover expenses, so that the postal savings bank system, once established, would be conducted at practically no cost to the Government, and would be of incalculable benefit to the whole people.

Thus the principal object of the postal savings banks would be to encourage habits of economy, not only among our own men and women, as well as children of ten years of age or over, who live in places remote from any bank, but also to encourage the foreign settler to deposit his earnings in this country, because after he had accumulated a few hundred dollars he would not be content to receive merely 2 per cent. interest, but would possibly seek to purchase a home, and the moment he acquired real property here he would become a more conservative citizen, would be actively interested in the affairs of the nation, and at the same time would place himself and his dependents beyond the likelihood of becoming public charges. Should, however, his earnings remain in the postal savings banks, the fact that he had an interest in the Government and something at stake would tend to make him a more desirable citizen.

WASHINGTON, D. C.

How an American Girl Made Up With the English

BY MATEEL HOWE

[Our readers will have noticed frequent quotations in our "Pebble" column from *The Atchison Globe*. Mr. Howe, the editor of the *Globe*, and his daughter, who writes this article, took a trip around the world last year. Mr. Howe's letters home to the *Globe*, now published in two volumes, are about the most interesting travel accounts we have happened to read. His daughter seems to be a chip of the old block.—EDITOR.]

TO begin at the beginning, I was sick when we left Hong Kong, and miserably lonesome and homesick, and when one is twelve thousand miles from home, and gets homesick, one also gets intensely patriotic. And the more homesick one gets the more patriotic one grows, and I was at the fiercely patriotic stage when I wanted to fight and die for my country, and preferably fight an Englishman. And the ship was hopelessly English, filled to the brim with English men and English women.

When I was very young and went to school and studied history, the first thing I learned was to hate the British. They had oppressed us and abused us when we were a little, young, struggling colony, and, consequently, they were a nation of blustering, bullying, beef-eating blackguards, and I hated them as fiercely as any Revolutionary patriot ever dared to hate. Of course, I learned better in time, and I thought my hatred had died a natural death long since, but the embers of that old anti-British sentiment seemed to have been sleeping in me somewhere, for I was just homesick enough to hate anything not American, and especially anything English.

Moreover, my experience thus far with Englishmen had been unpleasant. My father and I were going around the world. Most of the Englishmen I had met on the ships were of that disagreeable type that insist upon pointing out the bad points of these United States to every American they met. We were on a P. & O. steamer, the "Simla," and on

our way to Ceylon and India, and when I found that besides myself and my father there were only two other Americans on board, I could have cried with disappointment. Maybe I did, but I'm not going to tell.

There was one person on board, however, that I forgave for being English, and that was a Mrs. Williams whom I had known on another boat. She was traveling the same way we were; was a wealthy widow, and had only her maid with her, besides an Englishman whom she met at Hong Kong, and who was very much devoted. His name was Smythe—not Smith—and he shook hands up above his chin, and wore stocks and safety-pin scarfpins and blue and pink and yellow and green combinations such as nobody but an Englishman would wear for love or money, and said "jolly" and "ripping" and "doncher know" until I could have choked him, in spite of the fact that he was related to the Viceroy of India. He and Mrs. Williams and father and I sat at the chief officer's table with a few other English people, and it was there, I think, that somebody first mentioned Christmas.

Christmas! Horrors! We left Hong Kong on the 16th of December, so, of course, Christmas was near, but I had been too excited and lonesome to think about Christmas time, or to realize how near it was until somebody mentioned it at the breakfast table the second or third day out, and my homesickness before this was a perfect seventh heaven of bliss, a perfect garden of delight, compared to

the homesickness that surged over me at that one fateful word.

Christmas at sea! Christmas on board this horrible ship! Christmas with all these horrible Englishmen! Christmas—no home, no mother, no Christmas tree, no presents, no hanging up of stockings, no flowers, no Christmas dance, no holly, no mistletoe, no snow, no ice, no sleigh-bells, no Christmas shopping—nothing but sea and Englishmen. Oh, it was horrible, awful, not to be home—

I was deep in the midst of this cheerful reverie when Mrs. Williams sought me out in my corner to tell me that she was feeling a little bit homesick herself, and thought it might be fine to make a Christmas pudding, if we could get permission.

Christmas pudding! That sounded good. We always made one at home, and had a great time mixing it. So I began to sit up and take notice at once, and went off very gaily with Mrs. Williams to ask the captain, and the captain said yes.

He was homesick, too, I think, for he not only said yes, but asked if he might help stir, and went himself to see the steward and tell him to fix things for us, and that is a very great condescension for a captain, as every one will know who has known a ship's captain on his ship.

So the next morning, when we had finished breakfast, we found everything waiting for us in a little side room not far from the kitchen, and opening out on the passageway. There were big bowls and spoons to mix with, and raisins and nuts and bread crumbs and candied fruits and suet and spices—in fact, everything that possibly could go into a plum pudding was there. Mrs. Williams and Walker—her maid—and Mr. Smythe and I mixed that pudding without delay, and the captain and all the ship's officers came in to help stir and make a wish. I had already forgiven the captain for being English, and now I forgave Mr. Smythe and the officers, and began to be happier. It was very warm and everybody—including the men—wore white, so we could not imagine for a moment we were back home getting ready for Christmas, but we were very jolly, and this little attempt at keeping Christmas made us feel friends all at once, and not only friends but brothers, and I didn't hate anybody at all.

While we were making that pudding, I think everybody in the ship had taken a look at us—that is, everybody in the first cabin, and all the stewards and waiters and deck boys and cooks and kitchen helpers. The crew and most of the men employed on the ship—with the exception of the officers, of course—were Lascars, and every minute or two one of them would stick his gaunt, black-bearded face in for a look at the crazy white women who were mixing something queer in a little hot room, and working when they did not have to work, and the perspiration was rolling down their flushed faces. It was the first Christmas pudding ever made on that ship by the passengers—and, I dare say, the last.

By the time the pudding was mixt and handed over to the cook to be steamed, I was more than cheered up, and got to thinking that if we had a Christmas pudding we ought to have a Christmas tree, and I went at once to Mr. Smythe to find out if he could not suggest a way. Mr. Smythe had a way of getting everything he wanted, and I was quite sure that if he wanted a Christmas tree he would get it, if he had to make it grow out in the middle of the ocean. Mr. Smythe was a character, and he amused us all the time. He roomed with my father, so that father had a good opportunity to know him well. He got more attention than anybody on the ship—even more than the captain, I believe. He was always perfectly good natured, and had a charming smile, but he never was quite suited. If there was one kind of mustard on the table, he wanted another kind. If the pepper happened to be red, he wanted black, and vice versa. He always had his table steward and the head waiter hopping madly about hunting up something or other that he happened to think of, or Mrs. Williams or father or I happened to think of. If he wanted something or we wanted something, he could not imagine why we should not have it. We had our deck chairs together, and I think he spent half his time getting those chairs moved to the most desirable places. If he had not been so good natured about it everybody would have hated him, but as it was, everybody laughed. Father said every time he went into his stateroom he found the steward brushing Mr.

Smythe's clothes, or doing something for his comfort. He never touched father's clothes, tho father "tipped" twice as much as Mr. Smythe. But then that is always so. An Englishman traveling invariably gets all that he is paying for, tho he has to fuss a good deal to get it. An American takes what he gets, and keeps still to avoid the fuss. Mr. Smythe certainly got all that was coming to him. Once Mrs. Williams carelessly remarked that the water-pipes for the ladies' bath must be somewhere near the boiler, as she was unable to get cold water to rinse in after a bath, and Mr. Smythe wanted to have all the pipes on the ship instantly torn out and rearranged so that Mrs. Williams could have that cold water.

When I consulted Mr. Smythe about the Christmas tree, he said he thought I could get one, or something that would do for a Christmas tree, at Singapore, where we were to spend a day. The chief officer felt sure we could get one, and every one at our table began to plan for that tree.

We had a whole day in Singapore, and spent the morning viewing the beautiful tropical city and its gardens, from rickshaws. Singapore is only a few miles from the equator, and is noted chiefly for its intense heat, but the day we were there happened to be unusually pleasant and cool.

After luncheon at the hotel, father returned to the ship to do some writing, and Mrs. Williams and Mr. Smythe and I started for a toy shop. We found a regular English shop, where we could get everything wanted for a tree, and as the time was growing short, we decided that I had better take Walker, the maid, and go after the tree, while Mrs. Williams selected the trimmings and did some other shopping. The ship sailed at five o'clock.

We had been told that we could get a tree at a nursery and hot-house about a mile from the hotel. So Walker and I took rickshaws and started. We had Chinese coolies to draw us, and they were very slow, and I could not hurry them. When my father and I started on our trip, I was but newly graduated from a finishing school in Washington, and father said he was taking me along so as to get some of the benefits of the money

that had been spent on my education. He called me the "Educational Bureau," and I was expected to know everything under the sun, including geography—who ever heard of geography in a finishing school?—and Chinese. But, altho I was the "Educational Bureau," I did not know enough to make those coolies hurry, and my knowledge of the Chinese language was limited extremely. I believe I could say "Good morning," but that was all.

When we got to the nursery, the man in charge said he was sorry to say he had no Christmas trees, or anything that would do for a Christmas tree, but that he was sure I could get something at the Botanical Gardens, a mile or two further on. It was getting late by this time, but I was determined to have that tree or die. So off we started to the gardens, tho we had been there in the morning. It was further than I realized, and by the time we got there, I found we would have to hurry. So Walker and I flew around thru the grounds on foot, hunting the head gardener, and, finally, after much delay and much loss of valuable time, found the man and got our tree. It wasn't a real Christmas tree, but it was green, and it would trim, so we were happy. But we were not so happy when we got back to the gate, and our slow-moving coolies and found we had less than an hour in which to get to the ship. The dock was four miles from the hotel and it had taken us nearly an hour to come from the hotel to the gardens.

Every one who had learned of our tree had been interested, and the man we got it of had carried it for us to the gates. He refused any pay for the tree because it was a Christmas tree, and, bless him, he wished us a "Merry Christmas." He was an Englishman, too, and he could speak enough Chinese to tell our coolies to hurry, so after thanking him warmly, we started at a good pace.

A Chinaman, no matter how low, has no respect for a woman, be she rich or poor, white or yellow, high or low, and our coolies were no exceptions. It was hot, and the rickshaws were heavy, and they were being paid for by the hour anyway, so the coolies did not intend to hurry when a mere woman urged it. They poked and poked, and the time

grew less and less and less, until I was almost frantic with fear of losing the boat. Finally when I was almost desperate, I saw a small carriage, with a small horse, coming our way. It was driven by a native, and was empty, and I decided to take it, for a horse, no matter how small, is faster than a man, and it seemed to me a small sized rat could have gone faster than those coolies.

We hailed the man and jumped into the carriage hurriedly, and I paid the coolies four times as much as the regular rates, to avoid a row. But we were out in the country, and there was only one house near, and its blinds were drawn, and we were women, so the Chinamen thought they could intimidate us and get more money. I told the driver to drive on, but one of those fiendish devils gripped the horse while the other stuck his fist in my face, and waved it madly, and they both yelled like Comanche Indians—only an Indian never could make as much noise as a Chinaman—and I was green with fear. I think in a minute I would have given not only all my money, but my jewelry and my clothes, as well, if they had asked for them, but just at the crucial moment the door of that nearby house opened, and out came an Englishman. He had evidently been taking his siesta, for he was only half dressed, but he dashed straight to us, grabbed one of the Chinamen, kicked the other, and told our driver to go on. I had only time to call back a "Thank you," but I'll always remember him as he stood in the middle of the palm bordered road, madly clutching at his clothes and kicking those Chinamen. He was big and blond and ugly, and had a beard, but he looked like the angel of deliverance to Walker and me.

We galloped every step of the way to the dock, and found the ship still there, tho in an uproar, all on our account. Father had our trunks half packed up on deck, ready to get off. He and Mrs. Williams were running up and down; Mr. Smythe was jumping about trying to find out how long the captain would hold the ship, and the other passengers were hanging over the ship's side looking for us. When we finally appeared, hot, dirty, tired and breathless, and covered with red dust, but dragging my precious tree,

they all cheered. I had delayed the ship, scared my father almost to death, and upset the whole first cabin, but I had my tree, and they cheered me. They were English, too; but I loved them all at that moment. We were all white, anyway, and you do not appreciate how much that means till you go to a black man's country.

Singapore has the prettiest harbor I have ever seen. It is not magnificent, but it is beautiful. It is dotted with a multitude of tiny islands—all thickly covered with palms and riotous, creeping green things, with gorgeous tropical blossoms. One great ship sailed so close we passed thru its reflection, mirrored in the water. We left just in the midst of a tropical sunset, and the waters were all pink and gold. Tired but happy, I stood at the rail and waved good bye to the naked little brown divers that laughed up at me from the water. I shall never forget Singapore, nor my Christmas tree.

Mrs. Williams and I decorated the tree Christmas Eve after dinner. We placed it in the middle of our table, and every one promised not to look at it till morning. It was fun getting the tree ready, and yet it brought a lump to my throat. We were so far from home; the Indian Ocean is so far from the Missouri River, where I belong, and I could not but think of other Christmas Days and those others at home. My cabin mate, a young girl of my own age from Canada, was the only other girl on board, and she was homesick, too; tho she said she was not. It was she, I think, who suggested that we hang our stockings out on the rail in the passageway beside our door. No sooner thought of than two white stockings were hanging pinned to the rail, and, as a crowning touch, we pinned our calling cards on the tops.

Then we went to bed, but not to sleep. One of the young officers on board discovered the display of hosiery, and promptly notified all the others. About twelve o'clock we heard a suppressed commotion outside our door, and a lot of whispers and smothered laughter. Peering out thru the curtain, we discovered every man on board ship bunched about our stockings, and all, to a man, elaborately attired in pajamas and slippers and dressing gowns. One of the funny things

about Englishmen to me is the cool, calm manner in which they parade around in their pajamas, with only a kimona or dressing gown added, every morning. If one rose early enough, these Englishmen could be seen in dozens in airy costumes, having coffee, or something, on deck, and not in the slightest embarrassed at the sight of a girl. However, I got up early but one morning. It was quite enough.

But this Christmas Eve they were shadowy ghosts—or looked so, as the lights were out, and we were laughing so hard we could hardly keep in our berths. When they finally pinned our stockings back, they were bulging, and it was hard work to open them at once. In a few moments the ghostly throng retreated a few steps, and, at a sign from one of them, began a series of Christmas carols. I may have heard worse singing, but I cannot remember where. But after they had left—still singing—and after I had laughed and laughed, I found that my eyes were wet. They were doing their best, those Englishmen, to make the two girls on board feel less homesick, and one of them was very grateful.

We opened our stockings in the morning, and found oranges and nuts and candy and a lot of ridiculous presents. Then there came breakfast, and the tree, for all to admire, and more ridiculous presents. But none of us was very gay, tho we all tried so hard to be. After all, it was Christmas, and we were out on the Indian Ocean, thousands of miles from home, and thoughts turned too often to the real Christmas at home to be very gay.

The day dragged interminably. But in the evening we had a big dinner, and lighted our tree and had our plum pudding. We had made enough for our table and the captain's table. Everybody dressed up, and the captain and others made speeches, and we all drank toasts. Though the ship was almost entirely English, a toast to the President's health was drunk, as well as to the King's, and to our own good land as well as to Merrie England. After dinner, we had a dance out on deck, and my last waking thought that night was that our good George Washington had been so bitter toward so worthy a people.

ATCHISON, KAN.

Cobwebs

BY LOUISE IMOGEN GUINEY

Who would not praise thee, miracle of frost?
Some gesture overnight, some breath benign,
And lo! the tree's a fountain all a-shine,
The hedge a throne of unimagined cost;
In wheel and fan along a wall embossed,
The spider's humble handiwork shows fine,
With jewels girdling every airy line,
Tho the wild mason in the cold be lost.

Web after web, a morning snare of bliss,
Starring with beauty the whole neighborhood,
May well beget an envy clean and good.
When man goes too into the earth-abyss,
And God in His altered garden walks, I would
My secret woof might gleam so fair as this!

OXFORD, ENGLAND.

The Municipal Situation in San Francisco

BY HENRY SUZZALLO

[Professor Suzzallo was connected with Mr. Langdon when the latter was Superintendent of Schools in San Francisco, but is now an instructor in the Teachers' College of Columbia University.—EDITOR.]

THE municipal situation in San Francisco presents to the serious student of American social life one of the most interesting and hopeful subjects for study. Recent conditions in that municipality have exemplified a congestion of American problems within a single community more complex and acute than any hitherto known. Every dominant problem in our American life had added itself to San Francisco's complex despair. The difficulties arising from organized graft in government and the fierce struggle of labor and capital, which are more or less general in the United States, were added to those which were local to the instant need of rebuilding a large city after a great catastrophe. The record of failure upon the part of other communities when dealing with these evils in less complicated forms offered little encouragement to the hope that San Francisco would be able to cope with its own serious and complex troubles. Yet the municipal election of last November would seem to indicate a thoro redemption of the city. Its verdict is as hopeful for the future as prior conditions were discouraging. The head of the graft prosecution, District Attorney Langdon, was re-elected by a sweeping majority of 16,000 votes; while Mayor Taylor, whose appointment as the successor of ex-Mayor Schmitz was dictated by the district attorney during the period when he absolutely controlled the government thru the confest supervisors, was returned to office by almost 10,000 majority. In addition, the board of supervisors and practically all the other municipal offices were filled by the election of able and public-spirited men, who represent more established integrity and effi-

ciency in office than San Francisco had ever known before.

The completeness of the moral victory is surprising to those who have had no intimate knowledge of the systematic work conducted by the reform leaders during the past two years. In organization and method the reform forces of San Francisco offer a striking contrast to the short-lived movements that have been temporarily successful in other cities. At the same time, an ideal is presented for any future efforts for the political betterment of cities.

Reform in San Francisco represented no conglomerate of the puritanic forces of the community, more or less out of touch with the ideas and the sentiments of the masses, as it has elsewhere. It was a sane, practical effort for the restoration of municipal government, completely unified thru the personality of a district attorney who realized that no reform movement could be permanently successful unless it utilized every expert agency for the detection and punishment of crime and carried the support of the masses with it at every step. Every man who came into the reform movement, however powerful he might be to contribute, came in on the terms of the district attorney. The bold use of immunity, an apparent compromise with crime which finally reaches the sources of crime, made possible the proof of corruption in every quarter where it was said to have existed. A practical regard for the temper of the man on the street made it possible for the ideals of the prosecution to become the belief of the masses, insuring the majorities upon which any lasting effort for reform must depend. The gradual evolution of a reform movement from a single, faithful

and courageous district attorney, isolated and impotent in his office, to the inclusion of an honest millionaire, a great prosecutor, a great detective, several expert lawyers, a host of assistants, and finally a people willing to support a movement with enormous voting majorities, is one

as a means of self defense. Eugene E. Schmitz, an orchestra leader, was the candidate for Mayor upon that ticket. William H. Langdon, a teacher and lawyer, was the nominee for superintendent of schools. Both were elected, the latter leading by a large vote. Thus the two

WILLIAM H. LANGDON,
District Attorney of San Francisco.

of the most interesting developments in recent municipal history.

The teamsters' strike prior to the municipal campaign of 1903 had given the laboring classes a feeling that government was on the side of the capitalistic classes, more particularly the Citizens' Alliance, an organization hostile to the existence of organized labor. The result was the launching of the new Union Labor party

opposing figures in the recent sensational struggle were brought into public life by the same party, and became members of the same political administration. For one the campaign and its success meant the creation of a political machine; for the other, the beginning of a large personal following independent of parties and party bosses. Friction of greater or less extent occurred frequently between

the two men during this first term, largely as a result of the extension of the new political machine into the Board of Education, where the superintendent of schools had a voice, but no vote. No public and violent breach of relations occurred, however.

With the opening of the campaign of 1905, charges of graft in connection with houses of ill-repute, gambling machines, etc., were made. The Republicans and Democrats fused against the Union Labor party. Boss Ruef became badly frightened, and he determined to re-elect Mayor Schmitz at any sacrifice so as to maintain the political machine, now fairly well organized. In order to strengthen the ticket, but with no expectation of the candidate's success, William H. Langdon was given the nomination for District Attorney. The entire Union Labor ticket was elected, with Schmitz and Langdon leading by 6,000 votes. The machine was now complete; but there was one flaw. The flaw was District Attorney Langdon.

During this campaign Francis J. Heney, famous in the land graft prosecutions, took the stump and created a sensation by saying that he had evidence to put the Union Labor leaders in jail. After election he was brought before the grand jury to present his evidence, but failed to do so. In spite of this fact many had become suspicious of the administration. Among these was District Attorney Langdon. After one week in office he broke completely with his party associates in office over the appointment of his assistants. Soon he began to investigate the vice of the city in the attempt to discover evidence of graft. He refused to dismiss criminal cases that had a "pull" behind them; raided the gambling houses and the houses of prostitution; and soon drew the fire of the whole administration upon himself. Unwilling to make charges without evidence, he worked for months, but could not force a break in the machine organization. His power was further weakened by the refusal of the administration to grant him funds for his work.

Meanwhile many of those who had been on the opposite side to Langdon in his campaign for office were investigating on their own account. They soon became morally convinced of the rottenness

of the municipal government. The press for the larger part opposed the government. Rudolph Spreckels in particular had gotten an insight into governmental crookedness. Francis J. Heney, who was ridiculed for his inability to make valid his campaign charges, was working quietly. The new grand jury was on the point of being drawn. Spreckels offered a fund of \$100,000 to investigate the city. Heney united with him, and brought Federal Detective Burns into the work. These independent forces, for the larger part opposed to Langdon at the time of his election, had now become convinced of his honesty. They offered their services to him, and he substantiated their faith in him by accepting. That coalition in forces was not made, however, until the District Attorney was convinced that the evidence would be forthcoming, and that these men were willing to co-operate continuously in reaching the criminals, no matter in what social class crime was to be found. Hiram Johnson, J. J. Dwyer and C. W. Cobb were added to the legal staff. Burns expanded his detective force. The prosecution was now efficiently organized, and the work began in earnest. But the people were yet to be convinced that the prosecution was not a political movement. Here the tactful generalship of District Attorney Langdon, with his large personal following among the masses, came into play. At all times his final guidance of the policies of the prosecution assured the movement of popular support.

After months of solicitation upon the part of the prosecution, the officers of the public service corporations flatly declined to co-operate in any attempt to reform the government by revealing their transactions with the city officials. The prosecution now turned to the office-holders themselves. Detective Burns trapped one of the Supervisors in the acceptance of a bribe. Here was the entering wedge. He was granted immunity upon confessing to the District Attorney. Those implicated by the first confessions were likewise granted immunity. All the supervisors confessed, and the evidence was now fairly complete. The Mayor and the boss upon the one side, and the leaders of the corrupt corporations on the other were involved. Indictments were re-

turned by the grand jury, and the prosecution proceeded to the trial of the cases before the superior courts. Mayor Schmitz was found guilty of extortion and sentenced to five years in the State prison. Boss Ruef confest while in process of trial. Louis Glass was convicted upon second trial and also committed to the penitentiary.

Meanwhile the whole city government was disorganized. While the special prosecutors were trying the cases, the district attorney's office proceeded to protect the government against the criminal offenders who had not yet been deprived of office. Thru his control of the supervisors who had confest and been granted immunity, he blocked all efforts of the Mayor and the boss to use the government for their defense. When the Mayor was finally put in jail, he caused them to elevate one of their number to the acting mayoralty. When the status of the convicted Mayor was finally established by the higher court, he removed the acting Mayor, and caused the selection of the Hon. Edward Robeson Taylor to that position. When the new Mayor had the names of his appointees for the supervisorships ready, the confest supervisors were forced to resign one at a time, until honest men occupied every supervisorship. Thru a dictatorship warranted by the special emergency in municipal affairs, the District Attorney had cleaned up the government of the city with his arbitrary and unusual power. His work done, he delivered the government over into the hands of the new officers, and has since had no suspicion of connection with governmental affairs other than those of his own office. These officials, appointed thru the work of the prosecution, have now been re-elected by an overwhelming vote of the people. The reconstitution of the municipality has been given the legal warrant demanded by the spirit of popular government.

With the corrupt governmental officials driven from public office, and men of high standing put in their places, San Francisco has today a thoroly clean and efficient government. The conviction of

corrupt politicians and capitalists who have been the leaders in the graft ring has established the ability of government to punish offenders in high station. The defeat of the Union Labor party in the last campaign, largely thru the opposition of the real leaders of organized labor — Furuseth, McArthur, Casey, Sweeney and others—removes the strife of the economic classes as a determining factor in municipal affairs, so that the true issues of city affairs may be kept in the foreground. The situation is inspiring to the friends of good government. It is discouraging in the last degree to the corruptionist class. But the question of its permanency is already being raised by those who have noted the decadence of more than one municipal reform movement.

One thing seems certain. San Francisco will never fall back to its previous condition. There is reason to believe from the experience of other cities that every reform administration leaves standards of efficiency and honesty that are never completely effaced even by succeeding corruptionists. But the ability of good government to sustain itself on a high plane thru a long series of administrations will depend upon a number of factors. The graft prosecution must continue to convict the men at the head of the corrupt corporations, so that their pledge to the people may be completely realized. The larger railroad machine which dominates the State and is the encouragement of the less powerful local machines must be crushed out. The self-sacrifice of the leading men of the community now holding office in San Francisco must be appreciated, encouraged and maintained. The people must continue to nominate and elect officers upon a non-partisan basis. The intrusion of the industrial struggle into municipal affairs must be avoided, along with the injection of national and State party issues. The demands are many. Future events alone can determine whether or not the people are equal to the necessities which continued good government imposes.

NEW YORK CITY.

PROVIDENCE ISLAND,
Where the landing was made by the first American Colonists in 1822.

Past, Present and Future of Liberia

BY JAMES J. DOSSEN, LL.D.

ASSOCIATE JUSTICE OF THE SUPREME COURT AND VICE-PRESIDENT-ELECT OF LIBERIA

LIBERIA is the name given to that part of West Africa lying between the British Colony of Sierra Leone on the northwest and the French possession of the Ivory Coast on the southeast. Prior to the convention between Great Britain and Liberia in 1882, and that between the Republic of France and this country in 1892, the Atlantic frontage of Liberia stretched from Soloma on the northwest to the San Pedro on the southeast, a distance of about 450 miles, with an indefinite interior. Now her coast line is confined between the Manoh and Cavalla rivers, a distance of 350 miles, running back from the coast to a varying distance estimated at 250 to 300 miles.

Liberia, it will be remembered, was founded in 1822, about twenty-five years after the founding of the British colony of Sierra Leone by Sharp and Clarkson, by a few American philanthropists who organized under the name of the American Colonization Society, for the express purpose of planting a colony in Africa, whither negroes in America who might become free might be sent, in the hope of rearing in the fatherland a Christian community. Among the men who took an active part in this first movement were Judge Bushrod Washington, of Virginia; Henry

Clay, General Fenton Mercer and other prominent American citizens. The venture had also the strong endorsement of President Monroe, who, as early as 1801, when Governor of Virginia, had advocated the "separation of the two races and the return of the American negro to his natural habitat in Africa."

The United States Government, not then a colonizing power, withheld itself from direct official participation in the "experiment." But nevertheless, after the passage of the Act of 1807, it took an active part in suppressing the oceanic slave-trade and in liberating and sending to Liberia negroes who had either been captured on sea or brought into its territory after the said enactment. Of this class no fewer than 5,000 were sent to Liberia by the United States Government itself, the Government providing the means for their location and maintenance. Liberia is often stigmatized as a "backward community," and her apparent slow growth and progress adversely criticised by those who, perhaps, with the best intentions toward her, are nevertheless ignorant of or have failed to grasp the feebleness with which the "experiment" was started, and the environments amid which she has had to develop.

As stated above, the planting of the Liberian colonies was the venture of pri-

vate societies, which in the very beginning found themselves financially weak and on that account greatly handicapped. These societies, while full of noble aspirations and the purest motives, lacked the means requisite to launch successfully such a great undertaking, and to start such industries and enterprises that would set the settlers on their feet and give the colony a push forward. Fresh from the shackles of the most crucial servitude, where every opportunity for improvement and the acquirement of wealth had been denied, these men, to use the words of Dr. James Hall, the founder of Maryland in Liberia, were a most unsuited class (humanly speaking) to embark on such a stupendous mission.

Altho the over-sea traffic in human flesh had been formally abolished since 1807, and the navies of France, England and America hunted the slavers up and down the Atlantic, the slave-trade, with all of its horrors and scenes of misery, was securely intrenched on the upper "Grain Coast" when the Liberians landed here. At Grand Cape Mount and at other points on the Liberian coast, including Monrovia herself, where the first settlers landed, the barracoons of English and Spanish slave-dealers existed, and it was due to that that the natives were incited to deliver a most determined attack upon the colony eleven months after it had been founded.

I am afraid that the part that Liberia played in rooting up slavery and in helping to wipe out, in this part of West Africa, the blackest curse of modern times, has been sadly forgotten by the descendants of Anglo-Saxon statesmen and philanthropists who, just a century ago, sought to right the wrongs perpetrated upon Africa for three hundred years and to wipe from their national escutcheon the blot of African slavery. This signal service rendered by Liberia to the cause of humanity and justice, if she could point to no other achievement, is a cogent answer to her critics and detractors, who not infrequently are demanding the reason for her political existence.

In 1847 the Liberian colonies, which up to this date had been governed as the Commonwealth of Liberia under the tutelage of the parent society, was forced

to assume the status of an independent state in order to enforce its laws and protect its interest against foreign aggression. The circumstance which led to her taking this great "leap into the dark" at a period when, on account of her weakness and inexperience, she needed the fostering care and guiding hand of some strong friend, was such that left to her no other choice. And it is a fact, which seems not to be generally known, that this course was advised by the society as the only way out of a crisis which had arisen and which could not be met under the old régime.

For fifty years Liberia has pursued a policy of strict conservatism in her intercourse with the outside world. This attitude has been sharply criticised and pointed to as the real cause of her "backwardness" by outsiders, who sometimes display a questionable eagerness to mark her forward movement.

It is generally admitted by intelligent Liberians, who are abreast with the developments which have taken place in British, French and German West African "spheres of influence" during the last twenty-five years, that this policy of conservatism which has kept the greater part of our coast and rich interior locked to foreign enterprise and push, has greatly retarded the progress of the Republic and tended to national weakness rather than national prosperity. But perhaps the cause for this unwillingness on the part of Liberia in the past to enlarge her intercourse with the Powers of Europe engaged in West African development may be sought for and in a great measure found in the past attitude of those nations toward weaker races. The fever for the acquisition of territory and the founding of "spheres of influence" in Africa, which seized Europe with such relentless force during the closing quarter of the last century, and the "might-over-right" policy followed by the Powers in the consummation of this object, naturally made Liberians shy and circumspect in their relations with foreigners. But if one will carefully study the Liberian's mind he will find there is no ingrained disposition on our part to selfishness and narrowness in our relations with foreigners, as some have endeavored to show. They will find, how-

ever, that the average Liberian, whether civilized or uncivilized, is a passionate lover of his country and is anxious for its progress and success. They will also find that the Liberians so love their independence that they will studiously avoid any course that is likely to subvert it.

Comparing the past attitude of Europe toward Africa and the African with the new and more enlightened thought of the present day, one is agreeably surprised at the change which public opinion has undergone on that continent

successful colonization in West Africa. Perhaps the first Britisher who had the courage to draw public attention to the blunders and mistakes of this short-sighted and ill-conceived policy which aimed at destroying rather than preserving the country and people whom Europe had taken under her tutelage for the avowed purpose of improving, was the late Mary Kingsley, a woman of uncommon perceptiveness and judgment, who traveled extensively in West Africa and with her penetrating eye and inquisitive mind investigated on the spot *actual con-*

relative to Africa and the rights of Africans. After a long role of blunders and failures at colonization in West Africa by those intrusted with the development of Negroland, it has at last been discovered that the use of machine guns and punitive expeditions, the ruthless waste of blood and the devastation of the country they have come to improve and rebuild, the dislocation of native rule and native institutions and the obliteration of native laws and customs which form the framework of their social and political life under which they have lived and prospered for centuries, are not the best methods, the best regime for tangible and

ditions which served as a key to the real cause of repeated failures, and in her "West African Studies," which she published, called "a spade a spade" no matter where she found it.

Almost simultaneous with Miss Kingsley's publication there appeared in English journalism *The West Africa* and *West African Mail*, journals devoted exclusively to African affairs, whose strong, uncompromising advocacy of native rights and whose sound, enlightened views on African affairs generally, supplemented by similar efforts in France and Germany as well as the noble work of societies that have sprung up in

those countries to champion the cause of native races—thru these agencies in a great measure have been produced the new attitude and the new sentiment, on all sides visible in Europe's present dealings with Africa, the most notable examples of which are supplied by the wise and judicious statesmanship of the present day.

Under this new, beneficent policy,

of telegraph communication between Liberia and Europe. The pacification of our rich interior and the organization of law and order in those regions which under the indomitable energy of the present government is progressing satisfactorily opens a rich and hitherto untouched field for the capitalist and investor who possess the initiative and the faith to launch a new enterprise.

THE AMERICAN LEGATION, MONROVIA.

which recognizes and respects the rights of weaker races and in which the spirit of Imperialism is dictated by Justice and Righteousness, Liberia may feel justified in departing from the old rut of conservatism and in throwing wide open her doors to the legitimate commerce and enterprise of all nations. By a happy coincidence there sits at the head of the young Republic at the present time a man of sound progressive views who is capable of recognizing Liberia's present opportunities and willing to utilize them for the highest good of the nation. Looking forward there appears a brighter day for the struggling Republic. The administration of President Barclay has already been marked by a larger introduction of foreign capital and enterprise, the construction of motor roads, the improvement of national finances, the increase of commerce, the peaceful penetration and development of the Hinterland, and a larger incorporation of the indigenous tribes. Quite recently a concession was granted for the establishment

Dutch, French and Liberian travelers, traversing our Hinterland, have all called attention to its mineral richness. Anderson, the Liberian explorer and cartographer, who made his explorations in northwestern Liberia in 1868, exactly thirty years before the French mission of Hostains d'Ollone, and Captain Richard Watkins, another Liberian traveler, who penetrated the interior of southwestern Liberia to a distance of about 150 miles as early as 1845, have both testified to the free use of gold by the natives of the backlands.

But perhaps Liberia's greatest wealth lies in her unbroken forest of mahogany and other furniture and hardwoods, and her immense vegetation of rubber and fiber plants. Over twenty varieties of rubber have been found in the Liberian forest, some of which belongs to the first grade of African rubber. In 1890 a monopoly for the collection and exportation of rubber was granted an English syndicate, but this restriction has been removed by recent enactment.

It is remarkable that altho Liberia is an off-shoot of America, founded by American philanthropy, her form of government, laws and polity framed after that of the great Republic, and the further fact that a large percentage of her citizens, the negroes, are bound to Liberia by the ties of a common race, Liberia seems to have dropped almost entirely out of American thought since the independence of Liberia and the withdrawal of the society that founded her, if we expect the interest manifested toward her by American missionary societies to which I shall shortly refer.

In the large and constantly increasing over-sea trade carried on between Liberia and foreign countries not an American sail is seen in any of our ports. Thirty years ago a considerable trade was carried on between this country and America in American bottoms, but this has stopped owing to the failure to replace sail by steamers of greater speed and facilities.

Meanwhile shipping between this country and Europe has increased steadily. The Elder-Dempster Line, under the pushful management of Sir Alfred Jones, has a weekly and fortnightly service to Liberia. The great Woermann Line of Hamburg, another example of push and enterprise, serves the Republic with four lines of steamers, so that there is hardly a day that the German flag is not seen in one of our ports. France and Spain each maintains a fortnightly service, and very recently the great Hamburg-American Line established a service to Liberia. The Liberians, with their taste and preference for American products, must supply their wants via Liverpool or Hamburg, which, on account of heavy charges rising from double freights and the rehandling of goods, renders American products expensive and thereby prevents the expansion of commerce between the two countries.

The establishment of steam communication between the two countries would overcome this difficulty and bring closer together the mother country and her off-spring. When it is remembered that American enterprise and American money (the American colonization having up to 1867 expended \$2,600,000) founded the colonies which have since

become the Republic of Liberia, and the further fact that the greatest social problem of that country—the race problem, which is becoming more and more acute --will find in immigration to Liberia a happy and equitable solution, there would seem to be strong reasons why America should become Liberia's "next best friend." Whatever may have been the traditions which in the past have withheld that government from taking a deeper interest in West Africa and particularly Liberia, it would seem that they have undergone a radical change recently, under the progressive spirit and matchless statesmanship of President Roosevelt.

Among the most urgent needs of Li-

J. J. DOSSEN.

Associate Justice of Liberia.

beria is that of immigration. A country with an area of nearly 45,000 square miles and a civilized and governing population estimated at only 30,000 is an extraordinary spectacle. We need immigrants to build up the waste places; to plant strong and industrial centers in the

rich and virgin backlands and on the Manoh, the Makona and the Cavalla Rivers, which form the frontiers of the Republic. We need accessions to plant Christian civilization in our remote Hinterland and to teach the 2,000,000 indigenous population the peaceful pursuits of Western civilization.

This America can better do than any other country. The American negro, with years of training and preparation behind him, is the very material for this great work. If within the next five years 50,000 industrious, thrifty and intelligent negroes should be settled in Liberia thru the unstinted generosity and good conscience of the American nation; and if, as in the case of the Israelites on leaving Egypt, they should come, not in poverty and rags, but by a generous hand and a fair proportion of the accumulated wealth which their ancestors by bitter toil amassed for the American people during the crucial days of slavery, America will have then performed a great humanitarian act and discharged an indisputable moral debt which she owes to Africa and the African.

Another great need of Liberia is Christian education. I do not hold the view of some, that Christianity and Christian missions have effected no good in the moral and educational uplift of Africa, and that Mohammedanism is the religion best suited to the natives of this country. On the contrary, I hold a decidedly opposite view. I admit that Christianity, as it is sometimes seen

among some of its western votaries, is a deformity; that the rule of conduct taught in the "Sermon on the Mount" and the "Golden Rule" is not infrequently disregarded by the custodians and propagandists of that religion in the blind rush for empire and the greed for gold; but this is equally true of most creeds, not excepting even Mohammedanism.

The fact is that Liberia as she exists today owes an indisputable debt of national gratitude for the untiring and self-sacrificing labors of the missions established here by the Protestant and Methodist Episcopal Churches of America, which for half a century have played a most important and conspicuous part in the moral and religious uplift and educational training of the people of this Republic, and whose work in civilizing, Christianizing and preparing for citizenship the indigenous population forms one of the most brilliant chapters in the history of African missions.

Under the new régime mentioned above a wider field for educational and missionary work opens. Along with the flag should go the church. Here again is a golden opportunity for the American people, who alone have missions in Liberia, to do a great and noble work for Africa.

Thru the open door which Liberia holds out to her will America utilize her present opportunities for promoting the civilization and regeneration of the "Dark Continent?"

MONROVIA, LIBERIA.

San Francisco

To the Builders and the City

BY HARRY H. KEMP

BUILD well your city, high on gleaming height,
And rivet strong the beams, artificers skilled
In iron and in steel! Let heaven be filled
With granite bulk and marble huge and white
Until the nations wonder at the sight;
Make light the fame of Babylon as ye build
And those tremendous works the Pharaohs
willed,
Abandoned to the desert and the night.

And, Shining One—not being less august
Than those forgotten cities high and vain
Whose massive foreheads now salute the
dust,
Whose limbs, dismembered, strew the level
plain—
Oh, lay thy new foundations deep and wide
In love, but not, as they, in lust and pride.

LAWRENCE, KAN.

The Belled Woman's Son

BY ROSE MELROSE

THE following incident is related to show that, after all, the carpet-baggers and the Republican party are not wholly responsible for the race problem in the South. The seeds of it were sowed blithely fifty and a hundred years ago, and we shall not settle it without the right kind of restitution, which will prove to be something more complicated than a generous division of poll taxes and the abandonment of the snobbish phrase, "social equality," that is so beside the mark, and which is always an indication of what is ignoble in either race that uses it. Things are not so easily settled as some of us think. We forget the wrong that was committed long ago, but it does not forget us. It lives like the will of God to chasten us. It surpasses memory and the grave, comes back by way of the future and meets our children at the front gate. And we can no more bury it in the past than we can lay the ghost of a murdered man.

But here is the story, and look where you will in the South today, you will find the application.

It was a privilege, as privileges in slavery went fifty years ago, to belong to Mrs. Melrose, of the Melrose plantations, for she was a rich and indulgent mistress. But she had that monarchical conception of life which developed a sort of royal temperament in the Southern aristocrat. It is founded upon natural courage, generosity and the sense of power. These are qualities that make a few men great, but they do not develop a great people. They belong too much to the exclusive class. Thus Mrs. Melrose was an admirable member of that small but magnificent circle of eight thousand aristocrats who owned the South and ruled the nation before the Civil War. The elegance of her manners, the very dignity

of her spirit, depended largely upon the fact that she owned twelve hundred slaves and six thousand acres of land. This was by no means an ignoble conviction. The sense of ignobility belonged entirely to the slaves. On the contrary, it was a grand sensation, quite distinct from the parvenu consciousness of the average trust magnate of our own times, because it exalts a man more in consciousness to own men than money. It inspires a next-to-God feeling.

So Mrs. Melrose enjoyed the advantages of her position without enlightenment and without the corresponding qualms of the New England abolitionist, who, not being able to own slaves, had made a moral duty of cultivating the qualms. And all went well until the advent of another royal woman on the plantation, who had had a similar training in another barbarous country. One day Mrs. Melrose purchased at an auction in Savannah a black woman just landed from one of the slave ships. Now, it is a part of the obtuseness of royalty not to recognize its counterpart in rags, and our lady was far from suspecting that she had got an African princess for four hundred dollars. The fact did not occur to her even when the overseer reported that it was impossible to induce the woman to perform any kind of labor. In an attempted interview with the recalcitrant, the mistress assumed her grandest, kindest, most authoritative manner, all to no purpose. The lofty woe in the black woman's face surpassed it. She wrapped herself in tragic silence and refused to comprehend. Moreover, the serenity of her idleness showed a grace and distinction enough like Mrs. Melrose's own leisure to suggest the thought that it was derived from the same privileged sense of things.

Matters were complicated by the fact that the new slave refused to recognize the plantation as her home, and took up her abode in a neighboring swamp. And as often as she was discovered and brought back, just so often did she return to the lonely cypress trees and the dark shadows they cast upon the poisoned ground. Mrs. Melrose was at her wits' end. The women on her plantation were rarely flogged and she was loth to punish this wild creature, who was soon to be delivered of a child. Nevertheless, something must be done, and the lady fell upon a device which illustrates the whole situation as it existed in those days. There is little telepathy between the royal temperament and that of any recognized inferior. It implies an intimacy of natures that could not in the very nature of things exist. So Mrs. Melrose had no way of knowing the sensations of the slave woman when she ordered an iron collar to be made and fastened about her neck. It had a rod extending up above the head so high as to be out of reach of the victim's hands, and to this was attached an ordinary cow-bell. The one thought Mrs. Melrose had was to make it difficult for the woman to escape, on account of the ringing of the bell, and at the same time to afford an example to other slaves on the plantation who might be tempted to desert. Some men are naturally vicious, therefore stolidly cruel; but whenever this quality is found in a woman it takes the form of delicate ferocity and genius. Her subordinate position in the scale of things alone prevents its development. But whoever has heard women talk upon some subjects knows that the tenderest of them are not to be trusted with too much power over humans that are not blood kin to them. And the intimate history of the South would prove that, of all the people in it, the same women who were the kindest were often most cruel to their slaves.

From that day the African slave was referred to on the Melrose plantation as the "Belled Woman." And the story of her fury and madness when she heard the bell above her head is told there yet. But that very night she disappeared, and Mrs. Melrose's uttermost efforts failed to discover her retreat. Three years passed,

and beyond the fact that members of the Melrose family occasionally heard, or imagined they heard, the fierce human tinkle of a cow-bell down in the negro quarters at night, nothing further was known of the "Belled Woman" until a certain day, when the mistress went to inspect a grist-mill on the plantation which was undergoing repairs. As she was about to re-enter her carriage a little brown baby with a red turban upon his head toddled out from between the wheels, took his stand and stared at her. He scratched under the edge of the turban with one set of fingers and nonchalantly felt of the navel on his naked belly with the others, but his eyes never wavered from the face in the carriage above him.

"Shep," demanded Mrs. Melrose of the coachman, "what child is this?" She prided herself upon knowing each slave personally, and this was a stranger. "I dunno, Mistis; never seed him before!"

That was a lie. He knew it was the "Belled Woman's" child, and he had contributed along with the other slaves to its and the mother's support. For, *sub rosa*, the "Belled Woman" ruled the plantation, and levied a royal tax upon it in accordance with her state and the oath she had given that her son was the son of a great chief who would one day deliver them. Now, as Mrs. Melrose regarded that small iota subscript of African royalty, Shep realized how ephemeral this hope had been.

"Set the child here in the foot of the carriage," she commanded, "and drive on. I must find out what this means."

Far behind, in the dust of the rapidly rolling wheels, a dark form appeared, and the sound of a fiercely ringing cow-bell cheered the heart of the little hostage sucking his thumb in the bottom of the carriage. Mrs. Melrose had scarcely entered the door of her house before the "Belled Woman" appeared, breathless, covered with dust and crying for her young. "Give him back to me, Mistis," she screamed, lifting her arms high above her head and casting herself face downward upon the floor. "He no slave, he son of a great chief."

A law of the royal temperament is to own the vanquished, not to treat with them. And according to this, Mrs. Mel-

rose made haste now to profit by the circumstance that had delivered the mother of the chief's son into her hands. She commanded the woman to rise. "So this is the child you tried to cheat me of," she said. "Well, I shall keep him here in the house, and you may only see him if you do your share of the work along with the other slaves. If you will not, if you shirk or run away, I shall put the child into the guard-house, and he shall receive your punishment, and live upon bread and water until you return. You may go now and report to the overseer or not, as you please." Mrs. Melrose turned upon her heels, knowing that she would never be called upon to execute this threat. And, indeed, from that day the "Belled Woman" became the most obedient, the most industrious slave upon the plantation. Her one recompense was to sit at evening with the body of the brown baby in her arms, outside the kitchen door of the "big house," where the child had the freedom of a pet kitten. Mrs. Melrose understood the limits of her power, and never attempted to discipline him. She was content to await an opportunity for disposing of both mother and child, and thus ridding herself of an annoyance and the plantation of a dangerous example.

But it was becoming increasingly difficult to sell slaves. The Civil War had begun. In '63 a division of the Union army swept over that section of the South and camped for two days upon the Melrose plantation. Then one of all the slaves there proved faithless to the dearest traditions of slavery in the South, which claims that the slaves were naturally faithful to their masters, rather than to their deliverers. It was in the gray dawn of the summer morning. The Union camp was in the bustle of a hurried departure. Suddenly a Yankee officer, mounted upon his horse and about to depart, was startled by the apparition of a black woman wearing an iron collar and a bell upon a rod above her head. She stood at his stirrup holding up to him the sleeping form of a little black boy.

"Take him, Marster! He no slave! He came from over the water with me, under my heart. He great chief's son." And before he could recover from his

surprise, she poured forth the story of her misery and bondage. He was deeply moved, accepted the child (as was the custom of all Union officers when they had the opportunity to free a Southern slave) and promised to send it to friends in the North. But she refused all offers of assistance for herself.

"No, the 'Belled Woman' has lost the free heart. She had the lash on her back. She a slave now forever!" she cried, flinging her arms above her head and disappearing into the shadows from whence she had come.

Nearly all that was true of plantation life in the South before the war belonged so definitely to the middle centuries that it is almost incredible of belief now. For example, the incident related above bears every mark of fiction, and of primitive fiction at that, but it is substantially true. And the sequel to it presents one phase of the negro problem in the South, a phase that cannot be settled according to any system of ethics advocated by Northern sentimentalists, nor by any of the various methods of political repression of negro votes employed in the South. This is only a symptom of the mortal disorder with which both the whites and blacks are afflicted—and when all is said, there is an impersonal coldness about Northern ethics which springs from the academic quality of sentimentality in that region, and which renders it impossible for them to help further in the solving of this problem. Their assistance is more intelligent than it is kind and human. And peace with a simple, emotional, child-race like that of the negro can only be established thru the heart, not the head. It is the foolish notion of what this heart tenderness may lead to that keeps all races estranged from these black victims of a higher civilization. It does not really involve "social equality," or amalgamation, as so many think, but humane comprehension, honest regret, forgiveness. These are the treaty conditions of peace between the Southern whites and the negro, and they are the only people in this world generous enough to be capable of such a treaty. They are, by the very nobility of their nature, already profoundly related to the negro and his helplessness, whereas it is a notorious fact that even those North-

erners who make a sentimental recognition of him socially, feel an intense personal antipathy to him.

What we need in the South is a more *respectful* realization of the separateness of the two races. It will be expensive, but it will be decent and honest, and it would do away with the humiliations of Jim Crow laws. It is not proper and it never will be proper for whites and blacks to mix socially, but it is ignoble and disgraceful to humiliate the weaker on this account. Besides, we owe debts to the children of men and women who suffered the peculiar shame of slavery. And debts are not paid by hectoring or by denying them. Also, the time has come when the will of God demands that we pay one way or the other. That is what makes the problem.

Forty years passed before the "Belled Woman" heard again from her son. Freedom had come even to her, and she had wandered far from the Melrose plantation. But, like all the old slaves in the South, she retained that pathetic docility, that nerveless impotence of the spirit. It was the inside scar of the iron collar. One day she sat in the door of her house in Shake Rag alley, one of the darktown suburbs of a great Southern city, watching the little brown babies tumble in the noisy street outside. She had no philosophy, therefore no bitterness, but she worked hard, and in the evenings as she sat thus waiting for the sun to go down, she often recalled her own baby with vague pain, and wondered dumbly what had become of him.

On this particular day, however, her reverie was interrupted by the approach of a young negro man who proclaimed himself the agent for a wonderful book. And having accepted the seat which old Bell hastened to offer (she was called "Bell" now, thru a kind of delicacy—a name, however, to which the clatter of the bell still clung), he began a flowery exposition of the contents of the volume. Seated before him in a split bottom chair, with her hands folded, the old black woman listened entranced. It was impossible for her to resist any kind of agent. They seemed to her inspired beings, as indeed they were, and she had bought nearly all she possessed thru them on the instalment plan. Among other

things, an organ and a sewing machine; not that she could play upon the former or sew upon the latter, but she had not been able to resist the eloquence of the agents. Besides, in Shake Rag alley, a person was graded socially by these two essentials. And to be without them was to be without the pale of the best circle. Bell had always moved there, not very socially, but with mysterious dignity and a kind of inborn assurance which the organ and sewing machine helped to support. As she heard now of the wonderful value of this book from the young agent she contemplated a literary advance in the scale of things. She could not read, but that was no reason why she could not own a book. It would look well on the "center table" in her "front room." These were her thoughts when suddenly she caught the meaning of what the agent was telling her. He said that it had been written by a negro like themselves. She was astonished. She had thought all books were written by "white folks." She took it in her hands and gazed at it reverently and was filled with strange emotion when she beheld the picture of the author back of the preface. Where had she seen that face before? Never, of course; still it was strangely familiar.

"And," the young man went on, interrupting her reverie, "it tells all about slavery times."

"Not all!" she murmured, incredulously.

Then, to convince her, he took the book and read a certain memorial chapter dealing with the woes of the black folks in bondage. And as she listened old Bell realized that the author had set all the martyrdom of her life to a mutinous tune. It was the book of the revelations of the sad scriptures of a slave's heart. The tears ran down her withered cheeks and she beat her breast with her hands as the reader unfolded her own memories page after page, yet not her memories so much as the fierce passions born of such memories.

She gladly paid the extortionate price demanded and sat far into the night with the book upon her knees, strangely stirred and feeling near and kin to it. After that every neighbor who came in that could read was given the sacred

volume, while old Bell left her work to listen. and many came when they heard of the contents of the book, and Bell was never tired of showing them the picture of the author at the beginning. Indeed, she looked at it many times a day, never knowing that it was the face of her own son upon which she gazed. Her son, living now in a great Northern city, with no more than the shadow in his mind of the mother who had lifted him from her breast to liberty in the dim dawn of that summer morning so long ago. But as he grew to manhood he comprehended the act, and his life had been the living memorial of the mother's sacrifice. He had written the book because he had been haunted in his freedom by the thought of her bondage. And now the book had come to her, of all people, like the return of bread cast upon the waters. And as she fed from it day by day she had once more the "free heart." She inflamed the minds of her companions with terrible stories of the past. There was something dynamic in the dark eloquence of her face, and she became an inspired priestess of vengeance.

The newspapers only report the unruly spirit of the negro population in that community. And the whites do not understand that it is the sound of a cow-bell above a slave woman's head, ringing yet after forty years, in memory, that causes the trouble. They do not take account of the fact that if love dies easily between alien races, hate hatches out in the third and fourth generation. It is the longest lived of all human emotions, and the longer it is in hatching the stronger it will be in action.

And it is impossible to tell yet how much is to be done, but one thing is certain, we shall not have rest or peace or any measure of security until enough is done to atone for these great wrongs of the past. These are the father's debts which the children must pay. And, after all, this is the great consolation—the will of God is over and above the uttermost we do. The mind of man does not affect it nor do his tyrannies change it. We shall be confounded, ground to powder, born again and again till every wrong is made right and till good comes to all men.

A Creedless Church for a Creedless People

BY CHARLES SPRAGUE SMITH

MANAGING DIRECTOR OF THE PEOPLE'S INSTITUTE

EVERY larger community is facing today the problem of what to do for those whom the church no longer attracts. For it is recognized by churchmen and non-churchmen alike that the old Sabbath service which all attended, at week-end and week-beginning, gave something man needs. Purely educational or diversional opportunities are not substitutes, while the appeal of the (so-called) ethical movement is thus far limited chiefly to the more intellectual.

The larger the community, the more heterogeneous its population, the graver and more complex this problem. In New

York City an attempt has been made to solve it. The gathering place, Cooper Union Hall, is one dear to the people's heart. For there men who speak its speech, are inspired by its ideals, have addressed and still address great audiences. More than any other hall in America, more even than Faneuil Hall. in Boston, Cooper Union has been and is a forum of democracy.

In 1898 a new organization, The People's Institute, began its work there. For the first year its field embraced; solely, evening addresses and discussions upon problems of the day. The proclaimed purpose was preparation for the intelli-

gent discharge of civic duties. The frank way in which the work was done won in an unusual degree the confidence of the masses, distrustful ordinarily of any social-educational movement directed by men who do not themselves belong to the working class. For, from the platform, social reorganization on the basis of the recognition of solidarity, brotherhood, was frankly declared to be the goal set. Of the speakers only knowledge and sincerity was demanded, none being excluded, save the preacher of revolution. Similarly, entire freedom of speech, within the bounds of courtesy, was the sole rule prescribed in the discussion following upon every address.

In the second year of its life The Institute, relying upon the vantage of confidence won, began a church experiment. Similar methods were employed to those that had proved successful in the purely secular work. The sole limitations imposed were that there should be no attack of creed upon creed and no attempt to proselyte. The success, great at the start, vast audiences of all creeds and no creed gathering, has increased year by year. The seating capacity of the hall, 1,600, is, during the larger part of the season, inadequate, from 50 to 200 persons usually standing. The speakers, almost always clergymen, represent all creeds, save the Catholic. The themes are ethical and commonly religious. The element of worship is largely absent. Experience has suggested but one method of introducing this without giving offense to some element of the audience, and none should be offended. Music, that of a grand organ, would provide this medium, but there seems to be no place in the hall for such an organ, and there are no funds wherewith to provide one, could place be found.

It can hardly be doubted that with a hall of much larger dimensions, properly equipped, the audience would speedily more than double in size. For the close air and the crowding of the present quarters, with the inadequacy of the music (piano and soloist) due to limited funds, keep many, especially of the well-to-do, away who, under different conditions, would gladly become regular attendants. Thus one purpose sought by these gatherings, namely, the breaking down of the separating walls between

class and class, is still in large degree defeated. But the problem of assembling regularly non-churchgoers (with churchgoers) of all creeds and no creed and bringing to them, thru the teachings of the leaders in the pulpit, ethical and broadly religious instruction and inspiration can fairly be regarded as solved. Two-thirds, at least, of every Sunday audience are regular attendants.

Sit on the Cooper Union platform on a Sunday night and look out upon the mass gathered in that historic hall. It is not the usual church assembly. Ordinarily women predominate where religious or ethical addresses are given. Here, among the 1,600 to 1,800 that fill the seats and line the walls, the brighter colors of woman's dress and headgear are as infrequent as bright colored flowers, purple asters, for example, in a well-ordered grain field. Fully 90 per cent. are men, and they have gathered from all over Manhattan Island. Not a few have come from towns lying along the Hudson. Some are Jerseyites who make this weekly pilgrimage to the city to be present at the unique assembly. There is no listlessness. Perhaps a weary Willie or two may be nodding (Cooper Union is very convenient to the Bowery, and the stream of flotsam and jetsam that moves up and down it), but the nodders are few. To look for the first time into that multitude of tense faces is an impressive experience.

The speaker of the evening, usually a clergyman, and one of the most eminent in the metropolitan pulpit, is discoursing about some religious or ethical theme. It may be an ethical treatment of a question of the day. As he develops his thought, if he shows not only a good grasp of his subject, but also a sympathetic understanding of the people's way of thinking and feeling, there is a manifest deepening and quickening of life in the audience. You are sensible of waves of emotion sweeping thru the hall. The speaker pauses for a moment, and a burst of applause punctuates the interruption. Then he resumes. Perhaps a little later he seems to glide over the surface of things instead of penetrating to the depths, and you are conscious that minds are registering the fact and preparing to dispute the conclusions presented, when the proper time comes.

The three-quarters of an hour or hour, allotted for the address, is coming to a close; the speaker, inspired by his audience, is drawing together in a masterly fashion the threads of his discourse and leading up to a stirring peroration. The interest becomes every moment more tense. As the last word is spoken the applause reverberates from the low roof of the old hall. The audience will not let the speaker remain in his seat, he must advance to the edge of the platform and receive their enthusiastic greeting. They call him again and again forward. Gradually the intensity gives place to calm, and music intervenes to lull the minds back to restfulness.

Then follows the half or three-quarters of an hour devoted to discussion. The weak points, if any such there have been, in the argument have been noted, and are ruthlessly uncovered by those who in succession take the floor. In general, the discussion shows a sincere desire to get at the whole truth, to relate what has been said to practical life. But the crank is also in evidence, the man, too, who is convinced that his scheme of social service is the cure-all. A ripple of excitement occasioned by the substance and method of their remarks not infrequently runs thru the hall, but the presiding officer, with the assistance of the audience, always succeeds in repressing all undue manifestations.

It is a revelation to one who has not before come close to the people. This revelation is a manifold one. You discern what the people are thinking about and how they are thinking about it, what their deepest desires and needs are, and how they think they ought to be satisfied. You seem to see, you do see, if you have been there frequently, how the stream of folk life is moving in this city and country of ours. And in your mind the movement here associates itself with the world movement outside and with the folk current across all the ages since social development began. The fundamental, straightforward striving for the right on the part of the people becomes also clear to you. There is splendid citizenship here, in the making, in this unschooled multitude, an immense force of righteousness, for all kinds of uplift, if rightly instructed and directed.

Gradually, on the old dial above the platform the hands approach the hour of ten; the chairman stops the discussion, which usually has become somewhat languid, and the speaker of the evening, in a few brief sentences, sums up the lesson, the result of his own address and of the new thought developed by the discussion. The audience is thereby brought back again from its mental wandering to the heart of the theme, and uplifted to the heights of vision and purpose to which the evening's work has sought to lead them. Then comes the closing hymn, sung by the audience rising. The hymnology of this People's Church has also its special interest. Part of the songs have been composed by those connected with the work, part selected from other hymnologies. All breathe the spirit of democracy, faith in humanity, in an intelligent ordering of the universe, progress toward a higher social ideal.

To multitudes (some 12,000 individuals yearly) this is the only church they know or care to frequent. To its services they look forward as to a haven of refuge, a fountain of refreshing from week end to week end. Every creed is represented, and every non-creed, religious and social. But at the door all that separates falls away and all elements merge in a true congregation, a brotherhood seeking for instruction, light, inspiration.

If you would hear the leading clergymen of New York at their best, do not seek them in their own pulpits, but go to Cooper Union. If you would understand what the thinkers of the past meant when they used the term "*Vox populi, vox Dei*," go there also. If you would see democracy in the making, there is no place where you can get nearer to its fundamental processes than in that hall where Abraham Lincoln delivered the address that made him President, the hall that a working man of New York, Peter Cooper, dedicated to the training of working men in the principles and practice of democracy.

If formulated, the creed of this creedless church would run, "Faith in the brotherhood of man and loyal service to the Power not ourselves that makes for righteousness."

NEW YORK CITY.

Seeing Straight

BY JOHN BURROUGHS

A NEWSPAPER correspondent the other day asked me what I meant by truth in natural history. "We know that no two persons see alike," he said, "or see the same things; behold the disagreements in the testimony of eye witnesses to the same occurrences." "True," I replied; "but when two persons shoot at a mark, they must see alike if they are both to hit the mark, and two witnesses to a murder or a robbery must agree substantially in their testimony if they expect to be credited in the court room." In like manner, two observers in the field of natural history must in the main agree in their statements of fact, if their observations are to have any scientific value. Notwithstanding the fact that we do not all see the same things when we go to the fields and woods, there is such a thing as accurate seeing, and there is such a thing as inaccurate seeing and reporting.

By truth in natural history I can only mean that which is verifiable; that which others may see under like conditions, or which accords with the observations of others. You may not see just what I do in the lives of the birds or the quadrupeds, but you will see that which belongs to the same order of facts, just as you will in the world of physics. You will not see iron floating and wood sinking under like conditions, or trees growing with their roots in the air. You may see today something in the life of a bird, or a bee, or a beast, that neither I nor any one else ever saw before, but it will belong to the same order of things that I and others have seen these creatures do. You will not see a woodchuck hanging to a limb by his tail like a possum, nor a fox sleeping in the top of a tree like a coon, nor a loon running a race between lines of interested spectators, nor crows hoarding trinkets in a hollow stump, nor the old teaching their young this or that, and so on. No, you may send a thousand good observers to the woods every day for a thousand years, and not one of

them will see any of the novel and surprising, not to say impossible things of which the "nature fakers" see so many every time they take a walk. The nature faker's fantastic natural history is not verifiable. I have seen blackbirds build their nests in the side of an osprey's nest, and all seemed to go well—the osprey is exclusively a fish eater—but if any person were to tell me that he had seen them build their nests alongside of that of the hen hawk, or that he had seen blue birds breeding in a cavity with the hoot owl, I should know him as a faker. The rabbit is not on visiting terms with the fox or the mink, nor do the robins welcome a call from the jays.

I did something the other day with a wild animal that I had never done before or seen done, though I had heard of it; I carried a live skunk by the tail, and there was nothing doing, as the boys say. I did not have to bury my clothes. I knew from observation that the skunk could not use its battery with effect without throwing its tail over its back; therefore, for once at least, I had the courage of my convictions and verified the fact.

A great many intelligent persons tolerate or encourage our fake natural history on the ground that they find it entertaining, and that it interests the school children in the wild life about them. Is the truth, then, without value for its own sake? What would these good people think of a United States school history that took the same liberties with facts that certain of our nature writers do; that, for instance, made Washington take his army over the Delaware in balloons, or in sleighs on the solid ice with bands playing; or that made Lincoln a victim of the Evil Eye; or that portrayed his slayer as a self-sacrificing hero; or that represented the little Monitor that eventful day on Hampton Roads as diving under the Merrimac and tossing it ashore on its back?

The nature fakers take just this kind

of liberties with the facts of our natural history. The young reader finds it entertaining, no doubt, but is this sufficient justification?

Again, I am told that the extravagant stories of our wild life are or may be true from the writer's point of view. One of our publishing houses once took me to task for criticising the statements of one of their authors by charging that I had not considered his point of view. The fact is I had considered it too well; his point of view was that of the man who tells what is not so. As if there could be more than one legitimate point of view in natural history observation, the point of view of fact!

There is a great deal of loose thinking upon this subject in the public mind.

An editorial writer in a New England newspaper, defending this school of writers, says:

"Their point of view is that of the great out-of-doors, and comes from loving sympathy with life they study, and is as different from that of the sportsmen, and the laboratory zoölogist as a notebook differs from a rifle or a microscope."

Now how the point of view of the "great out-of-doors" can differ from the point of view of the little indoors in regard to matters of fact is hard to see. A man who watches the ways of an animal in the wilderness, or from the mountain top, is bound by the same laws of truthfulness as the man who sees it thru his study window. What the writer means is doubtless that the spirit in which the literary naturalist—the man who goes to the fields and woods for material for literature—treats the facts of natural history differs from the spirit in which the man of pure science treats his. Undoubtedly, but the two alike deal with facts, tho with facts of a different order.

The scientist, the artist, the nature lover, etc., all look for and find different things in nature, yet there is no contradiction between the different things they find. The truth of one is not the falsehood of another. The field naturalist is interested in the live animal, the laboratory zoölogist in the measuring and dissecting of the dead carcass. What interests one is of little or no interest to the other. So with the field botanist as compared with the mere herbalist. Both are seekers for the truth, but for a different

kind of truth. One seeks that kind of truth that appeals to his emotion and to his imagination; the other that kind of truth—truth of structure, relation of parts, family ties, etc.—that appeals to his scientific faculties. Does this fact, therefore, give the nature faker warrant to exaggerate or to falsify the things he sees in the fields and woods? Let him make the most of what he sees, embellish it, amplify it, whirl it on the point of his pen like a juggler, but let him beware of adding to it; let him be sure he sees accurately. Let him beware of letting invention take the place of observation. It is one thing to work your gold or silver up into sparkling ornaments, and quite another to manufacture an imitation gold or silver, and this is what the nature fakers do. Their natural history is for the most part a sham, a counterfeit. No one quarrels with them because they are not scientific, or because they deal in something more than dry facts; the ground of quarrel is that they do not start with facts, that they grossly and absurdly misrepresent the wild lives they claim to portray.

One of our most influential weekly journals, in defending the nature fakers against the attack of President Roosevelt, makes this statement:

"We quite agree that fiction ought not to be palmed off on school children as fact; but we do not agree with what is implied, that imagination may not be used in interpreting and narrating facts. Men see thru their temperaments; the imaginative man sees thru his imagination, and he is telling the truth if he tells what he sees as he sees it. Mr. Froude, who had a vivid historical imagination, was bitterly condemned by Mr. Freeman, who had none; but Mr. Froude's history is not only interesting, while Mr. Freeman's is dull, but very eminent authorities regard him as the better historian of the two."

Behold what confusion of thought there is in this paragraph. The writer confounds the interpretation of facts with the observation of facts; he confounds the world of ideas with the world of concrete experiences; he confounds the historian of human annals with the eye witness of daily events in the lives of our wild creatures. Neither Froude nor Freeman wrote from observation or experience, as our nature fakers claim to, but from the study of past men and events as recorded by others. They

were interpreting the records and their temperaments and imaginations greatly modified the results. But other things being equal, would we not prefer the historian who kept closest to the record, to the actual facts, of the case? Truthfulness is a merit, imagination is a merit, and neither can take the place of the other. When the two are combined we get the best results.

Certainly "the imagination may be used in interpreting and narrating facts"—must be used if anything of literary value is to be the outcome. But it is one thing to treat your facts with imagination and quite another to imagine your facts. So long as the natural historian or the human historian is sound upon his facts, we know where we stand. But the faker is a faker because he disregards the facts. Froude uses more imagination in dealing with his material than Freeman did, hence he has much greater charm and power of style. It is only when he disregards the fact, or takes unwarranted liberties with it, that Freeman can justly criticise him.

There has been no such luminous interpreter of the facts of natural history as Darwin; he read their meaning as no one else had ever before done. His reason and his imagination went hand in hand. But was there ever a mind more loyal to the exact truth? Every man who brought him a fact brought him material for the edifice he was so intent upon building—an edifice which the human mind since his day is dwelling in with more and more contentment.

It is in the interpretation of natural facts and phenomena that temperament, imagination, emotional sensibility, etc., come in play. In all subjective fields—in religion, politics, art, philosophy—one man's truth may be another man's falsehood, but in the actual concrete world of observation and experience, if we all see correctly we will all see alike. Blue is blue and red is red, and our color-blindness does not alter the fact. In emotional and imaginative fields a man may be "telling the truth if he tells what he sees as he sees it," but in the field of actual observation he is telling the truth only when he tells the thing as it really is, reports the habits and behavior of the animals as they really are. What do we

mean by powers of observation but the power to see the thing as it is—to see the truth? An opulent imagination cannot make up for feeble powers of observation. The effect the fact observed has upon you, what you make of it, what it signifies to you—that is another matter. Here interpretation comes in, and on this line you have the field all to yourself. I may think your interpretation absurd, but I shall not question your veracity or honesty of purpose. We are very likely to differ in taste, in opinions about this and that, in religion, politics, etc., but we must agree upon facts. Unless there is some chance that men can see and report accurately, what becomes of the value of human testimony as given by eyewitnesses on the witness stand? Things do fall out so and so, or they fall out otherwise; it is not a matter of imagination or of temperament in the beholder, but a matter of accurate seeing. In getting at the value of a man's testimony we may have to take into account his excitable or his phlegmatic temperament, and the seductive power of his imagination, and eliminate them as so much dross in a metal. Eyewitnesses generally differ; we must reconcile the differences and sift out the facts.

The animal story writers, such as Mr. Roberts and Mr. Seton, aim to give the charm of art and literature to their natural history lore, to so work up their facts that they appeal to our emotion and imagination. This is legitimate and a high calling provided they do not transgress the rule I have been laying down, which Mr. Roberts does when he represents the skunk as advertising his course thru the woods to all other creatures by his characteristic odor, since the skunk only emits that odor when attacked, and is at all other times as odorless as a squirrel; or when he says the fox is too cunning to raid the poultry yard near its own door, but will go far off for its plunder. I wish the pair of foxes that had their den within easy rifle-shot of our farmhouse the past season had acted upon this policy. We would have reared more chickens, and one of the foxes would not have met his death as he did while he was chasing a hen thru the currant patch in broad daylight.

The principal object of nature study as pursued in the schools should be to teach the children to see straight, to develop and sharpen their powers of observation and give them rational views of animal mentality.

When one of our nature writers, whose methods have been much criticised, says in the introduction to one of his books on animal life that he would "make nature study more vital and attractive by revealing a vast realm of nature outside the realm of science," is not one set to puzzling one's brain as to how there can be any nature study in the way of natural history that will carry one beyond the realm of science? Is there any subject matter in the books thus prefaced that science cannot deal with? And why does the author aver with such emphasis that his facts are all true and verifiable?—just the test that science demands. If it is all true and sound natural history, what puts it outside the realm of

science? If it is not true and real, why call it nature study? Why not call it the gentle art of bearing false witness against the animals? But this realm of nature outside the realm of science—the realm of the occult—is not open to observation and is therefore not a subject for nature study. The realm of science embraces the whole visible tangible and intangible universe. Is not that field enough for nature study? Can there be any other field? What lies outside of this is mere matter of speculation.

The works of the writer referred to are outside the realm of science only as every exaggeration and falsification is outside that realm, or as Alice in Wonderland and Jack and his bean stalk are outside. Such a course may make nature study more attractive to certain credulous minds, but it can hardly make it more vital or add to our knowledge of the world and its denizens, by which we are surrounded.

WEST PARK, NEW YORK.

Improving the National Capitol

BY W. B. HEYBURN

UNITED STATES SENATOR FROM IDAHO

EXISTING conditions render it imperative that Congress shall take immediate steps to provide additional accommodations for the several departments of the Government at Washington. In this practical age we necessarily approach the consideration of public improvements from the standpoint of accumulated experience and knowledge, and are controlled in a measure by what has been done and the conditions resultant therefrom. Plans that might have appealed to us in the beginning are rendered impractical in this day by reason of changed conditions. We have completed buildings and partially executed plans representing large expenditures which cannot be entirely disregarded. There remains, however, a large field for present and future plans that shall combine the practical, useful and beautiful

in harmony with what we have already completed without sacrificing in any large degree either the financial or useful accomplishments of the past.

In planning to meet the present and future requirements we have a natural basis upon which we may safely build. This basis is Pennsylvania Avenue, at the east end of which stands the Capitol building within which the laws are made and established. At the west end of this avenue stands the Executive Mansion, from which the will of the nation is applied and executed. The torch of the accumulated wisdom of all ages is planted under the golden dome of the Congressional Library, at the eastern door of the Capitol, to serve those who make and interpret the laws. The Treasury stands on the one hand and the combined Army and Navy Building on the other, of the

Chief Executive at the White House. Lying between the Capitol and the White House is a natural and convenient field within which to place the buildings necessary to the purposes of these Departments of the Government in the convenient execution of their functions. The Mall lies on the south and Pennsylvania Avenue on the north of this field; between these limits, with the legislative branch of the Government at one end and the executive at the other, I would place the judicial branch of the Government in a temple of justice befitting that goddess who holds the balance true to weigh the acts of the legislative and executive branches of the Government in the scale of justice by the measure of the constitution.

In buildings of fitting and appropriate design and structure along the south side of Pennsylvania Avenue I would place the administrative departments, necessary on either side of the temple of justice.

The Government is now the owner of a very considerable portion of the land lying south of Pennsylvania Avenue. It owns that included within the Mall, comprising what is known as the Monument Grounds, Agricultural Grounds, Smithsonian Grounds, Armory Square, Public Gardens and the Botanical Gardens. Within the building area on the south of Pennsylvania Avenue it owns in addition to the Mall, 441,961 square feet of land outside of that included within the streets and parks lying within the area between the Mall and Pennsylvania Avenue. These streets and parks cover 1,243,188 square feet. The private ownership necessary to be acquired between Pennsylvania Avenue and the Mall consists of blocks No. 227, No. 228, No. 229, No. 230, No. 256, No. 257, No. 258, No. 259, No. 260, No. 292, No. 293, No. 294, No. 295, No. 349, No. 350, No. 380, No. 381, No. 382, No. 461, Reservation A., Reservation B, block No. 575, No. 576. Reservation 12, Reservation D., and Reservation C., containing in aggregate 2,022,164 square feet. The Government is already an owner within these limits of blocks No. 255, No. 323, No. 324, a portion of block No. 228, a portion of block No. 293, the Haymarket Square, the Central Market Square and the streets and parks, making a total of

Government ownership, independent of the Mall and south of Pennsylvania Avenue, of 1,685,149 square feet. The assessed valuation of all the land included within the proposed purchase is \$3,753,906. The assessed valuation of all the buildings included within the proposed purchase is \$2,203,800. These assessments are based on a two-thirds valuation of the actual cash value of the property. This would make the land proposed to be taken of the actual value of \$5,630,856, and of the buildings thereon \$3,305,700, making a total of \$8,936,556 as the actual cash value of the lands and buildings included within the purchase.

On December 5th, 1906, I introduced in the Senate Bill No. 6649 providing for the purchase or condemnation of all private holdings lying between the Mall and Pennsylvania Avenue. This bill was referred to the Committee on Public Buildings and Grounds and on January 30th, 1907, was favorably reported by me without amendment. The bill passed the Senate and was sent to the House, but there failed to receive consideration. It was, however, on my motion offered as an amendment to the Sundry Civil Bill in the Senate, which amendment was adopted, and in the conference between the Senate and the House on the Sundry Civil Bill the Senate insisted on the amendment, but the House objected and the Senate was compelled to recede, so that the legislation failed. A similar bill was again introduced by me at the opening of the present session of Congress and it is sincerely believed that the bill will become a law.

This measure has received wide approval since its purpose and scope were made plain during the consideration of the bill in the Senate at the last session of Congress and the agitation of the measure during the recess by those who favored it.

I have frequently been urged to enlarge the scope of the bill by inserting provisions as to the manner of the use of this land after it is acquired, but I have declined to embarrass the provision for the acquisition of the land by any measures that would be likely to involve a controversy as to the plan of buildings or a determination at this time of the manner of the use of the property. I

have, however, given a great deal of attention and study to the question as to the manner and character of improvement to be placed upon this property. I think first the property should be acquired as speedily as possible, entirely cleared of all buildings and converted into an orderly, well-kept park which should constitute an extension of the Mall to the south side of Pennsylvania Avenue; and that concurrent with this work proper plans and specifications for government buildings sufficient not only to meet present necessity, but anticipating fully forty years of the growth of the country, should be prepared and that Congress should take immediate action for their erection as rapidly as possible. The government is now paying an annual rental which is equal to an interest charge on about \$18,000,000 in the city of Washington alone.

I believe that the character of the buildings to be constructed on the south side of Pennsylvania Avenue should be as harmonious in architecture as it is possible to plan them. By this I do not mean uniform, but I do think that the architecture should conform to what is generally known as the classic school—Corinthian-Greek—with such modifications as were made to the early classic styles through the Roman period. These buildings should not be set down to the present level of the ground but should be placed upon an elevated marble terrace extending continuously the entire length of the avenue, stepped to conform to the grade of the avenue—the terrace to be high enough to permit of open passage-ways conforming to necessary street crossings and open to permit of free access to the lower stories of the buildings and leave a passage-way for travel passing between Pennsylvania Avenue on the north and that part of the city lying on the south side of the Mall. The buildings should be set back on this terrace a sufficient distance to produce the best architectural effect and at the same time afford an opportunity for ornamentation on the terrace between the front of the buildings and the front of the terrace. I would have the architecture rise toward

the center of the stretch and there I would place the hall or temple of justice surmounted by a dome or other architectural climax that would give proper effect to the entire line of buildings that must necessarily be about eight times the length of the present Capitol. I think it would be necessary to conform the front lines of buildings already erected on the south side of the avenue to the general plan of architecture developed. This could be readily done by the construction of new fronts upon the buildings that would align with the avenue instead of the intersecting streets as at present.

I do not feel justified at this time in going more into detail as to the architectural plan that in my judgment should prevail, but I think the foregoing sufficiently suggestive of a plan that may be worked out with a variety of modifications and improvements. The buildings should be connected on the terrace level with peristyles. This would give the effect of a continuous structure and would make it possible to pass through all of the different buildings on the terrace level or to pass in front of them on Pennsylvania Avenue or on the Mall front upon the street level and enter the basement to elevators, as we now may do in the State, War and Navy building. I do not think it necessary to consider particularly what the original plan of L'Enfant was. Such plan has been forestalled by innovation that would render its complete adoption impossible, and modern wisdom gathered from experience since his day justifies us in departing from his plan so far as it may seem expedient under existing circumstances.

With this plan of improvement of the national capital carried into effect it will enhance the greatness not only of the city of Washington but of the nation of which this is the capitol and will place it in the very front rank of both ancient and modern cities in point of architectural beauty. It remains for the architects of the country to present us with the result of their skill and genius in devising appropriate plans for the realization of this great purpose.

Men We Are Watching

BY A WASHINGTON JOURNALIST

THE TREASURER OF THE UNITED STATES.

THE bank panic of October and the general agitation over the financial question, in and out of Congress, have turned all eyes toward a very prominent figure in the financial world today—the Treasurer of the United States, Hon. Charles H. Treat. It is no new thing for Mr. Treat to have broad, progressive and valuable ideas upon financial questions, but they have seldom been so much sought after by the President, by the Congress and by bankers and the public generally. Few men are kept busier, thru this early winter, than Treasurer Treat; but no busy man in America is more easily and pleasantly approachable and more cordial and agreeable to meet. He is a good man to look at—a big, sturdy product of Maine, sixty years old but as rugged, robust and active, physically and mentally, as any man of

forty. He is a better man to meet, if you have anything to ask that it is worth his while to answer or to say that it interests him to hear. It is a perfectly evident pleasure to him to make knotty problems plain. He does it with a simplicity and directness which makes you think yourself a fool not to have seen it before. He is a delightfully encouraging listener.

From his earliest efforts at anything Treat has had a bent, and followed it, which signally adapts him for his present position. He says he absolutely delights in his work. He told me the other day that he believed he found greater pleasure in an able financial article than most found in the best of novels.

Treat began with his fad early. When he graduated from Dartmouth College his thesis was upon The National Banking Act. Secretary Blaine paid him high compliments for the value of his theories during the complications attending the resumption of specie payment. During the Harrison campaign Treat lacked but two votes of being caucus nominee for United States Senator from Delaware. President McKinley made him Collector of Internal Revenue for the Wall Street District, and after seven years in that excellent school, President Roosevelt made him Treasurer of the United States. He is in the right position, now, to make his life-long theories of finance and the monetary system as effective as possible.

THE PRESIDENT OF THE CENTRAL AMERICAN PEACE CONGRESS.

The unexpected triumphant close of the Peace Congress of the Central American Republics, which has been in session in Washington for the past month, has drawn unusually wide attention to its energetic young president, Hon. Luis Anderson, delegate from Costa Rica, where he holds a Cabinet position as Minister of Foreign Affairs.

Señor Anderson was the youngest delegate to the Congress and is the youngest member of the Costa Rican Cabinet—he is not yet thirty-three—but he already has behind him a record of years of tenacious and more and more

CHARLES H. TREAT.

Treasurer of the United States.

Copyright, 1907, Harris & Ewing, Washington, D. C.

effective effort to bring order out of the chaos and friendliness out of the fighting blood of the Central American Republics. More than to any other one man it was due to him that conditions were brought about rendering this final success possible. Alone of the Central American Republics, Costa Rica has possessed a comparatively stable government and ballot for nearly half a century, and has taken the lead in several previous peace conventions, of which Anderson was an active member. They failed to become effective for various reasons which were carefully eradicated or overcome by the recent congress. As Señor Anderson expressed it to me in the early days of the session: "We have come to Washington for a final effort, determined to do the deed, this time, or die in the attempt." That "die in the attempt" is not such an elastic phrase, either, when applied to over vigorous reformers among our Latin-American brethren.

Anderson is a very small man, with no end of Latin-American characteristics, tho his father was English. He is very dark of hair, dark of eye and dark of skin. He speaks English gracefully and forcefully but not without a decided accent and some hesitation. His dainty moustache gives first glance a wrong impression of what is really a strong mouth and chin. In spite of his frail, boyish figure and Latin face, there is a lot of dogged Anglo-Saxonism—determination and courage—about the man, all of which he has amply displayed in pushing the peace proposition forward to its ultimate victory. He is nervous and quick in every word and motion, full of flashlights as well as patient insistence. He says, with evident pride, that it is the mixture of races in him which gives him the qualities of both.

He is already one of the leading lawyers of Costa Rica, and not long ago came to the United States in the interest of several American concerns operating in Costa Rica. Since he turned his attention to politics, and played an important part in the election of President Viquez, he has been rapidly developing the qualities of a statesman. The confederated American Republics will hear more of Luis Anderson, and his efforts for peace and his theories along those

LOUIS ANDERSON.

Minister of Foreign Affairs, Costa Rica. President of the Peace Congress of the Central American Republics.

lines are destined to take prominence in wider movements. He is already working upon the subject; but just after the last meeting of the recent congress he said to me: "Nothing which I can ever do will give me greater pride and satisfaction, or be effective of more real benefit, than helping to secure the peace which I now think has been established among the Republics of Central America."

JOHN DALZELL.

No one doubts the accuracy of the general impression that in the present session of the Sixtieth Congress there will be more dancing about the campaign pole than important and effective legislation. But that is the result of circumstances over which even the great ones have no practical control—the great ones especially in the House, who control most everything there, from the very necessities of the case as Tom Reed saw it and as Uncle Joe and his lieutenants profess and believe. Representative Ashbury only shifted a common sentiment to

anonymous shoulders when he told of a new member going home for his first holiday and saying to his friends: "If my constituents only knew how little a Member can accomplish in Washington, without the consent of a few big ones who rule the House, they would never take the trouble to elect a Representative at all. They would simply write."

The Hon. John Dalzell, of Pittsburg, Pa., is distinctly *one* of the big ones. He is the man everyone watches who wonders how the House cat will jump. It is Cannon, Dalzell, etc.—the Committee on Rules. It is Payne, Dalzell, etc.—the Committee on Ways and Means. And between the Rules and Ways and Means, what cannot be successfully managed is hardly worth managing.

Dalzell has one of the shortest biographies in the whole Congressional directory. It is characteristic of the man and would be shorter yet, by almost one-half if he had not been obliged, according to Congressional custom, to spell out the number of every Congress from the Fiftieth to the Sixtieth inclusive, in reporting the number of terms he had served in the House of Representatives. Dalzell knows all about legislation, and if he doesn't know he can easily find out by asking Speaker Cannon or Chairman Payne—with one or the other of whom he perennially is, when not on the floor.

He is one of the gentlest, most inoffensive of men to meet—if you can succeed in stopping him; for he is always going somewhere, usually with Payne, whose bulky proportions make Dalzell seem even thinner and shorter than is true. "Inoffensive," is a word used after meditation, for that is distinctly Dalzell. He is the last man in the world to be intentionally offensive to one seeking him. Nevertheless he hates to be sought. His greetings are cordially short and terse, in spite of a Pennsylvania drawl. His hand comes out in an I'm-busy-don't-bother-me way, which is effective. But if you have the courage to keep on, and a subject which appeals to him, you will find Dalzell one of the thoroly considerate and every-day friendly kind, in spite of his essentialness to successful legislation.

He was born in New York, sixty-two years ago; tho you'll have to take his word, under protest, to believe it. When two years old it became evident that his

future lay in Pittsburg, and he migrated, forthwith, and has legally lived there ever since. He is a Yale graduate and a shrewd, successful lawyer. He is a small man but so well arranged that when he is away from Payne and Cannon he does not look it. He has a good head, well covered with a vigorous crop of iron gray. He has bushy eyebrows over insinuating eyes, a dominating nose, and lips, under a big gray moustache, which are particularly adapted to parliamentary usage. He is a superb manager, but not

JOHN DALZELL.

one of the best for forefront fighting. John Sharp Williams found that out long ago, and when he can he makes the most of it. Dalzell's temper is not so enduring as his courage, especially when side-thrusts reach him at a high tide of eloquence. But that is a fault of his coming up; for Dalzell stepped from his law office into the House, hardly even knowing how he got there, years and years ago. He has remained there ever since and always will, unquestioned by constituents. He doesn't know and never will know, and is one of the happy few who have no need to know what it is to face the rough unshod and fight for a footing.

Literature

New Books on Japan

THE smallest but most permanently valuable of the year's crop of books about Japan is a shilling handbook¹ by Dr. W. G. Aston, for a half century a serious scholar, who knows the Japanese, their country, language and ideas, and the most searching critic of their boasted early traditions. None more than he has exposed the absolute worthlessness of their so-called ancient history. He follows his larger work on the native religion with a handbook of eighty pages, in which he gives the pith of the whole subject. He notices what Revon, Knox, Hearn, Griffis and other foreign authors, and also the native Japanese, who now write in English, have said. He treats of the general character of the cult, with its mythology, gods, priesthood, worship, ethics and history. Without Buddhism and Confucianism to antagonize and enrich it, Shinto would never have been even so much as recognizable. Its central lesson, put in practice on a national scale, is reverence for the land, ancestors, and the Emperor, who in sentiment incarnates the whole nation and its past. There was no ancestor worship in ancient Japan, for the family was not organized until the whole scheme of ancestor worship with family integration was adopted wholesale from China. Hence the cardinal error which runs thru the writings of Lafcadio Hearn. No mention of any of the sins of the decalog is found in the ancient rituals. Shinto, being a nursery cult, has no future, being too closely allied with the general scheme of fairy tales to endure. "Such meat for babes is quite inadequate as the spiritual food of the nation which in these latter days has reached a full and vigorous manhood."

Montague Smyth's exquisite colors and truthful representations in tint and drawing of Japanese life, in *Old and New Japan*,² are far above the quality of the

text by Clive Holland, who lives on the surface of the Nipponese scene. We have the geisha, kakemono, the jinrikisha, mousme and kimono, with flowers, salutations and other pretty things to our heart's content. If the small boy asks, "Is blue the favorite color of the Japanese?" we answer that one here lingers long over the exquisite pictures of sapphire seas, the violet air of sunsets in ever fair and flowery Nippon, and the common people in indigo-dyed kimonos. Both writer and artist have done their work with affectionate sympathy. The alien afar has here delightful realization of senses pleased and the esthetic perceptions tickled by piquant flavors. The volume is attractively bound in gray cloth stamped with chrysanthemums. From this latest book on Japan—as from the relics of stone and metal which archeologists, peering into the megalithic chambers of the mighty dead, sift out of the "knee deep dust that once was man"—the impression is strengthened that the Japanese, in their fiber as well as on the surface, are a beauty-loving race. Our grain of salt in criticism on the book in general, as upon the chapter on the Japanese home in particular, as well as on that about Japanese babies, girls and women, is that here we have the work of foreigners, not natives, with limitations. But that work is in art delightful, and by the penman fair.

To that American novelist who, with a brief tho bright career, before writing "The Red Badge of Courage" complained that few soldiers could tell their inward emotions in battle, *Human Bullets*³ would have been pleasing. The Japanese Lieutenant Sakurai, with that unconscious tho deeply seated instinct of impersonality which is the note of the race, speaks of himself and his fellow-soldiers as human bullets—shot against the Russians by the force of Yamato Damashii, or the spirit of Unconquerable Japan. Even his national hymn is about the Great Sire's domain, not of Mutsuhito, the Mikado—

¹SHINTO: THE ANCIENT RELIGION OF JAPAN. By W. G. Aston. London: Archibald, Constable & Co. \$1.00.

²OLD AND NEW JAPAN. By Clive Holland. With fifty illustrations in color by Montague Smyth. New York: E. P. Dutton & Co. \$5.00.

³HUMAN BULLETS. A Soldier's Story of Port Arthur. By T. Sakurai. Boston: Houghton, Mifflin & Co. \$1.25.

named never by the natives, but only by aliens. The least and the greatest of the soldier's feelings as to how things looked, and smelt, and felt, here find revealing. In the primitive and native sense he commits mental *hara-kiri*; that is, he lays open his inner mind and thought (as seated in the bowels) for public revelation. The Ninth Division, to which Sakurai (or Mr. Cherry Bloom) belonged, was raised on the western coast, in the region wherein the first free public schools on the American system were organized by an American in 1871. Amazing are the revelations of things lovely and horrible, and of Japanese characteristics for good and for evil. Superstition crops up on every page. The rock and the dragon are as familiar to him as is Santa Claus to us. How beautiful the thought that the spirits of the dead are with those left upon earth! Very good when these were benevolent and patriotic, but all Japanese history shows and daily emotions reveal the reverse side of such a belief, in that the scamps, rogues and malignant spirits are still at their pestering work, terrorizing human life on earth. "The Japanese characteristic that thinks only of going forward and not at all of retreating" is beautiful, but Japanese defeat reveals, even in 1904, ethical poltroonery, as shown in suicide. We should dream of our wives at home with our offspring in their arms, but in Japan "the wives, with their babies on their backs, were sewing and thinking of their dear husbands," ground into war dust. From close personal observation, the reviewer remembers when Buddhist priests seemed far more kind to beasts than to men, cer-

tainly to horses more than to beggars. So the Buddhist chaplain collects on the battlefield "fragments of shells to use in erecting an image . . . to comfort the spirits of the horses that died in the war." In Tokyo, after the peace treaty, a solemn requiem high mass was held for the repose of the horses killed during the war—all of which accords with the dogma of the transmigration of souls. Yet out of Buddhism never arose the Red Cross Association, or the trained nurses or hospitals, which were first

started by Christian missionaries. We know nothing more vividly realistic, in all the literature of war, than this story of a soldier's life before Port Arthur, whose right leg was shattered by a shell. "My mind worked like that of a madman, but my body would not move an inch; . . . my heart yearned to commit suicide, . . . but I had no weapon with me," he writes. He begged to be killed, but his request was refused, and, having heard that Port Arthur had fallen, he lived to write this great book. Incidentally, the monograph is a revelation

of the tenacity and power of popular Buddhism in Japan.

Mr. Masuji Miyakawa's publication, in structure, style and dress, shows just what a book ought not to be. Evidently an earnest man and a scholar among us means to show the true grounds of permanent good feeling between the United States and Japan, but the manuscript ought to have been revised by one who knows English well. The proof-reading is not at all creditable, and the book is decorated to tawdriness. Never-

Frontispiece, Sakurai's "Human Bullets."

⁴LIFE IN JAPAN. By Masuji Miyakawa. New York: The Baker-Taylor Company. \$3.00.

theless, it contains a great deal of truth that ought to be known at this time, when so much falsehood about the Japanese is daily disseminated.

The average reader, who must consider both his time and money spent on books about the Far East, must first make up his mind as to whether "the Oriental" is a profoundly mysterious creature, so different from us that our canons of fair play need not rule in his case. If the British ought always to preserve the balance of trade against China and Japan, or if the irrepressible Yankee has a divine right to dominate the whole Pacific Ocean and all possibilities of profit thereby, then Japan is an ingrate and dangerous foe. If, however, as we believe, Oriental human nature is exactly like ours, and the Golden Rule, or even a policy founded on "honesty is the best policy," be our norm of action, then it is difficult to see in what respect human nature in China and Japan differs essentially from ours. In *The Unveiled East*⁵ (how we should love to read a good book on the Unveiled Yankee!) the author tells about present tendencies in Japan and how she got into Korea. So far from believing that the Koreans committed national suicide (as they certainly did when the Government refused to educate its people, or to compel the nobles to work, kept all power in the hand of court cliques, and resorted to intrigue and perjury rather than to industry and honesty), the author tries to make out a terrible case against Tokyo. The best part of his book concerns reformed China. The pictures which he presents of Yuan and his constructive energy, the new Chinese army, the passing of the old order and the rise of the new woman are fresh and interesting. Mr. McKenzie is level-headed and judicially minded on the subject of the missionaries, and preaches with all his eloquence England's opportunity in helping China to be both enlightened and free. Virtually his argument, tho not so verbally stated, is that England should follow the century-old policy of the United States in Asia, and be more anxious to set her mark deep with science, education, benevolence and absolute fair play than by the assertion of

"British interests"—as if these were an integral part of the divine right of the Briton.

The Lone Star

EPOCHS are in men, as a spider's web is in its body. The emperor precedes the empire in the natural order of things, and it is the lack of this sense of proportion at this point which renders the average historical romance a solemn absurdity. The author usually represents the event to be of so much more importance than the hero of it that the latter appears to be a mere puppet pulled into action by fate. But Mr. Lyle has escaped this bondage in his story of the struggle for independence in Texas.* With him events are sparks struck off from great personalities. The scenes are laid in Texas during the period there of valorous deeds, and he finds the explanation of them, not in the situation, but in the red blood of brave men. His effort, therefore, has not been to create fictitious types commensurate with the situation, but to depict as nearly as possible the literal heroes of the struggle. They were rude Titans, earth stained, tender and pitiless, with an invincible courage, who leaped from the wilderness and wrested an empire from a lesser breed. One of the distinctions of the story is that drawn between Anglo-Saxon manhood and the feebler Latin race. And turning the pages, one feels that he is not reading history, but life. The events which made history have been thrust again into the hearts of living men, and they come to pass with an immediacy of action as if even now what the author calls "the colossal hero group of Texas" were making their last stand in the Alamo. The long stride of Sam Houston is the meter for the tale. Mr. Lyle may be of any age he choose, but he writes as if his genius were a youth. Note the whip and sting of this description of Houston:

"We stared, and saw a man whose spectacular career was the gossip of a continent. He was the hero of Horseshoe Bend. In that battle a Creek arrow had pierced his groin, and General Jackson positively ordered him out of the fight. He disobeyed, and charged the Indians single handed up a narrow gorge. Two bullets riddled his shoulder, and he lay

⁵THE UNVEILED EAST. By F. A. McKenzie. New York: E. P. Dutton & Co. \$3.50.

*THE LONE STAR. By Eugene D. Lyle, Jr. New York: Doubleday, Page & Co. \$1.50.

all night on the wet ground. The surgeons could waste no time on a man so nearly dead. But he was still alive the next morning, and they carried him on a litter sixty miles to an army post, then three hundred miles to his mother's cabin. He was worn to a skeleton, and the doctors would not take his case until he surprised them by refusing to die. He lived to go to Congress, to be elected Governor of Tennessee. He married, and two months later vanished from the executive mansion, never clearing the mystery of whatever domestic trouble had forced him to it. And here he was among his old boyhood friends the Cherokees . . . nearer dead now than at Horseshoe Bend. It was death morally; the curse of loneliness and despair, and, to forget the same, the greater curse of drunken sloth. . . . 'Yes, gentlemen,' he was saying in his exaltation, 'Drunken Sam attains the luster of a former name, and Drunken Sam remains behind. But Sam Houston, gentlemen, Sam Houston will go with you to Texas!'

Considered simply as a story the book is of absorbing interest, but that which renders it an invaluable piece of literature for the South in particular is the fact that it contains the almost living figures and character of a group of her greatest heroes.

A New Conquest of Cancer

PHYSICIANS and surgeons have grown accustomed to having "cures" for what unfortunately they must still call the incurable diseases announced to them every now and then. Three "cures" for leprosy have been exploited in the last ten years. A new and infallible remedy for tuberculosis is announced unfailingly at least once every six months. Cancer is another of these sad diseases for which similar announcements may be expected. The X-rays, then radium, various local applications and forms of electrical treatment, each have their turn. Now it is the pancreatin treatment that is being exploited, and tho the number of cases in which it is claimed to have been curative is but very few, and not any larger than the failures announced from it, the book which treats of this latest cure for the affliction is called *The Conquest of Cancer*.* Nearly one in thirty of our population dies of cancer every year, so that there are literally millions of cases in the

civilized world. One might expect then that a large amount of very definite evidence would be collected before a book of this kind would be issued, but any such expectation as to Dr. Saleeby's book will be seriously disappointed.

We naturally turn to his chapter on "Some Results Recorded." With the exception of a single report of a number of cases in the hands of the same observer what we find are scattered cases in some of which the diagnosis was by no means certain, while in the others one constantly has the feeling that they may be examples of the now well recognized tendency of cancer in some cases to get better spontaneously. This tendency of cancer was not appreciated properly until recent years. These cases are comparatively few, but because of the large number of cancer cases they are not rare and literally hundreds of them have been reported in the last ten years. Dr. Saleeby dwells much on the report of some thirty cases from one American observer. We wonder if he knows that that American observer has, during the last ten years, given just the same sort of an optimistic report with regard to several new "cures" for cancer, so that now nobody in America pays any serious attention to what he writes with regard to the treatment of malignant disease.

The other chapter of Dr. Saleeby's book that deserves to be criticized is that on "Cancer and Surgery." Very much is made of Sir James Paget's pessimism with regard to surgery for cancer, and there is a long quotation from one of his lectures on surgical pathology. He is spoken of as a surgeon of the past generation, but there is no hint that this series of lectures was originally delivered before 1850 and first published in 1853. Another authority quoted on the subject is Sir Benjamin Brodie, most of whose work was done in the early part of the nineteenth century. Dr. Saleeby poses himself and sets up Dr. Beard as a martyr to science, or rather to that conservative spirit which keeps scientific men from jumping to every new conclusion suggested. He seems to forget that this conservatism is perfectly right 999 times out of every 1,000, and that in the thousandth case it really does good eventually by arousing the spirit of the dis-

*THE CONQUEST OF CANCER. A Plan of Campaign; Being an Account of the Principles and Practice Hitherto of the Treatment of Malignant Growths by Specific or Cancrotoxic Ferments. By C. W. Saleeby, M. D., F. R. C. S. New York: Frederick A. Stokes Company. \$1.75.

coverer and making him work out his discovery properly.

For the general public it will be enough to know that the British Medical Association has taken absolutely no notice of the exaggerated claims made for the treatment of cancer with pancreatin, or, as it is better known, trypsin. The remedy has been tried in a number of cases by physicians who have found it of no service. These negative reports are not yet made in large numbers because it takes physicians longer to make up their minds to give a negative report than a favorable one. The present writer has had two cases under his observation where trypsin was given a thoro trial without effect. At least one American observer has found that this method of treatment did harm in certain cases. Dr. Saleeby glosses this over, tho accepting some favorable conclusions of the same observer. This whole subject at this stage should be discussed, not in books meant for popular reading, but in reports for physicians. According to all present knowledge the new *Conquest of Cancer* will prove to be just as little of a conquest as all the other vaunted cures for incurable disease that are so constantly being exploited have unfortunately proved. We would well wish it otherwise, but in the meantime see only the raising of false hopes and bitter disappointment for those who take Dr. Saleeby's book seriously.

The Art of Painting

THE small group of books in hand* covers three widely separated fields of art: Mr. Clausen's two volumes are for the art student, Mr. Abendschein's treatise is for the professional painter, and Professor Raymond's volume deals with the philosophy of art. Mr. Clausen says of himself and his work after speaking of the grand masters, "The majority of us have to work in humbler paths." His

*SIX LECTURES ON PAINTING. By George Clausen. Illustrated. New York: E. P. Dutton & Co. \$1.50 net.

AIMS AND IDEALS IN ART. By George Clausen. Illustrated. New York: E. P. Dutton & Co. \$1.50 net.

THE SECRET OF THE OLD MASTERS. By Albert Abendschein. New York: D. Appleton & Co. \$1.00 net.

THE ESSENTIALS OF ÆSTHETICS. By George Lansing Raymond. Illustrated. New York: G. P. Putnam's Sons. \$2.50 net.

estimate of himself is true. Altho a man of taste and an accomplished painter, he is an artist of the second rank, lacking strength and originality, and, as the Irishman would say, his writing possesses the same lack of these qualities. Altho these two series of lectures to students at the Royal Academy are good, wholesome and helpful, they are rather dull on the printed page. His style is uninspired, only vivid in spots. But he has the virtues of his defects. Some of his painting reminds us of Bastien Le Page, more of it strongly resembles Millet—an occasional canvas is distinctly Whistlerian in manner—and this sinking into his soul of the qualities of other men—for the imitation is entirely unconscious—has enabled him to give us in these volumes some beautiful tributes to other painters, among them the best praise of a certain quality in Fra Angelico that we have seen. After saying that the sentiment of his landscape is very serene, "like the clear light before sunrise in summer," he sings:

"There is no trace of posing in his figures; they have an unstudied grace, and there is even in their movements something of the little awkwardness that we notice in the movements of children. And, altho they are very human and touching, there is something about them different from ordinary people—something remote and apart from the world. They seem to exist for the picture only, and to have had no past history, no experience of life."

The illustrations, being admirably chosen and well printed, and bound in where they belong, are real illustrations: and as a whole the books, which are on the featherweight paper so popular in England, are examples of good bookmaking. They belong to the class of low-priced books on art subjects which have large sales there. Even the dark blue paper "jackets" are attractive.

We think that Mr. Abendschein has overestimated the importance of his discovery both in the title and the text of his book, which, after all, is only one of several hundred books on the technic of painting. It is important, tho, if for no other reason than that it may act as a wholesome check on the careless and reckless workman who is indifferent to the quality of his canvases and colors and who has never taken the trouble to enquire how and of what they are made.

This record of Mr. Abendschein's apparently exhaustive experiments may cause such a one to stop and think a little regarding the permanency of his work. Somewhat mercilessly, the author quotes the observation of a chemist that "artists are phenomenally ignorant of their materials, but do not lack confidence," and he recounts in detail the sins of some well known painters: Vibert's use of "three substances of uneven drying powers and no affinity," Hans Makart's habit of mixing with his colors the yolk of eggs, "which decayed instead of drying," and another "craftsman" who mixed his with vaseline, which never dried. The *crux* of his book, the secret—based on letters of Rubens and others, and his own experiments—a system of drying in the sun, is explained at length and is, of course, not entirely new, as many artists dry in the sun. But painters should read what he says about elaborate sun drying, and experiment and judge for themselves.

We are obliged to question some of Mr. Abendschein's statements as to the comparative durability of some of the mediums. He says that the durability of tempera "is not to be compared with that of oil," whereas we thought it had been proven that tempera was more durable than oil, altho it is true, as he says, that it is "not so easy to handle" and "has no such wide range or power." On page 63 he speaks of pastel as "having the least durability of all known technics," whereas, if protected by glass, pastel never changes and is therefore the most durable. The Pesaro Madonna study in the Uffizi Gallery, to which he frequently refers in support of his theories regarding old master methods, is not now considered by experts the work of Titian, but is thought to be a copy, possibly by Sir Joshua Reynolds!

By reason of the enthusiasm with which he tells us everything the book is lively and readable, and often amusing, but its English should have been revised before being sent to the printer.

It is impossible to properly review in this limited space a volume like Professor Raymond's, which raises on almost every one of its four hundred pages questions over which philosophers and artists have wrangled for centuries. This kind of writing is what Whistler used to call

"breaking a butterfly upon a wheel"; it approaches a certain danger line because painting and music begin where language ends; and it is somewhat like attempting to tell how to make a flower, perfume and all, but it is profoundly interesting.

One who holds that artists are apt to know most about art, just as scientists know more about science than any other class of men, will find places in this conscientious and scholarly book where he would like to interrupt Professor Raymond and ask him to show his hand, by pointing out irrefutable concrete examples proving some of his conclusions. Then there is a tendency to use "safe" works of art, as the old reliables, Raphael, Titian and Michael Angelo, for illustrations, rather than less shop-worn and therefore more striking examples. The author also takes Max Nordau seriously.

More clarity of style is to be desired; the book is hard sledding in parts, and a long quotation from Herbert Spencer comes like a burst of sunshine; even a book on a branch of philosophy and psychology should be entertaining. Yet Professor Raymond often makes a fine phrase, as in the chapter where he speaks of artists, how they differ from other men, showing in their manner "the virtue of uncompelled industry," and betraying the fact that they live in a world of thought and feeling by "the involuntary wavering of their lips" and "the unconscious bewilderment of their eyes."

But here is a dissertation on taste and a whole volume on art with a wretched cover design and printed on offensive and heavy "coated" paper, from which reflected streaks of light shine in one's eyes at every page.

The Story of the Ring. By S. H. Hamer. New York: Dodd, Mead & Co. \$1.00.

The Wagner Stories. By Filson Young. New York: McClure Co. \$1.30.

Rheingold. By Oliver Huckel. New York: Thomas Y. Crowell & Co. 75 cents.

These three books exemplify the three classes of Wagner-study — technical, poetical, fictional. In the first-named book we have a praiseworthy exposition of Wagner's *Der Ring des Nibelungen*, which compares favorably with Kobbé's well known book upon the same subject. This version fully illustrates the *motifs*

of these great music-dramas and also describes clearly their plots and scenery. It is an interesting and helpful handbook. Huckel's *Rheingold*, in blank-verse, carries us along in a sense of *oneness* with that music-drama, which it interprets far better, for the average reader, than the libretto in its halting translation can possibly do; for this poem, seen as was Dr. Huckel's "Parsifal," is confessedly an interpretation rather than a translation. The most valuable part of the book is, perhaps, its careful and interesting foreword. We are told that this poem begins a new series; the old series ("Parsifal," "Lohengrin" and "Tannhäuser") being completed. In our estimation while all are good, the first—"Parsifal"—is easily the best, so far. Filson Young, in his *Wagner Stories*, illustrates the third class of Wagner-study. For the ordinary student this form is probably the best, especially should he lack a taste for verse or technicalities. The author is particularly happy in having caught the emotional spirit of the music as well as the story, and to add to the value is an excellent chronology. Very tuneful are the lyric-translations of Eric Maclagen, used thruout this volume, particularly the haunting Runic-cadence of the Rhine-maidens' song. The postscript might well have led rather than have closed the procession, for it is a masterpiece of its kind, altho we can't quite agree with the author in his characterization of "The Mastersingers" as Wagner's greatest opera. Suffice it to say, in conclusion, that we know of no Wagner-study book so captivating and complete, from the story standpoint, nor in clearer diction than is this new volume.

The Better City. By Dana W. Bartlett. Los Angeles: The Neuner Press.

At a cursory reading this book might appear to be a clever advertisement of Los Angeles. It is full of praise of the City of the Angels, expressed in somewhat flamboyant language, suggestive of the prospectus of the real estate boomer. The climate of Los Angeles foreshadows the heaven of the imagination; its location is peerless; its people beyond compare; its beauty, existing and prospec-

tive, most dazzling; its resources inexhaustible; its charities and churches, settlements and social uplift, all meritorious; nothing is needed but an acceptance of that ethical ideal, "that belief that the city may become as noted for its righteousness, its morality, its social virtues, its artistic life, as for its material resources," to make Los Angeles—and may we who do not live there add, some other cities of our acquaintance—not only The Better City, but the City of God.

Brunhilde's Paying Guest. By Caroline Fuller. New York: The Century Co. \$1.50.

The scenes of Caroline Fuller's new novel are laid in South Carolina, and they are shaded with live oaks draped in long gray moss. No one makes a fortune or turns the world upside down in such a situation. Nothing but a romance of the heart could happen there, and no one who reads the book will doubt that the author has written love stories before, so versed is she in all of that sweet passion's idle moods. The very audacity of her cupid-winged imagination is illustrated by the fact that the flaming haired heroine was old enough to ride horseback when the hero was born.

The Life of Edward Henry Bickersteth, D. D., Bishop and Poet. By Francis Keyes Aglionby, M. A. Pp. xiii, 222. New York: Longmans, Green & Co. \$2.50.

The Established Church in England has been exceedingly fortunate in recent years in the biographies of men who have been of its episcopacy. Three years ago the "Life and Letters of Mandell Creighton, Bishop of Peterborough," was published. It revealed to wider world than had been brought into contact with Mandell Creighton as lecturer, as historical writer and as bishop, that in these modern times faithful and diligent service of the Church, service in its fullest and most Christian sense, often brings the Church's highest and most dignified rewards regardless of plebeian birth. This, so far as the Church of England is concerned, is the lesson of Mandell Creighton's life; and it is much the same with the biography of Edward Henry Bickersteth, who was Bishop of Exeter from

1885 to 1900. Bickersteth, like Mandell Creighton, was a North country man; and like Creighton he had no feudal or aristocratic background—none of the social or worldly advantages which were almost essential to a clergyman's promotion in the Church in the not very far off days when deaneries and bishoprics were regarded by Whigs and Tories alike as spoils of office equally with seats in the Cabinet or Parliamentary Undersecretaryships in the various State Departments.

with poems and other quotations. The pictures are very satisfactory and attractive, many of them being colored.

A Turnpike Lady. By Sarah N. Cleghorn. New York: Henry Holt & Co. \$1.25.

Vermont, in 1768 and for years later, boasted a turnpike road and tollgate villages. *A Turnpike Lady* is the story of the hamlet of Beartown a century and a half ago. It varies from the usual tale of the Revolution in the detail that its leading characters are Tories, or "Whig-

CHICKS OF DOMESTICATED RUFFED GROUSE:
From Wright's "Gray Lady and the Birds" (Macmillan Co.).

The Gray Lady and the Birds. Stories of the Bird-Year for home and school. By Mabel Osgood Wright. Twelve colored plates and 36 full-page illustrations in half-tone. 12mo. Pp. xx, 437. The Macmillan Co., New York. \$1.75 net.

The author of this book is president of the Connecticut Audubon Society, and she supplies a pleasant running text to accompany the pictures of birds. A "gray lady" is supposed to interest the children in a country school in the birds and gives them weekly talks on their character and habits, so that children may learn to know and love them. It is a useful book altho somewhat padded

with poems and other quotations. The pictures are very satisfactory and attractive, many of them being colored. There are only a few pages, however, devoted to the war; some of the descriptions of its earliest victims are hideously realistic; but the current of the story moves out from this gloom and running quietly along between meadow banks reflects the placid New England landscape and the uneventful life of its people. Naomi Polke, called by her father "the sisterly child," is the central figure. A dreamy but loving little girl, she grows up into the "Turnpike Lady" and has romances of her own as so nice a girl should, even in rural Vermont more than a hundred years ago.

The Campaign of Santiago de Cuba. By Col. H. H. Sargent. Chicago: A. C. McClurg & Co. 3 vols. \$5.00.

In this book we have a remarkably lucid history of a very remarkable campaign. And there is probably no man on this continent better fitted—on all the counts—to chronicle it with such accurate completeness and balanced discrimination as the author. A West Point training, a preliminary army career, in active command at the scene of operations and a previous record as a scholarly author and critic on the strategy and tactics of war, Col. H. H. Sargent brings to this book qualities and experience that are rarely found in one individual. The unique strength of the book lies in the fact that it is really a history and a commentary arranged in practical parallel. There is no time for even the casual reader to lose sight of the main facts and salencies before they are caught up in the "Comment," analyzed, sifted and explained in such a way that their proportion, bearing and consequence are intelligible to even the most lay mind. The first volume treats of the causes and conditions that led to the expedition, together with the full statistics and comparison of both arms of the service, on either side; the plan of campaign, situation of the forces and blockade of Santiago. It is interleaved with eight maps, and the chapters are divided, as in all the volumes, into two parts—history and comment. The second volume is interleaved with five maps and begins with the sailing of the United States troops on June 14th, and describes the operations terminating in the destruction of Cervera's squadron on July 3d. Volume III constitutes the closing chapter of the siege and capitulation of Santiago. It contains the final map of the series, together with appendices from A to X and a well-designed, exhaustive and workmanlike index. Colonel Sargent is careful to explain in preface that his book must not be taken as the official utterance of the United States Government. And it may be noted, in passing, that this is to the reader's advantage, for the official record would, perforce, be without the admirable and illuminating comment which constitutes a prime factor in this book's importance. For the rest, the

United States Departments of War and State and the United States Legation officials at Havana and Madrid have given the author the fullest access to all necessary documents and data. And that he has fully availed of his opportunities is amply shown in his work.

American Birds Studied and Photographed from Life. By William Lowell Finley. Illustrated from photographs by Herman T. Bohlman and the author. 12mo. Pp. xvi, 256. New York: Charles Scribner's Sons. \$1.50.

A Cape Cod fisherman once complained about the sportsmen who came from Boston and shot the birds of the region. "But you hook the fish," was the reply. "True," said the native, "but the fish has their option; the birds don't

MOTHER GROSBEAK FEEDING YOUNG.
From Finley's "American Birds."

have no option." Far greater is the fascination and the sport of photographing rare birds and their nests than that of ruthlessly shooting the one and robbing the other. The present volume is a collection of about 130 such photographs, with the necessary text, but we warrant that the photos have cost the author and his companion photographer much more labor than has the writing of the descriptions. Fortunately, whatever errors the text might contain, the pictures can be trusted. The best chance for the photographer is to find a nest, and then watch the birds feeding their young, but this requires patience and time to overcome the fears of the parent birds. Here are a humming-bird feeding her young; another poised in mid-air over a blossom; seven chickadee chicks on a branch; the male grosbeak feeding the young; crows, owls, wrens, kingfishers, blue-

birds, thrushes, gulls, herons, etc., and the last chapter records the search and photographing of a golden eagle's nest, with the stages of the growth of the eaglets from the egg. Far better is such a book as this than one which tells the savage joy of killing.

Bohemia in London. By Arthur Ransome. With illustrations by Fred Taylor. Pp. 291. New York: Dodd, Mead & Co. \$1.50.

The literary and artistic traditions and associations of Fleet street and its adjacent courts, of the Temple and of Chelsea and Hampstead always bear retelling if the retelling is cleverly and gracefully done. To this extent Mr. Arthur Ransome succeeds wonderfully well in his *Bohemia in London*. He has familiarized himself with about all there is to know of eighteenth century London literary traditions—all there is to know of the Cheshire Cheese in Wine Office Court, and the Cock and the Green Dragon in Fleet street; and he writes freshly and brightly of the men who have made these and other London taverns famous. There is less definiteness when he comes to describe Bohemian London of today; for London's Bohemia is from some aspects bigger than it ever was, and extends for beyond Fleet street, Soho, Chelsea or Hampstead. His definition of Bohemia is "that indefinite country where big longings and high hopes are matched by short purses and present discomforts," the world in which are to be found the kindergartners and the strugglers in journalism, literature and art.

Literary Notes

....Here is a chance for undistinguished writers. *Outing* offers a prize of \$1,000 for the best novel by one who has never done such a deed before. Address: Outing Publishing Co., Book Dept., Deposit, N. Y.; before May 8th.

....The American Book Company has been incorporated in New York with a capital of \$5,000,000. The directors are: H. L. Ambrose, of Orange, N. J.; H. Vail, C. P. Batt, G. H. Tucker, A. V. Barnes, H. B. Barnes, J. A. Greene, and Russell Hinman, of New York City.

....A new periodical devoted to the interests of the countries south of us and their relations to the United States makes its ap-

pearance in January with the title of *Tropical and Sub-Tropical America*. It is a monthly, \$1.00 a year; edited by G. M. L. Brown, 18 Frankfort street, New York, and contains illustrated descriptive articles and trade notes.

....The first number of a new monthly magazine is issued by T. Fisher Unwin, London, *The International: A Review of the World's Progress*, edited by Dr. Rudolph Broda. In its scope and policy it is similar to *THE INDEPENDENT*, containing numerous short articles on timely topics from all parts of the world and devoted to the promotion of concrete social reforms.

....A well written book of information about Mr. J. F. Atkinson and his good work in behalf of the street waifs of Chicago is Mr. Leonard Benedict's *Waifs of the Slums and Their Way Out*. (Fleming H. Revell Co. \$1.00.) The volume is dedicated "To Waifdom Everywhere," and all who are interested in the waifs of the city streets—and there is a gang of them even in each of our smaller cities—will find Mr. Benedict's pages, written by request of Mr. Atkinson, instructive and inspirational. The book is effectively illustrated.

....When the Rev. Dr. John Watson died last May, he left behind a completed manuscript of the Cole Lectures which he was to have delivered at Vanderbilt University. His last illness was almost coterminous with the dates set for the delivery of the lectures. Dean Tillet, of the Biblical Department of Vanderbilt, has attended to the publication of the volume and written a brief introduction. Dr. Watson's theme was the use of the Bible in the light of the new knowledge concerning it, and the book is entitled *God's Message to the Human Soul*. (Fleming H. Revell Co. \$1.25.) It does not equal in merit *The Mind of the Master* or the Yale lectures on *The Cure of Souls*.

....We would call attention to an excellent Sunday School text book on *The Life of Jesus*, by Herbert Wright Gates. (University of Chicago Press. 75 cents.) The book is for the teacher only. Its clear analysis and arrangement of the biblical material and its bibliographical references equip one for effective presentation of the important features of the life of Christ. Accompanying the volume is a *Pupil's Note Book* (50 cents) for use in class, which is skillfully designed to encourage industry and intelligent interest on the part of the pupil. Good use is made of maps and pictures. We see no reason why a teacher who is ambitious to do better work than is common with the ordinary "Quarterlies" should not make use of Mr. Gates's greatly improved method, and if there are still parents who account themselves responsible for the religious education of their children, here is a plan by which conscientious endeavor will meet with abundant reward. President George B. Stewart, of Auburn Theological Seminary, is the author of *A Study of the Life of Jesus* for adult classes. (Boston: The Pilgrim Press.) The critical point of view is that of Edersheim, and emphasis is laid upon practical applications.

Pebbles.

HAVE grandparents rights that *any one* is bound to respect?—*Atchison Globe*.

ADAM never drove a horse
That balked upon a railroad track;
And, furthermore, Eve never wore
A waist that buttoned down the back.
—*Chicago Record-Herald*.

'08—Who's that awful old frump over there?
'09—That, sir, is my mother.
'08—Er—ah—oh, yes—um. Well—ahem—
you just ought to see mine!—*Harvard Lam-
poon*.

THE WAY OF THEM.

A PAIR of shoes may hurt like sin
For weeks, and then about
The time we get them broken in
They start to breaking out,
—*The Catholic Standard and Times*.

"I CAN'T help it," declared Aunt Mehitabel Tarbox, "but there's some few Bible characters that I never reely cared fer. Now there's Beelzebub, fer instance. I s'pose he was a good man, but somehow I never could go that name!"—*Louisville Courier-Journal*.

THE PAPER CHASE.

"I'LL foil them yet!" the Hare exclaimed.
(The Hounds were at his back.)
He donned a pair of rubber boots,
And thus erased his track.
—*Yale Record*.

PARSON (on a bicycling trip)—Where is the other man who used to be here as keeper?

Park Gatekeeper—He's dead, sir.

Parson (with feeling)—Dead! Poor fellow! Joined the great majority, eh?

Park Gatekeeper—Oh! I wouldn't like to say that, sir. He was a good enough man so far as I know.—*Pick-Me-Up*.

THE VERACIOUS VERGER—In the far corner lies William the Conker; b'ind the organ, where you can't see 'em, are the tooms of Guy Fox, Robin 'Ood and Cardinal Wolsey. Now, does that guide-book, as I sees you 'ave in your 'and, tell you who is lyin' here, sir?"

The Skeptical Tourist—No; but I can guess.—*Tit-Bits*.

THERE are several excellent stories told of Professor Masson, the famous litterateur, who has just died. Once he was addressing his students in the Edinburgh University, and told them that "this was an age of decadence. If I were to tell you that the young men of Rome used to swim across the Tiber three times before breakfast, what would you say?" "I should say that you were inaccurate," came a voice. "What! You question my accuracy?" cried Masson. "Yes, sir; for their clothes would be left on the other side."—*Tit-Bits*.

SAVED THEM.

A JURY at Eaton, Ga., after being out eighteen hours, couldn't agree. Then one of the jurors suggested that they sing. So they sang "How Firm a Foundation, Ye Saints of the Lord," and "He Leadeth Me," and at once

turned in a verdict of guilty, asking the judge to give the two men accused of murder ninety-nine years each.—*Atchison Globe*.

THE NEW REPORTER.

WE took a new reporter on trial yesterday. He went out to hunt for items, and after being away all day returned with the following, which he said was the best he could do:

"Yesterday we saw a sight which froze our blood with horror. A cabman, driving down Clark street at a rapid pace, was very near running over a nurse and two children. There would have been one of the most heartrending catastrophes ever recorded had not the nurse, with wonderful forethought, left the children at home before she went out, and providentially stepped into chemist's shop just before the cab passed. Then, too, the cabman, just before reaching the crossing, thought of something he had forgotten, and, turning around, drove in the opposite direction. Had it not been for this wonderful concurrence of favoring circumstances a doting father, a loving mother, and affectionate brothers and sisters would have been plunged into deepest woe and most unutterable funeral expenses."

The new reporter will be retained.—*The Boston Herald*.

ADVICE WANTED.

DEAR PUCK:—I am up against it. My man Ali Baba is making trouble. Some time ago I hired him as a watchman on a four-year contract. He is honest, sincere, also serious, likewise religious and keeps one day in the week holy. But he is so needlessly zealous in threatening evil-doers, warning off intruders, and has been making so much noise with his Big Stick that the Roycrofters can neither work in the daytime nor sleep at night.

Recently Ali Baba has contracted the habit of hunting gas leaks with a lighted candle. Also he has threatened to burn my barn in order to kill the rats.

Some of my girls who work in the book bindery are married, and recently he has hammered with his Stick on the windows and shouted advice to them concerning matters which are supposed to be of a confidential and private nature.

I fear he is laboring under the hallucination that his duty is to govern my Shop instead of working for it. Deacon Buffum and Uncle Billy Bushnell say it is a plain case of Big Head on Ali's part, but many people in the village consider him a really truly great man. Ali Baba acknowledges this and declares that it was he who made me and not me myself.

In the meantime, business in the village is at a standstill, and you can't borrow an ax from a neighbor unless you agree to bring back two.

Ali Baba's time isn't up until a year from next March.

What shall I do in the matter?

ELBERT HUBBARD.

East Aurora, N. Y.

Dear Fra, our advice is to do him up in Limp Leather, pack him very Roycroftie in a silk-lined, gilt-topped packing case, tie on a hand-tooled tag and send him to somebody "on suspicion"—*Puck*.

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE

One Year, \$2.00 Single Copies, 10 Cents

Single Copies over six months old twenty-five cents. Postage to any Foreign Country in the Postal Union, \$1.75 a year extra. To Canada \$1.00 extra.

Order for the change of an address should be received one week before change is to take effect; the old as well as the new address should be given.

Persons desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, in that case, hold ourselves responsible for their return. Authors should preserve a copy.

The World Movement of the Year

EVENTS move rapidly in these years. What would require cycles in Cathay is now achieved in a twelvemonth. During the past year or two the balance of the nations has been changed, and, as we believe, for the better. The conclusion of the war between Russia and Japan had already made a tremendous change, but it was only within the last year or two that we have been able to comprehend what this would mean. We now know that as a Power threatening the peace of the world Russia has been eliminated for many years to come and must confine her energies wholly to internal administration, which means the development, under great opposition, of a constitutional government in place of an autocracy. But with this the outer world is not concerned, except as it looks on with benevolent hope.

In the large field of world politics Great Britain, under her present Liberal Government, has taken the leading part. Instead of remaining in splendid isolation she has become the center of the most tremendous combination for peace of modern times, and, indeed, of all history. She has entered into a firm contract with the rising Power of Japan; she has engaged in a most important understanding with France and Russia, and has eliminated all danger from the suspected ambitions of Germany. Difficulties with Russia as to Afghanistan, Tibet and Persia have been settled, and France is given a free hand in Morocco. Mean-

while reforms in Egypt are progressing, enormous irrigation schemes are accomplished, and the Sudan is fully restored to European control. In South Africa a very generous plan of government has ventured to trust the Boers with whom Great Britain was at war, and the Transvaal and Orange Free State have become loyal. Australia is developing under her new confederation, and there is no sign of trouble in the British Empire, unless it be in India; and there the native Congress has broken up, and will no more be used as a weapon with which to achieve independence. It is Great Britain's pressure more than any other influence which is compelling King Leopold to transfer to Belgium the control of the Kongo Free State, under provisions which, if not ideal, will secure much better conditions than those that have hitherto prevailed.

When we turn to the Farther East we find Cathay vastly shortening its cycles. A new spirit has been awakened and the astute Empress, aided by certain wise and progressive advisers, is reforming the entire educational system of the empire, and even planning for constitutional government and general reform. In this work of education American and British citizens have taken a most prominent part, just as they did thirty years ago in Japan. Meanwhile Japan is pressing her influence and power in Manchuria, as well as in Korea, and the nearest possible war is not between Japan and the United States, as the irresponsible journals predicted, but between Japan and China.

If nothing more had been accomplished, it would have been an immense step in advance in the history of the world that the Hague Conference is now assured as a permanent and regular tribunal of peace and international law. That meeting is itself enough to make the past year memorable, even apart from conclusions reached and larger plans that have failed. The world now accepts arbitration as better than war, and arbitration treaties are following fast one after another.

In our own land the prominent feature has been the remarkable growth of the sentiment that great financial and com-

mercial organizations must be subservient to the public welfare, and must not be allowed to exploit their powers for amassing enormous private wealth. There has been an awakening of the public conscience; what has been allowed as legitimate in years past is now seen to be immoral and has been made illegal. Railroad and other corporations have been compelled to revise their ways or have been investigated and punished, and the same scrutiny has been applied to municipal and State sources of corruption. What looks at first sight like evidence of great corruption is really evidence of an awakened public conscience and progressive reform. The action of our Government toward our colonial possessions has been on the whole wise and altruistic. Certainly no other country has presented such an example as we have done in our giving so great a degree of self-government to Porto Rico and the Philippines. For the first time in four hundred years of foreign rule the Philippines have a Parliament.

But all these events are of the political sort, and it is social and industrial progress that really counts for the world. That has also moved steadily and rapidly, whether we consider means of production, consideration for workmen, or the applications of new principles in chemistry and mechanics, such as wireless telegraphy, air ships, color photography, and turbine engines. Equally the advance of a Christian civilization and the progress of education among the belated races has been marked during the year, as even the blindest can see, where forests and deserts are pierced and crossed by new railroads. It has been a good year, even if we have not seen all we wished for liberty in Russia, and even tho predatory greed and racial arrogance are not yet subdued.

Rounding Up Relations

THIS is the season of family reunions. The cattle on our Western plains were all rounded up according to their brands a month or more ago; the convocation of learned societies comes next. Just now we are engaged in trying to remember all our relations and to prove that blood is thicker than water after all. But blood,

like other cohesives, works best warm and only when the objects to be united are brought close together; ink is an unsatisfactory substitute. All our marvelous modes of intercommunication, picture postals, typewriters, phonographs, wireless or wired telegraphs and telephones, fail to convey a complete personality. Hence we are obliged to get together in the same room in order to know each other.

Hence, arise, too, the embarrassments of family reunions, the meeting of stranger kinfolk, of whose who are *ex officio* affectionate but *de facto* unacquainted. You are introduced to an unknown niece, sister-in-law or cousin, and expected immediately to call her by her first name, even to use endearing appellatives. Somehow there seems to be an impropriety in being called upon to kiss a lady no matter how closely related, before you even know whether she likes Maeterlinck or grape-fruit. It puts one out not to begin with the proper moves in the foundation of a friendship. It is like omitting P to K4 in a game of chess.

Many tears have been shed over Hovenden's picture, "Breaking Home Ties." Why has no artist painted the distress of the reverse process of "Making Home Ties." Being born into a strange family is hard enough when allowances are made for one's youth and not too much is expected at first, but being plunged into a strange family by matrimony or a railroad train is a more serious matter.

Still it is good for us, this having to love and get along with all sorts and conditions of relations. It broadens the mind and develops the affections. Chesterton has put the point most forcibly when he argues that it is the club and not the clan that cultivates narrow-mindedness. Let us quote a passage from "Heretics":

"The modern writers who have suggested, in a more or less open manner, that the family is a bad institution have generally confined themselves to suggesting, with much sharpness, bitterness, or pathos, that perhaps the family is a good institution because it is uncongenial. It is wholesome precisely because it contains so many divergencies and varieties. It is, as the sentimentalists say, like a little kingdom, and, like most other little kingdoms, is generally in a state of something resembling anarchy. It is exactly because our brother George is

not interested in our religious difficulties, but is interested in the Trocadero Restaurant, that the family has some of the bracing qualities of the commonwealth. It is precisely because our Uncle Henry does not approve of the theatrical ambitions of our sister Sarah that the family is like humanity. The men and women who, for good reasons and bad, revolt against the family, are, for good reasons and bad, simply revolting against mankind. Aunt Elizabeth is unreasonable, like mankind. Papa is excitable, like mankind. Our youngest brother is mischievous, like mankind. Grand-papa is stupid, like the world; he is old, like the world. Those who wish, rightly or wrongly, to step out of all this, do definitely wish to step into a narrower world. They are dismayed and terrified by the largeness and variety of the family."

Next to the embarrassment of meeting relations who do not know us is that of meeting those who know us too well, who knew us before we knew ourselves and can tell how we looked and acted in long clothes and trace our traits back to our ancestors. The elderly lady at the head of the table may never have seen us but she knows by Mendel's law or a law of her own how we take our tea, also how we take our tea-cup, what disposition we make of the surplus fingers not in contact with the china. The young man back from college, proud of the originality displayed in his clothes, manner and sociology, is humiliated to have his mental and physical characteristics promptly classified in the ancestral pigeon-holes. And the children are picked to pieces and analyzed like a flower in the botany class. We can see now, for we have often seen, the latest addition to the family, a chubby youngster, surrounded by an admiring but analytical circle of relations, the first row on their knees, the last row looking down at him over the heads of those sitting in front of them, all engaged in distributing his features among his progenitors to the third and fourth generations; giving his nose to one of his great grandfathers, his eyes to another, his hair to his maternal grandmother and the dimple in his chin to his paternal, verifying these deductions by reference to the darkened paintings on the wall or daguerreotypes obliquely held; until at last the poor child feeling every shred of his precious individuality being snatched from him by the hands of dead folks, wrinkles up his face just as his father used to and wails with his mother's voice.

It is hard at first, this acknowledgment of indebtedness to our fathers, the recognition of the duty of fulfilling our hereditary obligations. We feel oppressed and hampered by it when we are young, when we are writing our declarations of independence and find it necessary to assert our individuality, often in unnecessarily erratic and obnoxious ways. Later in life we look at the same facts in a different light. We become lonely and want company. When we find out how few friends there are in the world we are content to fall back on relatives. We gratefully avail ourselves of the consolations of heredity. We find it a comfort to throw back upon our ancestors some of the responsibility for our actions when we make a mess of things. Then we are glad to recognize the bonds of consanguinity, and to feel ourselves a part and product of the past. Then we find satisfaction in realizing that the family tree is not merely a paper diagram, a sentimental symbol, but a very concrete and definite thing, a living being. There comes a time in a man's life—and the earlier it comes the better—when he had rather feel himself a part of something greater than he than to believe that he is the whole thing himself. At that time he begins to see the significance of a family reunion. Then he is willing to make the acquaintance of his strange cousins and to submit himself to the inspection of his aunts, and he holds out his two hands to his rich relatives and his poor relations.

Coal Mine Catastrophes

THE American people are unmoved by statistics, however terrible in their significance. The figures of the annual death rate from tuberculosis or accident rate on railroads arouse scarcely more emotion than those of the annual rainfall or tidal record. The customary comes easily to be regarded as the inevitable. But when many fatalities come at a time, altho they may not materially increase the general average, they get big headlines in the papers and people begin to inquire what is the matter and how it may be remedied.

This is the case with accidents in mines. The fact that during the year 1906, 2,061 men were killed and 4,800

injured in the coal mines of the United States attracted little attention, but five explosions in quick succession in the first half of the past month, in which over 500 lives were lost, has caused much discussion and ought to lead to effective action, for the larger part of such accidents are preventable. We have absolute proof of this in the reports of European experience. The miners there are of no higher intelligence than ours, for we get our men from Europe, and our mines are not so deep or difficult to work. Yet in the United States 35 men out of every 10,000 engaged in coal mining get killed every year, while in most European countries the number of lives lost is about 10. There are now three times as many miners killed annually as in 1890.

It has been argued that such an increase in the death rate over present European and our former record was the inevitable accompaniment of the immense increase in the production of coal. From 1890 to 1895 the United States mined more coal than in all the preceding decades. One miner in this country does on an average the work of two in Europe. But if we calculate the death rate on the basis of coal mined, instead of the number of men employed, it still makes a bad showing for American practice, for our rate is higher than the European, and is increasing, while theirs is decreasing. The number of men killed to every million tons mined was in this country 5.97 from 1890 to 1895, and 6.04 from 1901 to 1906. In Belgium the number killed for every million of tons mined was only 4.96. Bulletin No. 333 of the United States Geological Survey, just issued, gives the statistics and a discussion of the causes and prevention of coal mine accidents.

Explosions in the mines are caused by the fire-damp or hydrocarbon gases that leak in thru opened crevices, to which is added the force of the combustion of the coal dust. The danger from this source can be minimized by thoro ventilation and watchfulness, by care in the use of explosives and safety lamps and by spraying to lay the dust. About half of the fatalities in mines are caused by the falling of coal, and this can be in many cases prevented by using more timber or leaving larger pillars of coal. The dan-

ger from all these causes may be expected to increase in the future unless more stringent regulations are adopted, for, as the mines get deeper and the pressure becomes greater, ventilation will be more needed, and more expensive, and more props must be used, and timber is advancing in price.

As in railroading, the appalling fatality is due to recklessness of both employees and managers. The men risk their lives daily for the same reason that their employers let them, to make more money. They have to take chances or lose their jobs. They are often too ignorant to understand the danger they are incurring to themselves and others; they are often too careless to obey the rules or take possible precautions. Accidents are sometimes due to the same cause that stopped the building of the Tower of Babel, too many tongues. Men in the same camp speaking a dozen different languages are not so apt, it is true, to form unions to the detriment of their employers' interests, but they also fail in the co-operation necessary for the safety and efficiency of work in the mines.

Since both miners and managers find it apparently to their advantage to risk life in order to increase the output, it is manifestly a case where the third party, the public, has a right to step in and see to it that it is not supplied with fuel at too great a human sacrifice; that the conditions of labor are not intolerable. This right is universally recognized, but imperfectly utilized. There are mining laws and inspectors in the States, but the laws are often impracticable and ineffective, and the inspectors, either because they are too few or lacking of technical knowledge and training, do little to improve or to enforce them. What is needed is a thoro scientific study of such subjects as explosive mixtures, systems of ventilation and methods of testing, and then the careful and systematic application of suitable regulations. The terrible disaster at Courrières, in the Pas de Calais district, in 1906, the greatest in the history of mining, and the simultaneous explosions of January 28th, 1907, in the Lievin mine in the same district and in the St. Johann mine in Rhenish Prussia, show that accidents

will happen in the best regulated regions, but we should be able at least to equal the average European standard of safety.

Brownson and Rixey

IN Germany the highest honor a man may seek for his children is that he may get for them positions as officers in the army or navy. There the art of war is preferred to the arts of peace. Fortunately it is not so here. The profession of arms still has too high credit with us, and there is, among boys, a certain ambition and rivalry to be sent to West Point or Annapolis; but wise parents seek a better career for their sons. The scholar, the statesman, the professional man do not knuckle to the soldier, and the chief honor of the President is not that he is Commander-in-Chief of the Army and Navy.

We say that it is not so in Germany. The distinguished biblical scholar, Franz Delitzsch, coming from a humble origin, did not aspire so high as to secure a commission in the army for his son Friedrich, but was content that he should be a useful Orientalist and Assyriologist; but Friedrich Delitzsch is a favorite of the Emperor William, and he is proud to have his son become a soldier by profession. So the distinguished line of Delitzsch will sink into honored uselessness and clank of sword and gilt of braid.

In such an unhappy profession as that of international homicide the ethical reversal may be expected, and the rivalry of rank will give anxious employment to profitless hours. The great question now before the Navy is whether a rank in one part of the service is equal in honor and authority with a parallel rank in another part of it, and whether the President had any right to put a man in the medical department in command of a hospital ship, instead of giving the position to an officer in what is called the line. To the uninitiated man of business and peace it is mainly the question as to which officer is most competent to command, and he does not care a fig for the question of dignity and ranking glory; but this trumpery is a considerable part of the concern of a profession which is falling constantly in public esteem, and which

delights "*pondus addere nugis*," to make much of trifles.

We are approaching an epoch of peace. We are working to get rid of fighting men and all their vanities. War will go out of fashion. That is the business of the Hague Conferences, and that is the hope of the Parliament of Man. Then cannon will be hammered into hitching-posts and cruisers into coal-ships. May we not also hope that then we shall learn a little better that service is the test of rank, that precedence in positions of honor is not something to be striven for, and that the Brownsons and the Rixeys of the better generation shall rather defer courteously to each other, remembering a certain old lesson taught by a moralist of many centuries ago that he is a gentleman who takes the lower seat, and that he that humbleth himself shall be exalted.

The Senate and Arbitration

REFERRING to our recent editorial urging President Roosevelt to negotiate an arbitration treaty with Japan, the *Seattle Times* says:

"THE INDEPENDENT presses for consideration the desirability of the United States and Japan agreeing upon compulsory arbitration of all difficulties that may arise in the future, thus speedily putting an end to all chances of armed conflict between these two nations. This is pleasant enough to contemplate, but it is still an open question as to whether the Senate would ratify any such treaty. There are a lot of Senators who would prefer backing up the judgment of Congress with a fleet of battleships rather than trusting to an arbitration board which might contain men from nations who do not see American customs as we see them."

This is the nub of the whole matter. When our forefathers adopted the Constitution of the United States all international affairs were settled by diplomacy or war, and the Senate was made an integral part of the treaty-making power. Now there are auguries of a coming day when the nations of the world will become politically federated and international affairs will be determined by the reason of judges rather than by the intrigues of diplomats or the swords of soldiers.

Altho the publicists generally agree that the Senate is entirely within its constitutional prerogatives in ratifying a

general obligatory arbitration treaty, and it is evident that sooner or later public opinion will compel it to do so, yet assuming that the *Seattle Times* is right and that the Senate will not ratify such a treaty *now*, is there no practical solution of the problem satisfactory alike to the Senate and the friends of arbitration?

Suppose the United States and Japan should sign a treaty in which each agrees to respect the territorial integrity of the other. This would mean that the question of the ownership or control of each other's territory is not a fit question for difference and arbitration. Then let the proposed treaty declare that all other questions of dispute that might arise be referred to arbitration. Thus the "vital interests" of territorial integrity would be the subject neither of arbitration nor war, and all other subjects (which would manifestly not be worth going to war about) would be settled by arbitration.

Such a treaty should be acceptable to the most zealous and jealous Senate and would mark the greatest step in advance yet taken in world-civilization. Has a grander opportunity ever come to Theodore Roosevelt, recipient of the Nobel Peace Prize, and to the Senate of the United States?

The Greatest of All the Crops

LATEST, but largest and best of all, is the crop of leaves. These belong to the poor man as well as to the rich, and they are laid down by Nature very nearly where they are wanted on the land, and on every sort of land. Without them the world would soon grow too poor for human habitation. Only for the crop of leaves there would be, in a few years, no other crop, of wheat or apples or corn. They replenish the soil annually, and give to the earth the wealth of the air. It has come about, or will soon, that people will know better than to talk about agriculture, and will understand that they are tilling the air, and not so much the dirt. Aericulture will be the new word for the progressive farmer. Nitrogen, phosphoric acid and potash, these three are the trinity of Nature; the elements with which she creates our harvests; and these three come to us with the crop of leaves.

Most of these leaves will go lower in the order of existence. They will become humus, then soil or dirt; and then again will reappear in higher and nobler forms. It is this humble stuff out of which are to be made our potatoes and our roses. That man is a fool who turns back into the air the magnificent contribution of the year—burning his wealth. There is nothing of more importance to the owner of a rood of land than this leaf crop. He should gather it from the fence corners, and from the highways, and store it in his compost piles. Banked about his buildings, it will keep out the cold; spread over his lawns, it will keep the frost from harming his plants; used for bedding in his stables, it will make his animals comfortable. Yet at least one-half of the leaves that fall inside our corporations are burned or otherwise wasted. Go and lift up, with your trowel, the heap that is made in some hidden corner by the decay of years, undisturbed, and note the depth of rich soil.

It is not the economy of the leaf alone that makes it valuable. Nature never separates the beautiful from the useful. What is there more exquisite than the sweet brown leaves of the beech and the oak; what more perfect than the rare gold that covers the Norway maple, and the scarlet that covers the sugar maple? Nature who made them beautiful knows also how to spread them, to retain their beauty. The lawn is far more charming when covered with the wind-shaken leaves. Along the roadside they drift into frisky rows. There are hollows full, and little winds are whirling and tossing them back toward the limbs where they grew. But they come back again to nestle in the grass. They are tired, and their mission is done among the limbs. It is a beautiful thing that change is possible—certainly if there is to be progress. The weak spot with our civilization is that there must be climbing all the time. We must be going higher, and sometimes we forget that there must be humble passages along this road of betterment. Nature is not simply destroying the beautiful when she throws her leaf crop to the ground. She is not only hurrying them forward to blush in the rose, but she is opening flashes here and there through the tree tops. The persimmon tree, completely strung with golden balls, is far

more beautiful than when the leaves covered the fruit. Clusters bend down the twigs, in ones and twos and tens, making the tree a bit of clean art. Every day they grow more golden under the frost fingers.

What blankets cover the winter world; yellow, brown, red and russet! He blunders who rakes them off into windrows, leaving the grass to the mercy of the frost. Only less wise is he who burns them. What the sod can spare, and be careful not to rake too clean, those only carry to the barn, and let your horses and cows have them knee-deep thro the cold days of winter. Even here they are still beautiful, and the sound of their rustling in the stables is sweet to the farmers' ears. Ah, this nice art of saving and at the same time using what Nature gives us!

As to the Second Advent

A CORRESPONDENT requests an argument against the doctrine of the second coming of Christ as expounded by adventist agitators in orthodox churches. We know of no volume by a scholar of modern point of view which is devoted exclusively to setting forth sane and reasonable opinion on this subject which has caused so great confusion and disaster. In all the plethora of volumes concerned with the topic there is not one which will afford reasonable satisfaction to an inquirer imbued with modern principles of investigation. Dr. Ayres's recent "Bibliography of Jesus Christ Our Lord" contains 238 titles on the subject of the second advent, but the great majority of the books are the veriest rubbish and the remainder are hopelessly out of date. The inquirer, however, will find what he wants in Dr. Clarke's "Outline of Christian Theology" (pp. 436-448), which is a mine of common sense and spiritual insight on the truths of the Christian religion. Further study of the subject may be pursued profitably with the help of such books as Mr. Lewis A. Muirhead's "Eschatology of Jesus," Prof. H. A. A. Kennedy's "St. Paul's Conception of the Last Things," and the late Dr. Salmond's valuable work on "The Christian Doctrine of Immortality."

The time has fully come for Christian

leaders to admit frankly that it is impossible to construct a credible doctrine of the second coming of Christ on the basis of a literal interpretation of texts. The books of Daniel and Revelation were written to instil courage and hope into men harassed by terrible persecution; they were tracts for their times, one for the Maccabean age and the other for the days of Domitian, and their use to predict world catastrophes is a sin against all sound principles of exegesis. The words of Jesus as reported would seem to show that he expected his return on the clouds within the lifetime of men then living, and St. Paul and his contemporaries awaited the parousia daily. Time has shown that this was an error, and if Christian experience counts for anything, it has demonstrated that the whole attitude of waiting for the clouds to break is unwise and harmful. Already in New Testament days a wiser and more spiritual view obtained, for in the Fourth Gospel the return is no longer marvelous and apocalyptic, but the quiet coming of the Spirit to the heart. This is the only parousia which can be preached with any compelling force to the men of to-day.

The passing of the old doctrine—and there can be no question but that it has already past—is a great gain to worthy religious life. Mere watching for a future event is one of the most foolish and inane practices which can possibly be imagined. To sit down in idle expectation, and wait and watch for something to come to pass, is nerve-racking to an extreme, and is also a wicked and sinful waste of time.

The proverb that the watched pot never boils expresses the common consent as to the folly of the practice. Moreover, the more one learns to expect according to the ordinary laws which govern in the affairs of the world, and the less he comes to depend upon catastrophes and interruptions, the more likely is he to do his duty toward God and men. We are all inclined to be at least third cousins of Micawber and "wait for something to turn up," and we need encouragement from our piety rather ourselves to turn over the sod and prepare for a harvest according to established laws.

The counsel of Jesus in view of the second advent is more practical than is

often imagined. He said, "Let your loins be girded about, and your lamps burning, and be ye *like* unto men looking for their lord." He commanded, not star-gazing nor ecstatic prayer, but preparedness for moral crises. Here is a duty on which one can insist with good conscience, for over and over again men are caught unprepared for the moral trials in which they find themselves; and the man of the girded loin, alert for the signal that calls him to duty, quick in rebuff of mean and base suggestion, is all too rare for the good of the world.

For the most part, conduct is not the result of deliberation, but the outcome of the sum-total of deeds previously registered. The world is so constituted that one is forced to act on impulse a great deal of the time. Most real decisions are speedily made, even when one has time to think the matter over. What is called "deciding" is often a pleasant dreaming over future probabilities, not careful estimation of facts now in hand. You can tell pretty nearly what a man will do in given circumstances, if you know the man. Anybody might have predicted that Esau would sell his birthright when he came in exhausted from the field. The bargain was not made when Jacob stipulated that the price of a mess of potage must be the portion of the elder son, and when Esau replied, "Behold, I am about to die, and what profit shall the birthright do me?" that was only the passing of the receipt. Esau sold his birthright when as a lad he did not learn to control his appetite, and failed to learn the worth of an honorable position in life. There is always some way for a fool to lose, and he can be depended upon to find it.

The world is full of men who are shedding tears over "dispensations of providence" which have kept them from success. Perhaps it is a merciful arrangement of our human nature that we can attribute to luck what we foreordain for ourselves in the slow process of the years. We see the crisis, and imagine that there the deed was wrought which in our childhood we began to fashion, and at which we have labored slowly and steadily all the days of our life. We forget the great clumsy boy spelling out the hard words of Shakespeare: we note only

the classic English of the speech at Gettysburg.

The duty of preparedness for moral crises is the practical improvement of the New Testament teaching on the second advent. No considerable body of people will ever again anticipate the personal return of Jesus to the earth. The pervading of society by His spirit, which is actually taking place, is something a great deal better. In the present vocabulary the command to watch means to be men of girded loins, ready for duty; come when and how it may. The way to overcome evil is to achieve manhood which scorns all baseness. The time to overpower temptation is ten or twenty years before it solicits. The wise man will be forehanded in his morals as well as in his business, not saving his neck by a hair's breadth in a struggle of tremendous fury, but nourishing and exercising himself to a moral vigor that will scarcely feel the fight. Some of earth's noblest souls do not even know the triumphs they are winning, since they made their fight so long beforehand.

Trying a Parliament for Treason

To invite the people to elect a Parliament, and then to try its members for treason, is one of the grim horrors of history. Yet that is just what we see done in Russia today. The present Czar asked the Russian people to choose members of the first Russian Duma. They did so, and they told the Czar what sort of a constitutional government they wanted. This he refused and he dissolved the Duma. A large number of them, their most representative men, met together after this dissolution in Viborg, in Finland, and there signed a protest against the action of the Czar. Now 160 of these men, all that can be reached, are being tried for treason in St. Petersburg.

Whether their act was one of treason depends on who were the rightful rulers of the people, the Czar and his advisers, or the Duma which he dissolved. The Czar appoints the court, so that these 160 men stand a very slim chance of having that question even opened for discussion.

The action of over two hundred mem-

bers who met at Viborg was most courageous. They said:

"Citizens, stand up for your trampled rights, for popular representation and for an Imperial Parliament. Russia must not remain a day without popular representation. You possess the means of acquiring it. The Government has, without the assent of the representatives of the people, no right to collect taxes from the people, nor to summon the people to military service. Therefore you are now the Government. The dissolved Parliament was justified in giving neither money nor soldiers. Should the Government, however, contract loans in order to procure funds, such loans will be invalid. Without the consent of the popular representatives the Russian people will never acknowledge them and will never be called upon to pay them.

"Accordingly, until a popular representative Parliament is summoned, do not give a kopeck to the throne, nor a soldier to the army. Be steadfast in your refusal. No power can resist the united, inflexible will of the people."

That address to the Russian people was treason, if the Duma was the creature of the Czar, who had the right to call or dissolve it; who had the right to disobey its will and blot it out of existence. It was not treason, if the people have the right to rule, and Czars are but their creatures, set to do their will. The latter is the doctrine held in the United States and in every constitutionally governed country in the world. It is not the doctrine which today holds power and rule in Russia, in Russia alone of all so-called civilized countries. There the throne is lord of the people; the people have only the rights which the throne offers to them.

Very bravely do these 169 men maintain their position and rights as against the tyranny of the Czar. They make no apology. They assert that they are answerable not to the throne, but to the nation and to posterity. They declare that they are the true representatives of the people, and that the second Duma justified them by sending an overwhelming majority which supported their positions.

Nevertheless they will be condemned and punished, for with the oppressor there is power. The Cossack soldiers have no sympathy with the people of Russia, and they are numerous enough to crush opposition for the present. Yet the years move on, and these men, sent to prison and exile, will be the patriot

heroes of renovated Russia only a few years later.

"Conversion by the Million"

THIS is the title of a paper in *The Chinese Recorder* by the distinguished missionary, Timothy Richard, D.D. He asks, What is Conversion? and he answers:

"It is a turning round from sin which produces sorrow and ruin so as to escape from both and secure joy and life, to be found in its fulness in God alone."

He then asks, What is the cause of sorrow? The Hindu finds it in neglect of caste, and the remedy is outward observance. The Buddhist finds it in love of existence, and the remedy is to stamp out all desire. The Mohammedan finds it in idolatry, and the remedy is worship of one God. The Taoist finds it in ignorance how to control evil spirits and the forces of nature, and his remedy is magic and charms. The Confucianist finds it in lack of order, and the remedy is sound ethics. The Christian finds the cause of sorrow in sin and transgression of God's laws, and the remedy is to learn and obey them.

Now, he says, these laws of God are broad. They include laws of material improvement, and ignorance of the laws of economics impoverishes people and famines follow, while ignorance of the laws of health kills people. The laws of right education make small nations great, and obedience to the laws of peace prevent rebellions and wars, while if the laws which require respect of others' rights are broken distrust is created and men and nations suffer or perish.

Now, says Dr. Richard, when railways, steamers, telegraphs, roads, etc., are introduced for a whole people, it is a case of the conversion of millions of people, and we should be grateful for the development of man's material welfare under divine law, and praise God for it. Equally when modern education is adopted thruout the land, as is coming to be the case in China, "it is an immense conversion, turning millions from the darkness of ignorance and superstition to the light of knowledge, for which we should feel grateful and praise God."

Again, when better laws are adopted, "it is a conversion of incalculable good for bringing peace and good will to untold numbers." And, once more, when a nation encourages the study of religion, to find out what is the highest and best, "then we feel as if the kingdom of God were at hand."

The point of Dr. Richard's argument is this: That if endeavors after conversion are meant merely to cover the strivings to renew men's hearts devotionally without striving to improve men materially, intellectually and nationally, it would seem that only a small part of the kingdom of God makes headway. It is a fact that "conversion in regard to material, intellectual, social, national and international, as well as devotional aspects, is a conversion towards the establishment of the kingdom of God on earth," and therefore the universal changes going on in China now should, so far as they go, be regarded as "genuine conversions by the million."

There is a phase of deep truth in Dr. Richard's claim as applied to China, and to all progress which makes the world happier and better. It is the same doctrine which Kipling has preached:

"Beyond the path of the outmost sun thru
utter darkness hurled,
Further than ever comet flared or vagrant
star-dust swirled,
Set such as fought and sailed and ruled and
loved and made our world."

The World Is Round

And getting smaller, or at least it seems so, for we are certainly getting closer together. The year 1907 has been distinguished by a marvelous development of methods of intercommunication. We have beaten Jules Verne's imagination by half. A man can go around the world in forty days by regular railroad trains and steamship lines. From the United States to England now takes less than five days by the new giant turbines "Lusitania" and "Mauretania." There has been an automobile race from Pekin to Paris, and another is projected from New York to Paris thru Alaska and Siberia, with a little assistance, of course, in leaping the gap at Bering Strait. Airships travel across continents, paying no attention to frontiers and looking down on custom

houses. Commercial telegrams are transmitted by ether waves across the Atlantic, and ships that pass in the night extend their period of intercourse by telephoning to each other. Photographs and sketches of distant scenes are transmitted to newspapers by wire. We start our whole fleet off without trepidation on a 15,000 mile voyage to San Francisco, and last, but not least, our peripatetic proconsul takes a trip to our antipodal possessions, and, being in a hurry to get back for the campaign, goes on around the world.

That a little pocket State like Nevada, which had a population in 1900 of only 42,335, having lost over three thousand people in ten years, with a territory about double that of the six New England States, and a population about that of Holyoke, Mass., or Covington, Ky., or Lancaster, Pa., should not be able to maintain a militia or a State constabulary is not strange, altho it is ridiculous that it should supply two members of the United States Senate. Because the Governor of Nevada had no militia he had to ask the President to send soldiers to Goldfield to maintain peace, but the condition is irregular, and the President tells the Governor that he must call the Legislature, and he has consented to do so. Then the Legislature can create a constabulary, or can ask the President to do for it in its feebleness what he would of his own right do in a Territory. But is it not farcical to speak of a Legislature for a so-called State, whose voting citizens are no more in number than those in Brockton, or Saginaw, or Covington, and who are scattered like wolves in a forest? It is the rotten borough system which compels interference by the Federal arm.

Ora Pro Nobis

On the eve of the feast of the Immaculate Conception, December 7th, 1907, the Congregation of Rites took the initial steps toward the canonization of Pius IX. A fit day, indeed, for in 1854, on the same day, of his own authority, without Council, Pius IX declared the Immaculate Conception of Mary a revealed doctrine. Now the edict has gone forth that every-

body, male and female, cleric or layman, must, under threat of ecclesiastical censures, forward within two months to the aforesaid congregation all writings of Pius IX which they have, as well as the names of persons who may possess any. In the long chain of Roman Pontiffs, few Popes have left more fatal results politically to Catholicism, while no Pope perhaps witnessed a larger growth of scholarship, in its turn equally threatening the Church's claim.—Austria humbled at Königgratz; Spain convulsed with revolution after revolution; imperial France buried at Sedan, and the German Kaiser crowned at Versailles; Italy one and indivisible, from the Alps to the Ægean Sea; the Third French Republic, destined to wipe out the Concordat; Mexico and the South American republics, except Ecuador, disestablishing the Church; the Southern Confederacy, which Pius IX honored with an official state document, shattered to the winds at Appomattox. So, in the scholarly world, the growth of the critical school, Tübingen and the rest of the German universities, Darwin and evolution, the great results of historical studies and biblical research. But sainthood may be the due reward of his eternal "*Non Possumus*."

Indians as Individuals The keynote with which Commissioner Leupp entered office is still dominant—treating the Indians individually instead of *en masse*. To promote this the division of large agencies is being carried so far as to place even day-school teachers under bonded responsibility for small communities of Indians whose every-day lives they can know personally. Another touch of individualism is the substitution of thumb-print signatures for the perfunctory touching of the pen. Thus is impressed upon the signer as well as the paper the binding obligation which he has incurred. In the same line is the establishment of an employment bureau for Indians thru which several thousand of them have become wage-earners as farm-hands, herders, laborers on irrigating ditches and railroads or at any other occupation for which they may be fitted. If the Indians can find work for

themselves, so much the better; but if not, work is found for them, sometimes individually, oftener in groups or gangs. For instance, last year 600 Indians earned \$28,000 in the Colorado beet fields, and some 1,100 Indians received \$115,000 for their work at the Salton Sea, where it was found most difficult to get or keep any others than Indian laborers. The manufacture of garments by Indian women is an experiment just started, with a capital of \$2,000, among the Rosebud Sioux in South Dakota. During the year 10,000 allotments of land to Indians have been approved. The United States Supreme Court has made the important decision that thruout the trust period State courts have no jurisdiction over Indian allotments. Under the "Burke law" of 1906, which authorized the issuing of patents in fee to allottees found competent to manage their own affairs, a beginning has been made in the dismissal of Indians from the government nursery; 753 have this year been given their freedom papers as to their lands. The law of 1902 authorized the sale of inherited lands and already 380,000 acres have been disposed of for five and a half million dollars. To see that each Indian sells at a fair price, and that he is not immediately fleeced out of the proceeds means a deal of watching and work for the Indian Bureau; and the same is true as to the leasing of Indian lands. This helps to explain why the Indian Bureau is still growing larger instead of smaller. Hand-picking requires a good many hands.

A Methodist Union Three of the Methodist denominations of Great Britain have now been united in one body. These are the United Methodist Free Churches, the Methodist New Connection and the Bible Christians. The negotiations have been going on for several years and are now consummated. There were nearly seven hundred delegates from these bodies in the final meeting, when they subscribed unanimously to the act of corporate union. They took a good name, the United Methodist Church; and they are not satisfied; they are sanguine that there will follow the com-

plete union of all the Methodist bodies in the United Kingdom. Now why should we not have such a union made the chief business of the General Conferences of the Methodist Churches in the United States? There is no visible reason why the two great white branches of Methodism should not unite. There is nothing essential that any longer separates the Northern from the Southern Methodist Church. Equally there is absolutely no principle that divides the negro Methodisms. There is no present likelihood of the white and colored Churches uniting, but each color can at least unite by itself, maintaining their separation from each other until death do them join. For whom pigment hath put asunder, let not Christianity join together in this life.

What is the matter with the "Major Excommunication"? It does not seem to work. On Christmas Day the Pope inflicted its penalties on all concerned in the publication of *Il Rinnovamento*, the Milan monthly whose very name suggests Modernism, and which frankly condemns the late Papal decisions. Of course that is rebellion against constituted ecclesiastical authority, and ecclesiastical death is the suitable penalty for such treason. But the editors, proprietors, printers, contributors and subscribers laugh at the decree, and declare that the Pope is trying to crush liberty of research. The major excommunication was a terrible thing in the old days when it shut a man out, not only from the Church, but also from association with human kind. Now Italians pay no attention to it.

The time has come when the Indian Congress, after twenty-three years of work for the uplifting of the people of India, must meet the question whether it is to be used as an implement to destroy the British rule in India. At last the sober, conservative people will no longer submit to allow the radicals to demand the withdrawal of England, so that the rule shall be left to the natives alone. The result is disruption of the Congress, which will greatly weaken its influence for good. It is well to seek for progressive rights for the people, and larger share in rule; but India cannot be

left to itself yet. The time may come, as it may for the Filipinos, but that is for another generation.

The Mayor of Portland, Me., has discovered, or thinks he has discovered, that the Japanese have been secretly making plans and maps of that city and of the roads that approach it. Possibly; for war bureaus have to keep busy, and one of their duties is to have on hand maps of every place under the stars. Doubtless Great Britain and Germany and France have acres of maps of other countries in their archives, all ready to be drawn out if a war should break out anywhere. If they were not forearmed they would be thought greatly to blame. Very probably the new Japan feels obliged to keep busy, and is mapping the world quietly.

We are not sorry to have the question tried before the United States Courts whether it was lawful for the President to dismiss without honor the entire squadron of negro soldiers who were accused of "shooting up" the town of Brownsville, Tex. Such a suit has been brought, and will be prest to the Supreme Court. The President's action was unusual and very drastic, altho based on evidence presented to the President which seemed to justify his action. The courts will tell us whether he transcended his authority in this matter.

The last birthday batch of honors in England gave no new peerages. Why should it? The Liberal Government is trying to discredit the House of Lords, and why should it strengthen it? Would it not be a good policy for Liberal Governments to take the position that a hereditary House is an anomaly and an injustice, and that not a member should be added to it? In that case all new peerages would be Conservative and bipartisan, which would prove the Upper House unrepresentative.

A question of ethics arising at this season has never been settled. Is it fair to accept a beautiful and expensive calendar from your grocer and then cut off the advertising or cover it up with a photograph?

Railroad Coal Property

SIXTEEN months have past since the following provision of the new Railroad Rate act became a law in force:

"From and after May 1, 1908, it shall be unlawful for any railroad company to transport from any State, Territory, or the District of Columbia to any other State, Territory, or the District of Columbia, or to any foreign country, any article or commodity (other than timber or the manufactured products thereof) manufactured, mined or produced by it, or under its authority, or which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such articles or commodities as may be necessary or intended for its use in the conduct of its business as a common carrier."

Only four months remain, but it appears that the question of policy under the statute was not taken up by the coal railroad companies for thoro consideration until a few weeks ago. The problem is an extremely difficult one, and thus far there is no agreement as to what shall be done. One small coal road has transferred its coal properties to a new and separate corporation, controlled by its stockholders. It is reported that the same method may be adopted by the Gould railroad companies, whose soft coal properties (East and West) are worth about \$60,000,000. But such action would probably be attacked as an evasion of the law. Railroad companies virtually own 90 per cent. of the anthracite deposits. It would be impracticable for some of these companies to transfer their coal holdings, because the latter are security in part for large issues of the companies' bonds. It is understood that the project of making a new anthracite company, capitalized at \$1,000,000,000, has been abandoned because of this difficulty and also for the reason that such a company would be regarded as a Trust. There is a desire to test the constitutionality of the law, but the penalties for violation, which would be heavy, would probably be exacted during the interval preceding a final decision. It is expected that the Union Pacific, which now supplies a large area from its mines in Wyoming, will cease to sell coal and will mine it only for the company's use.

Congress was led to make this law by abundant evidence of discrimination against independent producers, both in the East and in the West, and of fraud in the acquisition of coal land by railroad companies in the West, where criminal suits are now pending. The statute will not be repealed, but temporary concessions might be obtained if the railroad companies should show a willingness to comply with its requirements and should ask that the difficulties confronting them be fairly considered.

The Security Market

THE well known banking house of Spencer Trask & Co. have just issued an interesting analysis of present financial conditions in which they hold that the country will very speedily recover from the panic for the following reasons:

"1. The very magnitude of the business which we have developed during the last three years, but which has grown on a sound basis, will, now that the turn has come, result in a corresponding ability on our part to accumulate large savings.

"2. The balance of trade with Europe was never more in our favor than now, and foreign countries must pay us high prices for our surplus products.

"3. The lack of confidence which has existed is rapidly being dispelled by the general discussion of various reforms which are being suggested with reference to the currency system and the regulation of trusts.

"4. The present panic, in contrast to all other periods of great depression, finds the farmer everywhere highly prosperous.

"5. A trade reaction has set in which will help to a restoration of normal conditions in the price of labor materials, and commodities generally.

"6. As underlying conditions are undoubtedly sound, and there has been no general overproduction, it is probable that the reaction will be of comparatively short duration, because business is being rapidly curtailed in exact proportion to the lack of demand."

If this is so, the stocks and bonds should soon go upward and consequently now is the time to buy. THE INDEPENDENT does not know whether we have yet reached the absolute bottom of the market or not, but those who are looking for investment rather than speculation can hardly make a mistake by buying standard securities now.

Bank Reserves

THE theory of banking is that if a man deposits \$1,000 in the bank today and he wants to draw this money out tomorrow he goes to his bank of deposit, draws a check for the \$1,000 and gets his money. Let us suppose that 1,000 persons deposit \$1,000 each and that the next day each one wanted to draw out the full sum on deposit. Let us further suppose that every bank was in a position instantly to meet such wholesale demands in spot cash; where would the bank's margin of profit lie? How could any bank invest its money so as to earn dividends? It would manifestly be impossible to do a modern banking business on any such basis. In order to determine the proper margin of safety as to what kind of a reserve should properly be held in the vaults of every going bank, Governor

Hughes, moved by recent happenings in the financial world, appointed a committee consisting of A. Barton Hepburn, president of the Chase National Bank (chairman), Presidents Edward S. Marston, of the Farmers' Loan and Trust Company; Edward W. Sheldon, of the United States Trust Company; A. S. Frisell, of the Fifth Avenue Bank; Stephen Baker, of the Manhattan Company, and Andrew Mills, of the Dry Dock Savings Institution, all of New York City, to determine on a safe and standard bank reserve and on other related subjects. This committee has now recommended that a minimum reserve of 25 per cent. be required of trust companies as well as banks, of which 15 per cent. is to be in cash and 10 per cent. in approved depositories. Bankers and those interested in finance generally may well carefully consider this admirable report *in extenso*.

The Travelers Insurance Company

The Travelers Insurance Company, of which Sylvester C. Dunham is the president, was founded by James G. Batterson in 1863. Mr. Batterson's attention was attracted to the subject of accident insurance while traveling in England in 1859. From data which he gathered on this subject and because of his initiative grew up the business of the Travelers Insurance Company as well as the general business of accident insurance, in which such large capital is now invested. From very small beginnings accident insurance has grown to very large proportions. In the development of the business The Travelers has taken a leading, even a parental, part. From first to last more than seventy companies have been organized to do an accident business. Many of these companies have come to grief because of a series of disastrous railroad and steamship accidents and for other reasons to which space forbids reference here, but the Travelers, while hard hit by the same events which swept away so many of its competitors, by promptly meeting its losses has gained the confidence of the insuring public. It has absorbed many of its sometime rivals and

has progressed, sometimes slowly, but always step by step, until the necessity at last arose for the new home office, which is pictured in this issue. Sylvester C. Dunham, the president of the Travelers Insurance Company, was born in Mansfield, Conn., in 1846. He entered the service of the Travelers in 1885 as its general counsel. He became one of the company's directors in 1897. On the death of the late President Batterson in 1901, he was elected as his successor in the president's chair. In 1906 the Travelers had total assets of \$53,401,726 and a surplus of \$6,139,686.

The Travelers has for many years been the leading exponent of guaranteed non-participating insurance—that is to say, that

form wherein a definite premium is paid for a definite amount of insurance. Both in its life, accident and liability departments the Travelers constantly maintains that conservatism for which the company became known from the very beginning of its existence. Its record has been constantly progressive, and the outlook for the new year is most encouraging. Statistics compiled by the Travelers show that more accidents overtake pedestrians than any other class of persons. The percentage reaches 24.14.

SYLVESTER C. DUNHAM,
President of the Travelers Insurance Company.

The Independent

VOL. LXIV NEW YORK, THURSDAY, JANUARY 9, 1908

No. 3084

The Navy Quarrel

Secretary of the Navy Metcalf has given to the press two letters by President Roosevelt on the question before the Navy as to the propriety of appointing a surgeon in command of a hospital ship. It will be remembered that when the President decided to give the command to a surgeon Admiral Brownson sent a letter to the President resigning his post as Chief of the Bureau of Navigation and emphasizing his opposition to the principles that a surgeon should be in command. His letter has not been published. In the first of President Roosevelt's letters, of January 2d, he says:

"The action of the late chief of the bureau, Admiral Brownson, in tendering his resignation because he did not agree with the President and the Department regarding an order issued before he came into the bureau by the Secretary of the Navy as to the control of the hospital ships, was unseemly and improper, and coupled with the various controversies among the officers of the navy and their adherents as to details of naval construction and methods of training has undoubtedly been prejudicial to the interests of the navy and may seriously impair the confidence in the navy which is essential to securing the legislation so sorely needed by the navy. The way in which these controversies have been carried out is highly injurious to the service, whether the communications are made openly over the signatures of the naval officers or by civilians who have evidently gained their information from naval officers."

"The first duty of every officer, whether of the line, of the pay department, of the medical department or of the construction department, whether in one bureau or in another, is to give immediate and loyal obedience to every lawful command of a superior and, of course, above all, to the law itself. This duty is incumbent upon all, but it is most incumbent upon those highest in rank, whose example may be of far-reaching effect."

In his second letter, written two days later, the President expands the reasons why, after careful consideration, it was decided to put hospital ships under command of surgeons, their navigation being

under a competent sailing master and a civilian crew. He says this has been the custom in other navies to preserve neutrality for the wounded in case of war. He says:

"The command of a hospital ship should unquestionably be vested in a medical officer and no line officer should be aboard it. The medical officer in such case is simply the responsible head of a large hospital plant, which by reason of his training he is peculiarly fitted to command. It is not his province to navigate the vessel; this should be left to a civilian sailing master, but he, and he alone, is best qualified to respect and guard the neutrality of the ship."

He says that the absurdity of having a line officer command a neutral hospital ship is shown by the case of the "Solace" which was in command of a line officer during the Spanish War, when this officer actually put in a claim for prize money for the part the "Solace" took in a capture while flying the Red Cross flag and professing neutrality. Other cases of more flagrant breach of neutrality are mentioned. Line officers and crew are combatants and not neutrals.

Message of Governor Hughes

The message of Governor Hughes surprised all the politicians because of an unusual recommendation, which would alone set a great many people against him as candidate for the Presidency. It was that which urged the Legislature to pass a law absolutely forbidding betting at racetracks.

"The Constitution makes it the duty of the Legislature to enact appropriate laws to prevent poolselling, bookmaking and other kinds of gambling. Experience has shown that the laws enacted have not accomplished the purpose which the Constitution defines. The evils and demoralizing influences and, it may be added, the economic waste at which the Constitution aimed exist under the law and in fact are stimulated and increased thru its provisions. The discrimination in penalties now existing rests on no distinction that is justified

to the popular mind. Public sentiment is against such arbitrary distinctions, with the result that the laws against gambling outside of racetracks have been defied and the administration of the law has been brought into contempt.

"The Constitution makes no exception of racetracks. I recommend that the Legislature carry out the clear direction of the people without discrimination. In connection with the repeal of the existing exception I recommend that the offences described in Section 351 of the Penal Code (poolselling or bookmaking) should be punished by imprisonment and that the alternative of fines should be abolished.

"In order that there may be no diminution of the support upon which agricultural societies rely at present as a result of the 5 per cent. rakeoff they get from the gross receipts of the racetracks the Governor favors making appropriations to guarantee them against loss. 'It is better that they should be supported directly,' he says, 'than that the State should derive a revenue for this purpose thru an indefensible partiality in the enforcement of the fundamental law.'

Those who object to the abolition of racetrack gambling confine themselves mainly to the recommendation that the Legislature make specific grants to agricultural societies, as additional and burdensome taxation, while others declare that the encouragement of agriculture is the duty of the State. Governor Hughes further urges that trust companies be made to submit to the same laws as other banks; that the powers of the State Superintendent of Banks be increased; that amounts to be loaned by any bank or trust company on the stock of another financial institution be limited, as well as the amount that may be loaned on collateral to any one interest, and that proper safeguards be imposed against loans on unmarketable securities. He also urges direct nominations for office at party primaries, and at elections a simplified ballot without the party column, altho appropriate designation may be placed after each name. He would have the power of the Public Service Commission extended so as to include telegraph and telephone companies. That the Legislature will pass any bill to prohibit racetrack gambling is regarded as very doubtful. Last year was an unusually profitable year for the racing associations, and Speaker Wadsworth's father is chairman of the State Racing Commission, and much interested in the sport as well as being financially interested in the Kenilworth Park, near Buffalo. Last

year an effort was made to pass such a law as is now proposed, but the bill was suppressed in the Senate committee. When the bill to prohibit racetrack betting was pending in the Legislature, eight racing associations and jockey clubs sent to the representatives of the racetrack at Albany the sum of \$23,457 to aid in preventing its passage. They urge that a law prohibiting betting would kill the racing associations, and thus do a great injury to the development of the horse. New Hampshire, Massachusetts, New Jersey and Pennsylvania are among the neighboring States that have abolished racetrack gambling.

Presidential Candidates

Mr. Taft is somewhat reorganizing his forces for securing delegates to the Convention. Frank H. Hitchcock, First Assistant Postmaster-General, has been asked to take charge of the Taft interests in the South and East. This would involve his resignation of his present post. It will be remembered that it was reported that Mr. Hitchcock was busily at work securing delegates in the South in favor of Mr. Cortelyou until the latter in a sharp letter absolutely denied that either he or any one else was doing anything of the sort. It was apparently an ill-advised rumor, which had its origin in the ranks of the friends of Mr. Taft. In a meeting of the Ohio State Republican Central Committee the issue in every vote was drawn sharply between the Taft men and those who follow Foraker, and the friends of Secretary Taft stood 14 against 7 for Foraker. But Senator Foraker has issued a statement to the effect that he will not be bound by this action of the Central Committee. Particularly he objects to the requirement that before there can be a Taft ticket and a Foraker ticket for the election of delegates there must be a petition signed by twenty times the number of the candidates for delegates and alternates. That might require, he says, 4,000 signers. He says the rule is illegal and he will not stand by it. There has been a conference in Albany of friends of Governor Hughes to further his interests. Committees are to be appointed, under the direction of State

Senator A. R. Page, in every Assembly district, to secure delegates to the national convention favorable to Governor Hughes. When asked whether the plan had the approval of Mr. Hughes, Senator Page said: "The Governor has not served us with either an injunction or a mandamus." In Iowa Governor Cummins and Secretary Shaw, both of whom have been named for the Presidency, have agreed to keep their hands off from the delegation to the national convention, and the delegation will not be instructed for either candidate. Within the Democratic party there seems to be a considerable movement away from Mr. Bryan toward some one who will be regarded as a more conservative man. The name of Governor Johnson, of Minnesota, comes into prominence, particularly since he has, in an interview, declared that the tariff ought to be the chief issue of the campaign. He also argues against centralization as endangering the constitutional rights of the States, and he does not favor the nomination of Mr. Bryan. Under this issue, with that of currency reform, the names of Judge Harman is being actively presented in Ohio, and that of Judge Gray, in Delaware. This movement seems to be gathering strength in the South.

Prohibition With the New Year Prohibition went into effect in Georgia and Oklahoma, and largely in Alabama. The churches were filled on watch night with enthusiastic crowds of men and women in the larger cities. Over four thousand people filled the Baptist Tabernacle in Atlanta. Speakers showed the evils of the saloon, one speaker declaring that in Chicago \$100,000,000 is spent annually for whisky, \$19,000,000 for gambling and \$20,000,000 for prostitution. At the hour of twelve Dr. Long smashed an empty whisky bottle. The saloons generally prepared for the change by selling out their entire stock of liquors before the midnight hour, and the saloons were thronged with customers. Even the saloons at some places entered into the spirit of the reform, and at Columbus, Ga., the most prominent saloon was draped in crape, and a large bell was put

in the doorway and was dolefully tolled at intervals. In Birmingham, Ala., every saloon closed at midnight. In fifty counties in the State the saloons are now closed, while in seventeen liquor may be sold for another year. The best saloon locations in Birmingham have been rented at reduced figures. In Oklahoma City the New State brewing plant prepared to send its beer and that not yet fully fermented out of the State, but was not allowed to do so. So 2,300 barrels were poured at once from the great vats into the sewers and into the streets. A large crowd came to see the sight, some of whom brought buckets and scooped up the beer as it flowed into the sewers. Others lay down to drink from the gutters, and not a few were made drunk. The value of the beer was \$18,000. In Raleigh, N. C., by a popular vote, the liquor system run by the city, which brought in a revenue of \$45,000, was voted down, and prohibition has been inaugurated.

Lawlessness in Kentucky

There have been further attacks by night-riders in Kentucky against those who had not signed the contract not to raise tobacco crops this year, and to hold their present crops of 1907 for six months. Three hundred night-riders compelled growers in Powerville and its neighborhood to sign such contracts, and in Russellville one hundred such disguised riders overpowered the three policemen and then dynamited and burned two independent tobacco concerns and several other establishments, and then escaped. Three men were wounded by the marauders. The loss is estimated at about \$50,000. The men were well organized, with a captain and lieutenants, were mounted and wore white capes, false beards and masks. It would seem easy enough to discover them.

Ambassador Aoki's Farewell

Before embarking on his voyage home Viscount Aoki, the retiring Japanese Minister to Washington, was given a luncheon by the San Francisco Chamber of Commerce, and on this occasion, as well as in interviews, he talked about amicable relations existing between the United States and Japan, in-

sisting that there were no issues between the two countries that would involve war. On the contrary, the two nations needed each other and had many interests in common, which would require their mutual understanding and kindly good will. He ridiculed as absurd and entirely unwarranted the sensational reports of a contemplated seizure of Hawaii by the Japanese before the arrival of our fleet in Pacific waters. In regard to the immigration question, he made the following frank statement of the policy of his Government:

"I am perfectly convinced that the immigration of Japanese laborers to this country is undesirable. I admit that if it is impossible for American and Japanese labor to live and work together in this country without fighting, under the competitive conditions which the Japanese laborer imposes on the American laborer, I cannot see how strife can be avoided between them, and for this reason I am in favor of the restriction of immigration.

"I can assure you that the immigration of laborers from Japan to this country will be entirely stopped by the Japanese Government, and also that the American laborers will be excluded from entering Japan. The Japanese Government is fully determined on this course, and effective legislation will be enacted and enforced immediately. The effect of these regulations will, in my opinion, remove all serious international differences.

"The principal object of my returning to Tokyo is to explain in detail the conditions existing in this country. These conditions are little understood in Japan, because of misrepresentation on the part of the press, and because of biased and prejudiced correspondents, both American and Japanese. I am convinced that when the Japanese people as a whole thoroly understand the situation they will realize the necessity of the legislation which it is the purpose of the Government to put into effect."

The name of Viscount Aoki's successor had not yet been announced.—A reply to Secretary Root's note in regard to Japanese immigration has been given by the Japanese Government to Ambassador O'Brien at Tokyo. While the contents of the communication have not been given out, it is understood that it is along the lines of Ambassador Aoki's remarks in San Francisco, expressing a willingness on the part of the Japanese Government voluntarily to restrict the emigration of laborers to the United States. The fact that the restrictions imposed have not as yet succeeded in checking the influx into the United States of Japanese from Hawaii, Canada and the Philippines

is understood to have formed the basis of Secretary Root's remonstrance.—Race hatred in Vancouver, B. C., is receiving a new incitement thru a conflict in the Japanese quarter on the morning of January 1st. Three young firemen smashed in a window of a Japanese boarding house and were at once attacked by half a dozen Japanese armed with knives. The nose of one of the firemen was cut off, and the other two were severely wounded.

British Imperial Difficulties

The anti-Asiatic animosity shown in the disorder at Vancouver and in other British colonies is a double source of embarrassment to the Government, because it makes trouble with the allied power of Japan, as well as with the people of India, now equally sensitive to racial slights. The action taken by the Transvaal Government against the Hindus as well as the Chinese adds to the difficulties of the situation. The Immigration Restriction Act passed by the Transvaal Government went nominally into effect January 1st, but there will be some delay in enforcing it. The law practically prohibits the immigration of Orientals into the Transvaal, and required that the Hindus already in the country register and identify themselves by a system of finger marks before their licenses, expiring December 31st, would be renewed. The Imperial Government, after having granted responsible government to the Transvaal, could not veto the law, altho it restricts the freedom of other British subjects. The Asiatics have taken matters into their own hands. Two thousand of them met in Johannesburg, and voted to refuse to submit to the humiliating personal conditions of the law. They will adopt a policy of passive resistance, and submit to arrest rather than comply.—The Indian National Congress meeting at Surat broke up in disorder on account of the conflicts between the Extremists, who advocated the renewal of the boycott and other anti-British resolutions of the last Congress, and the Moderates, who wish to co-operate with the British Government. There were 2,000 delegates to the Congress, representing all parts of India, and 5,000 spectators in the pavilion on assembling. Af-

ter "Bande Mataram," a hymn to Kali, had been sung by a choir of ladies, the Congress was opened, and a conflict was at once precipitated over the election of president. Dr. Rash Behari Ghose was nominated by the Moderates for that office, but the shouts of the Extremists were so great that no parliamentary action could be taken. Another session was called on the following morning, but broke up in a free-for-all fight, in which the legs of chairs and tables were used as weapons, and the police had to be called in. Lajpat Rai, who was recently deported by the British Government for sedition, was the hero of the Extremists, who filled his carriage with garlands of flowers and dragged it thru the streets of the city in procession.—The native drivers of the Eastern Bengal Railway who have been on the strike, altho returning to work three times, have finally been locked out by the management of the railway. Mr. Allen, a magistrate of Dacca, who has been trying a case against the leader of the National Volunteers, was assassinated by an unknown native on the railway platform.

The Trial of the Dumaists

The trial of 169 members of the first Russian Duma, who, after its dismissal by the Czar, assembled at Viborg and issued a manifesto appealing to the people against this despotic action, has been concluded, and all but two are sentenced to three months' imprisonment, which involves the loss of civil rights. An appeal will be made to the Senate, the highest tribunal of Russia. Under the circumstances the penalty is regarded as unexpectedly light, because the charge was virtually that of treason, involved in the drawing up and dissemination of a manifesto "with intent to incite the population of Russia to disobedience and resistance to the law." Of those charged, 157 appeared for trial. It was not necessary to call witnesses for the prosecution, because all admitted the part they took in the manifesto, and defended their action with eloquent speeches. They claimed that the arbitrary dissolution of the Duma and the uncertainty whether the Government would not abolish the constitutional régime demanded a vigorous protest.

Among the condemned was the aged patriot, Ivan Petrunkevitch, the first to demand a constitution for Russia; Sergius Muromtseff, the president of the first Duma; Prince Golgoroukoff, and other leaders of the parliamentary movement in Russia. The convicted members were not imprisoned, but will be required to surrender themselves January 20.—The present Duma and the Council of the Empire have passed a famine appropriation, and have under consideration the budget presented by Premier Stolypin, who announced that an extraordinary loan of about \$93,000,000 would be needed. Among the items of expenditure he mentioned an increase of \$28,000,000 for national defense, \$27,000,000 for the army, \$6,000,000 for the navy, \$23,000,000 for improvements in communications, \$6,000,000 for agriculture, and \$3,000,000 each for public instruction and the Ministries of the Interior, Finance and Justice. The extraordinary expenditure for last year amounted to \$102,000,000, which included \$33,000,000 for expenses arising out of the late war.

Hungarian Race Troubles

The Magyar Coalition Cabinet is being confronted by the same difficulties and fought by the same tactics that brought it into power. The Croatian Deputies in the Hungarian Chamber are making use of all possible obstructive measures and disorderly interruptions in order to secure a greater recognition of their language. They object against the exclusive use of Magyar by the officials of the state railroads in Croatia as strenuously as the Magyar leaders objected to the use of German words of command in the Hungarian army. Since the Government was obliged to pass the new Austro-Hungarian customs agreement thru the Chamber before the end of the year, the obstruction of the Croats was especially annoying and dangerous to the members of the Magyar Government, and in order to overcome it they adopted rules for the suppression of the minority almost as stringent and autocratic as those which the Magyars successfully defied two years ago. The Croats could not be prevented from exercising

their legal right to make speeches in their own language, but by a ruling of the presiding officers of the Chamber they were not allowed to use Croatian in making points of order and similar parliamentary motions, thus depriving them of one of their dilatory weapons. On account of their continued refusal to obey the orders of the chairman, the Croatian Deputies were suspended and as a last resort the Hungarian Premier, Dr. Wekerle, ordered the convocation of the Croatian Diet at Agram and immediately dissolved it in order to secure a delegation to the Chamber less antagonistic to Magyar interests. Bitterness has been added to the struggle of the minor races by the bloodshed at Csernova, a suburb of Rozsahegy, where thirteen Slovaks, including five women and two children, were shot dead and more than eighty wounded by a volley from the gendarmes because they opposed the consecration of a church by Magyar clergy. As part of the Magyarizing policy of the Government the three gymnasiums founded by Slovaks have been closed, and in the technical and high schools the boys are not allowed to write or speak their native language even at play. Slovak libraries have been burned and singing and temperance societies disbanded on the charge of promoting Pan-Slavism. In order to prevent the children from learning Slovak in the family a system of compulsory crèches and kindergartens was established where only Magyar was heard. The Serbs, who form 43 per cent. of the population of Bosnia-Herzegovina, are also restive under Magyar supremacy, and demand local autonomy and universal suffrage.—In the Austrian Parliament the race question is equally troublesome. The Czechs manifest their sympathy with the Croats in Hungary by violent speeches and disorder, and Dr. Lueger, burgomaster of Vienna, denounces the Hungarian Government as "Judeo-Magyar blackmailers." In a recent session the Ruthenian Deputies broke up a session of the lower house by riot, in which one of them threw a large piece of wood at the President, missing him, but hitting two other Deputies. The Christian Socialists thereupon attacked the Ruthenians with chairs as weapons.

Foreign Notes

Anarchy still continues to prevail in Morocco, the three Sultans carrying on a desultory warfare and the tribes shifting unceremoniously from one to the other. Kaid Sir Harry MacLean, who was kidnapped by Rasuli July 3d, has not yet been released, altho the British Government has come to terms with the bandit and promised to pay him \$100,000 ransom. General Lyautey's expedition against the Beni Snassen tribesmen, who invaded Algeria from Morocco, has raided their mountain fastnesses and captured their leaders. The tribesmen have paid in \$16,000,000 in indemnities and handed over 725 magazine rifles to the French. The report that France contemplates establishing a volunteer corps of 7,000 African troops has aroused some apprehension in Germany. If the French can call upon Algeria and eventually upon Morocco for recruits to her army, she may counteract the numerical preponderance of the German army.—The camarilla scandal in Berlin has officially come to an end thru the condemnation of Maximilien Harden for libel. He is sentenced to four months' imprisonment and to pay the costs of the trial. Count Kuno von Moltke and Prince Philip zu Eulenberg took oath to their innocence of the charge of immorality made against them by Harden in *Die Zukunft*, and the court expressly exonerates them from all offense.—An explosion took place in the Stock Exchange of Rome, which caused the destruction of a large part of the building and injury to a number of persons, but no loss of life. The cause of the explosion is unknown, but is thought to be the ignition of a gas tank or the throwing of a bomb, with the intention of committing an extensive robbery. The building is within the ruins of the ancient Temple of Neptune, built by Hadrian in the center of the Forum of Agrippa, but the ancient part of the building was not injured.—There has been much dissatisfaction among the suburbanites of Paris on account of the delays of trains on the Western Railroad, and on January 3d a crowd of 3,000 of them gave vent to their displeasure by wrecking the offices at the Saint Lazare station. They held their place until they were driven out by the police, with the aid of the hose of the fire department.

The Equality of Sovereign States

BY DR. RUY BARBOSA

[On the 9th of October Dr. Barbosa, the first delegate of Brazil, delivered an address at the Hague Conference, so memorable that it has a place in history. Allusion was made to this address in the last of the articles recently written for us by Mr. Hayne Davis. We are glad to present to our readers this address in full, as the most notable single document issuing from that Conference, and as an authoritative statement of South America's place in the Peace Movement. Dr. Barbosa became the champion of "States Rights" in the Conference, throwing himself into the fight to prevent certain States from securing a primacy in the election of international judges. The battle at The Hague over "Equality Among States" is of supreme importance as the first parliamentary engagement in the war for forming a judicial union of the nations, and Dr. Barbosa was the representative of principle in this battle. He was a member of the Constitutional Convention of Brazil and proposed that clause of Brazil's Constitution which raises this nation above all others in one respect; i. e., it cannot engage in war without previously proposing to arbitrate the question at issue. He is now vice-president of the Senate of Brazil. The article is translated from the French by Mr. Raul Perez.—EDITOR.]

MR. PRESIDENT: Animated by that spirit of co-operation and harmony which has constantly inspired it thruout this Conference, the Brazilian Government has reviewed its former instructions, in accordance with which I pronounced myself against the Fry proposition in the session of the *Comité d'Examen*, and has authorized me to follow today the course which seems most reasonable to me, and to vote in favor of said proposition, provided I recognized, as Brazil does, the wisdom of this change in our attitude.

In view of the authorization, and drawing inspiration from that same desire for conciliation in which I have abided during all the deliberations of this assembly, I declare that Brazil accepts as an ingenuous compromise the recommendation proposed by the British delegation, supported by the United States of America.

On making this declaration I am instructed, however, by the Brazilian Government to insist, in as precise terms as possible, that it considers as implied in this vote the recognition of the principle of equality among sovereign States, and, therefore, the absolute exclusion—in every future negotiation aiming at the organization of the Court of Arbitration—of both the system of periodicity or rotation in the distribution of judges, and the selection of said judges by foreign electors.

We repose our trust, in the hope that there will be no deviation from this line

of conduct, in the loyalty of the Powers placed at the head of this initiative, in their honor, and in their wisdom, being convinced that they could not construe our present attitude as indicating the least break from the judicial principles presented by us upon this question. On the contrary, we act thus at this hour only to uphold and strengthen the ideas expressed upon former occasions, renewing at the same time our appeal to the future, which, we are sure, will win for these ideas a lasting triumph.

But on accepting today this compromise, you will allow me, now that I address this Conference for the last time, to explain, and to justify ourselves by insisting upon the advantages achieved thru our resistance, so unjustly regarded by those who hold opinions contrary to ours.

I want always to save you from my speeches. Today more than ever I should prefer not to tax your time and good nature. At the end of our labors I would like to leave with you a good impression of myself by my silence. It is not willingly that I fail to do so. Quite often the sacrifice of delivering a speech is a necessity even more unpleasant for him who delivers it than for those who have to listen. Duty is not always sweet to perform nor to tolerate on the part of our neighbor.

Why have we resisted?

Firstly, because in performing duties which require so much attention to *vital interests*, it is inconceivable that a *vital*

right should be disregarded. There is no other right more entitled to be thus designated than that of the equality of sovereign States.

Secondly, we have resisted because, aside from the supreme necessity of preserving said right, we were bent on preserving another right not less essential, not less inalienable: the right of insuring, for all time, its arbitral character to international justice, including the inherent right of each party to choose its own judges.

Notwithstanding the high interest and ardor displayed within this Conference by a majority of its members—notably those of greater prestige—to find an acceptable formula for the composition of the new Court of Arbitration, the only outcome has been continued failure. It appears, therefore, that the idea is either impractical or that the time is not ripe yet for the blooming of this dangerous novelty. On that account also we have resisted it to the last.

It seems to us, therefore, that wisdom advises us to wait until the next Conference. People would not be satisfied with the delay, but why not? Why should there be so much hurry?

The haste arises from a certain tendency, whose hazardous character I have pointed out before, which carries us rapidly away from the spirit of deliberation which presided over the work of the Conference of 1899—a tendency which insists upon substituting for arbitration, which is the form of justice for sovereignties, a jurisdiction which no one has regarded as applicable to international matters except in Utopian dreams.

The danger of such adulteration of arbitration, of such seductive and dangerous illusions, had been perceived and denounced in 1899, at the First Conference, by a personality who has been accepted as the oracle of the Second Conference. I need hardly say that I mean our illustrious president, Mr. Leon Bourgeois.

(Here Mr. Barbosa read the well-known passage of Mr. Bourgeois's speech of the 9th of June, 1899):

"Under the double guaranty of entire liberty in having recourse to the tribunal and the liberty of choosing arbitrators, we do not hesitate to support the idea of the permanent institution, always accessible, and charged

with applying rules and following the procedure established among the Powers represented at the Conference at The Hague."

Notwithstanding the attitude acclaimed by every one at that time as the expression of wisdom itself, today, under identical conditions, it has brought upon us attacks and insults. I would not allude to them within these walls had those attacks not had a most unexpected and lamentable echo in the highest regions of the European press. From those heights have fallen, with the authority of great prestige, words that do violence to the open and essential truth of our acts, at the expense of the good name of the Latin States of America, illtreated without cause or reason merely because they have dared to defend their rights with their votes.

You who are the witnesses to the innocence of the accused see also the violence of the libel.

(Dr. Barbosa quoted here the attack of the London *Times* against the constitution of the Conference, whose last paragraph reads as follows):

"Consequently, *since the great Powers are not willing to place above them as their judges the most corrupt and backward states of Asia and South America*, we will not have yet the court of arbitration."

Fortunately they give us credit for having irrefutably reasoned both legally and diplomatically. That is not a trifle. They agree that it is necessary to alter the basis of the Conference itself in order to shake the foundation of our arguments. That is not a small concession. Tho the premises are unavoidable, the conclusion is ridiculous. What wisdom is here expressing itself!

Now, to begin with, is there logically and practically more common sense in the arguments with which they oppose ours? There is, no doubt, between state and state, as between individual and individual, differences of culture, of honesty, of wealth, of physical strength. But is there any difference arising therefrom as to their essential rights? Civil rights are identical for all men. Political rights are the same for all citizens. Lord Kelvin or Mr. John Morley have the same voice in the election of the sovereign Parliament of Great Britain as a workingman mentally famished by

the misery of his labors. And yet, is the normal intelligence of said artisan, placed at the lower level by his suffering and toil, to be compared with that of the statesman or of the man of science? Well, then, sovereignty is the prime and elemental right of constituted and independent states. Therefore sovereignty signifies equality. In theory, as in practice, sovereignty is absolute. It knows no grades. The juridical administration of law is a branch of sovereignty. If there must be among States a common organ of justice, all States must have of necessity an equivalent representation.

Notwithstanding, they still prefer the classification of states. Who would be in charge of making it? The powerful nations? It is they who carry off at the same time the palm of power and the palm of culture. They would be then our classifiers. But is it not true that we have already tested their ability for classification regarding matters similar to the one under consideration? They did their level best in order to present a perfect sample in the project of the Permanent Court, and of the Prize Court. They had only to adhere to material standards of measure: navigation, maritime trade, navy. In order not to make mistakes it was enough to have taken statistics as a guide. What happened? The statistics were ignored, and patent injustices were committed, of which I have presented to you the mathematical proofs.

Now, if such has been the case in that field where, in order to be just, it was sufficient to have eyes, what would be the result in the case where it would be a question of putting a value on nations—inferior nations—according to the vague and elastic criterion of intelligence, morality and culture?

But, tho it is true that we have claimed for each State a seat in the court of arbitral justice, it is absolutely untrue that we have pretended to make inferior States the judges of their superiors. No; that is false. That has been alleged. We have denied it. Now the falsehood is brought forward again, but it has never ceased to be a falsehood.

The text of the Brazilian proposition is plain and unmistakable. Article VI of said proposition reads thus:

"The parties to the conflict are free, either to submit their controversy to the full court, or to choose, from the body of the court, the number and the judges they may prefer."

Could anything be more definite? We have recognized for the great Powers, the same as for the others, the absolute right not to be judged, either by States without honesty from America, or by States without blemish in Europe. We have preserved for all of them freedom *without restriction* to choose their judges, and consequently the certainty of being judged only by those enjoying their confidence.

I would be very far from imagining that such insults could be aimed at my country were it not that I see those insults expressly directed against it in the slanderous campaign of a certain transatlantic paper, where it is stated that the great Powers would never consent to have their matters settled by arbitration by such States as Brazil, Hayti or Guatemala. Neither Guatemala nor Hayti needs my assistance for their defense; I will limit myself to the defense of my own country.

To allow oneself the use of such language against Brazil it is necessary to ignore the history of international relations during the last quarter of the nineteenth century. Were it not for such ignorance they would have remembered that among all Latin-American countries Brazil has been the only one to which the great Powers—notably the United States—have gone in quest of arbitrators. In the most famous of arbitrations, the case of the "Alabama" between the United States and Great Britain, the treaty drawn by the two parties at Washington on the 8th of May, 1871, designated the Geneva Court, one of the arbitrators chosen being Viscount Itajuba, a Brazilian diplomat. At the Washington Franco-American Court, constituted to settle the claims of the two conflicting Powers, in accordance with the convention of the 15th of January, 1880, the presidency fell to Brazil, in the person of one of our diplomatic representatives, Baron d'Arinos. Finally, of the four mixed arbitration committees which, from 1884 to 1888, acted in Santiago, Chile, for the decision of the claims of England, France, Germany

and Italy against the above mentioned South American State, were successively presided over by three Brazilian counsellors: Lopez Netto, Lafayette Pereira and Ajuirar d'Andrade.

Those who ignore these facts may obtain confirmation of the two first in the work of the North American internationalist, John Bassett Moore. In said publication they will see, besides, that in the case of the Washington Court, for the purpose of prolonging the sessions, the Governments of France and of the United States, jointly, addressed a note to the Brazilian Government soliciting the continuation of our representative's services until the settlement of the question at issue.

In 1870, in 1871, in 1880, from 1884 to 1888, Germany and Italy have asked us for arbitrators, once each of them; and France, England and the United States twice. Such distinction has not befallen any other American State except the United States.

It is clearly demonstrated, therefore, that a majority of the great Powers—the United States, Great Britain, France, Germany, Italy—have not scorned to submit settlement of their questions to Brazilian arbitrators, even conferring upon them the high position of the presidency of the courts established for the purpose of passing judgment on their acts. It is not regarding our own interests that we hold any misgivings in claiming for second-rate States a seat by the side of the great ones, for our right to such an honor has been long recognized, with special solemnity, by the agreement of the Powers, and we would be the last ones to be underestimated today by those same Powers, when, after a lapse of twenty-five years of increasing prosperity, we have doubled our importance as to population, culture, wealth and strength.

At this late date they seem to think that they have found the way of ridiculing the South American States at our expense, presenting as the *ne plus ultra* of absurdity the possibility for a great Power to accept arbitration from Brazil. The right to laugh is ours, is it not?

Nor is it true that the nations have been deprived of an arbitral court by Asia and South America, where igno-

rance and corruption reside. No. That is by no means true. Facts testify overwhelmingly against such a fabrication.

The Asiatic and South American States are but a minority in the Conference. They do not exert a right of veto over the deliberations of the majority. If the projects presented by the great Powers to solve the problem of the composition of the new court have failed, it is because the great Powers themselves have ended by disavowing them.

They have formulated but two solutions for the matter. The first—classification—was rejected by all the great Powers.* The United States itself, in the presence of such an unanimity, did not hold to its offspring. The other solution has been the one of the election of the court† presented by the American delegation to the Comité d'Examen B, on the 18th of September, and snowed under during the same session, having obtained only five votes against nine. Among these nine votes, by the side of four second-rate States—Belgium, Brazil, Portugal and Rumania—were five great Powers: Germany, Austria, Great Britain, Italy and Russia. This proposition of the United States was supported only by France among the great Powers, and by the Netherlands, Greece and Persia among the smaller ones.

Consequently, in the one case it has been the *unanimity of the great Powers*, and in the other the same *unanimity except France*, which caused the failure of the American initiative on this matter.

So, then, if we initiated the movement which defeated this plan, the great Powers contributed in no lesser degree than we did to the success of this resistance. They are the ones who struck the decisive blow for accomplishing this good work.

It is purposely that I point to it as commendable, for it established with magnificent solemnity, with the general

*The Great Powers agreed to the idea of one judge all the time for every Great Power, but opposed the American plan for admitting to the bench the judge appointed by the small powers for one year or more in each term of twelve years, according to the class in which each State was placed in the plan for the Court.

†The plan for classification having been rejected, the American delegation proposed that each State nominate one person, and that from these each State select fifteen, the fifteen receiving the largest number of votes being the Judges for the following twelve years.

and direct co-operation of nations, the principle of the equality among States. That principle has been scornfully spoken of right here; it has been jeered at; it has shared with obligatory arbitration the luck of amusing the humorists. Those subtle and refined weapons have all been drawn from the same quiver. We have claimed the equality of rights for the different peoples. We have maintained that all nations are equal before the law of nations.

Is not this a work of reason, of straightforwardness, and of reality? To those who might entertain any doubts we have only to refer them to the least idealistic masters of the literature on international law. Take, for instance, Major-General Halleck, of the American army.

A man of the sword, whose book, teeming with rigid and steely practicality, cannot be suspected of humanitarian weakness or of pacifistic sentimentality, is the one who proclaims that the equality of States is the fundamental condition of peace among nations. We exert ourselves in behalf of the great and general aspiration toward peace in opposing with all our might the victory of inequality in the composition of the international courts.

Well, then, such are our motives, the motives of the Latin-American States, for not flinching in the defense of the principle we have upheld. Are not these motives wise enough? One may compromise regarding earthly possessions or regarding rights that can be economically gaged; but no compromise is possible without weakness, without desertion and without shame, regarding rights which affect our character, our very being.

It is this attitude that makes them see a quarrelsome disposition and political imbecility in the countries of Latin America. The world, around the Conference, has been filled with the noise of Brazilian hostility toward the United States. But that is a nonsensical fabrication. At the time of the presentation of the project which caused the breach between us, our Government did not spare any effort to prevent the mistake. They would not listen to us. We were forced into the disagreement which is now charged against us. This disagree-

ment, however, has been circumscribed to two points where it was unavoidable: that of the classification of sovereign States, which would annihilate to its foundations the whole of international law, and that of the Prize Court, whose organization despoiled us, without reason or pretext, of a clear right. Aside from that, we have supported the United States in *all* important questions:

Immunity of private property at sea.

The recovery of contractual debts.

Obligatory arbitration.

Periodicity of the conferences.

If we have disagreed in the two extreme cases of attempted violation of an inviolable principle, in direct disregard of our right, is not such independence recognized as our custom, firmly established thru long practice, even concerning questions which bear no comparison to these in importance? When our North American friends, in 1856, invited us to follow them, refusing to subscribe to the abolition of privateering, until capture had first been abolished, what did we do? We came out against capture, but supported the *immediate* extinction of privateering, notwithstanding the fact that it was no question then of parrying a fatal blow aimed against our rights.

We were in those days about twelve million souls. We are twenty-five millions today. The right to have a conscience and to be worthy of it, as exercised by twelve million Brazilians about the middle part of last century, could it possibly have been lost by our twenty-five million Brazilians at the beginning of the present one? We have always thought that, in order to raise ourselves to the level of a noble friendship, we were bound, first of all, to be worthy of it by deserved self-consideration and respect.

Mutual independence cannot be cause for weakness; on the contrary, it is bound to insure and increase cordiality among nations that, holding to their honor, have developed, by virtue of their history and interests, intimate feelings of friendliness and of necessary intercommunication. Reciprocal justice is the strongest bond of great friendships, and the two largest States of the two Americas can never forget how they

have exercised it toward each other: Brazil at the "Alabama" arbitration, the most noteworthy thruout history; the United States in the Cleveland arbitral award. Add to this Root's excursion, the latest testimonial of the solidarity of our hemisphere, and you will have to conclude that between North America and South America there may be some occasional divergence of opinion, but that the spirit is the same, with a similar future in which there can be no difference as to sentiments.

Viewing under this light the questions solved, or adjourned, by the Conference, it is immaterial to us whether people continue to talk deprecatingly—under the designation of small States—of those nations which do not handle as yet the powers of war, and whether people continue to propose—as has been the case in certain regions of the high press—as a substitute for the World Conferences—which are mindful of the difficult points of law and cautious not to trespass upon dangerous ground—petty conferences, where a few would be able to arrange among themselves things that suit the powerful, expecting that the weak will not be able to resist the alluring honor of being permitted to subscribe to what others have decided in regard to their interests.

No one denies that force has its rights. Alas! in this wretched world of ours it looks sometimes as if force owned every right and as if the worst crime were to be weak. The superstition regarding power has so pervaded human consciousness that many accept freely that the great Powers possess not only big guns and men or war, but that they monopolize also that most rare and precious gift—the genius of justice and of inspiration. They claim that God is on the side of the largest battalions, a doctrine which we could accept unhesitatingly provided we think merely of the god of battles, Siva, the destroyer; or if we regard God as not only the savior, but also as the avenger of mortals. Even the doctrine of evolution has been perverted to justify worship for what is huge in size. The survival of the fittest is set forth to explain why almost divine honors are accorded to a government momentarily disposing of the greatest

material force. But force does not imply qualities. Hugeness may even be an impediment to survival. The mammoth and the megatherium have been eliminated from among mammalia.

The insolence of the giant in fairy tales—the classics of childhood—is as a rule only to be matched by his asininity. According to an old proverb small packages contain the most precious treasures. Concerning individuals this truth is so universally accepted that the big woman from the Barnum circus is not widely considered as the most characteristic specimen of human excellence. Why should not this rule apply to States? Is the possibility of becoming more bulky, under the form of extensions of territory, a clear demonstration of political genius? The great empires are in the habit of entertaining exaggerated notions concerning themselves. Owing to their monopoly of armies and navies the world over, they can enact regulations for those armies and those navies, and this fact leads many among them to imagine that the control of armed force places in their hands the scepter of the universe. Nothing could be less true. We are willing to render unto the Cæsars of Berlin, St. Petersburg and London what belongs to Cæsar, but only unto God what belongs to God. And to God belong justice, law, independence, liberty and the right to individual sovereignty.

The history of the world does not justify that support should be sought in Darwin's doctrine of the struggle for life and the survival of the strongest, in order to prove that the huge empires of exaggerated growth possess that essence of divine power which bestows upon them the right of primacy over the less important States. If the ability to survive be the test for power, the great empires are the least strong, because they are the most ephemeral. And those of greatest endurance are the small nationalities. Three thousand years ago a small nation established itself in a little corner of what constitutes today a petty "pashalic" of the Ottoman Empire. That small nation has had to bear every violence at the disposal of the great Powers for its destruction. But, tho exiled from its native land, and dispersed as the heavenly winds to the four corners of

the world, it is to this day indestructible, while all the great Powers from which it has had to suffer have ceased to exist. The Egyptians, the Assyrians, the Babylonians, the Persians, the Macedonians, the Romans, the Byzantines, the Arabs and the Crusaders have one after another reigned over Jerusalem in their capacity as great Powers. One after another those powerful nations have disappeared from the face of the earth. History is but a long recital of their follies, their crimes and their failures. The Jews, however, constitute only one of the small nations that have always been powerful, and whose influence has affected the spirit of the whole world. If we are indebted to the Jews for our religion, we owe to the Greeks our art, our literature and our philosophy. And we, who are gathered here at The Hague, could not possibly forget how small has been the nation that has presented Spinoza and Grotius to the world and that reduced to ruins the power of the Spanish Empire.

This worship of material force and the extension of this power to the domain of Justice is nothing but a degrading form of idolatry. It is mere adoration of the temporary incarnation of power.

Eternal spirit, however—after obtaining certain given results from material force—has repeatedly abandoned those whom it previously sustained when they depart from right.

The same delegates who have voted against the proposition granting to the small and great States equal rights for the selection of judges represent governments who, not very long ago, were rated among the despised petty States. Prussia is a *parvenu* among great Powers. Three centuries ago England was only a small isle of the North Sea. Today these nations strut before the world, like sons of Belial, overflowing with insolence and pride. But how long will that last? The great empires appear and disappear; they pass like shadows on the wall, without leaving any trace. Today these great Powers seem to be all-mighty, but the next stage on their way to maturity will be corruption, for as soon as an empire reaches the summit it begins to fall.

The moral of all this is that even the

representatives of the greatest among the great Powers might do well to be quiet and unassuming toward their colleagues, even toward those from Guatemala, and to force themselves not to forget that since the days of Solon and Solomon up to the present time the wisest judges have often belonged to the smallest States.

We would fain witness today an experiment of that kind, for the experience of this Conference has demonstrated that the stumbling block in the way of solving difficulties was not the resistance of second-rate States, but the opposition of great Powers. Take, for instance, the abolition of capture, the regulation of contraband of war, blockade and the rest. The weak States have been almost unanimous in supporting the safe, liberal and humanitarian solutions. The divergencies have originated among the great Powers, either regarding the beneficent solutions themselves or regarding the estimate of their own needs. I would like to see whether the comfortable atmosphere of such Congresses would easily dispel differences of opinion so unyielding to the free air of world assemblies like this one.

Concerning the other States kept dancing in attendance and having only the privilege of subsequent acquiescence, I have one thing to tell you. It is the most abominable error—and one persistently committed—that of insisting on teaching the peoples that rank among States is to be measured by their military standing.

Consider well the consequences of such a teaching (the right of force)—more terrible at the present date than at any other epoch. About three years ago Europe saw on her political horizon—outside of herself—only the United States, as a sort of European outpost, the only non-negligible representative in the West. Asia and Latin America were hardly more than geographical expressions, having a political status merely thru condescension. One day, to the utmost general astonishment, a frightful apparition manifested itself in the Orient. It was the unexpected birth of a great Power. Japan entered the European concert thru the gate of war, bursting it open with her sword.

We—the Latin-American States—

have been invited to walk in thru the portal of Peace. We have entered into the precincts of this Conference, and you have begun to know us as workers in the cause of peace and law. But should we find ourselves deceived, should we be disillusioned by actual experience, in finding that international greatness is determined only by armed forces, then, by your work, the result of the Second Peace Conference would be to reverse the political tide of the world in the direction of war, forcing us to seek for the recognition of our proper position by the creation of large armies and great navies—a position proven ineffectual by population, intelligence and wealth.

Shall we not succeed? It is wrong to misjudge this matter. The differences between the greatness of European countries and American countries are entirely accidental. Here development is slow. The land is already held in possession. The load of the struggle for life is overwhelming. But on the other side of the Atlantic, in those countries of rapid growth, man's strength is like the sap in our forests—it seems to make peoples in a moment. We do not languish under the obligation of military service. We have not the social castes. We do not suffer under the inheritance of a long past of wars. We know only the fruitful obligations of peace and labor. In those vast valleys for immigration where the human family spreads itself like those huge American flowers on the surface of our beautiful tropical waters, one or two generations are sufficient sometimes to double the population

of a peaceful and prosperous country. Brazil, for instance, fifty years ago had only twelve or thirteen million inhabitants. It has today twenty-five millions. How many will it have twenty-five years from now, taking into consideration that the facilities for settlement are highly improved, that the influx of foreign blood increases more and more every day, and that our far-away existence, hardly realized heretofore, begins now to be revealed to the world in full light?

In the face of the events which constitute history, what does a generation or two signify? No more in the onward march of the world than from today till tomorrow. Why, then, speak so freely of the weak and of the strong, of the small and of the great, in reference to nations? In our times, maturity, for the peoples, is often interwoven with adolescence. In this swift era the future invades the present. And the future is always full of inversions and surprises. But, in spite of all things, the authority, the utility, the necessity of these assemblies, occurring periodically hereafter for the promotion of peace, have achieved for them an irrevocable conquest. They cannot be prevented, frustrated, nor replaced. They are an open door for all time, thru which the rights of nations shall enter into effective operation, little by little. The field occupied in 1899 has been enlarged in 1907, and, in spite of all that has occurred, enlarged with glory, and, just as the First Conference made the Second necessary, this one renders inevitable the convening of the Third.

THE HAGUE, HOLLAND.

Love Speaks

BY GRACE DUFFIELD GOODWIN

At the revel of the world
Sat the strong kings, Greed and Power,
While a pilgrim paused without
In the midnight hour.
"Wealth is here for all," they said.
(Is that gold that gleams so red?
Skies are bending black above).
"Tears be wealth," quoth Love.

At the revel of the world
Laughed the great lords, Lust and Fame,
While the night-wind sighing low
Breathed the pilgrim's name.
"Crowns are here for all," they said.
(Are those gems that glow so red?
Never star shines out above).
"Thorns be crowns," quoth Love.
PAWTUCKET, R. I.

Going Ahead

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OUR HEREDITY FROM GOD,"

THAT civilization is moving with an accelerated rate of progress must be recognized by students of history. This has been especially true since 1880. The Civil War in America and free trade in England moved collaterally but coincidentally. The present position of the Anglo-Saxon peoples is more moral than political; and any forecast of the future must be from the moral viewpoint. The Civil War was a great triumph of conscience. English reform was achieved as a matter of righteousness. It brought to the front such men as John Bright, Cobden and Gladstone. We conscientiously abhor business selfishness.

Our present dominant social feature is waste of power. The use of coal has been an extravagance beyond all measure, using up deposits that could have lasted a thousand years in a single century. We are losing, according to the reports of our Agricultural Department, one-fifth of our productive energy from lack of help in the fields, and another fifth is lost because of hindered production. That is something like one-quarter of our food, but must also be deducted from the amount of world food which might be secured from American fields. Domestic economy we leave to economic professors, altho we are persuaded that the careless and reckless use of our food products prevents the generous feeding of a population one-third larger than we have. Any one going up and down the highways, with a reminiscent mood, has impressed upon him the astounding waste in our forests, to secure poles for telegraph and telephone service. We shall have to get rid of poles and of wires, and secure a storage battery adequate to the demands of an entirely new phase of civilization.

Diseases that took away one-tenth of our population fifty years ago have been abolished, and we have barely scarlet fever still defiant among the fevers.

Notwithstanding the enormous waste of lives by railroad accidents and in mines, accidental deaths have been greatly minimized in proportion to the population. We easily forget that the anti-toxins do not go back of a single generation. It now seems probable that the elimination of disease will be by the same road that it entered, that is, by the way of thought and healthy will. As yet we know very little of will power, that is, of the power of our conscious life over unconscious functioning. Right thinking, caused by right education, is constructive; as surely as rotten thinking is destructive.

We are today dependent for our meat supply on vast pasture lands. These are being absorbed into homesteads, at such a rate that ten years will have transformed four-fifths of the pasturage of the United States. What then? The small farm increases egg production, fruit production, and makes a ten-fold multiplication of roots and cereals possible. The simplifying of our diet will probably eliminate meat, except as a rare luxury—needed neither for strength nor for health. What we need now is a farther extension of our power to combat blights and insects. We have come to a time when potato blight must positively be obliterated. This pest is more revolutionary than the invasion of a foreign army. It upsets the calculations concerning food supply, and breaks down all forecast.

The electric age will probably be very short, and we shall leap into a newer era, with a new power; at any rate electricity is now too expensive, and its mechanism too cumbersome. Possibly the greatest conceivable blessing to mankind would be the exhaustion of the coal fields. At present the comfort, if not the lives, of one-third of our population is dependent on the foresight, and even the mercy of our coal baron roads. What may happen at any time was seen in the Dakotas, in December, 1906. We must have a fuel

at our doors, and it will be a new sort of fuel, and it will not be subject to the dictation of a corporation.

We are passing into a play age. We are told that a good deal over half of the automobiles now in use are for sport. "Play is one of the five instincts of every child and every cub"—according to Mr. Long. It is our one perfect accomplishment, including perfect exercise and complete pleasure. Probably no greater social evil ever overtook any race or community than the promiscuous confusion of vice and pleasure made by the Puritans. Baron Russell insists that "vice is essentially stupid." If you will examine the better sort of life you will find that pleasure constitutes the better half of it; including reading, news gathering, the arts; and now, more and more, direct labor. Work is in its very nature something beautiful, fascinating and pleasure giving. It is only stupid work, ignorant and untrained work that is despicable. We are never quite so happy as when the hands and the brain thoroly co-operate. The outlook ahead is promising, not because it will lighten our toil, but because it will enlighten it.

We shall not be able to reforest the United States, but we can more than create an equivalent by a universal suburbanism, involving orchards and lawns, groves and nut-bearing trees. This equalized distribution of valuable trees will do for us better service than vast forests could have done, in the way of creating equable temperature and stability of moisture. The farmer who does not, first of all, attend to groves and orchards, and to windbreaks and hedges, does not know what winds can do in drying his soil. A vast suburbanism, practically covering the whole territory, will ultimately control climate.

The education of the future will not endeavor to tax the memory and increase its power to retain facts, but will work in just the opposite direction. It will teach us to forget, as a matter of mental economy; not to try to load up with what, at best, will be only a rag bag of knowledge. It will teach us to select the most salient facts, and do nearly all our memorizing on paper. In an age like this the art of forgetting becomes one of the fine arts, and should be taught in our

schools. We are also reacting, and will soon react much farther, from the glorification of erudition. Why should we be stuffed with facts that we cannot digest, until intellectual dyspepsia intervenes? What a man cannot use he will certainly abuse; and so it is that our worst rascals are school graduates. Our colleges are as conspicuous for follies as for scholarship.

Some of our most general social customs have past away, and others will just as surely leave us. Common sense is a phrase which we use to describe an increasing power, on the part of the people, to see together, feel together and act together. Imagine the effect of one or two more such inventions as the telephone in reforming communities. We are beginning to exist not so much as towns, as we are as circuits. That is, those who are bound together by coils of wire are able to talk together and co-operate after a new and very novel form. The telephone tea-party is a very euthanasia of science. It puts into close social relation those who are scattered over miles of territory. They do not need to waste time on dressing.

Within fifty years we have seen theology revolutionized. What an astounding cordage of apologetics has gone to waste; what a lot of dead theology is in the lumber room of history. Yet religion and religious life were never more vigorous than today. The evolution of theological and sociological eras has been in cycles of about five hundred years. Counting these from earliest history, the Abrahamic era culminated about two thousand years before Christ. Then came the Mosaic (with Manu), not far from fifteen hundred years before Christ; while the Davidic and Homeric era ended one thousand B. C.; the period of Socrates, Buddha and Confucius about five hundred B. C.; while all of these culminated magnificently in the work of the Galilean. Counting another five hundred years we reach the Papacy; another five hundred abolishes religious anarchy and creates the Hierarchy; and five hundred more brings us to the culmination of the Reformation in Martin Luther, about fifteen hundred. What shall occur about two thousand; unless it be the completed evolution of enlightened reason?

The nineteenth century belonged to manufactures; the twentieth century belongs to agriculture. The change, however, is not so great as it seems, for agriculture now covers not only nearly every known science, but has adopted machinery. By conditions we must be essentially producers of prime products, the food stuffs of the world. Five acres of intensive farming are fully equal, in their results, to one hundred acres tilled on the extensive system. We can increase population in that ratio, and feed them at home; twenty times as many as now exist on American soil; and do it with one-twentieth the work—at the same time making our products of higher quality. With this evolution of population, to match the evolution of scientific knowledge, we can allow the same ratio of exports—that is twenty times what we now sell. Our present foreign sales are nearly four-fifths farm products; one-fifth manufactures. The future tariff will be a very much modified affair; and its chief attention will not be holding close our home market, but opening wide the markets of the world.

The new newspaper will be a revolution. It will remain a news-paper, but will not carry the facts of the gutter into the parlor, nor the gossip of sensuality into the homes of the decent, nor make the details of crime schoolboy pabulum. It will approach the school in method and power, and will have a collateral influence. There is no question of its present tendency to lower the average of human thought and purpose. Wireless telegraphy will before long displace much of the labor of printing news. I have heard the news when on the ocean a hundred miles from shore.

Can you estimate the increased volume of wise, healthy thinking that will come about by the rapidly increasing suburbanism—the contact with Nature of the bulk of the people? The fields become the Scriptures, revealing Life, Love and Will; and the new God is becoming the infinite Soul, “in whom we live and move and have our being.” This is to go on until there can be no more thought of a savage God, creating for his own glory, and damning for the same reason. Add to this the power of scientific truth,

spread abroad among the people. That which has made one Burbank may make a thousand more of the same sort; yes, is doing it, for the farmer is now feeding on the sublimest facts of the age, all correlated to his own soil and his own life.

Shall we ever have another Shakespeare? Imagine the effect of two, or even half a dozen, in a single century. Are there any such now really buried, and to be unearthed—say in China or in South America? Minister Burlingame, when asked what he thought of China, said: “It is the land of ten thousand Ralph Waldo Emersons.” It is not quite impossible, but it is not probable. But this we may be very sure of, that literary growth has already done its best in the way of thought fruitage. The great thinkers hereafter will not junket with kings, or weave myths of words, but will deal with the facts of Nature. They will be the Bacons, the Huxleys, the Burbanks. The premium on intelligence is today so great that the uneducated farmer must go to the wall. This does not mean that the literary college is not any longer essential to success, but that industrial education is. The young man who gets the wholesome aspiration of the coming age, will understand that he has to have his whole body, and whole mind, in training.

Is the air full of crotchets? Is referendum a fallacy? We certainly are going to try such things as larger public ownership and direct legislation. They are already being tried elsewhere, and would be here also, if our democracy had not become to some extent an oligarchy. It is not impossible that some of our sacred institutions will become historic fads. The power of the ballot to settle social questions, and limit political progress, weighs lighter in the balance. The honest legislature will hereafter be watched by a People’s Lobby. The often amended Constitution is likely to be rebuilt, bringing it a whole hundred years nearer our times and needs. The “balance of governmental departments” will be replaced by a better sort of legislature. Commissions of experts are likely to displace the experiments of amateurs. Altogether, politically and socially, we shall understand that our salvation

depends on character, constructed by a school system that places manhood above success and wisdom above erudition.

The creation of international conscience is the most remarkable product we have received from the nineteenth century. It will be greatly broadened and deepened during the twentieth century. Our schools will first of all teach character; they will educate to self-government. As the terrors of future damnation fade out, the dread of present damnation will increase. "Love God with all your heart and your neighbor as yourself" will have to cross the race lines—not only as concerns the peoples, but as concerns the Gods. Socialism is hardly the question of the day, but intersocialism—the intersocialism of St. Paul. "On earth peace" is one of the oldest axioms of civilization. It goes far back of Jesus, until it touches the hem of natural life among pastoral peoples. The great struggle of the world has been to overcome war. The "Dreadnaughts" are the latest expression of a huge farce. We have begun the game of the giants, hurling mountains at each other.

Altogether, the glory of our age is its readjustment to industrialism—the glorification of the hands. The schools cannot move too fast in fronting this move-

ment, for labor is going to rule—not the laborer or labor unions, but labor itself. It should be intelligent labor, trained to lead wisely and beneficently. Prince Kropotkin epitomizes the revolution, when he tells us that, "For the first time in the history of civilization, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose therefore, as has heretofore been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure wellbeing for the few, is needed no more; wellbeing can be secured for all, without overwork for any. We are thus placed in a position entirely to remodel the very bases and contents of our civilization—provided the civilized nations develop the constructive capacities required for utilizing the conquest of the human intellect in the interest of all." The most notable men at the present time are not warriors, but leaders in overcoming the difficulties that lie in the way of equalizing human comfort. Our Secretary of Agriculture assures us that we have already reached the point where unseasonable frosts, prolonged droughts, insect pest or plant disease can never seriously menace national prosperity, or create famine, plagues, or commercial panics.

SORRENTO, FLORIDA.

Whither?

BY ROSE PASTOR STOKES

(From the Yiddish of Morris Rosenfeld.)

SAY, whither, whither, pretty one?
The world is still at present!
O list how quiet 'tis around!
Ere dawn—the streets hold not a sound.
Oh, whither, whither do you run?
Sleep at this hour is pleasant.
The flowers are dreaming, dewy-wet;
The birds'-nests—they are silent yet.
Where to, before the rising sun
The world her light is giving?
"To earn a living."

Oh whither, whither, pretty child,
So late at night a-strolling?
Alone—with darkness round you curled—
All rests:—and sleeping is the world.
Where drives you now the wind so wild?
The midnight bells are tolling!
Day hath not warmed you with her light.
What aid canst hope then from the night?
Night's deaf and blind!—Oh, whither, child,
Light minded fancies weaving?
"To earn a living."

The Isle of Crises: A Fable

BY RUFUS W. WEEKS

[This financial fantasy is by one of the Vice Presidents and the Chief Actuary of the New York Life Insurance Company and ex-President of the Actuarial Society of America.—EDITOR.]

IN a quarter entirely out of communication with the rest of the world there lies a large and populous island, having institutions singular and unheard of. In the first place, all the land belongs to one man; and not only so, but all the workshops, which are many and large, belong to him, as well as all the machines in the workshops. This great man is called "The Owner"; such title being a proper noun, as in fact the language of the island possesses no *common* noun meaning "owner."

In spite of the fact that everything the people must use in getting a living belongs to The Owner, those same people emphatically deny being his slaves; they say they are free, and, as a matter of fact, they do make the laws. Then why, the reader must ask, do they allow The Owner to own all their means of livelihood? For a reason which the reader may believe or not as he chooses—to me it does sound incredible—for the reason that the people of that island have a fixt idea that it would be wicked to deprive The Owner of any of his possessions; and I believe that The Owner himself sincerely shares this conviction.

In this island the people are all wage-workers; they work for The Owner whenever he gives them work; otherwise they do not work, for they cannot, as they have neither land nor tools of their own. Consequently, the second title of The Owner is The Employer, and as such he is held in reverence by the people. They are fond of kissing his hand on all occasions, and they perform this affecting

rite with even more fervor at those times when, for reasons of his own, he withholds livelihood from them, than, at those other times when, equally for reasons of his own, he grants them the privilege of work. They show toward him that constant fidelity for which man's faithful companion, the dog, is lauded by poets. I ought to tell you that the full title of the great man is, His Righteousness The Owner, and His Beneficence The Employer; and that the people always capitalize the nouns or pronouns they use in writing of him. This custom, so far as the pronouns are concerned, is not followed in the present account, since so to capitalize in this country would be profanity and would grieve Bishops and such.

All the commodities raised or made by the people of the island are, of course, the property of The Owner, and are at once deposited in his immense storehouse; and the wages he pays are in the form of orders on this storehouse for food and other commodities necessary for life. The remaining commodities produced—those not necessary for life but only for comfort or for luxury—are kept in a separate section of the storehouse, and are given out only to The Owner and his family. The wages paid are sufficient to keep the workers alive and to give them strength to work during the most efficient years of their life; but not enough to allow them to store up anything from year to year.

The Owner has a numerous family, or clan, including his relatives to a remote

cousinhood; and none of these work, but they all receive from The Owner orders on the storehouse for commodities of subsistence, of comfort and of luxury, in great quantities—these orders being of the nature of rightful title derived from relationship to The Owner of all. The members of this great Family are considered as forming no part of “the people,” as that term is used there; and for convenience I will follow in this account the same mode of speaking.

Of course the workshops and machines must be kept in working condition, and therefore The Owner always keeps a part of his hands at work at replacing machines, at enlarging plant, and at installing newly invented machines. These he calls his “plant-hands,” while the majority whom he keeps at work producing commodities to be consumed he calls his “commodity-hands.” It is manifest that the commodity-hands produce all the commodities used not only by themselves but by the plant-hands and by The Owner’s Family; it is therefore manifest that, after the commodity-hands have received their wages in the form of orders for their own subsistence, there is only a given bulk of commodities left for The Owner’s Family and for the plant-hands.

In times called “good,” most of the people are at work, the greater part of them as commodity-hands, and a smaller part as plant-hands. Every one is contented, and the talk is all of prosperity and of the excellence of the institutions. The volume of luxuries rolling into the homes of The Owner’s Family becomes enormous; and The Owner is in an increasingly confident and expansive frame of mind. Every day he thinks of some new enterprise he could undertake in the way of rebuilding workshops and machines on a vaster scale and on more effective lines; accordingly he starts a multitude of these fine enterprises, and to carry them on, he transfers more and more of the commodity-hands to the rank of the plant-hands. He pays this growing army of plant-hands in orders on the storehouse for commodities, with a general sense of boundless prosperity and without thinking of the limit which exists to the bulk of commodities available for his Family and his plant-hands.

One morning, as he lies in bed thinking, he says, “By Jupiter Mammon! I am giving out too many of these orders to the plant-hands! If I don’t stop, there won’t be stuff enough left in the storehouse for me and my Family!” The more he thinks of it, the worse panic he gets into; why, if he doesn’t stop, the storehouse won’t be able even to honor the orders.

That day word goes forth to stop work on this and that new establishment or machine, to lay off this and that gang of plant-hands; until, in a few days, half the late plant-hands are idle, and are *drawing no orders on the storehouse*. Instantly the pressure on the storehouse for commodities slackens, and The Owner, still in the mood of contraction and caution, says to himself: “Now I don’t need so many commodity-hands! I will discharge a lot of *them*!” And he proceeds to lay off a considerable fraction of the commodity-hands—not so large a fraction, however, as he has laid off of the plant-hands.

What is the effect on the people? One-fourth of them no longer receive orders on the storehouse, while the remaining three-fourths receive subsistence orders as before; but the one-fourth still feel the necessity of living, and the three-fourths want them still to live; and so the four-fourths go on living on a three-fourths’ subsistence to each.

This state of things lasts a certain length of time; it is looked upon by The Owner’s Family as not altogether an evil, since the slight check on their own consumption of luxuries improves their digestions; and, besides, the people are apt, at such times, to get into a religious mood, and this, The Owner’s Family feels, is good for the souls of the people, which are infinitely more precious than their bodies.

But, after a doleful space of suffering for the people, The Owner feels that he runs no risk in putting small gangs of commodity-hands and even of plant-hands back to work; gradually confidence replaces terror in his mind, and normal times return, with most of the people employed. Then the cycle is ready again to begin at the point of balance. *But*, the inquiring mind must ask, *why need there*

be any such cycle; why need there be this periodic unbalancing of the normal equilibrium between volume of commodity-producing and of plant-producing? Why does not His Righteousness The Owner and His Beneficence The Employer, order some of his brain-hands to work out the arithmetic of this equilibrium; and why does he not then fix his canon against his own transgressing of the balance so established? I do not know why; I only know he does not.

Moral.

This fable teaches us that we need not be so proud of our goodness in bringing all our wages home, and spending all our evenings amusing the children; seeing that, from those large outside affairs which we so virtuously neglect, disaster may even now be loosening itself to sweep that little nest of ours down into the ruin where countless others already lie.

NEW YORK CITY.

The Man Who Saved Boston

BY FRED A. WALKER

[The recent municipal election in Boston resulted in the defeat of Mayor "Honey" Fitzgerald and the victory of those allied citizens who voted for a non-partisan mayoral candidate. Much of the credit for the awakening of Boston is given to W. H. Holden, a reporter on the *Boston Journal*, and at our request F. A. Walker, the managing editor of the *Journal*, has written of Mr. Holden and his work.—EDITOR.]

A FEW years ago a young man, who had never been inside the building before, stepped into Boston's City Hall and began his first work as a reporter for a metropolitan daily.

Stephen O'Meara, now Boston's Police Commissioner, then the publisher of the *Boston Journal* and at that time living in Charlestown, had been attracted by the pungent wit and clever sarcasm which had characterized a series of articles in the *Charlestown Enterprise*, and on inquiry he found they were written by a young man named Holden, who had come to Charlestown from somewhere "up in New Hampshire." Mr. O'Meara sought the acquaintance

of Holden and shortly invited him to join the staff of the *Journal* and become its City Hall representative. Holden protested that he knew little of Boston, less of Boston politics and nothing of City Hall, for he had never been inside the building. "That," said Mr. O'Meara, "is one of the reasons I want you," and under these conditions Holden went to work.

To say that he is the most feared newspaper man in New England and at the same time one of the most respected summarizes the result of the years which he has devoted to political writing. That this fear is well based and this respect well merited is evidenced by the almost universal

W. H. HOLDEN.

credit given to him for the emancipation of Boston in the last municipal election from an era of graft and mismanagement, bribery and dishonesty, which tho on a smaller scale, is along the same lines as the municipal wickedness of San Francisco and Philadelphia.

It was not long after Holden commenced work in City Hall that he began to scent crookedness, but a man new to the political game in Boston has to do a good deal of digging before it is safe from a standpoint of libel to publish very much of what he suspects but cannot actually prove. As time went along, however, Holden saw circumstances and conditions more clearly and knew men more thoroughly. Politicians began to find it desirable to read what Holden wrote, both for the sake of finding out how much he knew about them and how much he knew about those opposed to them. Little by little the inside workings of City Hall and the hangers-on, the contractors and the grafters were more definitely analyzed and more clearly defined. And then began a series of exposures which set the town by the ears. He found that dead men, relatives of prominent politicians, had for a long time been carried on the city pay rolls, the money "earned" being drawn by ward heelers and petty political workers. He found and made public the names of scores of men who regularly drew salaries from the city who were at the same time drawing money for work in factories where they were really employed. He exposed the system of "split contracts," by which, with the Mayor's sanction, the city was made to pay enormous prices for municipal improvements. He delved in real estate values and proved the loss to the city of thousands of dollars by the connivance of politicians of power and shady real estate promoters. He exposed the paint graft, the cement graft, the paving graft and the street lighting graft and every time he exposed dishonesty he pointed his finger at the participants. How truthful all those charges were is proven by the fact that not one suit for libel has ever been filed against the *Journal* for any story written by Mr. Holden.

One of the direct results of his work was the appointment of the Finance Commission, which is at present investi-

gating all departments of the city government and whose reports thus far published have in every case been an official endorsement of Mr. Holden's contentions.

Pleaded with by some of the most prominent men in Boston to desist from his exposures, tempted with bribes, threatened with personal violence, his stories interesting alike to both politician and layman have never swerved from the straight line of truthfulness nor sought to obtain by inference or indirectness any impression which he was not willing to bluntly state and stand ready thoroly to prove.

It is probable that Holden knows more of the inside of politics in Boston than any politician, for he knows intimately the character and records of men of both parties, not to speak of that vagrant class of politicians which follow the victorious flag into whichever camp it goes.

Short, thick-set, smooth faced, gracious in manner despite personal reserve, Holden would not impress you at the first meeting as being a man likely to interest himself in municipal politics, but that air of the student which in other vocations might have been applied to research he has put to use in the study of civic institutions and the men who run them. An excellent listener, he is also a thoroly enjoyable story teller, and whether talking or writing, his subject or manuscript is always liberally sprinkled with dry humor and pleasing wit. He is an indefatigable worker, a man who averages easily from 3,500 to 4,500 words a day and produces copy which needs little or no editorial attention. Besides his newspaper work he is a contributor to a greater or less extent to a considerable number of lighter magazines and weeklies.

He has steadfastly refused to accept political office of any kind, and even tho responsible for the election of Mayor Hibbard, will not be in any way connected with his administration.

The *Journal*, which he represents, has been deluged since the defeat of Fitzgerald, with letters and messages of congratulation on the part it had in the restoration of Boston to good government, but to Mr. Holden and his pen belongs the lion's share of the credit.

BOSTON, MASS.

Paul Milyoukov

Professor Paul Milyoukov, leader of the Opposition in the Third Duma, is en route for America. It is Milyoukov's third visit to this country, and will be as brief in duration as it seems likely to be significant in Russian political history. He will address the Civic Forum in New York on January 14th, will pay a flying visit to Washington, where he will speak at a banquet to be given by Chairman Herbert Parsons, and will return to St. Petersburg in time for the reopening of the Duma at the end of January.

Milyoukov has a typical revolutionary past, and a future which, like most things in Russia, is a question-mark. He said farewell to America in January, 1905, as a private citizen; he returns as leader of the combined radical forces in the Third Duma. Himself a Constitutional Democrat, and conservative enough to be eligible for membership in either of the great parties in America, he is holding together as diverse an army as ever marched under one parliamentary banner. On his roll call are Social-Democrats, or Marxian Socialists, and Social Revolutionaries, who demand communistic socialism for Russia and endorse active terrorism. Differences are postponed for future discussion, and the Opposition is a unit under Milyoukov's guidance and under the desperate struggle for bare parliamentary existence.

Ten years ago Milyoukov was professor of Russian history at Moscow University. He was seized by the police and summarily exiled to Siberia on the charge of "radical tendencies." While in exile he wrote his monumental "History of Russian Culture," whose practical drift is a justification of revolution in Russia on historic grounds.

Released from Siberia, he was immediately thrown into prison, and after a five months' confinement was led across the frontier into Bulgaria, an expatriated revolutionist. Then began the cosmopolitan life which brought him twice to America. His influence upon European opinion outside of Russia is large.

Milyoukov offered himself as candidate from St. Petersburg for both the First and the Second Duma. The government discovered technical grounds for declaring him ineligible. Nevertheless, from behind the scenes he gave active direction to affairs in the Duma, and is said to have been among the framers of the famous Viborg resolution, for which the 167 Duma members who signed it are now on trial on the charge of treason. Last year Milyoukov again ran for the Duma, was elected, and entered upon office.

It is rumored that while in Washington Milyoukov, tho the representative of Democracy in Russia, will not be received at the White House owing to the feeling of the Russian Embassy.

The Approaching Political Crisis in England

BY JUSTIN McCARTHY

THE approach of the coming parliamentary session is already beginning to cast its shadow, if it be quite proper to use such an expression with regard to the Imperial Parliament, over the preparations for the Christmas festivities. I think, however, that in this instance the drawing near of the session may be said to cast a shadow over at least a very large proportion of those who maintain, in expensive style, the festivities and the hospitalities of Christmas. Every one knows that this coming session is destined to see the great struggle between the parliamentary institution which represents the aristocracy of these countries and the chamber which now represents in its great majority the resolves and the aspirations of the people at large.

The session, which will open somewhat

DAVID LLOYD GEORGE.

earlier than the usual time this approaching year, will be given up mainly to the carrying thru of the educational measure and to what we may hope to be that final struggle with the House of Lords, which has arisen directly out of the Government's scheme for education reform and the manner in which the hereditary chamber lately dealt with the Ministerial plans. I do not suppose that anywhere thruout these countries there was felt a serious doubt as to the determination of Sir Henry Campbell-Bannerman and his colleagues to bring this struggle at once to its conclusion, but if there had been any such doubt it must have been altogether banished by the recent speech of Mr. Asquith, the Chancellor of the Exchequer. Mr. Asquith announced in the most clear, precise and emphatic words that the Government were determined to fight this battle out to its end in the approaching session, and by means of the General Election, which is certain to follow, unless the Lords should entirely give way to the Government on the momentous issue to be offered to the decision of that General Election. Nor is it to be supposed that even if the Lords were to give way merely so far as the education measure was concerned the Liberal Government would then be content to let the business of Parliament go on as before and take no immediate steps for the reconstruction of our legislative system. Such a course would merely be to put off the actual struggle for the time, with the certainty of its coming up again before very long and then requiring the final settlement.

The determination of the Liberals is to complete at once the whole constitutional struggle and to deprive the hereditary chamber once for all of its autocratic and absolute power over the decisions of the chamber which represents the great majority of the people in these islands. Such is the clear purpose of Mr. Asquith's recent speech, and I may tell my American readers that Mr. Asquith is not

by any means what could be called an advanced Liberal in political views. He is not what I should describe as a strong Radical. He has always been regarded as one of the "Moderates" of the Liberal party, to adopt the phrase which has lately been coming into common use, and he has been rather pushed along to his present place in the movement than has demanded for himself a position in the van of Liberalism. I should feel rather inclined to describe him as a brilliant man of the world rather than as an enthusiastic and advanced Radical or as a political leader of any order, for some of the great reforms with which the Liberals have recently become identified were pressed upon him rather than led by him. But he is unquestionably a man of great and varied capacity, endowed with most brilliant gifts of ready argument and eloquence, and in his capacity as Chancellor of the Exchequer he has proved himself a very master of finance. It will, therefore, be easily understood that such a man is not in the least likely to overstate the determination of the Government to bring the claims of the House of Lords at the earliest possible moment to the decision of the national constituencies.

Altho Mr. Asquith has never been a Liberal of the advanced order, yet, when prevailed upon to give his support to this or that advanced measure of Liberalism, he has never, as some other men of his time has done, backed out of any course on which he had once been prevailed upon to enter, and I feel quite satisfied that in his recent speech he expressed his own determined and final resolve as well as that of all his colleagues. Therefore the whole British Empire and, indeed, all peoples outside that Empire who take any interest in its doings, must look with profound interest to the now near approaching session of Parliament, which is to have before it for settlement the great question at issue between the House of Commons, which represents the nation, and the House of Lords, which represents only the nobles, and is not elected even by the nobles for that or any other work of representation.

No private calamity has for a long time aroused so much wide and fervent public sympathy thruout these countries as the

DION CLAYTON CALTHROP.
Author of "The Dance of Love."

grief which has quite lately fallen on Mr. Lloyd-George and his family by the death of the eldest daughter of the house thru a sudden attack of appendicitis. Miss Lloyd-George was in her seventeenth year and was giving every promise of intellect and personal charm and genuine nobility of nature. The misfortune seemed only all the more tragic because it came so soon after the marvelous successes which the girl's father had won by his timely, most judicious and effective intervention in the strike among the railway workers, which was threatening just then to become absolutely universal in that class and to convulse for the time the whole railway system of the country.

I told my American readers the story in brief of this great crisis and of the hopes which were entertained even almost against hope that Lloyd-George might be able to accomplish the work which he had voluntarily undertaken—the task of prevailing by his personal influence and advice on both the disputing parties to come to a compromise and a friendly arrangement. Lloyd-George's

efforts proved quite successful in the end, and a complete reconciliation was effected and the railway traffic of the country was never actually disturbed. Immediately after this most important achievement Lloyd-George effected another great success by his voluntary intervention in a trade dispute of a different kind between employers and employed which seemed to threaten a very serious disturbance to the carrying on of an important national industry. And just as the public had begun to offer its universal congratulations to Lloyd-George on his peaceful triumphs the sad news was made known that an irreparable calamity had fallen upon his own home and his own heart.

My countrymen in the United States, and, indeed, all sympathizers there with the Irish national cause, must feel deeply interested in the speech delivered a few days ago, at a public meeting in one of the counties, by Sir Edward H. Carson, a distinguished member of the bar, King's Counsel, and representative in the House of Commons of that ancient fortress of Conservatism, Dublin University. Sir Edward Carson appears to have opened his eyes at last to the fact that Conservatism must no longer hope to effect any good result by endeavoring to resist the Home Rule movement in Ireland. In the most direct and emphatic language he told his audience that England must abandon the idea of enforcing on Ireland her system of government by a majority of votes in the British House of Commons, that she must sooner or later give to Ireland a system which will enable her to manage her national affairs for herself, and that the sooner she makes up her mind to adopt such a course the better it will be for the peace, the prosperity, and the progress of the whole kingdom. Such a declaration coming from such a man cannot but have an influence even over some of the most antiquated Tories, and it is one of the most remarkable evidences we have had for a long time of the manner in which the justice and the reasonableness of Ireland's claim for Home Rule are making themselves recognized among all classes in these countries. After the struggle with the Lords the Home Rule question will come again before Parliament.

I turn not by any means reluctantly from politics to literature. We have had some remarkable novels published in London lately, concerning which I am desirous to offer what I may call letters of introduction to my American readers, if, indeed, these volumes may not have already found their way into American homes. The first of these is called "The Dance of Love"; its author is Mr. Dion Clayton Calthrop, and its publishers are Messrs. Duckworth & Co., London. Mr. Calthrop is the grandson of the late Dion Boucicault and is a son of the late John Calthrop, the actor for whom most of Pinero's early plays were written. I should be inclined to describe "The Dance of Love" rather as a fantasia than as a novel or even a romance. It is a prose poem, is thrilling with imagination, glowing with color and at the same time instinct everywhere with genuine and original humor. It is made up of a series of adventures, but these are not by any means adventures of the kind familiar to the readers of imaginative stories and do not tell us of wild encounters with the fierce natives of some savage country resisting the too daring incursions of civilized explorers; nor do we hear about the caves of robbers, nor do we encounter pirate ships, nor does the working of magical arts ever threaten the life of the adventurous hero. Yet the hero passes thru a course of experiences which are in their way absolutely wonderful and which come upon him in new forms and with varying forces whenever he passes from one stage of his journey to another. The author troubles himself nothing, or at all events very little, about time or space, about climate or latitude, about probability or improbability, but takes us whithersoever he pleases, and we soon learn to feel that the only thing certain about the whole story is that the next adventure will be quite unlike the last and that each will hold us in equal enthrallment.

The hero, who bears the somewhat unheroic name of Pipin, has been inspired by a sudden purpose to find out whether he has or has not yet discovered his true love, his one and only love, and if not whether she is to be found anywhere in the habitable globe. He has already been making love to and been made love

to by three charming girls in his native town, and he has not yet quite satisfied himself as to which of the three is or is to be the one and only. So he resolves to start out on his quest of the one true love very much as Don Quixote starts out on his quest of chivalric adventures, and Pipin's search and its result make up the story of the book and explain its metaphorical title. The hero travels as rapidly from one place to another as if he were being wafted by the latest invention among scientific aeroplanes, and whenever he alights on the earth he comes upon a new temptation to love and for one reason or another does not yield to it. The result of all the adventures is that he returns at last to his old home and finds that his one and only love is and is to be that one of the three girls with whom he had first fallen in love during those days of youthful inexperience.

I must tell my readers, however, that this outline sketch of "The Dance of Love" does not give the faintest idea of the varied charms possessed by this fascinating and original story. Every chapter is rich in scenery, in character-drawing, in odd fantastic figures, and every figure, even the most fantastic, is a life-like picture. The chapters are full alike of humor and of pathos, and not a single figure is created by the author which has not the attraction at once of originality and yet of living realism. The scenes are so deftly shifted, if I may use such an expression, that we seem to have past over

vast spaces of the world and to be always coming into new and strange scenes, and yet we have really only traversed a very small extent of the earth's space, and at the same time the whole is in perfect drawing. Many of the characters described in these pages are sure to live long in the memory of every reader, and I feel sure that every reader will feel grateful to the adventurous hero of the story for starting on this marvelous quest before making up his mind as to his one and only love.

Mr. Percy White's latest novel, "Mr. Strudge," which has just been published by Eveleigh Nash, of London, is the third of the wonderfully clever character studies for which Mr. White has been celebrated since "Mr. Bailey Martin" appeared in the early nineties. "Mr. John Strood," another novel in the same manner, was published much more recently. All these are in autobiographical form, and the Mr. Strudge—as did the two others—in telling his story, also draws his own character. This method is naturally extremely difficult, but when managed as skillfully as it is by Percy White it is also the most effective for the purposes of satire. The book is practically all satire, for there is hardly any character in it one can like, or at least like much, but all are real and true to their life, and it is a delight to read so brilliant a study of peculiar character—one of the best Mr. Percy White has ever done.

LONDON, ENGLAND.

The Stranger Hills

BY CHARLES L. O'DONNELL

THE stranger hills are blue, friend,
And fair fields lie between;
And friends are here that are true, friend;
But yet is the thought of you
Full first in my heart, and the fields we knew,
And the hills of the life that has been.

The west is dim, yet the sun, friend,
Has left stars piling there
To shape my dreaming of one, friend;
And an evening when all was done,
We looked in the dusk on our long day run,
With a peace that was half despair.

For then 'neath the garnet skies, friend,
In the gray of the twilight lands,
We silenced the last good-byes, friend,
And blunted the edge of a thousand sighs;
But deep called to deep in the parting eyes—
Oh, the treason of lingering hands!

WASHINGTON, D. C.

The Professor and the Medium

BY E. W. SCRIPTURE, Ph.D., M.D.

[The large number of books now appearing on spiritualism and psychical research indicates a revival of popular interest in alleged supernormal phenomena. It is easy to fall into belief that where there is so much smoke there must be some fire, so we have asked Dr. Scripture, formerly director of the Yale Psychological Laboratory, to review the recent literature of the subject and to show what it amounts to.—EDITOR.]

IN every large city there are hundreds of spiritualistic mediums who make their living by receiving messages from the dead, by predicting the future, etc. Their mysterious rappings, rope-tying, cabinet manifestations, slate-writing, letter-reading and so on are more wonderful than the dynamo, more startling than wireless telegraphy, more fascinating than the flying machine. The problems they solve are the most important of all. The turbine steamer bridges the Atlantic, but spiritualism opens an excursion route across the Styx. The telephone enables us to talk with our friends a thousand miles away, but the medium lets us communicate with the souls of the departed. Their results even prove the immortality of the soul. Every man must put the question to himself: Are these not the most important phenomena in the world to which I should give my attention? And my money, also? Shouldn't there be richly endowed "professors," who should devote their entire time to such investigations?

"It is no light task to collect a census of coincidental experiences having scientific value for proving the supernormal, and it should have the financial support commensurate with its importance on any theory whatsoever of the facts" (Hyslop).

The answer is, Yes, if a single one can be proven to be free of trickery or gross blundering.

I cannot here enter upon any discussion of the usual phenomena of spiritualism; they have, one and all, been shown to be tricks—tricks so clever that it is well worth an occasional dollar to be taken in by them. Mr. Abbott, in a fascinating book⁹, has given complete inside information concerning all the medium's work. Many of these secrets are sold by mediums to pupils at prices from \$2.50 to \$98 (marked down). Mr. Abbott was obliged to pay for a number of them.

Carrington also gives some excellent descriptions.⁸ Hereafter every man can become his own medium.

Does any educated person still believe in these things? "Professor" Camille Flammarion, Director of the Observatory of Jovisy, does. "I purpose to show in this book¹⁰ what truth there is in the phenomena of table-turnings, table-movings and table-rappings, in the communications received therefrom, in levitations that contradict the laws of gravity, etc., etc." "Mediumistic experiences might form (and doubtless soon will form) a chapter in physics." He gives photographs of tables suspended in the air by the mystic force of Eusapia Paladino. The medium commands a "spirit" to raise the table. "This being appears to come into existence and then become non-existent as soon as the experiment is ended." Professor Crookes, the celebrated chemist, believes in the movement of heavy substances when at a distance from the medium, in the rising of tables and chairs off the ground without contact with any person, in human beings rising and floating about, in the appearance of disconnected hands either self-luminous or visible by ordinary light, in a bell passing thru the wall of a room and a flower passing thru a table, in the creation of a lifelike figure, "Katie," who sobbed, talked, shook hands and even submitted to a "gentlemanly" embrace. Professor Milési believes in self-playing mandolins, in pianos that jump up and down, etc. Professor Palmieri felt himself embraced by his dead daughter and everybody heard the sound of a kiss. Professor Richet believes in anything that comes along.

Professor Hyslop¹¹ believes in certain "clairvoyant" persons who can perceive objects or scenes at a distance and without any of the normal impressions of

sense, in the appearance of "apparitions" of dead persons, in dreams that reveal events happening at a distance, in telepathy or the direct communication of one mind with another, in "crystal gazing," or the "supernormal" acquisition of knowledge by looking at a bright object, in premonitions of future events, etc., etc. In fact, there seems to be very little left that he won't believe. Yet, like my clever friend, the showman, "Professor" Baldwin, the White Mahatma, he is addicted to such phrases as "the matter is supernormal" and to indicating that some mysterious force is at work whose nature we do not yet know (and for whose investigation we need endowed professors).

Let us accept Professor Hyslop's challenge:³

"It is high time that investigations of this kind should be endowed as are many others of less importance. . . . They will spend millions in North Pole expeditions, in deep-sea dredging for a new fish, in biological inquiries to show a protoplasmic source of life, and in astronomic observations that lead only to speculation about planetary life—in short, anything to throw light on man's origin, but not a cent to ascertain with any scientific assurance a word about his destiny."

The problems of man's destiny, of a possible future life, of extraordinary powers of foreseeing events, of seeing things at a distance with a spiritual eye, etc., are certainly far more worthy of investigation than any problems now undertaken. But—these problems *have* been undertaken; money *has* been spent; a whole society for psychical research has been hard at work for twenty-five years; whole series of volumes have been published. And—the result has been entirely negative; not one single fact bearing upon any of the problems has been established. At the present time there is money by the barrelful for any one who will produce even the shadow of a fact of this kind. Show me a person who by premonition will predict a rise in stocks and I make him a multimillionaire over night. One who could by clairvoyance see what is happening at a distance wouldn't need to work for a living. If telepathy, or thought transference, had even the most microscopic foundation in fact, it would be instantly commercialized as a rival to telegraphy, telephony,

and even the postal service. Show the world even the faintest hope⁷⁹ of trustworthy investigations of the immortality of the soul, and the whole body of scientific men would plunge into the work.⁷ The mountain has been in labor for such a long time and it has brought forth not even a mouse.

But why do the professors still believe? Let us be just; they don't. Out of all this magnificent body of men (just think of Koch, Virchow, Röntgen, Behring and the thousands of other great names!) Dr. Funk^{1 2} can find only ten to mention as believers in these vagaries. Among them there is not a single German and not a Frenchman of prominence. Of the Englishmen, the famous chemist Crookes is like a child in his simple faith and careless experiments as soon as he leaves his own domain. The three Americans we will leave to their colleagues.

Why do these few remainders believe contrary to all evidence?

A study of their characters will show the reasons. One of them, a professor of psychiatry, has written books on insanity, genius and criminality that have been brilliant, startling and original, but in every respect utterly devoid of scientific worth; every thesis proven by him could just as well have been disproven by the very facts he collected. Another is a professor of physiology in a world-famed university. No kinder, simpler, more charming man ever lived; full of enthusiasm and ambition to discover some great truth, his very sincerity and simplicity render him an easy prey to the clever schemer. I have seen him, after a test of a musical prodigy, clasp the child to his breast with enthusiastic tears—whereas the audience had seen the mother's tricks. A university life is in some respects like that of a monastery; the inmates are to a great degree protected from the evil world outside. The standards of ethics are higher, and there is greater faith in one's fellow men. Every swindler knows that a college professor is usually an "easy mark." It is only natural that among such men there are a few who are caught by the spiritualistic and telepathic humbugs—and once caught in print, with true academic

obstinacy, never back down on what they have said.

Francis Thompson: An Appraisalment

BY MILTON BRONNER

AUTHOR OF "LETTERS FROM THE RAVEN" AND EDITOR OF THE "KENTUCKY POST."

FRANCIS THOMPSON, the poet, is dead. He was one of the most singular characters and one of the most remarkable versemen of the latter part of the nineteenth century. "Nineteenth century" is used advisedly, because all of his published poetry was given to the world in the years of the last century ("Poems," 1893; "Sister Songs," 1895; "New Poems," 1897).

There is probably no recent poet who in his own life so completely embodied the romantic notions we have of what a poet should be. He was the true follower of the gleam; the real slave of his own fair dreams. The son of an English physician in a country town, he was educated at the famous Catholic College, at Ushaw, in the north of England, and at Owens College, in Manchester. He acquired a deep knowledge of Greek, Latin and French. He lived with his books. He seemed of all young men in his classes the most impractical. Destined by his father for the practice of medicine, he was sent to London, where he "wasted" his time reading poetry in the great libraries. When his father discovered this he cut off the young man's allowance. Francis, then twenty-four, was content to remain in London, somehow, anyhow. The dreamer dreamed on.

We have had vivid pathetic pictures of poets who dwelt in miserable attics and dined on crusts. Soon Thompson had no place where he could lay his head

and no crust at which to nibble. He took to the streets by night and spent his days reading in the libraries as before.

When desperate, he turned his hand to anything that promised him a few pennies, whether it was working in a shoe shop, selling matches and newspapers, or blacking boots. He went for months without knowing the simple luxury of a meal. An apple, a hot bun, a bit of fried fish once a day—these sufficed to keep him alive, aided by a curious friend—laudanum. The use of the latter was not with him a vice. It was a preserver of life. It kept him from starving; often from freezing. It weakened his body, but it did not degrade his soul. Amid all his poverty and squalor, amid the hideous sights and sounds of the murky streets, he retained his virginal purity of heart. He was in the world about him, but not of it. His soul dwelt with the masterpieces produced by deathless poets. He brooded over the beauties of rural England, for he loved nature with a worship so Greek in its ardor that deep, devout Catholicism, Catholicism in its most mystic phases, was as a sanctuary to him from the Pantheism which otherwise would have claimed him for its own.

As the years passed, Thompson, to all outward appearances, sank lower and lower. His clothes became so ragged, his body so unkempt, that after a time he

could not secure admittance to the libraries. At night he gained a precarious penny by serving as cab "tout" in front of theaters. If the pennies were not secured, he slept in some corner in a doorway until discovered by the police and ordered to move on. Nowadays we expect this kind of life to make a man pessimistic; to convert him to anarchism, or at least to a vengeful feeling against the world. We expect to hear him sing the raucous song of the submerged tenth. Not so with Thompson. He had no resentments. He did not rail at society. He had counted the cost of his way of life. He did not seek riches or acclaim. He was content to dream of beauty for its own sake and to celebrate it, indifferent to world applause, so that he won the approval of his own soul. We gather something of this from his own poems. His verse bodies forth both his outlook on the world and his inlook upon himself. He says he is of those to whom is given

"The impitiable Daemon,
Beauty, to adore and dream on,
To be
Perpetually
"Hers, but she never his?"

He reapeth miseries,
Foreknows
His wages woes;

"He lives detachèd days;
He serveth not for praise;
For gold
He is not sold;

"Deaf is he to world's tongue;
He scorneth for his song
The loud
Shouts of the crowd;

"He asketh not world's eyes;
Not to world's ears he cries."

It was this kind of an other-worldly poet who wrote verses on crazy scraps of paper and one day deposited them furtively in the box of the editor of *Merrie England*, a Catholic publication. So uninviting were the slips of paper that they lay untouched for months. Then one day Wilfrid Meynell, husband of Mrs. Alice Meynell, the poetess and essayist, and himself biographer of Disraeli, allowed his curiosity to get the better of his repugnance. He read the verses and had the supreme joy—not vouchsafed to many editors—of having discovered a

man with the veritable divine fire. It was no easy task to find the poet amid the mazes of gigantic London, but he was finally dragged from his obscurity and sent to the country to rest and recuperate. For some years he contributed poems and discriminating criticisms of poetry to *Merrie England*. However, with its limited audience, the publication did not afford him the field his friends desired for him. He was finally persuaded to gather some of his verses into a volume, which, under the simple title of "Poems," was published in 1893. There followed a chorus of high praise and of violent denunciation, repeated when his other volumes appeared. U. D. Traill hailed him as a poet of the first rank. George Meredith commended him. Coventry Patmore, himself no mean poet and no mean judge, said Thompson had taken aplace with Crashaw and Cowley.

On the other hand, there were those who denounced him as one who gave mere echoes of other men's music. "Here," said they, "he apes Donne, there Poe; here Keats, there Rossetti." Others, again, censured him for the Latinity of his vocabulary, for his daring habit of creating words, of making past participles from non-existent verbs as "heavened," "goddèd," "lampèd clusters of grapes."

Still others denounced him for his obscurity, or for his profusion of metaphors and other figures of speech. There was "much talk about it and about,"—and then silence, practically unbroken for years by both poet and critics.

Bearing this in mind, the question with us is, What is his place in our literature? Was he merely a comet, flashing into our field of vision for a brief span and then going away again, leaving behind him nothing but the memory of a portentous flash of light, doomed all too soon and too certainly to fade away and disappear? We think not. We think when the *advocatus diaboli* has done his worst, when all poems marred by obscurity, by overwrought fantasy, by religious mysticism, or by conscious imitation of former masters, have been thrown away, there remains a treasure of verse sufficient to give Thompson a permanent place in the ranks of the great lyric poets of England.

He is something more than "master of the fine frenzy and the fine line," as one critic put it. This is only part of the truth. The soul of a poet can not be expressed in an epigram. Thompson was more than a nineteenth century descendant of Crashaw, Vaughan and Cowley. He resembled Crashaw in his religious ecstasy, "sweet inebriated ecstasy," as the latter himself put it. He resembled him, too, in his "towering press of fantasies" to quote Thompson. He resembled him in his religious mysticism, leading him often into dense obscurity. He resembled him at times in his aping of the foolish fashion of the Marinists. But the resemblances mainly occurred in the poorer work of Thompson. When he is most truly himself, he is most genuinely a son of the nineteenth century, heir to all the ages that have gone before, beneficiary of all its knowledge and its songs. He shows himself most a nineteenth century man in his worship of nature. Thus, when he wishes to evoke a portrait of his lady in her youth, he says:

"As gale to gale drifts breath
Of blossoms' death,
So dropping down the years from hour to hour
This dead youth's scent is wafted me today;
I sit, and from the fragrance dream the flower."

He sees a woman pondering and phrases it in this manner:

"Upon the heavy blossom of her lips
Hangs the bee musing."

He desires to speak of earth and sun and gives us this striking, strictly scientific fancy—for he recognizes the facts of science as surely as does George Meredith:

"This laboring, vast, Tellurian galleon,
Riding at anchor off the orient sun."

In another line let us consider this rich picture of autumn:

"Suffer my singing,
Gipsy of Season, ere thou go winging;
Ere Winter throws
His slaking snows
In thy feasting-flagon's impurpurate glows.
The sopped sun—toper as ever drank hard—
Stares foolish, hazed,
Rubicund, dazed,
Totty with thine October tankard.
Tanned maiden! with cheeks like apples russet,
And breast a brown agaric faint-flushing at
tip,
And a mouth too red for the moon to buss
it—"

And so quotation after quotation could

be culled, showing his deep love for the external beauties of the world, his rich fancy, his ability to express it in new terms set to new music. He has his favorite themes. The sun is one of these. Again and again this modern sun-worshiper bursts forth with trope after trope describing sunrise and sunset. But his greatest fealty is given to the Spring. The vernal season called forth his best powers. The poor, half-starved, half-frozen poet forgot his troubles when he contemplated the goddess who transforms the earth. His second book, "Sister Songs," is seemingly a tribute to two young children. The book is divided into two parts. The first is not only one of the most beautiful things that Thompson ever wrote, but one of the most exquisite compositions of the later nineteenth century era. It is a pean to spring. It is drenched with the dew of it. It is perfumed with the smells of it. It shines with the tender greens of it. There is a morning light in the figures of speech, a thrilling music in the verses, a happy, light-hearted ring that set the work apart.

There are delicious bits like this:

"The lily stirs her snowy limbs,
Ere she swims
Naked up thru her cloven green,
Like the wave-born Lady of Love Hellene."

There are dainty rhythms like this, marking their author as a strayed reveler from Elizabethan times:

"Then, Spring's little children, your lauds do
ye upraise
To Sylvia, O Sylvia, her sweet, feat ways!
Your lovesome labors lay away,
And trick you out in holiday,
For syllabbling to Sylvia;
And all you birds on branches, lave your
mouth with May,
To bear with me this burthen,
For singing to Sylvia."

And lest the poem might suffer from excess of light and joy, there is the shadow of sorrow and tragedy cast for a space, enhancing the beauties of the whole. It is necessary to dwell for a moment upon this shadow. We have seen how some critics censured Thompson for his Latinity, his out-of-the-way, antique and obscure words. In the passage now to be quoted the English is simple enough to satisfy the most exacting, while the incident is described with a passionate tenderness, a pathos, and a reality rival-

ing the famous episode of De Quincey and Ann. Nor must we deem this a mere poetical version of De Quincey. One is convinced upon reading the lines that they embody a veritable happening to their author:

"Once, bright Sylviola, in days not far,
Once—in that nightmare-time which still doth
 haunt
My dreams, a grim, unbidden visitant—
Forlorn, and faint, and stark,
I had endured thru watches of the dark
The abashless inquisition of each star,
Yea, was the outcast mark
Of all those heavenly passers' scrutiny;
Stood bound and helplessly
For time to shoot his barbed minutes at me;
Suffered the trampling hoof of every hour
In night's slow wheeled car;
Until the tardy dawn dragged me at length
From under those dread wheels; and, bled of
 strength,
I waited the inevitable last.
Then there came past
A child; like thee a spring flower; but a
 flower
Fallen from the budded coronal of Spring,
And thru the city streets blown withering.
She past—O brave, sad, lovingest, tender
 thing!
And of her own scant pittance did she give
That I might eat and live;
Then fled, a swift and trackless fugitive."

Thompson pinned his faith to his odes, those odes whose irregular form he copied from Cowley of old time and Patmore of our own day. A vassal of spring, in "From the Night of Forebeing," which is an ode after Easter, he has this triumphant strain in celebration of the coming of spring:

"Cast wide the folding doorways of the East,
For now is light increased!
And the wind-besomed chambers of the air
See they be garnished fair;
And look the ways exhale some precious
 odors,
And set ye all about wild-breathing spice,
Most fit for Paradise.
Now is no time for sober gravity,
Season enough has Nature to be wise;
But now distinct, with raiment glittering free,
Shake she the ringing rafters of the skies
With festal footing and bold joyance sweet,
And let the earth be drunken and carouse!
For lo, to her house
Spring is come home with her world-wandering
 feet,
And all things are made young with young
 desires;
And all for her is light increased
In yellow stars and yellow daffodils,
And East to West, and West to East,
Fling answering welcome fires,
By dawn and day-fall, on the jocund hills."

Attention has been called to the religious and mystic strain in Thompson's

composition. Quotations have been made at length to show him as a singer of sun and spring. In startling contrast to this, is still another strain in his mental character. He, the sufferer and dreamer, is filled with a poignant idea of the futility of our little lives. We are all players in a little play in which death is the stage manager, arranging our exits. Thompson has moods as macabre as any we may find in Donne or Beddoes. Indeed, the irregular rhythmic arrangement of the following reminds us of both men:

"Life is a coquetry
Of Death, which wearies me,
Too sure
Of the amour;

"A tiring-room where I
Death's divers garments try,
Till fit
Some fashion sit.

"It seemeth me too much
I do rehearse for such
A mean
And single scene.

"The sandy glass hence bear—
Antique remembrancer;
My veins
Do spare its pains.

"With secret sympathy
My thoughts repeat in me
Infirm
The turn o' the worm

"Beneath my appointed sod;
The grave is in my blood;
I shake
To winds that take

"Its grasses by the top;
The rains thereon that drop
Perturb
With drip acerb

"My subtly answering soul;
The feet across its knoll
Do jar
Me from afar."

There is something of similar tenor in his wonderfully fine ode, "An Anthem of Earth":

"What is this Man, thy darling kissed and
 cuffed,
Thou lustingly engender'st,
To sweat, and make his brag, and rot,
Crowned with all honor and all shamefulfulness?
From nightly towers
He dogs the secret footsteps of the heavens,
Sifts in his hands the stars, weighs them as
 gold dust,
And yet is he successive unto nothing
But patrimony of a little mold,
And entail of four planks. Thou hast made
 his mouth
Avid of all dominion and all mightiness,
All sorrow, all delight, all topless grandeurs,

All beauty, and all starry majesties,
And dim transstellar things;—even that it may
Filled in the ending with a puff of dust
Confess—"It is enough." The world left empty
What that poor mouthful crams. His heart
is builded

For pride, for potency, infinity,
All heights, all deeps, and all immensities,
Arrased with purple like the house of kings,—
To stall the gray rat, and the carrion-worm
Statelily lodge."

Enough has been quoted to give a taste of Thompson's quality, a method the more excusable by dint of the neglect he suffered in this country. It may be objected. Thompson gives us fine lines and superb snatches of song, but does he give us any complete poems that challenge comparison with the best that other nineteenth century masters have given us? We answer in the affirmative. We point to "Ex Ore Infantium," unexcelled in English for its childish simplicity, purity and sweetness, with its touching strain:

"Little Jesus, wast Thou shy
Once, and just as small as I?
And what did it feel like to be
Out of Heaven, and just like me?"

We point to the wonderful poem, "The Hound of Heaven," with its vision of God's pursuing love, with its swift rush of music, with its poetry appealing to poets:

"I fled Him, down the night and down the
days;

I fled Him, down the arches of the years;
I fled Him, down the labyrinthine ways
Of my own mind; and in the mist of tears
I hid from Him, and under running laughter."

We point to the Elizabethan strains in "Field Flower" and "A May Burden"; to the five delightful poems on children, in the poet's first book, with the Wordsworthian pathos of its

"She went her unremembering way,
She went and left in me
The pang of all the partings gone,
And partings yet to be."

We point to the exquisite "Envoy" in the poet's last book, with its proud assurance of immortality:

"Go, songs, and come not back from your far
way;
And if men ask you why ye smile and sorrow,
Tell them ye grieve, for your hearts know
Today;
Tell them ye smile, for your eyes know
Tomorrow."

We point to the music of "July Fugitive," to the troubadour daring of "Noc-

turne," to the ringing saga strain of "To a Snow Flake," and finally and above all to the tear-compelling "Dream Tryst," a poem assured of immortality, reminding us of Rossetti's "Blessed Damozel," not as an imitation, but as a masterpiece along somewhat similar lines:

"The breaths of kissing night and day
Were mingled in the eastern Heaven:
Throbbing with unheard melody
Shook Lyra all its star-cloud seven:
When dusk shrunk cold, and light trod shy,
And dawn's gray eyes were troubled gray;
And souls went palely up the sky,
And mine to Lucidé.

"There was no change in her sweet eyes
Since last I saw those sweet eyes shine;
There was no change in her deep heart
Since last that deep heart knocked at mine.
Her eyes were clear, her eyes were Hope's,
Wherein did ever come and go
The sparkle of the fountain drops
From her sweet soul below.

"The chambers in the house of dreams
Are fed with so divine an air
That Time's hoar wings grow young therein,
And they who walk there are most fair.
I joyed for me, I joyed for her,
Who with the past meet girt about:
Where our last kiss still warms the air,
Nor can her eyes go out."

In closing, we repeat, this poet, so richly endowed with command of rhythms old and new, so daring in his creation of new words, so fertile in his metaphors and fantasies, with his three-fold strain of religious mysticism, nature worship, and contemplation of the grave; this poet who has given us three or four perfect lyrics, two or three wonderful odes, and one marvelous pean to spring, is no mere minor poet doomed to early oblivion. As the years pass, he will attain a surer place in England's pantheon. He may be neglected for a period, but some pious Edmund Gosse of the future will resurrect his work and do for Him what Gosse did for Beddoes and other men of genius who pursued their own way regardless of the popular clamor and the blindness of critics. The new readers will see in him something of the Catholic religious ecstasy of Crashaw, something of the paganism of Keats, something of the grim irony of Donne, but blended into something that expressed the soul of Thompson himself—that strange, shy soul which worshipped Christ, and the sun, little flowers and little children.

COVINGTON, KY.

The Catholic Encyclopedia*

THE second volume of the *Catholic Encyclopedia*, appearing just at this interesting time, stirs one's curiosity as to how far it may be infected with the germs of that deadliest of diseases, Modernism. The infection is very slight, but a stray germ or two is there all the same. The discussion of the Tower of Babel hints at the non-historicity of that celebrated structure, the aboriginal skyscraper, if we be not irreverent in saying so. Dr. Howlett, from whom we may always look for splendid work, had better watch out for the anathemas with which the sky is dark just now, if he persists in writing such good articles as his study of Barlaam. The author of the paper on Barlaam and Josaphat admits that these two saints of the Roman Martyrology, to whom doubtless many a devout Christian prayer has been said, are nothing more or less than Buddha foisted upon the calendar of the Church thru a sixth century legend. The article on the Assumption is very candid in acknowledging that this legend of the Virgin is absolutely without foundation in primitive Christianity. One of the finest articles in this volume is on the "Bollandists." It gives an admirable account of the persecutions suffered by Papebroch, the greatest of the "Bollandists," because of his fidelity to historic truth. Would that the present persecutors of truth in the Catholic Church might read it!

Apart from these few articles, the volume is as safe as death. Times almost without number it avoids those aspects of a question which would open up "Modernist" ideas. Indeed the silences of the book are more eloquent than its utterances. Think of two articles on the Avesta, and not one word on the momentous matter of Zoroastrian influence upon Judaism! Not a syllable in the article on the pool of Bethesda concerning the critical points there at issue! Not a reference in the essay on the Beatitudes to the problem involved in the twofold form

of the beatitudes! Hardly a mention in the two articles on Bossuet of the controversy with Fenelon, absolutely no mention of Bossuet's still more important quarrel with Richard Simon, and, of course, only decorous silence upon that extraordinary episode in the great bishop's career, his relations with Made-moiselle de Mauléon. Fifteen lines are devoted to Jean Astruc, who, with Richard Simon, merits the title of father of biblical criticism, and these fifteen lines so prim, so cautious, so careful not to offend pious ears that no intelligent man can read them without disgust. The author of the Bellarmine article tries valiantly to exculpate the great Jesuit from the charge of deliberate falsehood in the matter of the Sixtine Vulgate, but he refrains from telling us that when the cause of Bellarmine's canonization came up, the opposing cardinals so powerfully attacked his truthfulness in the Vulgate business that the project of Bellarmine's saintship was incontinently dropt.

It would be wearisome to go thru all the inadequacies of this volume. We might take up in detail such incompetent articles as those on Baptism, a classic of medieval rubbish, the Aztecs, the Liturgical use of Bread, Augustine, the Epistle of Barnabas, and others, but we have said enough to indicate that if the *Catholic Encyclopedia* is to be of this stamp thruout, it does not deserve the name of scholarship.

We take pleasure in acknowledging, on the other side of the ledger, that the geographical articles are extremely well done; and we feel bound to congratulate Dr. Oussani for his scholarly studies upon Assyro-Babylonian subjects. The Hebrew printing, which was disgraceful in the first volume, is correct in this one.

The Soul of a City

THE soul is the life, the *ego*, the essence of the man. But the soul can be known only by means of the body it inhabits. Individual character is comprehensible only by the soul's concrete manifestation in conduct and in words

*THE CATHOLIC ENCYCLOPEDIA. Volume II. As-sige-Browne. New York: Robert Appleton Company.

(thoughts expressed). And the same is true of communities. The real character of a city can be seen and understood only thru a knowledge of its life as manifested in the activities of its people. Where the city is an old one, especially, the first aid to such knowledge is the study of its buildings, not alone architecturally but also historically. This, in brief, is what has been attempted by Mr. J. Wood Brown in his book on *The Builders of Florence**—to present certain aspects of the soul of that ancient Italian city—and the attempt is crowned with a considerable measure of success.

What he has produced is a scholarly study and interpretation of Florentine architecture as an expression of the character of the Florentine people, illustrated more in detail and specifically by the examination of twelve important and monumental buildings possessing both architectural and historic interest, "and such as lend themselves readily as illustrations of the city's life, whether commercial, ideal or political." An introductory part, before taking up the characteristics of Florentine architecture, provides an exposition of the "Substance of Florence"—how the position and character of the city were determined by the Arno, once navigable, and by the road which crosses it where Florence stands; and how the commerce of Florence by road and river waxed and waned, from Roman times to its success in the thirteenth and its decline in the fifteenth century—of the "Spirit of the Place" and of the "Form" in which these two resulted by the action of the Spirit on the Substance—the obscure but constant source of which form is found in the Trade Associations and popular life of the city. In the fourth and last chapter of the introduction we have some general considerations of Florentine architecture—how the unit of the civil architecture is to be found in the tower, shaped by Florentine habits and tastes, and how this Florentine tower in its arrangement and details "corresponds singularly to the Substance and the Spirit of the city it composed"; how the tower group, suburban and civic, developed till it became the *Palazzo*; how even the tower divisions developed, the

basement becoming the *Loggia*, the galleries the *Sporti*, the battlements the *Terrazza*; how the civil architecture influenced the ecclesiastical, the campanile, developed from the tower, here lending its vault to roof the church and its battlements to adorn it, and how this influential development was natural:

"And indeed it is thus that all great architecture lives and triumphs, by moving on easy and natural lines, not straining after effect, accepting its conditions, building for convenience, adopting, in structure and decoration alike, the suggestions that naturally offer themselves in the course of ordinary practice. Such at least was the way of Florence and great was her reward."

Among architectural treatises this work must take rank at once as noteworthy for breadth of vision, insight and erudition. It is packed with a wealth of historical material and that material is skilfully used. The work is worthy of the handsome dress in quarto form with which the publishers have invested it, and Mr. Railton's pen and ink drawings—simple, impressionistic, distinguished for fine continence of line and wise selection of material (skill in omission as well as inclusion) and altogether charming—make it, for the student of architecture or the lover of Italy, one of the most beautiful gift-books of the year.

Love of Life. By Jack London. New York: Macmillan Co. \$1.50.

This volume of short stories is interesting, not only on account of the stories themselves, but because they indicate Mr. London's development as a literary artist covering as they do a period of several years. The scenes are nearly all laid in the Arctic regions. And if this country so cruelly inimical to life had not been discovered, Mr. London might have written stories, of course, but he could never have had the right conditions of famine, cold and solitude in which alone his savage genius is at home. There is a bone bitterness in him against the kind of life civilization has developed. He prefers to think of life as he depicts it in the initial story in this volume, a craven, deathless instinct, thru which a man survives the terrors of awful loneliness, the agonies of frightful hunger; an instinct that crawls on insensate with the tongue of a sick wolf licking at it, on to a death

*THE BUILDERS OF FLORENCE. By J. Wood Brown. M. A. With seventy-four illustrations by Herbert Railton. New York: E. P. Dutton & Co. \$6.00.

grapple between the two, rendered more hideous by their very feebleness; and in which the man only survives because he sucks the blood of the dying beast. Nothing could be more monstrous. But that is Mr. London's distinction. He has the monstrous mind; and apparently it is incapable of surviving the softening influences of ease and happiness. This is suggested by his story of "Brown Wolf" in the same volume. The scene is laid in California, and there is an attempt at something like gentle sentimentality, but it is utterly lacking in the horrid distinction, the gorilla strength of his earlier stories. Possibly he will get the fierce breath of his genius back during this sea life he is now living.

The Industrial Conflict. By Dr. Samuel G. Smith. New York: Fleming H. Revell Co. \$1.00.

Labor and Capital. By Goldwin Smith. New York: The Macmillan Co. 50 cents.

These are both books for beginners, suitable for the kindergarten class in sociology, addressed to the great Smith family to which the authors belong. Dr. Samuel Smith has obtained letters from a number of labor leaders and influential employers of labor, from which he deduces the demands of the opposing camps, on the assumption that the controlling views of the two sets can be elicited in this easy way. He does not realize that to get "the truth, the whole truth and nothing but the truth," from workman or employer, an investigator must often interview him skillfully through several hours under circumstances which loosen his tongue and give him assurance that he is not talking for publication. The legitimate and most noticeable deduction from Dr. Smith's inquiries is that the labor leaders lay great stress upon social action and the interests of society outside their own unions, while no employer shows the consciousness of the existence of society outside his factory. Mr. Smith is apparently not so well acquainted with Socialist writers and advocates as with trade unionists, for he declares that Morrison Davidson is "perhaps the ablest Socialist writer in recent years." This estimate would be very comforting to the dear old Fleet Street journalist, whose acquaintances had

never thought of him specially as a writer on Socialism. It is indicative of the limitations of the writer who makes the statement. Dr. Goldwin Smith's long letter, addressed to "My Labor Friend," recalls with some pathos the struggles in the days of his youth for the legalization of English trade unionism. Such a veteran must always command respectful hearing when he warns against the newer programs of trade unionism, against the boycott, against the demand for the whole product of labor, the single tax and the abolition of competition and the preaching of "class hatred." It is but natural that a man so aged that he once stood on the platform by the side of Joseph Arch should tremble at the approach of these vast new problems, which, to the younger men, are less daunting than Joseph Arch and his Agricultural Union were to the old men of his day.

Lord Cammerleigh's Secret. By Roy Horniman. Boston: Little, Brown & Co. \$1.50.

This is a remarkably amusing novel of the fantastic sort. The hero, who begins as an actor out of a job, and ends in the House of Commons, is as incredibly clever as Sherlock Holmes or Inspector Bucket. He has an airy insouciance as well as a preternatural acuteness in reading the hearts of men. He discovers, early in the story, that Lord Cammerleigh is the possessor of a guilty secret, and thenceforward becomes an actor in private life to his own advantage and entertainment, and to the confusion of Lord Cammerleigh and several other characters. He is a dazzling young man, and he keeps up a constant pyrotechnic display of epigrams. But he does not weary us because we are genuinely interested in what he is going to do next, which is, as a rule, the *n*th degree of unexpectedness.

The Secret Agent: A Simple Tale. By Joseph Conrad. New York: Harper & Bros. \$1.50.

To call this story *A Simple Tale* is a tortured misnomer. Between the covers, intrigues, anarchistic plots, bomb explosions, robberies, murders and suicides revel. Thomas Jefferson himself could find no simplicity here. Despite its gruel-

ling and sanguinary plot, the book is saved by some excellent character sketches. Steevie, the affectionate but mentally erratic brother of the heroine, is a creation. His death, caused by the explosion of a bomb he was innocently carrying, induced his sister to murder her husband, Mr. Verloc, at whose feet she cast the blame. The murder is accomplished with the family carving knife, as her husband lies peacefully on the lounge. Mrs. Verloc intrusts her escape to Comrade Ossipon, the fat anarchist whose great care is to feather his own nest. He induces Mrs. Verloc to give her money to him for safe keeping, and after placing her on the Dover Express, he deserts her. She is left to commit suicide from the channel boat. The descriptions are vivid, and the book works up to a series of climaxes, that would enrich any melodrama.

Stories of Symphonic Music. A Guide to the Meaning of Important Symphonies, Overtures and Tone-Poems from Beethoven to the Present Day. By Lawrence Gilman. New York: Harper & Bros. \$1.25 net.

If, after title and sub-title, any further clue be sought as to the nature and purpose of Mr. Gilman's book, it may be found in his preface, which tells us the volume is intended "to serve, in effect, as a guide to modern orchestral program-music." He has gathered into convenient compass the stories, episodes, poems, basic ideas, or suggestions which inspired the composers of those symphonic works of a suggestive or illustrative nature, from Beethoven to the present day, which are part of the standard orchestral repertory, "and such others as seem likely to become so," in the hope of thereby enabling the concert-goer to listen comprehendingly to the music thus elucidated. It is a compilation from many sources, but it is well made, and the book will serve a useful purpose—it is in all respects worthy of place on the music-lover's shelves beside Mr. George P. Upton's series on the "Standard" operas, oratorios and so on. Mr. Gilman has prefaced the "stories" with an introductory essay on "The Orchestra as Poet, Painter and Dramatist," in which he takes a rapid survey of the advance of delineative or "program" music, from the days before Beethoven, when instrument-

al music was primarily an art of pure design, down to the present, when music "can annotate the art of the painter—as witness the symphonic commentary by the Swiss composer, Hans Huber, on certain paintings by Böcklin; it can be sportively delineative of personalities—as witness Sir Edward Elgar's orchestral characterization of the peculiarities of various of his friends; it can be portentously metaphysical, as in Strauss's formidable 'Thus Spake Zarathustra'; it has become, in brief, 'a tongue of all life.'"

Susan. By Ernest Oldmeadow. Boston: John W. Luce & Co. \$1.50.

In this volume, the reader will find a very pretty comedy of errors. The little maid, Susan, receives a letter blown by the very breath of love from a great lord which was really intended for her young mistress. The latter actually superintends the misdirected courtship, and we get the story day by day from her diary. It is written with that elegant ease of a fine spirit, which does not need to pause and polish phrases. The situations are slight, but they are worked out with exquisite humor and with that high sweetness of mind which is supposed to belong to ladies of noble degree; a happily diverting story for an idle hour.

Pebbles.

"I CHAFE against the regulations," murmured the college girl as she prepared the surreptitious Welsh rarebit at 2 a. m.—*Harvard Lampoon*.

"Now," said the teacher, who had been giving an elementary talk upon architecture, "can any little boy tell me what a 'buttress' is?"

"I know," shouted Tommy Smart. "A nanny goat."—*The Antivivisectionist*.

LEARNING TO SWIM.

"MOTHER, may I go learn to swim?"

"Yes, my darling daughter;

Take a course at a correspondence school,
But don't go near the water."

—*Woman's Home Companion*.

SHE (in a friendly tone)—By the way, are you going to take supper anywhere tomorrow evening?"

He (eagerly)—Why, no—not that I know of.

She (serenely)—My! won't you be hungry the next morning!—*Yale Record*.

AN odd word she let fall

Makes me fear there's no hope.

When I "popped" I recall

An odd word she let fall.

You'll not find it at all

In your Webster. 'Tis "None!"

This odd word she let fall

Makes me fear there's no hope.

—*Catholic Standard and Times*.

The Independent

A Weekly Magazine. Entered at the New York Post Office as Second-Class Mail Matter
Publisher, Clarence W. Bowen
Owner, The Estate of Henry C. Bowen
130 Fulton Street, New York

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE

One Year, \$2.00 Single Copies, 10 Cents

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Issues and the Candidates

THIS is the formative period in the great political campaign of 1908, the time when public opinion is becoming crystallized about certain issues and the relative availability of prominent men is being considered. Just now motions and nominations from the floor are in order; the people have more influence over the course of events than they will have later, even on Election Day. In order to find out as much as possible about what the people are really thinking of men and issues we ask the following question of all our readers:

What is the most important issue in the coming national campaign and who is the best candidate?

We shall print a number of the replies in an early issue, so they should be sent in promptly. It is important that all parts of the country be heard from and that the opinions of all classes, professions and shades of political opinion be represented. Therefore let no one neglect thru modesty to send in his personal views. This is not to be re-

garded as a straw vote. It would not mean anything that of those who chanced to write us so many favored Hughes and so many Bryan. But we believe that such brief, pointed and sincere expressions of opinion from a variety of sources will be as much of a contribution to political thought at this time as a long article from one of the recognized party leaders. Therefore we ask the co-operation of all our readers to make this symposium comprehensive and representative. State your personal views in a clear and concise form. Contributions of over 200 words are most liable to be omitted or cut down. Of course in the columns of THE INDEPENDENT women have the same voice as men, even tho they live in States where they are not allowed to give expression to their desires at the polls.

The New Gospel Fragment

Too much must not be made of the newly discovered "Saying of Christ" so called, brought to notice by Prof. Henry A. Sanders, of the University of Michigan, for it is more interesting than important. As we understand it, it is from an old manuscript, or papyrus, found in Egypt, and there purchased by Charles L. Freer, of Detroit. It contains a short passage intercalated between the fourteenth and fifteenth verses of the last chapter of Mark. The fourteenth verse reads:

14. "And afterward He was manifested unto the eleven themselves as they sat at meat; and He upbraided them with their unbelief and hardness of heart, because they believed not them that had seen him after He was risen."

Now follows the new portion:

"And they answered, saying that this age of unrighteousness and unbelief is under the power of Satan, who does not permit the things which are made impure by the (evil) spirits to comprehend the truth of God and His power. For this reason, reveal thy righteousness now, they said to Christ.

"And Christ said to them: The limit of the years of the power of Satan has been fulfilled, but other terrible things are at hand, and I was delivered unto death on behalf of those who sinned in order that they may return to the truth and sin no more, to the end that they may inherit the spiritual, indestructible, glory of righteousness which is in heaven."

Then follows the fifteenth verse, as in our Bibles:

15. "And He said unto them, Go ye into all the world and preach the Gospel to the whole creation."

It is impossible and incredible that this should be a forgery, for no forger and scarce any scholar would have known enough to invent and insert this passage, for it has a remarkable history. It was not quite unknown before.

Let the reader remember that the Revised Version puts a wide space between the eight first and the twelve last verses of this chapter. That indicates that these last verses have not the authentic value of the main body of the Gospel of Mark. In the margin we have this note:

"The two oldest Greek manuscripts, and some other authorities, omit from verse 9 to the end. Some other authorities have a different ending to the Gospel."

Since the Revision one Armenian manuscript has turned up which names the Presbyter Aristion as the author of the twelve verses which form the conclusion to the Gospel. Aristion is mentioned by Papias as a disciple of our Lord. In the fourth century yet another and shorter conclusion was somewhat current, and one important manuscript ends the Gospel with the eighth verse, and then gives both, allowing the reader the choice of either conclusion.

In the fourth century Jerome was acquainted with this new passage, for in his "Dialog with Pelagius," ii.15, he says:

"Some copies, and especially Greek manuscripts . . . in the end of the Gospel according to Mark read:

"And they were content to say, This age of unrighteousness and unbelief is under the power of Satan, and it does not permit, thru the unclean spirits, that the true power of God should be apprehended. For this reason reveal thy righteousness now."

It is clear that this bit of conversation was included in the early passage from which the appendix was added to Mark's Gospel, but it did not approve itself to the Church, and was soon dropt out. The reason is perfectly clear. It must have been written at a very early period, apparently toward the end of the first century, when the expectation of Christ's speedy return was passing away. When it was found that his return was delayed Aristion's text was written by way of ex-

planation, and later when this expectation quite ceased the entire passage on the subject was omitted. It is well that this was done, for its retention would have added one more to the difficulties as to the second coming which have always attached themselves to the interpretation of the twenty-fourth chapter of Matthew. The warning which Aristion puts in the mouth of our Lord that his coming will be delayed until after the "terrible things" "under the power of Satan" had taken place is much like Paul's instruction in his Second Epistle to the Thessalonians that the disciples must not expect Christ's immediate coming, as it will not take place until after "the man of sin be revealed, the son of perdition, he that opposeth and exalteth himself against all that is called God."

This new "saying" is, then, interesting, but not important. It does not give the actual words of Christ, but what Aristion the Elder thought he might properly have said. It may be, with the whole twelve verses, a fragment of a lost gospel, very early composed, one of the series of which Luke says many were written, but probably a little later than those which came into Luke's hands.

Convocation Week

FOR four days last week, Madison, Wis., was the meeting place of the various economic, sociological and historical societies which commonly sit in joint session during the Christmas vacation. Nearly four hundred scholars in the allied branches were gathered together to present in many programs and discussions the latest views and newest discoveries along their respective lines. As may be inferred from the location of Madison, the representation was heaviest from the Middle West, but members were present from Washington, Oregon and California, from Texas and Mississippi, from Minnesota and North Dakota, and from New England, in sufficient number to make the meetings fully national in their significance.

An attempt had been made to have the chief address delivered by the British Ambassador, but Mr. Bryce was unable to leave Washington at this time. It is likely, however, that he will attend the

Richmond meeting in 1908, since he has accepted the presidency of the American Political Science Association for next year. This society, one of the newer members of the group, held sessions in its various fields of research, revealing a definiteness of purpose surprising to many who were, only a few years ago, asking "What is political science?"

None of the discussions of the American Economic Association had a greater importance than that led by Prof. Irving Fisher, of Yale, upon the economic function of "savings." Public policy in the future must turn largely upon the part really played by the capitalistic accumulation of wealth. If this accumulation is to be regarded as service it must be favored by legal enactment, but if it prove to represent only a personal advantage secured by the lucky possessor it will be hard to avoid broad and heavy schemes for taxation and regulation of such wealth. Hence the far-reaching significance of this investigation now under way to determine the relation of savings to public wealth.

The American Historical and Sociological Associations occupied much common ground in their work, the latter drawing much of its vital support from the historians, and dwelling at length upon class, sectional and race problems in America. Professor Turner, who as second vice-president was started toward the presidency of the American Historical Association, addressed the sociologists upon the future of sectionalism. He spoke with the authority which we have become accustomed to accord to his utterances.

A host of minor papers, marking frontier posts in many lines of research, contributed to the success of all the meetings. The American Association for Labor Legislation met for the first time in conjunction with the other bodies, and a new Mississippi Valley Historical Association was organized during the period of meeting. The Association for Labor Legislation was founded in 1906 to serve as the American branch of the International Association for Labor Legislation. The International Association was established at the Paris Exposition in 1900, and the permanent bureau was opened in Basel, Switzerland, in 1901. This bureau,

which is strictly scientific in character, has as its special function the examination of labor measures and the investigation of actual conditions underlying labor legislation. It is semi-private in character, inasmuch as it is a voluntary organization composed of experts and officials as well as public-spirited citizens. It is, however, quasi-official, as it receives subventions from most civilized governments, including a small one from our own Federal Government. Strictly non-partisan in character, as well as scientific, it aids governments by its investigations conducted by men trained in economics. It has directed special attention to industrial poisons, night work of young persons, and uniformity of labor legislation in international and State laws. It aids capitalists and employers in this way by placing them on similar footing in international and interstate competition, and it aids working people by raising the standard of legislation in the less advanced countries and states.

The greatest achievement of the International Association is the international treaty between France and Italy, signed April 5th, 1905. This is the first great international treaty in the interest of labor. It aided the French manufacturers by protecting them against unfair competition, and it also helped the Italian workers by raising the standard of factory inspection and labor protection. Prof. Richard T. Ely, of the University of Wisconsin, is the president of the American Association.

Madison was so fully alive to its duties of hospitality that these sessions make a record mark in the matter of entertaining and social opportunity. It is often felt that the scientific sessions are merely the excuse for gossip, debate and private communion. Perhaps most of the members feel that these last are the really important matters to be attended to. At no previous meeting has there been so widespread private hospitality. We have reason to believe that no visitor failed to receive some social recognition from the hosts. The better known men were engaged for breakfasts, luncheons and dinners on every day of the meetings. The local members kept open house so generously that the chance for personal acquaintance has never been greater than

here. It may well be doubted whether it is right to allow the local faculties and members to assume so heavy burdens for the associations.

The Holidays in Florida

THE country editor flitted with the birds. He hates New England winters; he loves New England Junes. The robins packed their trunks, and went southward. The editor had seen it done for fifty years, and then it occurred to him, why not. Florida is only the other end of Massachusetts, and one may as easily have a home at both ends, as the birds. He found the robins and bluebirds in cozy bayheads, on friendly terms with cardinal birds and bob-whites.

Here Christmas never saw snow, and nothing but artificial ice. On Christmas day we bathed in the lake, and the white herons were fishing along the opposite shore. When thru our ablutions, we lay in hammocks in the orange orchard, and threw dainties to the mocking birds, that did not hesitate to come within arm's length. The whole live world seemed chuckling at its escape from ice and blizzard. The trees set out in December hardly knew what to do about it; whether to laugh with the sunshine, and grow all winter, or to stand by instinct, and wait till April before leafing, and May before blossoming. They settled it, by some doing one thing, and some the other. Frost is a good thing to divide the seasons, and advise the trees when to take their rest. But in Florida, all the same, the deciduous trees shed their leaves and take a sleep for about three months.

A Christmas garden is certainly a novelty, but here on that blessed day, we pulled young beets and new carrots, and we carried in lettuce heads as big as a half bushel. There was also cassava and there were sweet potatoes, to be dug whenever wanted. Bees buzzed in fresh flowers, and cow-bells tinkled thru the pastures like a northern June. One gets a queer sensation when he finds himself setting out celery rows in midwinter, and digging new potatoes for his dinner. "I do miss the ice on that lake," said the boy "for what a glorious skate we might have!" But the girl came in with both hands full of huge roses, crying out,

"Here are your Christmas roses"—not little creeping hellebore, half way under snow banks, but great big Safranoses, Bougères, General Lees and Bon Amis. It is not General Washington and General Jack that one finds in his rose beds down here, but a whole lot of Confederate generals. It is all the same, for the hate is gone, and they are blossoming now for Northern eyes. It gets to be quite natural to have a personal liking for Magruder and Stonewall Jackson and even Forrest, when they blossom in our gardens or grow in our vegetable beds.

Can you think of a Christmas without a coal bin, and only a possible bit of fire, on a broad fireplace, in the evening? The thermometer marks eighty at mid-day, or possibly a little more; but at five o'clock one throws a dozen big pine cones on the back of the hearth and enjoys a blaze. The resinous odor is delicious; the blaze laughs and talks; and, drawn up in a half circle, you wonder about your Northern friends, and wish them here. How cozy it all is, but you are soon too sleepy for conversation, and nod much as your grandparents did about the huge fireplaces of New England. You cannot bring in apples and cider; but oranges and grape-fruit you can, and you can brew a delicious drink from lemons and sour oranges.

One may own a whole lake anywhere hereabout; and it may be half a mile long, or he may pick out one five times as big. They are scattered about in every hollow, as if Nature had so many she did not know what to do with them. Why, not own a lake, as well as a farm, or an orange grove, or a park of pine? These exquisite sheets of fresh soft water never get turbulent with noisy winds, but are always rippling just enough to catch every glint of sunshine, and at night every glint of moonshine. The editor boasts two lakes, and a grove of oranges linking the twain. There is no contiguity of elbows in this sort of life. It is a queer sensation that one has, coming here out of the congested New York, or even Philadelphia, Baltimore and Richmond; there thousands of people to the acre, and several stories of human beings on top of each other; but here barely one to fifty acres. One alligator used to live in our lake, and we were hugely proud of him,

but some time ago he walked off across the land, to some other water retreat. They are for the most part innocent fellows, doing only a little fishing, and no more duck-killing than an ex-President. One can hardly be aristocratic in Florida without at least one 'gator in his lake.

Work must be done in the morning, and it stands us in hand to rise as soon as the daylight will permit work in the garden. At midday it is better to be in your hammock, under the live-oaks and cherry-trees, or where your broad verandas invite you to be fanned by a breeze from either the Gulf or the Ocean. Newspapers can hardly be said to be a fad in this section. There is a bit of politics, but it concerns local affairs almost altogether. We have most of us heard who is Governor of the State, but we are not worrying about him. What we are thinking about is oranges, and loquats, and peaches, and Kelsey plums; and better shipping advantages. Orange-picking begins about the first of November, and during the holidays is at its hight. We don't talk about oranges however, but about Rubys, and Jaffas, and Washington Navels, and Homosassas and other sorts, up into the hundreds. They cover the ground, as Northern Spies and Baldwins lie in a northern orchard, and one may pick up his pockets full with a welcome. What is the need of worrying ones self over referendum and initiative, over old age pensions and postal facilities? Have we not one mail a day, and a new telephone line, two miles away? Bless us! one can live very comfortably without a morning paper, full of politics, social twaddle, and crimes. *THE INDEPENDENT* is here however, and *The Literary Digest*, and somewhat more of the indispensables.

Not far away is the Suwanee River, and Cæsar has his mule team over there in the cassava field, part of which he is preparing for melons and the rest for Irish potatoes. These are planted in January. The melons will average forty pounds each, if the ground is well prepared and decently cultivated. The potatoes will be ready for the northern market in May. Cæsar does not understand that planting potatoes in January is not what they are accustomed to. He divides his time between singing melo-

dies and shouting to his mules. Singing and scolding alternately, nevertheless you will find that he is doing good work, because he is a darky dead in earnest.

The Christmas stocking is here as surely as it is in New York and Massachusetts; but the Christmas tree is out of doors—great pines and small pines everywhere, all of them full of bees and birds, and many of them hanging with tassels of moss, a dressing more beautiful than delicate fingers could give them. Live oaks surpass for density of shade; but a grove of young pines, sprung up where the forest fires cannot touch them, is the most suggestive of Christmas. It would be absurd to create little trees indoors. You may much better adopt a young tree by the lake, and let Santa Claus know which it is, as he drives by, in his cotton shirt and bareheaded.

Breaking Good Resolutions

THIS, the second week of the new year, is the season of many failures to carry out contracts that people have made with themselves. The good resolutions laid with due ceremony as the foundation stones of character are broken up to macadamize the broad road. Last week, if we were faithful to the custom of the season, we drew up a balance sheet of our failings and virtues, took stock of our moral assets and decided on an extension of our ethical business or perhaps on taking in sail on account of hard times. Modern methods of bookkeeping and card cataloging have tended to eliminate or make less formidable the old annual trial balance which kept our forefathers working over their books until late at night. So, too, there are fewer persons nowadays who draw up sets of good resolutions and enter them on the first page of their diaries, but still to most of us January 1st does not seem just like every other day. We have a more or less conscious feeling of turning over a new leaf, of getting a fresh start, when we throw the old calendar in the waste basket and hang up the new one, and this consciousness is usually accompanied by a more or less definite determination to make a better record in the new year. If such high resolves do not come on January 1st or on our birthday the New Year's

Day of the individual, they will follow on some practical demonstration of the bad results of following our present courses.

Later, a week or month, there comes a time when we repent of our repentance and question our wisdom in having bound ourselves.

"Indeed, indeed, repentance oft before I swore—but was I sober when I swore?"

This is the time of danger, when the strength of our resolution is put to the test. If we give way to the impulse we lose ground; we suffer from that most dangerous moral disease, disintegration of character. Nothing else strikes so direct a blow at the soul. Continuity constitutes personality. If the chain of memory is broken or branched we have two persons instead of one. It is not enough to possess the present, an infinitesimal point of time; we must have also the memory of the past and know that it is our past. A case of chronic amnesia where the patient loses instantly the knowledge of what he has done, is hopeless, altho he may be otherwise in full possession of his mental and physical powers. He is chronologically reduced to zero when the future and past are cut off. Modern psychology has made us familiar with many instances where there are two or more separate chains of memory in one mind. In such cases the individual is divided into as many distinct personalities, alternating or coexisting. Tho living in the same household and using the same faculties they are not usually on good terms with each other. Léonie II hates Léonie I and Sally plays tricks on Miss Beauchamp. Each insists, and quite rightly, that she is not responsible for the deeds of "the other."

It is to this abnormal condition of dual or multiple personality that one approaches when he permits himself to fall into the habit of fickleness, when he changes his mind too often and cannot depend upon his own word. To lose confidence in other people is disheartening, to lose the confidence of other people is painful, but to lose confidence in one's self is fatal. It is no use to make plans for the future if a new person is liable to take possession of the plant tomorrow. The more completely you can unify your personality the more you can accomplish. The more happi-

ness you will have, too, because all you get out of life will belong to you alone, not to a more or less alien personality who sometimes possesses your body and whose acts and tastes you are ashamed to own. Do not lead a double life, even in your own mind.

It is more important to keep the promises you make to yourself than those you make publicly. Breaking the latter only injures your reputation; breaking the former impairs your character. "He that sweareth to his own hurt and changeth not, he shall never be moved." And if one has lost faith in an external Judge before whom vows are registered and who inflicts punishment for their violation, he must take especial care to maintain his conscientious consistency, because he has only himself to depend upon. It is not safe to deviate from the line of conduct you have marked out for yourself, even when such deviation seems for the moment advisable. If you set yourself a stunt of so many rows of corn to hoe before dark or so many thousands words to write before lunch, stick to it even tho it does not make any difference. If you have determined that you ought to keep your desk or bureau top cleared, it is worth a sacrifice of something intrinsically more important to carry it out. Don't spend your time alternately making and breaking, as tho you were the armature of a dynamo.

Dangerous as is the breaking of resolutions, yet it sometimes has to be done, and we should know how to do it properly. Many well intended laws turn out to be impracticable or inadvisable, and have to be repealed. But it is necessary for the stability of the state that they be annulled by the same authority that made them, not by the criminals. So our self-imposed laws of conduct should be abrogated only after as much serious deliberation of our higher selves as when we made them, not cast aside in a moment under stress of the very temptation against which they were intended to guard. A good resolution is designed to furnish a means by which Philip drunk can appeal to Philip sober.

If one could calmly reason things out when the moment for action arises, or if one could depend on an automatic decision on the right side, there would be no

need for determining on a line of conduct in advance. But there are many cases where we know we will not have time for debate and have no fixed habit to rely upon, and these are the cases where we, consciously or unconsciously, fortify ourselves by making the decision before the crisis. Bad habits grow spontaneously, like weeds in neglected soil. Good habits have to be planted; they start from the seed of a good resolution.

A Prophet's Warning

ONCE in a long while a poem appears so unusual and so strong that it deserves especial attention. Not often, for great poems by greater or lesser poets are few in these days, or in any days. Some months ago we were glad to call attention to the poem "The Sons of Martha," by Rudyard Kipling. This week it pleases us to commend a strange and notable poem by an American writer, Joaquin Miller.

It occupies a page in *The Circle* for January, and the title is "Resurgo, San Francisco." It begins with the mention of the recovery of the city from its terrible disaster:

"Behold her seven hills loom white
Once more as marble-built Rome.
Her marts teem with a touch of home
And music fills her halls at night;
Her streets flow populous, and light
Floods every happy, hopeful face;
The wheel of fortune whirls apace,
And old-time fare-and-dare holds sway.
Farewell the blackened, toppling wall,
The bent steel gird, the somber pall—
Farewell forever, let us pray;
Farewell forever and a day."

Then the poet describes her as she stands rewrought, refashioned, concrete mixt with steel, all so strong, as if never to be moved,

"And yet, and yet what ropes of sand,
What wisps of straw in God's right hand—
And yet, my risen city, yet

Your prophets must not now forget."

And what must they not forget? How that proud city strewed her streets with gold, coveted the simple Mexicans' lands, and robbed the poor red Indian of his home and pride. And then the yellow man:

"Nor shall your prophets now forget,
Now that you stand sublimely strong,
How when these vast estates were set
With granaries that burst in song,

You spurned the heathen at your feet
Because he begged to toil to eat;
Because he pled with bended head
For work, for work, and barely bread—
Yea, how you laughed his lack of pride,
And lied and laughed, and laughed and lied,
And mocked him in your pride and hate,
Then in his gaunt face banged your Gate."

That is a real prophet's voice, and true, but there is more of it, the Japanese, and it is a terrible story:

"Nay, not forget now that you rise
Triumphant, strong, as Miriam's song,
How that you lied the lie of lies
And wrought the Nipponese such wrong,
Then sent your convict chief to plead
The President expel them hence.
Ah me, what black, rank insolence!
What rank, black infamy indeed!
Because their ways, their hands were clean,
You feared the difference between,
Feared they might surely be preferred
Above your howling convict herd!"

And the arraignment proceeds of the noisome band, some of whom are now in prison, and the insolent ones who howled in the sacred name of Labor, until the reckoning came:

"Your great, proud men heaped gold on gold;
They heaped deep cellars with much horde
Of costliest wines, rich, rare and old
As never Thebes or Babel stored.
They sat at wine till ghastly dawn—
The ides had come, but had not gone,
For lo! the writing on the wall!
And then the surge, the topple, fall!
Then dust, then darkness—then such light
As never yet lit day or night,
And there was neither night nor day,
For night and day were burned away!"

And the description proceeds of those "black three days of black despair," such nights of flame as Nero's Rome never saw.

"And say you God saw not, cared not?

Nay, better say there is no God,
Or that he slept, or quite forgot

The lowly ways the heathen trod.
What time he begged to toil for bread,
With hollow cheek and bended head . . .
Say that your lies on clean, brown men
Were but a jest; then lie again!"

Then, in proof that God is just, he points to the ruins of the City Hall:

"And here throbbed San Francisco's heart,
And here her madness held high mart—
Sold justice, sold black shame, sold hell.
And here, right here, God's high hand fell,
Fell hardest, hottest, first and worst—
Your huge high hall, the most accurst!"

And the prophet's "burden" ends, as it should end, with close application to the men of guilt:

"And rests your rich man without blame?
 Were his ears dulled, were his eyes sealed?
 And shall your good man bear no shame?
 Is his heart stone? Is his sense steeled?
 He said, 'Go to! What need of fear?
 Am I my brother's keeper here?'
 He knew this piteous penal crew;
 He knew its deeds, its darkness knew;
 He knew the right, loved right afore,
 But loved his yellow metal more!—
 And so the seven-headed beast!
 And lo, the last Belshazzar's feast!"

The fearful fact about this strange, fearsome poem is that it is true; and the truth comes from one of their own men, from the premier poet of the Golden State. And if, at last, "your rich man" and "your good man" have awaked to see the shame of the herd that ruled the City Hall, they have not yet felt the guilt of the crimes against the yellow man and the brown. And we are glad that this aged singer of the Sierras, who has always himself been true to Indian and Mongolian, flings his last javelin at the seared conscience of the "good man," preachers, many of them, of the gospel of brotherhood and love, who have defended the banging of the Golden Gate, have told us that white men cannot allow yellow men to enter and work, for this is a white man's country. They have disgraced the Christian name.

Now, we do not pretend to be able to interpret the current providence of God. We do not pretend to say, as would have been said in old time, that the earthquake and the fire were the judgment of Heaven on the sins of the most reckless and most ungodly city in the country, like that visited on Sodom and Gomorrah. We know the geology of it, and how the edges along a fault in the earth's crust split when the strain had become too great. And yet we wish that the "good man" would not forget, that he would remember the command given ten times in the old code of Moses, "Ye shall have one manner of law, as well for the stranger as for the home-born." "A stranger shalt thou not wrong, neither shalt thou oppress him; for ye were strangers in the land of Egypt"; "Love the stranger, for ye were strangers in Egypt"—what texts these would have been for those good men—dumb dogs—who must listen now to hear one thru whom they had not expected the Lord to speak as he spoke thru Balaam, yet not to bless, only to warn

and to convict, as did Jeremiah and Micah. And will the "rich man" hear, or will he ask for the penknife and the brazier of Jehoiachim?

✱ Picture Telegraphy

WHENEVER an author writes a romance of Utopian life some centuries in the future he introduces as one of the marvelous inventions of that period an instrument for seeing what is going on at a distance. Usually it is modeled after the telephone with a disk in which one can see mirrored the scene at the other end of the wire. We do not remember that any of these novelists of the twenty-first century and after have dared to discard the wire, which shows how difficult it is nowadays for the imagination to get ahead of the facts. Already we have the promise of the company controlling the Poulsen patents that it will establish, during the coming year, a transatlantic service including a wireless telegraph system recording automatically its messages in ink, a wireless telephone, and a wireless apparatus for transmitting photographs, signatures and sketches. It seems that the ether is likely to be overcrowded with business of one kind and another next year if all the prospectuses speak truth. Already there are complaints of interference. Every wireless telegrapher tells his story to the listening earth and to the stars as well. It would be confusing to have an order from Admiral Evans to the fleet interpolated in the midst of the portrait of an escaping embezzler, or a telephonic conversation recorded, like Dr. Scripture's graphics of the voice, on a telegraph blank.

But we need not anticipate the advantages or the embarrassments of future inventions when we have so much that is wonderful already accomplished. Several plans have been worked out for the transmission of pictures; the latest and most promising is that of M. Edouard Belin, a French engineer. Most previous attempts at the solution of this problem have depended upon the selenium cell; this rare metal having the peculiar property of varying its electrical resistance according to the amount of light that strikes it. But M. Belin utilizes an entirely different method. He first con-

verts his photograph into a relief map and uses the back and forth motion of a point traveling across this to produce the fluctuation of current transmitted thru the wire. The first part of the process is accomplished by means of a photographic plate sensitized with bichromate gelatin. When this is exposed under a negative and then wet, the parts that have been protected from the light take up water and swell, while the parts affected by the light remain dry and low. The picture is then in high and low relief instead of shade and light. This gelatin film is put on a revolving cylinder like a phonograph record and a point at the end of a lever travels over its hills and valleys in a close spiral from one end to the other. The motion of the lever changes the resistance in the circuit and the corresponding variations in current swing back and forth a small mirror at the other end of the wire. This throws a greater or less amount of light on a sensitive photographic film or paper, thus reproducing the original picture. Of course it is made up of parallel lines of varying blackness, but these may be made so close together as to be imperceptible to the eye, like the square dots in a half-tone print. A large photograph can be transmitted in less than half an hour.

If this proves practicable it will be a great thing for illustrated journalism. News comes now by wire and the pictures follow by slow freight, arriving usually a week or so after people have lost interest in the event. This delay places too much of a strain on the editor's conscience. He is sometimes unable to resist the temptation to put a stock cut to a new use or to touch up a photograph. When Father Gapon led his procession to their death in St. Petersburg on Bloody Sunday the American papers came out with half a dozen different portraits of him, all typical Russian revolutionists; any one of them might have looked like him, but unfortunately none of them did. When San Francisco was burning the most enterprising of the New York papers published a photograph of the city in flames with very natural looking smoke rolling up from it. Unfortunately the staff artist who adapted it neglected to erase the date of the copyright, which was several years before the catastrophe.

Such accidents have a tendency to impair the implicit confidence which the dear reader should have in his favorite periodical. Besides, we insist the moral character and future prospects of an editor deserve consideration. But perhaps this new machine, like all the others, will bring with it more powerful and insidious temptations. "God made man upright, but they have sought out many inventions."

The Plague of Flies

WE have all been so often warned of the danger of the carrier of the malarial and yellow fever parasites that we jump when we hear the hum of a mosquito as quickly as at the buzz of a rattlesnake, but the common house fly is not yet generally recognized as one of the most formidable foes of the human race. Rattlesnakes and even mosquitoes are less to be feared in most localities. In New York City there are about fifty deaths a year from malarial fever and more than a hundred times that number from typhoid fever and other intestinal diseases in the dissemination of which flies play a prominent part.

The importance of this factor is indicated by the report of the Committee on the Pollution of New York Harbor, recently published by the Merchants' Association of New York. This contains maps of the city, showing that the prevalence of these diseases is greatest along the water front and especially near the sewer openings. From fly cages distributed around the city it was ascertained that the number of flies was greatest at the same points.

The coincidence holds for time as well as place. The advent of the flies about the middle of July brings an immediate increase in the death rate from diarrheal diseases, and two months later a similar, tho less, marked rise in the number of deaths from typhoid contracted at that time. The following diagram shows how closely the two curves correspond, the September crop of flies producing a noticeable effect.

The ancients thought that the sun's rays acting on decaying matter engendered life in it, and something of the same superstition lingers in the way we

talk of the thousands of children dying from "summer complaint" as tho it were a natural and inevitable consequence of hot weather. These diseases are caused, however, by specific germs, which are not spontaneously generated by the heat, but are conveyed into our food and water either directly or more commonly by flies. They can be watched and tracked on their trips back and forth between the foulness in the street and the food in our homes. One fly captured last summer on South street, New York City, was found to be carrying on his mouth and legs over 100,000 bacteria. A female fly lays about a thousand eggs during the season, and every ten days brings a new generation. We cannot hope to kill off all the flies, but we can do something toward preventing them from making the deadly short circuit between filth and food.

CURVES SHOWING THE RELATION OF FLIES TO DISEASE.

The upper line represents the number of flies caught in traps. The lower line gives the number of deaths from intestinal diseases in Manhattan, summer of 1907.

This may seem just the wrong time to talk of flies, but it is not. Only a very rare fly is to be seen now in our houses, and often it is spared out of a false sense of humanity. These are literally the

mothers of thousands of flies and the grandmothers of hundreds of thousands for the summer. They should be killed off as far as possible. In three months the fly pest will begin again. Now is the time to make arrangements to prevent its evil effects. Mosquitoes used to be thought trivial annoyances; now we know they are veritable plague bearers. It is time that the same knowledge with regard to flies should be more generally diffused. Now is the time to begin the work in the schools and other avenues of information if we shall lessen even by a little the ravages of the pest for next summer.

St. Louis Graft

St. Louis seems to need another lesson in the evils of grafting. That of several years ago, administered by Governor Folk, then Circuit Attorney of St. Louis, does not seem to have been sufficient. A recent grand jury has been investigating the lower house of the Municipal Assembly, with the result that it has declared that the House as now organized and controlled "is a menace to decency, order and good government, and a disgrace to the citizenship of St. Louis. Nine members of the House of Delegates are engaged in the liquor traffic, and prohibition will not become an accomplished fact unless the local interests are divorced from politics. Members disposed to render honorable public service are in a hopeless minority, subject to the gibes, taunts and billingsgate of those who control. Legislation of the most beneficial public character has been denied. The conduct of members on private and corporation bills indicates an adroitly cloaked purpose of blackmail, and the legislative agent made no concealment of his purpose, but proposed his fee. Many irregularities in city contracts are due largely to the political apathy of good citizens.

"It appears that the house is dominated by an organization popularly known as a 'combine' composed of eighteen members of the body. It is evident to us, and it is only fair to say that all of the members of the combine are not venal and corrupt, and that some of them honestly have felt themselves compelled to join this majority in order to be in a position to obtain legitimate legislation for the constituencies which they represent."

The grand jury is grinding out a number of indictments which the present Circuit Attorney is busily prosecuting. Already one member has been convicted of perjury and sentenced to two years in the penitentiary. Eternal vigilance is the price of democracy.

Professor Seymour Prof. Thomas D. Seymour was one of the finest Greek scholars in the United States, and his death is a great loss not only to Yale University but to American scholarship. But he has taught in his death as well as in his life. We must presume that it was by his wish that his body was cremated, and his ashes was borne in a small casket by Professors White and Goodwin, of Harvard; and at the funeral services there were no conventional signs of mourning, as the family were clothed in their ordinary attire and sat with the friends. It did not require six stout laborers and three strong straps to lower the coffin into a cemented vault, for the light casket was lowered by Professor Seymour's son and son-in-law. That was a sensible funeral. It not only saved a good part of the lavish and absurd expense which is often such a burden to the family, but it provided that the body should speedily and decently—we may say grandly—be resolved into its elements. And it was particularly fitting that this no less Christian service of cremation should be employed in the case of one who was a special student of Homer, altho the hecatombs and the vast funeral pyre of Achilles have given place to a modern crematory, and it was only in the figure of affection that the flames were kindled with honey and perfumes.

The Dead Hand We suppose it is settled that Swarthmore College will decline to accept some two million dollars with the conditions annexed that intercollegiate sports be forever interdicted, altho we are by no means clear that the decision is a wise one. It is a similar case that is presented by the bequest of more than \$200,000 to St. Clement's Episcopal Church in Philadelphia on condition that its doctrinal teaching and ritual observance remain unchanged. It is a similar case simply in that a dead

hand is laid on the church, but the condition required is a much more serious one. To deny college boys the excitement of playing football with another college is not a very serious matter and involves no intrinsic principle; but for a church to promise for all time that it will not modify its doctrinal teachings or its ritual service is a very different and much more serious thing; for it forbids the teaching of any new truth to children or adults, and condemns the institution to eternal fossilization. We trust the Church will consider what changes in doctrine and worship have been made since the time of Henry VIII, and will remember that the Thirty-nine Articles of the American Church of Bishop Seabury's time are now laid on the shelf and covered with irreverent dust; and that there is an equal advance in ritual from the time of the first Convention in 1785 to the last Episcopal consecration at Fond du Lac.

**Berea's
Atonement**

When the Kentucky Legislature forbade even private schools in that State to teach white and black youth in the same institution they did an act which was tyrannous, impertinent, and which we yet hope the Supreme Court will annul. But meanwhile it has to be obeyed, and Berea College has set aside \$200,000 of its funds as morally belonging to the education of colored people, and it has since paid the expense of its colored pupils at Fisk University and elsewhere. Being rather willing to submit to the will of the State and to the sentiment of its white people, it now proposes to establish a large industrial school for negroes, such as does not exist at present in Kentucky, and support it with \$200,000 of its funds. But to organize it will require, they say, \$400,000 more, for such schools are expensive, and require lands, shops and other buildings and equipment. For this they make application to the generous public, and doubtless such an institution would do much good, and we hope they will succeed. Only we suggest that precisely the same opportunities for education should be given to both races, and if the industrial education is regarded as the better and more important for the new school, it should also be henceforth made the predominant

feature for Berea itself, which should hereafter be patterned after Hampton and Tuskegee.

The Saving of Christianity Christianity was in a parlous state if it has been saved from overthrow by an encyclical, as we are informed by *The Catholic Standard* in its review of the year, is the fact. It says:

"The verdict of the wise and the clear-sighted is that the Holy Father has saved not merely Catholicism, but Christianity, by whipping the money-changers, so to speak, out of the Temple. The Encyclical on "Modernism" will stand, therefore, as the greatest document which has issued from the Vatican in modern days—a document worthy of a Cyprian or an Athanasius."

There is room for a difference of view. But we are further told that things are so badly off with the Church in Europe that we fear the saving is not yet visible. It tells us:

"In the Eternal City the enemies of the Church are in full control of the public administration, and the Law of Guarantees affords no protection to the Holy Father, the Cardinals or the visitors to the Vatican. Infidel Freemasonry sits in the Mayoral chair, in the person of the ex-Grand Master Nathan. Every dog will have his day."

In France things are quite as bad. It says:

"Briand and Clemenceau are evidently determined to run the full course. Their feet are on the slope of Avernus, and there is no going back now. But at the bottom of that slope, it should be remembered, lies the lake—perhaps for them the lake seen by the prophetic eyes of Edward the Confessor, Sanguelac, the Lake of Blood. The men who raised the guillotine left their heads in its basket."

That is a sanguinary forecast; we will offer another. It is that twenty years hence the Catholic Church will bless the day the Concordat was abolished and the Church was left free. We prophesy further that within ten years the Syllabus and the Encyclical will be a forgotten dead letter, interesting to historians, and that the successor of Pius X will be a man of the liberal spirit of Leo XIII.

The acquittal of George A. Pettibone last week at Boise City, Ida., and the decision of the State to drop the case against Charles A. Moyer, puts an end to the attempt to prove the "inner circle" of the

Western Federation of Miners responsible for the death of ex-Governor Frank Steunenberg. The Socialists and Labor Unionists proclaimed all along that the trial was a capitalist conspiracy to break up the unions, and that Haywood, Moyer and Pettibone would be "railroaded" to death. Their distrust and denunciation of the courts are proved to have been unwarranted and libelous. Neither side to the controversy now claims that there was a miscarriage of justice, and consequently it must be admitted that the assumed guilt of the three indicted officers of the Western Federation of Miners is not proven despite the appalling testimony of the appalling Harry Orchard.

Even infant Manitoba is leaving the United States far behind in public matters. The Provincial Government has purchased the entire Bell telephone system within the Province, with a share of the equipment, for the sum of \$3,300,000. The Government will secure control January 15th, under the charge of a commission, thus making the telephone a publicly controlled utility like the post office. But in this country we hesitate even to establish postal banks.

What shall be done in the case of Col. W. L. Marshall, who did not take the horsemanship test required by the President of officers in the army? He answered that the reason was that he could not find a horse strong enough to stand it, as he weighs 300 pounds. He is the engineer officer in charge of the work of dredging the new Ambrose Channel for the "Lusitania" and "Mauretania." He needs a test with a boat rather than with a horse.

There is a curious misprint in the remarkable poem by Joaquin Miller to which we call attention elsewhere. It reads as printed, "strong as Abram's song." Now nobody ever heard of "Abram's song." Read "*Miriam's song*." But the printer may be excused, for Joaquin Miller writes a hand as illegible as Horace Greeley's or Dean Stanley's.

Participating Versus Non-Participating Insurance

In the report of the recent Investigating Committee of the State of New York, dated February, 1906, on page 310, will be found these words: "The non-participating policy issued by a company doing business on the mutual plan can be justified only upon the supposition that the exact results of the business can be foreseen and the premium adjusted accordingly. This is, of course, an impossibility." In accordance with these views, under Chapter 326, Section 102, of the laws of this State, no domestic life insurance company may issue both participating and non-participating policies after January 1, 1907. It appears that this requirement will probably be followed by other states, the result being eventually to divide the companies doing business in this country into two separate classes, between which there will be keen competition. The question arises; In which class of company should a prospective policy-holder put his insurance? A well conducted non-participating company in order to do business on a conservative basis should charge premiums sufficiently high to meet a fall in the rate of interest or increase in the cost of doing business, assuming the mortality rate to remain unchanged. In a participating company these factors are cared for by the excess of the participating over the non-participating rate. If the non-participating rates are placed too low, the financial stability of the companies charging them will be endangered; therefore, the advantage always rests with the participating companies, as they charge rates slightly in excess of the non-participating rates, but so arranged that the excess insures their safety, which excess, if not needed, will be returned to the insured in the form of so-called dividends. On account of the method of calculation of these amounts followed almost universally in this country, for an explanation of which we have not sufficient space, the return to the policy-holder will probably

begin by being less than the difference between the two rates, but after a time will exceed it, the result being that in choosing between the two classes of company, financial stability being assumed the same in both, it may be said generally that where the insurance is required to cover a long period the participating policy is preferable, while in the case of a short term endowment or where surrender is contemplated in the early history of the policy, it may pay better in the end to take out the policy on the non-participating plan.

It was announced last week that the Prudential Insurance Company of Newark, N. J., would distribute \$1,700,000 among the stockholders and policyholders of that company. According to President Dryden this distribution will be entirely voluntary and altogether irrespective of the new insurance laws.

DARWIN P. KINGSLEY, president of the New York Life Insurance Company, in his recent address before the Association of Life Insurance Presidents, sounded a warning note regarding insurance legislation. Last week Mr. Kingsley again went on record as being in favor of a speedy revision of the Armstrong laws and a removal of company restrictions as follows, viz.: (1) The repeal of the section limiting the reserve which a company can hold to provide against contingencies and to guarantee solvency; (2) the amendment of the section which in effect prohibits insurance on under average risks; (3) the amendment of the section relating to expenses; (4) the repeal of the section which limits the amount of new business a company may write.

IN view of the issuance of a circular by Otto Kelsey, Superintendent of Insurance for New York, covering the valuation of securities held by insurance companies, the recent paper on the proper method of valuation of fixed term securities owned by life insurance companies,

(Continued on page 120.)

Receivership for the Seaboard Air Line

AN event of last week of more than ordinary importance was the passing into receivers' hands of the property and control of the Seaboard Air Line Railway Company. This corporation had a capital stock of \$62,000,000, a bonded indebtedness of \$58,000,000 and operated 2,611 miles of road, extending between Washington and Norfolk to Atlanta and Tampa. The recent anti-corporation crusade, which has been particularly drastic in North Carolina, has resulted in certain very radical action against the railroads. The bitter feeling against carrying companies in other Southern States has been strikingly manifested thru the enactment of laws tending toward the reduction of traffic rates. The earnings of the Seaboard Air Line, as one result of these enactments and of the collateral general depression in the business and financial world, have very largely fallen off during the past few months, and the receivership was decided upon only after several meetings of those most heavily interested. The effect of last week's action, whereby Lancaster Williams and S. Davies Warfield became receivers for the Seaboard Air Line, will be far-reaching, not only in Baltimore, where the road's securities are extensively held, but in the financial world generally. The opinion appears to prevail among Baltimore bankers, however, that there is no necessity for nervousness on the part of bondholders. If the claim that has been voiced in certain quarters, that the management of this company that has now led to the receivership has been directed more to the advancement of personal interests than to the advancement of the property as belonging to widely separated and scattered stockholders should prove to be well founded, something more ought to be visited upon the offenders than mere criticism and vain condemnation.

....The statement of the New York Trust Company, of which Otto T. Ban-

nard is president and Willard V. King and Alex. S. Webb, Jr., are vice-presidents, shows a capital of \$3,000,000, surplus and profits of \$10,472,559.09 and total resources of \$43,224,698.93.

....The Kings County Trust Company, of which Julian D. Fairchild is president, and whose vice-presidents are William Harkness, D. W. McWilliams and Julian P. Fairchild, in its new statement shows a capital of \$500,000, surplus of \$1,000,000, undivided profits of \$700,516.92, and total resources of \$12,488,583.30.

....The Department of Commerce and Labor has just issued an exhaustive report (Part II) of the Commissioner of Corporations on the Petroleum Industry. Prices and profits are carefully considered, both here and abroad. The Standard Oil Company and its policy is reflected in all the trade movements and in the price movements. The publication is crowded with valuable tables and diagrams.

....Trade of the United States with the Latin-American countries south of us during the last fiscal year was about \$610,000,000, against \$234,000,000 ten years ago. Porto Rico is included in these totals. Since 1897, imports from these countries (now \$360,000,000) have increased by 132 per cent., and exports to them (now \$250,000,000) by 212 per cent.

(Continued from page 119.)

by John Tatlock, president of the Washington Life Insurance Company, recently read before the Association of Life Insurance Presidents, becomes of special interest. Mr. Tatlock advocates in this connection that the valuing of bonds, by computing their present value on the basis of the effective or actual rate of interest if held to maturity, which is determined by the cost prices, while not new or in any way original, nevertheless meets in a satisfactory manner all the conditions of the problem.

The Independent

VOL. LXIV

NEW YORK, THURSDAY, JANUARY 16, 1908

No. 3085

Survey of the World

Secretary Taft on Labor and Capital

There was published at Martin's Ferry, O., on the 9th, a long

letter written by Secretary Taft in reply to questions propounded to him by the Secretary of the Ohio Federation of Labor. These questions related to the use of injunctions in labor controversies. The Secretary said he saw no objection to the enactment of a law defining the cases in which a temporary restraining order may issue, or of one defining the rights of laborers in their controversies with employers. Nor would he object to a re-enactment of the old law providing that no injunction should issue except after notice to the defendant and a hearing. The present practice was sometimes accompanied by injustice; it would be well to require notice and a hearing. And the defendant should have an opportunity to be heard within three or four days. It would not be unreasonable to require, in cases of contempt following the granting of an injunction, that the issue should be tried by some judge other than the one by whom the injunction was granted.—On the 8th, the executive committee of the New Hampshire Federation of Labor had published a statement opposing the nomination of Mr. Taft because he was the "arch enemy of organized labor" and "the instrument of capitalistic power."—On the evening of the 9th, Mr. Taft delivered a long address on "Labor and Capital" in Cooper Union hall, New York, before the People's Institute. He made a very favorable impression, and at the close of his speech commended himself to the great audience by his apt and witty answers to many questions. At the beginning he spoke of the interdependence of labor and capital, saying that the laborer was

benefited by everything which tended legitimately to increase the accumulation of wealth and its use for production, while he was injured by insecurity of invested capital and property, because this tended to make wealth idle. Injustice to capital—as in excessive taxation of corporations or in drastic legislation unjustly reducing the legitimate earnings of railroads—affected wage-earners directly and injuriously:

"We are suffering now from a panic. It was brought on, in my judgment, by the exhaustion of free capital the world over, by the lack of an elastic system of currency, and also by a lack of confidence in our business fabric produced in Europe thru the revelations in certain great corporations of business dishonesty, corruption, and unlawfulness. It had been necessary for us to purify some of our business methods; but the purification cannot stop the panic. It will doubtless make another in the far future less likely. Meantime all must suffer, both the innocent and the guilty, and the innocent more than the guilty. Certainly the laborer who is thrown out of his employment by the hard times is innocent and suffers more than the capitalist, whether innocent or guilty, who has money to live on meantime until prosperity shall be restored.

"The conclusion I seek to reach is that the workingman who entertains a prejudice against the lawful capitalist because he is wealthy, who votes with unction for the men who are urging unjust and unfair legislation against him, and who makes demagogic appeals to acquire popular support in what they are doing is standing in his own light, is blind to his own interests, and is cutting off the limb on which he sits. It is to the direct interest of the workingman to use careful discrimination in approving or disapproving proposed legislation of this kind and to base his conclusion and vote on the issue whether the provision is fair or just, and not on the assumption that any legislation that subjects a corporation to a burden must necessarily be in the interest of the workingman. What I am anxious to emphasize is that there is a wide economic and business field in which the interests of the wealthiest capitalist and of the humblest laborer are exactly the same."

The effect of the organization of labor

had been highly beneficial. The union had come to stay. "Under existing conditions, the blindest course an employer of labor can pursue is to decline to recognize labor unions as the controlling influence in the labor market, and to insist upon dealing only with his particular employees." Wise managers of corporate enterprises would receive the leaders of unions with courtesy and listen to them as they would to the managers of any other corporate enterprise with which they were to make an important contract. It was a serious question whether, under our Constitution, the decree of a tribunal under a compulsory arbitration law could be enforced against the laborers. This would come very close to a violation of the provision forbidding involuntary servitude. Concerning strikes he said:

"I know that there has been at times a suggestion in the law that no strike can be legal. I deny this. Men have the right to leave the employ of their employer in a body in order to impose on him as great an inconvenience as possible to induce him to come to their terms. They have the right in their labor unions to delegate to their leaders the power to say when to strike. They have the right in advance to accumulate by contributions from all members of the labor union a fund which shall enable them to live during the pendency of the strike. They have the right to use persuasion with all other laborers who are invited to take their places, in order to convince them of the advantage to labor of united action. It is the business of courts and of the police to respect these rights with the same degree of care that they respect the right of owners of capital to the protection of their property and business."

But there should be no resort to violence or other form of lawlessness on either side. He denounced boycotting and blacklisting. In their own interest, workmen should sustain the Government in suppressing such evils as railroad rebating and the unlawful stifling of competition by industrial combinations. Speaking of injunctions, he expressed the opinions we have already mentioned, distinctly favoring notice and a hearing before issue. Trial by jury, in cases of alleged contempt, would cause delay and weaken the force and authority of the court's order. Among the questions that came from the audience was one asking whether he approved the discharge of the negro troops. Being Secretary of War, he said it would be improper for him to answer this while the matter was still under consideration in a Senate committee.

To one who asked whether he did not think Government ownership of railroads and mines would make easier the settlement of labor disputes, he replied:

"Have you ever thought of the tremendous power you now put in the hands of a few men at Washington? Lord knows there's enough power there now, but if you give still more to one man or a small group of men you will create a force that may well make you tremble for the future of the republic."

The employers' liability law, he said, ought to be re-enacted in proper form. "Why shouldn't an injunction be allowed to a blacklisted laborer?" To this he replied: "It ought to be, and if I were on the bench when he asked for it I'd give it to him mighty quick."—According to dispatches from Washington, Mr. Roosevelt says he thinks Secretary Taft will be nominated on the first ballot.

Curious Decision in San Francisco

By a decision of the three judges of the District Appellate Court, at San Francisco, the judgment of the lower court in the cases of ex-Mayor Schmitz and Abraham Ruef has been set aside and both of these men have virtually been pronounced innocent. Ruef pleaded guilty and was not tried; Schmitz was convicted and sentenced to be imprisoned for five years. This was the French restaurant case, in which a considerable sum was extorted from the keepers of several restaurants by a threat that their licenses would be withheld. Ruef took the money as a fee and divided it with Schmitz. On appeal, the three judges say that the threat was not one to injure business or property, because a license is not property, and that for this reason the accused men did not violate law. Judge Dunne, of the Superior Court, who presided at the trial of Schmitz, says:

"It is to be regretted that the hearing of this appeal came up before a court whose members have relatives and intimate friends against whom many indictments were returned by the grand jury that returned these true bills. In view of these facts, I do not believe that the court was in proper frame of mind to give this matter an impartial consideration and to decide it strictly upon its merits. I am satisfied that the evidence and the law sustained the judgment and the verdict. I will further say that the jury which returned this verdict will be remembered with respect and honor in the community long after the court which set aside the verdict has been forgotten."

Judge Cooper, who wrote the opinion, is a brother-in-law of W. I. Brobeck, who was indicted in connection with the Parkside railway franchise bribery. Judge Frank B. Kerrigan's wife is the daughter of James McNab, who is said to have received many favors from Mayor Schmitz. The third judge, Samuel P. Hall, is a brother-in-law of the lawyer employed as senior counsel for Patrick Calhoun, the indicted president of the street railway company. The prosecutors will ask for a rehearing and then appeal to the Supreme Court. There are still pending 40 indictments against Schmitz and 117 against Ruef. District Attorney Langdon and Mr. Heney say that they are not embarrassed by the decision, and that the prosecution, under other indictments, will be pressed vigorously. — Ex-Supervisor Thomas F. Lonergan, one of the first to confess his guilt, dropped dead, on the 6th. Before his election by the Labor party Lonergan was the driver of a bakery wagon. He testified at the trials of Schmitz and Glass. — In the Harrisburg Capitol fraud cases, last week, five additional indictments were found against Architect Huston, Congressman H. Burd Cassel and Contractor Sanderson. These indictments are for false pretenses in respect to fraudulent bills. These men had already been indicted thirty times for conspiracy.

Cost of the Panama Canal

It is understood that Lieut.-Col. Goethals, the head of the Panama Canal Commission, will lay before the Senate committee this week information showing that the original estimate of the cost of the canal was much too low. The minority of the Board of Consulting Engineers, whose recommendations were accepted by the Government, estimated the cost at \$139,705,200. It is said that from \$60,000,000 to \$100,000,000 must now be added. Reports from Washington assert that the Commission recently reached the conclusion that from \$210,000,000 to \$250,000,000 would be required, and that the more conservative members of the Commission now think that it may be possible to reduce the total to \$200,000,000. The explanation is made that in the original calculations the

quantity of earth to be excavated was underestimated, and that they did not include the cost of maintaining the Zone government, of equipping and improving the railroad, and of the water works, paving and sewers in Panama and Colon. The locks, also, will cost much more than was expected, even if the width of them be not increased. So much progress has recently been made that the appropriation for the current fiscal year is said to have been exhausted. The Commission expects that the canal will be finished by January 1st, 1915. — Owing mainly to Mexico's new railway, 190 miles long, spanning the isthmus of Tehuantepec, the quantity of merchandise originating in the United States and carried to points in the United States by way of one isthmus or the other, was three times as much in 1907 as in any previous year, the value having been about \$40,000,000. From Hawaii \$15,000,000 worth of sugar was carried by the Mexican railroad, to be delivered at our Eastern ports. There was also a considerable increase of such traffic on the Panama railroad.

Land Fraud Cases

Prosecution of pending land fraud cases has been affected by the recent decision of Judge Robert E. Lewis, of the District Court, at Denver. More than sixty persons, several very wealthy and prominent citizens of Colorado included, were indicted there last year for conspiracy and fraud in violation of the land laws. Judge Lewis quashed all the indictments relating to the timber and general land statutes and indicated that he would also quash those relating to the coal land laws. His decision is regarded by the prosecutors as sustaining the methods by which corporations have acquired coal and timber lands by means of "dummy" applicants or entrymen to whom the corporations supplied money for the necessary payments. It is characterized by the Government's attorneys as revolutionary, and Attorney-General Bonaparte has authorized an appeal to the Supreme Court. In respect to one point, Judge Lewis has since been sustained (January 6th) by the Supreme Court, in its decision granting a new trial to Representative J. N. Williamson, of

Oregon, who was convicted of complicity in land frauds in his State. This point is that affidavits for proof of final entry are not required by the statutes. Judge Lewis holds that the existence of a conspiracy before the application and entry must be shown. It was reported that on account of his decision the Government's pursuit and prosecution of violators of the land laws would be suspended for several months, or until final decision on the appeal, and that many special agents had been dismissed. In an official statement the Attorney-General says that there will be no cessation of the prosecutions, altho Judge Lewis's decision necessitates a change of procedure. Pending the appeal, he adds, there will be no advantage in bringing further criminal prosecutions on similar charges, except in cases where offenders might be protected by the statute of limitations. In such cases there will be indictments, but trials will await the decision of the Supreme Court. Therefore the field force has been considerably reduced. The Government's purpose to continue actively in the prosecution of land fraud cases has undergone no change.—Judge Ballinger, Commissioner of the General Land Office, has resigned and will retire on March 4th. Assistant Commissioner Dennett will be his successor.—Stephen A. D. Puter, convicted last year in Oregon and sent to the penitentiary for two years, has been pardoned. He has aided the Government in land fraud cases, and will give further aid in the prosecution of Benson and Hyde.—The President has added 78,000 acres to the San Gabriel National Forest in southern California, making its area 633,295 acres.

Various Notes

The battleship fleet arrived at Rio de Janeiro at 4 p. m. on the 12th, and was met, fifteen miles from the anchorage, by a Brazilian cruiser, which escorted the visitors up the bay. An elaborate program of entertainments was provided by the Brazilian Government and the local authorities.—It is expected at Washington that within thirty days the Government will bring suit against E. H. Harriman and others, the Union Pacific and the Southern Pacific

railroad companies, under the Sherman act. This suit will be like the one against the Northern Securities Company.—Virginia, North Carolina, Georgia and Alabama have accepted the compromise relating to passenger rates on the lines of the Southern Railroad Company. By the terms of the agreement, the general rate is to be $2\frac{1}{2}$ cents a mile, and books for 2,000 miles are to be sold at 2 cents a mile.—In the case of the rebate indictments returned by a grand jury at Jamestown, N. Y., the demurrer of the Standard Oil Company has been overruled. The trial will take place in March at Buffalo. There are 1,700 counts. If the company should be convicted upon all of them, a fine of \$34,000,000 could be imposed.—By a vote of 5 to 4, the United States Supreme Court has pronounced the Employers' Liability law unconstitutional, upon the ground that it goes beyond the bounds set for the regulation of interstate commerce. This action was taken upon appeals in two cases from the decisions of Judges McCall and Evans, and these decisions are now sustained. Justices Moody, Holmes, Harlan and McKenna supported the statute. Senator Knox has introduced a bill repeating the substances of the annulled law in a form designed to meet the court's objections.—In New York, the tunnel from the southern extremity of Manhattan Island to the City Hall in Brooklyn was opened for traffic a little before 1 a. m. on the 9th. There are two circular tubes having an inner diameter of $16\frac{1}{2}$ feet, and the road is an extension of the New York subway. The distance, a little more than a mile and a quarter, is covered by trains in less than five minutes.

The Japanese Immigration Question

Our Government has been officially notified of the recall of Viscount Aoki as Ambassador to the United States and asked if Baron Kogoro Takahira would be acceptable as his successor, to which Secretary Root replied in the affirmative. Takahira was Minister until the end of 1905, when he was transferred to Italy. He acted as one of the plenipotentiaries of Japan in the negotiations with Russia at Portsmouth. Viscount Aoki denies having

made any of the statements in regard to the restriction of Japanese immigration accredited to him by San Francisco reporters. The Paris papers which have been filled with war talk for some weeks, most of it inimical toward the United States, have suddenly changed their tone and give prominence to official assurances of peace. The *Matin* publishes the following statement from Count Hayashi, Japanese Minister of Foreign Affairs:

"Tokyo, Tuesday.—Our negotiations with both the United States and Canadian Governments are characterized by eminently cordial feelings. There are no insurmountable difficulties in the way. We have every reason to believe that a satisfactory settlement will soon be reached."

The more friendly attitude of the French press is ascribed to official influence exercised at the request of Minister Jusserand. Deputy Lucien Millevoye, in a sensational article, calls upon France and Great Britain to intervene in the American-Japanese crisis before it is too late to secure the settlement of the difficulties by arbitration. The conferences between our Minister O'Brien and Count Hayashi are said not to have reached the stage of formal negotiations. It is understood that, on one side, Japan wishes a definite assurance that no hostile legislation such as an anti-Japanese exclusion act shall be past by Congress, and that, on the other side, our Government wishes to be satisfied as to the efficiency of the Japanese restrictions on the emigration of coolies. Obviously neither party can give the desired assurances. The President cannot pledge himself to prevent action by Congress, and the Japanese Ministry would be promptly turned out of office if it gave to a foreign nation a written promise to curtail the movements of its own citizens. Figures were presented to Count Hayashi proving that Japanese were coming into this country at a much greater rate than before the passport regulations were adopted by Japan. While British Columbia and the United States are trying to check the entrance of Japanese laborers, Mexico is seeking them and no effective way has been devised to prevent their crossing the border into this country. Certain provincial and prefectural officials have been privileged to issue passports in the name of the Foreign Office,

but it is understood that the Japanese Government will withdraw this permission and remedy other defects in the regulations which have been pointed out.

British Imperial Problems

The Indians in the Transvaal are continuing their stubborn resistance against the enforcement of the anti-Asiatic legislation, which went into effect on January 1st. Mass meetings of Indians have been held in Natal and Cape Town, as well as in the Transvaal, to protest against the expulsion of Indians who refused to comply with the regulations. They regard it as an insult to their race that they should be required to register as aliens in any part of the British Empire and have their finger impressions taken like criminals. Since they are not allowed to renew their trading licenses unless they have registered the Indian merchants are deprived of their business and subject to punishment by imprisonment or deportation. Six thousand Indians have already left the Transvaal rather than submit to the conditions of residence imposed. Telegrams were dispatched to the Earl of Elgin, Secretary of State for the Colonies, and the Earl of Minto, Viceroy of India, asking their intercession. The Chinese, who are subjected to the same restrictions, joined with the Indians in their opposition. Two of the Indians who were arrested and ordered to leave the country within two weeks for having no registration certificates are veterans of the Indian Army, one of them having served for thirty years and the other having taken part in four campaigns and received three wounds. The leaders of the anti-British movement in India have added this to their grievances against the Government. The fact that the similar treatment of British subjects in Transvaal during the Boer War was one of the indictments brought against President Kruger's Government by Great Britain makes the situation especially embarrassing, since the British Ministry is determined to give the Transvaal Government free hand in internal administration. The Colonial Secretary of the Transvaal, J. C. Smuts, in a recent speech, declares: "That his Government will maintain its position and enforce the law," concluding with

the words "The Government will keep this a white man's country, and it will keep our heritage unsullied." The Congress of the African Colored Political Organization was opened at Indwe, Cape Colony, January 3d. The president, in his speech, urged a closer union of all the colored races in South Africa and conciliation between them and the whites.—Postmaster-General Rodolphe Lemieux, who has been in Japan conducting negotiations in regard to the restriction of Japanese immigration, has returned to Canada. He denied that his mission has been a failure, as had been reported, and says that in Japan the talk of war with the United States is not taken seriously.—The Canadian Government has under consideration a regulation requiring that all emigrants should come direct to Canada from their place of birth or country of citizenship. This applies to all countries, so it would not be offensive to Japanese pride, yet would prevent the immigration of the Japanese from Hawaii. The Australian papers express the belief that war is certain between Japan and America, and they fear that the American fleet will meet the fate of the Russians on its arrival in the Pacific. That event, they believe, would leave Australia practically defenseless against the Asiatic tide, for on account of the threatening attitude of Germany a large part of the British fleet will have to be kept at home. The Australian Government has advocated the adoption of compulsory military service in order to provide for the defense of the country. It is reported that Ambassador Bryce will be called to London in the near future to advise his Government on the question involved in the immigration of the Japanese to the United States and Canada.

Suffrage Riots in Berlin

An effort is being made in Prussia to abolish the old oligarchical system of voting, and to substitute in the kingdom universal manhood suffrage and a secret ballot such as prevails in elections for the Reichstag. Under the present system, all voters are divided into three classes according to the amount of taxes they pay. The largest taxpayers who together pay one-third of the taxes, constitute the first class, the next highest tax-

payers who together pay another third form the second class, and the remaining taxpayers form the third. An equal number of electors is chosen by each class, and these assemble to elect the representative of the district. On January 10th a Liberal member interpellated the Government in the Landtag on the subject, and many speeches were made in favor of an extension of the suffrage and the secret ballot. Prince von Bülow, the Imperial Chancellor, declared in reply that such a change would not be for the good of the State, and would not be permitted in Prussia. He acknowledged that some reforms were needed, and said the Government had been studying the question for a long time, but that the street demonstrations would not make the slightest impression on the Government or change by one hair's breadth its determination to carry thru what was thought to be right. This announcement was received with violent protests, but the Landtag supported the Government. Outside the parliament building large crowds were assembled shouting for universal suffrage and denouncing the Chancellor until the crowd was dispersed by the police. The demonstrations were repeated on a large scale on the following Sunday. Assembling at their six hundred local organizations the Socialists organized street processions numbering some forty thousand, augmented by almost as many more of the unemployed class and political sympathizers. They marched thru the streets of the city, and made an effort to reach the Emperor's palace, but in Alexander Platz they were charged by the police and driven thru Unter den Linden to the Tiergarten. Other demonstrations were attempted before Chancellor von Bülow's palace in Wilhelmstrasse and before the Parliament House. But all of the police of the city had been assembled in the fire stations and public buildings, and as rapidly as a crowd collected it was dispersed by squads of police mounted or on foot. The police used the flat of their swords, and the Socialists clubs and stones. No one was killed, but one hundred or more were injured by being struck or trampled upon.—Baron von Rheinbaben, Minister of Finance, presented a pessimistic report on the budget to the Landtag. The estimates for the

coming year require a revenue of \$840,500,000, which will involve a deficit of \$110,500,000. Of this, \$63,000,000 is to be covered by a loan, \$10,000,000 by increased taxation, and the remainder from revenue receipts. The general causes of the deficit are the decrease in the profits of the state railways and iron and coal mines, and the high bank rates, due to commercial and industrial depression. Baron von Rheinbaben deplored the tendency to extravagance of living and the love of luxury which was replacing the old Prussian tradition of stern economy and self-denial.

Civil War in Morocco

The Moroccan situation has entered upon a more complicated phase thru the proclamation of Mulai Hafid as Sultan at Fez, the northern capital at Morocco. Since the departure of Abd-el-Aziz from that city to Rabat his authority has been weakening. The officials left in charge at Fez even went so far with his sanction as to remit all taxation in their efforts to retain the loyalty of the people. Bribes were offered to the ulemas inducing them to consent to the employment of French troops against his brother Mulai Hafid. Finally, after three days' rioting, a meeting was held at the principal mosque in Fez, at which the sherifs and ulemas decided upon the deposition of Abd-el-Aziz, and Mulai Hafid was proclaimed Sultan amid great popular rejoicing. The charges against Abd-el-Aziz, as stated in the letter sent to him, were that he has acted contrary to the Koran, in having allied himself with European Powers, borrowed money from them, imported foreign officers, mortgaged the customs, allowed France to occupy Casablanca and Ujda, and accepted foreign decorations, even those bearing the cross. He is regarded as a traitor to his country and unfaithful to his religion. Mulai Hafid has not yet arrived in Fez, and in the meantime his uncle, Mulai Saramini, acts as regent. A deputation has been sent from Fez to Mulai Hafid bearing presents and offering him the throne on condition that he put himself under the protection of the Sultan of Turkey and repudiate all relations with Europeans so far as possible. This action places the French Government in a somewhat embarrassing position. The

Convention of Algeciras, which gave France and Spain the right to police the ports of Morocco, is signed by Abd-el-Aziz, and the French Government, therefore, can only recognize him as the legitimate Sultan. But the troops of Morocco and most of the tribes have espoused the cause of the new Sultan, and to conquer the country against so fanatical and warlike a foe would be a difficult and extensive enterprise. General Drude, who has been in charge of the French troops at Casablanca, was opposed to an aggressive policy, and advocated neutrality in the conflict for the throne, but he has been removed on the ground of his poor health, and General d'Amade takes his place. At once on his arrival at Casablanca, General d'Amade dispatched troops to occupy Rabat, in order to protect the Spanish Consulate at that point. General d'Amade was military attaché of the British staff during the Boer War.

Abyssinians Raid Italian Town

The Italian possessions in Somaliland have suffered during the last few weeks from raids by Abyssinians from over the border. Many villages were attacked, caravans pillaged and merchants robbed or captured. The Italian representative at Lugh went to the aid of the people with an armed force of natives, and had a hard fight with the Abyssinians. Apparently the Italian forces were defeated and withdrew to Lugh, which was blockaded and captured with heavy losses on both sides. The number of Abyssinians engaged is said to have been two thousand. On receipt of the news, the Italian Minister to Abyssinia at Addis Ababa immediately presented a protest to King Menelik against the violation of the treaty between Italy and Abyssinia, which guarantees the safety of traders and the occupation of Lugh by the Italians pending the final settlement of the disputed boundary. The representatives of France, Great Britain and Germany supported Italy in this demand. King Menelik expressed his sorrow at the affair, which had been done by chiefs contrary to his orders, and he expressed his willingness to give satisfaction. He ordered the recall of the Abyssinians from Lugh, the punishment of the guilty and the payment of an indemnity.

The Marauder

BY T. JENKINS HAINS

AUTHOR OF "THE WINDJAMMERS," "THE BLACK BARQUE," "THE STRIFE OF THE SEA," ETC.

SLINKING silently over the shoal, the sunshine glistening upon the clean sand of the bottom, the huge monster held his way. The glare was not unpleasant to the giant ocean denizen. He had just risen from the deep chasm of the Gulf Stream where it sweeps past the colossal cliff-like wall just beyond the edge of the Hatteras Shoals, and in the profound depths there had been a silent blackness, impenetrable even to the eye of a fish. The glare of the sunshine made his eyes hurt a little, for he was unable to close them, even blink. He must keep them wide open, two glistening, filmy, round eyes which let in the light, the images of the surrounding sea, upon his brain. He could now see distinctly for some distance on all sides, albeit the green of the shore water closed the vision slightly, but he was alert, ready and searching for an encounter with a victim, his six rows of razor-like teeth now and then being bared as he opened his jaws and drew back his hard, mobile lips, which, like the scabbard of a sword, covered the white line of cutters. The triangles set in sextet rows, fitting closely together, made a most excellent cutting machine, probably the best and most powerful grown in nature.

A small skate lying close to the bottom saw the advancing shadow, and, instead of sucking close to the sand, gave a sudden dart of terror and fled seaward, its side flukes whirling up the small particles like dust upon a country road, leaving a smoky wake behind. Into this dived the giant with a fling of speed, his tail merely giving a whirling stroke and his huge side fins slanting to guide him true to the mark which was disappearing

into the green void eastward. The unlucky skate saw the shadow drawing quickly over him. He was slipping along over the sand his fastest, but knew he was doomed. He gave one last, sidelong dart, flung up his long, whiplike tail, and then the cavernous jaws, opening close behind, suddenly opened wider, the teeth bared for an instant, and the monster swung upon his side to get his gaze fairly upon the object of his stroke. He seldom missed, and he could not see the object when it was right dead ahead, on account of the position of his eyes, which were set wide apart at either side of his broad skull. One last spurt of speed and lines of white cutters were above and below the doomed skate. Lightning-like they closed, and half of the creature went whirling over and over along the bottom, the spasmodic muscular action not ending with the severing of the body into two equal parts. Circling slowly, and very much at his ease, the gigantic marauder came close along the sand, picked up the remainder of his victim, and then held his way serenely along toward the Outer Diamond Shoal.

The water grew shallower as he drew nearer the land. He could see the tower of the Hatteras lighthouse five miles away shoreward, and he heard the thunderous snore of the breakers which fell incessantly upon the shoals. The water began to lift with the roll of the sea behind him, and he knew it was rising to the steep-crested seas which gradually broke and roared away in a white smother of snowy foam suds, going bodily shoreward and carrying everything movable along with it that could not get below the foaming crest. He knew this was good hunting ground, for he feared not the breakers at all, knowing that as long as he remained well out he could

find plenty of water to go under the roaring crests when they threatened him with the landward rush. But there were other denizens of the sea who were not as strong or as wary. They were always in danger of getting caught in the roll, and then, when they were struggling to save themselves from being washed in upon the sand, he would throw his huge bulk upon them and have them at his mercy, which meant they would be instantly killed.

There was no feeling of pity for the unfortunate weaker animals who failed to stand the rush of the waves. With the huge shark was only that relentless savagery, that implacable singleness of purpose, the purpose was always deadly. He killed everything that came in his path and it mattered not if the victim was fit for food—he killed anyhow. Many generations of predatory ancestors had given his brain a peculiar development, that which defines the initiative in all matters; he never hesitated to attack, no matter what the object, and he never withdrew until his victim was killed. He was a pirate of the deep ocean and all animals except the toothed whales were his enemies. The warm-blooded whales he never disturbed. Some long-inherited instinct told him to leave them alone, and within him was a half-developed dread of their mighty presence. When they came within his vision he slunk silently away and sought hunting grounds elsewhere. The leviathans never noticed him and never appeared to any of his class, confining their hunting to the deeper ocean where the soft cuttle-fish or giant squid haunted the rock caves. Only after being sure a monster was dead would he approach; then sperm-whales and black-fish, toothed and untoothed, all fell a victim to his insatiable appetite, for he was a veritable scavenger.

In the lifting water of the shoals the blue-fish swarmed along, swimming slowly northward. They were wary and active and were flanked by a band of porpoises, who watched them closely but dared not attack unless they found the smaller fish in trouble. Into the solid phalanx the marauder of the deep ocean plunged headlong.

The triangular-toothed sharks are plentiful, but the peculiar development of the giants of the species, called "genus

carcharodon" is rare, some authorities believing them extinct, or almost so. But this monster was of ancient lineage. Right into the thick of the swarming fish he swung his length, his twenty-foot body making a path, and while he tore his way thru he rolled from side to side to get a good view of the whirling, striving bodies which surged away in frantic haste.

At intervals he opened his mouth, and it opened a full two feet sheer, while his jaws slipped forward and the ivory rows of cutters chopped suddenly upon some unfortunate. He tore his way back and forth several times, but only managed to get a few pounds of the active school. It annoyed him and he slunk away to the shoaler water, forcing the band of sea-pigs to give him room as he went.

Among the struggling blue-fish were some who had met the edges of the triangles, and these few fell to the rear, straggling along with the peculiar movement of a wounded fish. Nowhere in the world is the instinctive knowledge of cause and effect so well understood as among the denizens of the ocean. The porpoises singled the stragglers out at once and there was a sudden dash at them, some of the more agile sea-pigs leaping high in the air as they rushed forward, then plunging gracefully headlong and keeping up a speed that was marvelous. There was a short and slight disturbance in the vicinity of the wounded blue-fish. Then these wounded were eliminated from the world of fear and trouble. They were wiped out completely, their bodies giving sustenance to the more powerful foe. Such is the economy of Nature, cruel, relentless and bitterly savage. Only the strong and lucky survive.

But in the struggle for the wounded one of the porpoises received a cut from a pair of jaws armed with canine teeth. It let out much blood and attracted attention which was dangerous. The sea-pig, strong and vigorous as he was, instinctively knew he was watched by his fellows and it was time for him to seek seclusion. He dropt quickly to the bottom and slunk for the shoaler water, where he might get a chance to turn out and go to sea again by passing astern of the school.

In the edge of the breakers lay the

giant monster waiting for some game to come along. He let himself be rocked by the swell and rolled shoreward for a space, then driving ahead again to meet the coming sea. He was close down upon the white sand and his huge form lay like a dark shadow on the bottom. The bleeding sea-pig came slowly in and was just about to circle around to meet the lifting water when he noticed the shadow upon the bottom. He was not afraid of sharks, for he was armed with the long jaw and sharp teeth of his race, while with his tremendous vitality and activity made him capable of taking care of himself. But the blood still trailed from his cut and left its tinge to the sea. It was the signal for attack from even weaker enemies. It roused the shark from his lazy contemplation of the shoals.

The old pirate swung himself head on and for a moment gazed at the fat porpoise. Then with his rushing charge he drove straight for him, his cutters baring themselves and his jaws ready for the strike. Like a huge twenty-foot bolt he drove at the sea-pig, the smaller fellow, not over seven feet long, waiting just a moment, then plunging at him with equal fury.

With all the shark family there is the necessity of turning upon the side if the object of their strike is above them. A shark cannot see above him, nor can he bite until the object is below the level of his great, curved snout. The porpoise sees little above him, but can bite and snap with the lightning-like rapidity of a bull-terrier, and it makes no difference where the object lies as long as it is within reach of his stroke. It is always the object of the shark to get the foe beneath him; then he can strike without turning and see as distinctly as anything that swims, except, perhaps, the sword-fish, whose eye is larger than any living organism that spends its time in the sunlight.

The huge shark with his lumbering bulk, weighing, perhaps, a thousand pounds, came on with jaws open. He struck just as the porpoise swung like lightning and fastened to the monster's side fluke. The shark's cutters tore a great gash in the fat of the sea-pig, but failed to bite, while the teeth of the small-

er antagonist met and fastened like the grip of a bull-dog. The force of the charge carried the shark along some fathoms, and as he was far heavier he dragged the sea-pig, who was holding gamely to his fluke, the two lying side by side. Then began the real battle. The issue depending upon the staying powers of the smaller animal.

Rolling over and over the shark dragged the holding porpoise thru the breakers, making for the deeper water, where he would have a better chance to break the grip which had closed upon him. The wounded sea-pig tore and shook with his hold, trying to open up the wound and tear out the piece he held. He kept backing up to keep clear of the great jaws which opened and closed just out of reach.

Had the old pirate's hide been any other than his own, the battle would not have been so one-sided. Nothing can tear a shark's hide. It is as thick as sole-leather and twice as tough. The teeth of the sea-pig fastened but would not cut or tear out the wound, and the punctures were of small consequence to such a monster as his antagonist. He shook and struggled, but only succeeded in tiring himself, while the shark rolled and rolled, twisted and turned, waiting for the time which he knew would come when the teeth of the smaller animal would give and he would reach him with those cutters. One good hold and there would be no question of the effects of the bite.

After a little while the porpoise grew less wary in swinging away from the turning shark. He was growing tired, but shook and struggled on, doing the best he could. Suddenly his tail flukes came within reach of the jaws. There was a quick stroke and the fluke on that side came away as clear as tho sheared off by metal shears, the curve of the monster jaws showing the exact outline of the bite.

This was the beginning of the end. The sea-pig could no longer get enough leverage to keep clear, and struggle as he did, the swinging of the huge head came nearer and nearer at each successive effort. The porpoise was weakening from the bite and his grip was slacking up. Then the shark, feeling the

end approaching, redoubled his efforts and at last rolled clear.

He was a heavy brute, the old pirate of the ocean, and he lay perfectly still for a moment before making a finish. He knew he was master of the situation, and instead of plunging in full speed, he turned his head slowly in the direction of the porpoise. The sea-pig, knowing his end was at hand, did the instinctive thing which he should not—that is, he turned and fled seaward. The shark was waiting for this movement, and with a mighty sweep, plunged into his wake, his huge, heavy flukes at last giving full power. In a moment he was up alongside. In another he had struck the sea-pig with his jaws open, struck him just back of his ribs, and the piece of fat and beef he cut out would have weighed twenty pounds. Swinging slowly away, as if there was nothing more to exert himself about, the monster bolted the mouthful, and then waited until the spasmodic twisting and twitching of the dying porpoise ceased before continuing the meal. He was a very fat and juicy porpoise, and after he had eaten a couple of hundred pounds of him he tired and swayed slowly away, leaving the carcass to the hangers-on who had collected at no great distance to finish. Crabs, porgies, sculpins and hundreds of small fry now took a hand, and in an incredibly short time nothing but the heavier bones of the sea-pig were left to show that he had existed but a few hours before.

Slowly to the southward the marauder held his way, following the shoals until the entrance of the Cape Fear River opened ahead and the rips of the Frying Pan stirred up the sands until the water was thick and turgid. This seemed like good hunting round, and he slowed his pace to a drift to cross the shoals with the current.

Crossing over he made his way into the river mouth. The tide was running in and it carried him sluggishly up stream. He drifted along like a great log close to the bottom, and he kept a lookout for game which he knew should be near the shore.

Across the current lay a line of stakes, a long line of poles stretching far out into the stream. Along the top of them ran a thin line and below this sank a fine

network of meshes, reaching downward to the bottom. The monster let himself drift slowly up against this and wondered what it was for. He poked it gently with his great snout and found that it gave easily, but the meshes held and slowly came back to their place when he ceased to press upon them. He drifted slowly along the length of this peculiar arrangement and came to a pocket, a pound where there were thousands of bluefish, rockfish and other choice small fry. It was easy to grasp them by mouthfuls, and he gave his savage nature full sway, killing them by hundreds and eating as many as he felt like. Many more, cut in two by his terrible triangles, floated and drifted about upon the surface and bottom. Then, when he had the remaining swarm panic-stricken, he rushed them wantonly about the enclosure, and finally plunged thru the net himself in his lust for the slaughter.

This killing caused some disturbance in the sea and was noticed by some fishermen who made their living from the proceeds of that net. They quickly and rightly solved the problem of its cause, and throwing some gear into their small boat, they shoved off, three rowing and one standing up steering with an oar, keeping the disturbed water in close observance as the boat advanced. The ruthless marauder, having gone thru the meshes, came slowly back for more destruction and wanton killing. He followed the line of net again and was soon in the enclosure.

About this time the small boat with the crew of four men arrived at the pound. A man standing in the bows held a harpoon ready. The water was not deep at this inner end of the net and he could see the giant shadow of the deep sea monster moving about beneath the surface. As the shark rose to strike at some of the fish, the man hurled the iron and drove it thru his thick hide deep into his back.

The dull pain of the powerful stroke awoke the faculties of the monster. He realized he was attacked from above and he saw the shadow of the small boat as long as himself almost directly over him. His first desire was to strike and he rose slowly, not quite certain as to what the thing was. He saw the peculiar objects,

the forms of the men, and saw also that the boat was not a living thing which he could cut up. Then another biting pain stung him furiously in the spine and he swung around and fled, towing the small craft after him.

This panic was instinctive, it was the natural panic of all organisms which are suddenly confronted by dangers they do not understand. The huge shark fled seaward and the men in the small boat hauled line, trying to get the fellow close enough to fire at with a musket which, loaded with a charge of powder and soft lead bullet of the ancient type, they kept ready. The channel was reached, the buoy swinging for the flood tearing past as tho the small boat was under power of mighty engines. Forward the bow pushed a spread of foam away on both sides and the men, arranging themselves, sat three aft and one forward, letting the craft rush away with her tow.

But this panic did not last long. The old pirate, feeling the dead pull upon his back muscles, began to slow up to see what he could do to relieve himself of his burden. He allowed himself to be slowly hauled alongside, hoping for a chance to get a stroke at his enemies. They hauled him up gingerly enough, and one man lifted the musket ready for the shot as soon as the shark broke water. Slowly and like a dead weight the shark drew near the surface. He was lying still, allowing the line to be hauled in without resistance.

Suddenly his snout showed just beneath the boat's bow. The man hauling line gave a yell to the gunner and yanked heavily upon the monster to raise him clear of the water. He broke clear and at that instant the man with the gun fired point blank at his head.

It was as if a signal had been given for the struggle to begin. The soft lead bullet tore thru the snout and came out thru the open jaws, passing into the sea thru the open mouth. It was a ragged wound, but it missed the brain and a hole thru the nose was painful, but not in any way dangerous to the fish. With the agony of the wound he swung alongside and smashed furiously against the small boat, striking her with both head and tail. The man holding the line to the harpoon iron was forced to slack it up, then to keep the monster near the

surface until they could fire at him again; the fisherman took a turn around a thwart to hold on while the man with the gun loaded again as fast as he could.

Raising his head in savage fury, the shark cut and struck in all directions. He tore the sea to foam about the small boat and the men were obscured in the storm of flying water. The boat was half full from the wash of the tail flukes, but the men were used to danger and held on grimly. The blood from the wound in the shark's nose flew over them in a red shower when he threshed about, and once he almost seized the gunwale in his mouth. Just before the man succeeded in loading the musket, the man with the line was forced to slack away and the monster sank slowly down out of sight, leaving a red trail behind him.

Slowly the men hove him up again. He swam strongly away, but they drew the small boat toward him in spite of this, he towing them rapidly to the entrance. Across the bar the breakers fell and the tide set the fight right straight over the shoal.

The shallow water forced the shark to come near the surface again, and as the boat was close aboard him, the man with the gun drove another bullet thru his head, missing the brain again, but making an ugly wound. The shock of the lead staggered the great fish for a moment and he slacked up his efforts. Then the feeling that his end was approaching came upon him, and he gathered himself for his last struggle. Deep in his old pirate heart lay the savage instinct of making his last stand eventful, making his enemies pay the price of his life. He shook himself, swung around and whirled up alongside in a smother of foam, biting, striking and giving smashing blows with his tail. His cutters met upon the gunwale, just missing the hand of one man. They tore out a large piece of the wood. Sullenly his spirit rose for the furious fight, waxing higher and higher, his whirling and twisting to get clear of that iron in his back becoming more amazing. They had to slack away the line at various intervals, but he never relaxed again, never took an instant's rest. The tide set the small boat nearer and nearer the breaking water. The man farthest forward saw the danger.

"Pass the hatchet," he yelled.

"No, don't cut adrift; hold on a bit longer—we'll go thru," called the one in command.

A high sea rose just ahead, its crest lifting higher and higher until it was as steep as a wall. Then it topped a moment and fell with a dull roar, and under it drove the monster shark, hauling the boat after him.

The small craft rose end on, rose straight up in the air for an instant. The rushing surge burst over her bow, half filling her. Then she fell over and into the white water beyond. She had gone thru the first breaker. In the white water the shark was plainly in view. He struggled near the surface, for there was not a fathom beneath him. As his head rose another bullet struck him, but he never wavered for an instant; he tore the suds into a spray and bit even more furiously.

The suction of the next sea suddenly sent the boat ahead, the line grew slack for a moment, and then the instant of the monster's chance came to him—came even when the knowledge in his dying heart told him it was too late. He swung with a mighty sweep, cut the line with one strike and drove under the sea that rose and burst solidly over the boat.

Relieved of the pull ahead, the craft swung up broadside, poised for an instant upon the foaming crest of the breaker, then rolled over and over and was swept shoreward in the rush of foam.

The men came to the surface and fought their way back to her, their minds occupied with the feeling of the expected drag from below, their faces

white with the excitement and danger of the affair. They all gained her, but as the tide set them and held them in the breaking water, they were unable to get the boat clear of water, and she settled down until the gunwale was just awash. Over this sunken wreck the surge burst and rolled at each sea, the men forced to keep under water and support themselves by holding her sides.

The giant old pirate felt himself free. He was terribly wounded, bleeding from three bullet holes and the iron in his back, but his spirit was neither cowed nor broken. He swung around for the finish, the finish which had come late, but which would be his own.

After the second sea only three heads appeared above the boat's gunwale. Soon two, then one, and the last man screamed in horror and flung himself flat into the sunken craft, holding both gunwales with his hands and hoping to keep the craft upon its keel, his only hope.

The giant from the ocean could not count. He nosed about the swamped small boat, found nothing except wood to set his cutters upon. Then his weakness coming upon him with the drain from his wounds, he swam slowly away. Under the foaming crests of the seas he drove with his remaining energy. The open ocean lay to the eastward and the water deepened as he swam on. He neither turned to right or left; but held his way out, went due east into the mighty sea from whence he had come.

When the tide turned the small boat and its remaining occupant drifted slowly into the Cape Fear River and grounded.

NEW YORK CITY.

A Simple Creed

BY SUSIE M. BEST

To do Thy will,
My fate to fill,
My daily work to do;
To scorn the mean,
To keep me clean,
Nor chide, tho gains be few.

To bear the rood,
To see the good,
To help my brother's need,
To be forgiven,
To hope for heaven—
These sum my code and creed.

Discovery of the Temple of the Heretic King

BY PROF. JAMES HENRY BREASTED, Ph.D.

DIRECTOR OF THE EGYPTIAN EXPEDITION OF THE UNIVERSITY OF CHICAGO

WE were in the midst of that thousand miles of wild isolation which may be called the cataract region of the Nile, where the great river winds northward thru the eastern end of the desolate, rocky Sahara in two enormous curves, forming together a vast S, broken at six different places by dangerous rapids, known since the Greek geographers as the Cataracts of the Nile, two of which are over 125 miles in length. Three thousand years before Christ the Pharaohs had begun the slow absorption of this region, until, by the fifteenth century B. C., they had gained the northern loop of the S and established their final frontier at about the middle of it. They

never gained the southern loop. We were endeavoring to follow the course of the river, going with the current, and to gather exhaustively every surviving record of the Pharaohs in this most distant of their conquests. In a twenty-five foot felucca we had crossed the Pharaohs' southern frontier, thru the fierce and difficult rapids of the Fourth Cataract region about 140 miles long. At its foot we had spent weeks among the monuments of Gebel Barkal, the ancient Napata, the capital of Nubia, where dwelt the Nubian Dynasty of Egypt, against whom Isaiah fulminated in the streets of Jerusalem as Sennacherib beleaguered the holy city. At Napata we had embarked in two heavy

City wall on the left. The Temple on the right, between them mounds covering ancient houses.

gyassas, as the natives call their clumsy, high-prowed cargo boats, usually from forty to ninety feet long. Passing into the northern loop of the great S, our huge sails were of little use against the prevailing north wind, save as we descended the rapids of the Third Cataract, where the canvas acted as a brake and eased our motion in the swift current, saving us from many a fatal crash on the ugly rocks plentifully scattered in midstream. As we were passing out of the last rapid we had, however, run full upon a hidden rock, smashing a hole in the bow, so that our craft filled and went down within ten minutes. Luckily for us and all our records, a heavy cross wind drove us rapidly shoreward, so that we grounded just as the hull sank. It was after days of labor recovering our water-soaked supplies and equipment, and patching the defunct craft, that we set off again for the temple of Sesebi, then but a few miles below us.

Situated as it is at the foot of the Third Cataract, a few miles below the Kagbâr Rapid, separated from the south by the upper cataracts, and from the north by the long and terrible rapids of the Second

Cataract, it lies in the heart of the most inaccessible region of Nubia. It has therefore not often been visited by Europeans. First reported by the Frenchman Cailliaud, and the Englishman Waddington in 1821, the first visitor who could read its records was the great Prussian, Lepsius, who in 1844 spent a few hours there. He discovered and reported that the columns of the temple bear the name and reliefs of Seti I of the Nineteenth Dynasty (1300 B. C.). Since then the place has been visited only by Budge, of the British Museum, who went thither with men and tools for excavation in 1905, but reported as follows:

"This temple was built by Seti I. . . . An examination of Seti's temple convinced the inspector and myself that it would be a waste of money to dig there."

There was little intimation therefore that our labors and misfortunes as we issued from the Third Cataract were now about to be rewarded by the most important discovery of our winter's campaign.

Escaping the insistent roar of the cataract which for days had besieged our ears, and throwing many an anxious

glance at the dubious patch which covered the great hole in our wounded bow, we rounded the bend above Sesebi, and

Looking southwestward from the neighboring hill of Sese the temple of Sesebi and its ancient city are lost in the wide

PALIMPSEST RELIEF ON ONE OF THE COLUMNS OF IKHNATON'S TEMPLE.

Amon stands at the left, Seti I at the right worships him with uplifted arms. Seti's form covers the earlier expunged figure of Ikhnaton, whose uplifted arms and pointed kilt in front may be discerned (even in the photograph), having not been entirely expunged like the rest of his figure. On the original portrait profile of Ikhnaton all is traceable except the lips. The chisel marks of the expunction may be seen even in the photograph. The old lines of Ikhnaton's form have been penciled in the photograph to make them clearer in the above cut.

across the wide sands of an intervening island we saw the distant columns of the temple rising on the west shore, but a few minutes' walk from the water's edge.

plain which stretches far away westward from the Nile to the distant hills of the Sahara. The air was now so obscured by the flying dust and sand of a violent

tempest that the temple was barely distinguishable. The violence of the wind was such that work upon the temple was almost impossible, and it did not subside in the least during our stay there. Sixty years ago Lepsius had the same experience at the place, and was therefore unable to make any paper squeezes of the inscriptions.

Altho expecting nothing new here, the situation and the vast solitude of the

survivors. The temple stood in the northwest corner of the city, the walls of which were nearly 25 feet thick. Both city and temple were laid out on a rectangular plan, pretty accurately coinciding with the cardinal points. In the western half of the town the remains of the sun-burnt brick houses were still distinctly visible.

Turning then to the records on the columns, the figure of Seti I, as reported

THE PLAIN OF SESEBI.

On the left is the Nile. In the middle the columns of the Temple and the walls and mounds of the ancient city. The horizon and distant mountains are completely obscured by the sand storm.

western desert in which the temple stood interested me greatly, and I set off alone in the biting sand storm to examine the place. I found a sandstone building about 130 feet long by some 62 feet in width. Most of the walls were down, and the blocks had been carried away by the Nubians for their own crude buildings. Of the two colonnaded halls only three columns were now standing, and the fragments of a fourth, still erect in Lepsius's time, were scattered among the

by Lepsius, was immediately discernible. Each of the columns bore a relief depicting the Pharaoh standing before Amon in the act of worship and sacrifice. The king was accompanied by the royal name in the usual oval, and all seemed clear and simple. Altho the gale made the use of a notebook almost impossible, I began to make a pencil record of all the reliefs until the weather should permit the use of the camera also. It was slow work. One would dodge out from the lee side

of a column during a momentary lull, make a hurried observation and hastily beat a retreat to escape a deluge of sand and to record the observation in the wel-

great revolutionary, the earliest monotheist. Seti I was but a later interloper here; the builder was Ikhnaton, and this was the only surviving temple of his

ONE OF OUR "GYASSAS" AMONG THE ROCKS OF THE KAGBAR RAPIDS, AT THE FOOT OF WHICH IT WAS SHORTLY AFTERWARD WRECKED.

come shelter of the column. As I began work I was soon disturbed by what were evidently intrusive symbols breaking into the reliefs of Seti I. I could make nothing of them, nor at first decide which were the older—the records of Seti I or the intrusive signs which interrupted the former. Behind the outlines of Amon I was endeavoring to discover the head of another divinity, when, dimly discernible thru Seti's reliefs, and almost disappearing among the barbarous chisel marks of intentional expunction, I was suddenly confronted by the familiar outlines of King Ikhnaton's figure. The unmistakable lines of his striking and peculiar person were certainly there. I turned to the other columns, now knowing where to look and what to look for. An interval of search and baffling uncertainty! There he was on all the others also! These were palimpsest columns, and this was a monotheistic sun-temple of the

monotheistic worship, and the first monument of his yet found in Nubia.

Ikhnaton is the greatest and most individual personality in the early Oriental world. Gaining the throne when Egypt was mistress of the East, he had caught the earliest conception of *universal* power and dominion, and thus gradually gained the idea of a world-god, being the first man in history to attain this monotheistic conception, some eight centuries before it was reached by the Hebrews. He deified the fructifying heat of the sun and called his new divinity "Aton." He gave his exalted idea practical expression, banishing the multiplicity of old gods and expunging their names on the monuments, even hacking out the plural "*gods*" wherever it could be found in the old records. He built a political and religious capital in Egypt—Akhet-Aton, now known as Tell el-Amarna—where the now famous cuneiform correspondence of the Asiatic

rulers with him and his father was found. Several years before this visit to Sesebi I had found inscriptional evidence at Thebes which showed that he had also founded a religious capital in Nubia called Gem-Aton. It was then all clear. This was the temple of Gem-Aton, and the heavily-walled town in a corner of which it stood was the city of the unique ruler, who had by such means sought to bring Nubia, Egypt and contiguous Asia—his whole empire—under the dominion of one god. For as the king sang to his god in

"The countries of Syria and Nubia,
The land of Egypt,
Thou settest every man in his place."

When Ikhnaton died (about 1358 B.C.), and the vindictive hatred of the ancient priesthoods triumphed over his revolutionary faith, his temples to the sole god thruout Egypt were without exception destroyed, and their fragments have occasionally been found rebuilt into the temples of Ikhnaton's successors. It was with mingled feelings that I realized that here in distant Nubia, in this desolate reach of the Sahara, this remote sanctuary had escaped Ikhnaton's enemies, and, altho it was now in a state of ruin, I was standing in the earliest surviving temple to monotheism. Having escaped the first outburst of wrath, owing to its remote and inaccessible situation, it remained unharmed for fifty years or more, when the iconoclastic Nubian officials of the zealous traditionalist, Seti I, found it still bearing the reliefs of the hated monotheist, in which he was depicted worshipping his sole god. Instead of destroying it, as had been done with all such temples in Egypt, they hacked out the detested reliefs, patched the unsightly surface with stucco, wherever it was too deeply sunken, and executed, partially upon the stone and partially upon the new stucco

patching, the reliefs of Seti I worshipping Amon the state god, to whom the sanctuary was now dedicated. When the new reliefs were painted in the usual colors all sign of Ikhnaton's hated records had completely vanished. Thus the place became a city and temple of Aton's rival, Amon. Its name, Gem-Aton, could not be purged from the mouths of the people, where it still survived. A thousand years afterward, when the theological odium attaching to the name had long since been forgotten, we find inscriptions mentioning "Amon, lord of Gem-Aton," an official designation containing the names of the two rival deities, one of the strange ironies of history. From that time on we have no further knowledge of the place. When it fell into disuse and decay after the Christianization of the country in the sixth century, the temple became a quarry for the neighboring Nubian kinglet. This continued till its walls had been almost entirely removed, and its columns one by one disappeared, leaving only four. Since 1844 even one of these has fallen. Centuries ago the stucco patching fell out and the secret of the weatherbeaten columns lay awaiting the exhaustive examination which would reveal the remarkable origin of the place. But who knows what still lies beneath the temple site and the whole town, which are cumbered with rubbish and must cover much? The rapidly falling water of the river, which was making navigation difficult, gave us no time to put down even a trial shaft, or run a trench; and there still survives yonder in remote Nubia a temple and city of Ikhnaton untouched by the spade of the excavator. What secrets of the world's first monotheist still lie hidden there remain for the future excavator who may penetrate into this inaccessible region.

CHICAGO UNIVERSITY.

Judge Cleland and Chicago's Four Hundred

BY WILLIAM E. BARTON, D.D.

[Since this article was written we understand that the politicians have had their way, and Judge Cleland is to be removed from the court described in the following article and is to try civil cases hereafter.—EDITOR.]

THE municipal courts of Chicago have been in operation not quite a year. It will soon be time to estimate, on the basis of twelve months' experience, the probable success of the system that put out of business the disreputable justice shops. Of that new system as a whole it is not my present intention to write. But there is one branch of that court which has been in operation even a shorter time than a year, of which I want to tell something. I have just sat on the bench beside Judge Cleland as he issued his one thousandth parole, and that is a good time to take account of stock. From 9 o'clock in the morning until 3 in the afternoon, with never an intermission save five minutes for a glass of milk, the judge sat at his desk, and I sat with him while the docket ground its course. It was a representative day's work, and when it was over the judge told me the whole story of the court from its beginning. I desire to tell it, partly as I saw it and partly as he told it.

When the new municipal courts were established, McKenzie Cleland had practically the unanimous support of the Chicago bar for a place on the municipal bench. But not a few of the lawyers were ready to take it all back when they learned that he was assigned to the criminal side. He had never tried a criminal case in his life. He had had absolutely

no experience in criminal law. He counted himself entirely unfit for such work, and consented to take the place for a fortnight because there had been a slip in the appointments that seemed to make it necessary for him to accept a temporary assignment. And he got there for good, and has made his calling and election sure. The court opened last February, and he has made it a unique institution.

The Maxwell Street Police Station is situated in the Ghetto. The courtroom is of the usual police court character, save that it is light and bright, and has pictures on the walls. The seats are filled with as ill assorted a lot of people as ever were collared and shaken together by the strong arm of the law; and as for the cells in the basement, they are undesirable. The building is of the old police court type, and there is nothing pleasant to be said about the jail part of it. The way of transgressors is hard. It is only the court methods that are changed, and these have modified somewhat the hard outlines of the courtroom. As for the rest, it is like other police stations, and that is not saying much. The only good thing I can say about the cells is that most of them are empty. And that is a very good thing to say.

When Judge Cleland took this court last February, under new power given

the city in the matter of its courts, he had no new body of criminal law to administer. The same old laws are on the books that have grown up out of the cruel experience of the ages. And these laws compelled him to do many things which he did not want to do, and he is a believer in the enforcement of every law, good or bad, so long as it is a law. It seemed to him that in some way the operation of the criminal law should be constructive, and he found it only punitive.

looking after men who were down by appointing an "elder brother" to see to each one of its tempted men. It was that suggestion that started his new method. He got together seventy-five men, lawyers who practice in his court and business men of the district, and told them what he was trying to work out, and they agreed to help him. Each of the business men agreed to be an elder brother to some tempted man. The number of elder brothers increased till now

JUDGE CLELAND AND HIS COURT.

It seemed to him further that revenge should be eliminated.

Theoretically there is no revenge in the enforcement of law; but practically most laws are not enforced unless some one prosecutes. It seemed to him also that convictions should be far more certain in cases where guilt is proved, but that so far as possible needless disgrace should be spared.

Judge Cleland talked the matter over with a prominent railroad man, who told him of a church that was in the habit of

there are four hundred. These are the Chicago Four Hundred, and Judge Cleland is their leader.

Let me describe some of the cases I saw and heard. This, for instance, happened to be the one thousandth: A man was brought in drunk last night. He had spent the night in the cell. He stands before the judge, barely sober. It is his first arrest. He is married and has five children, the oldest thirteen years of age. He speaks a little English. He gets drunk habitually, and his family is very

poor, but he is not boisterous, and would be a decent man if he would let liquor alone. The law gives little liberty in such a case. He may be found not guilty, and sent home with a lecture, or he may be fined, and since he has no money, he may be sent to the Bridewell to work out his fine at 50 cents a day, his wife and children subsisting on charity while he is in jail. That is all that the law provides for such a case. And in a city not far away from Chicago on one morning only a month ago, 167 cases, of which this may be regarded as a fair specimen, were ground out in ninety minutes; a rate of speed, as Judge Cleland remarks, just about equaling that with which they dispose of hogs at the stock yards.

Judge Cleland asks, "Where is this man's wife?" She is not here. The man is sent back to his cell for an hour or two till the officers go out and find his wife. Meantime the court goes on. At length the woman appears, accompanied by the eldest child, a girl of thirteen, but looking as if she were eight. She and her mother wear shawls over their heads, and they stand, stolid, beside the husband. An interpreter is necessary for a time, but soon the little girl is discovered to speak good English, and the judge's lecture becomes the more impressive when interpreted to the parents by the child. The mother, too, drinks, but not usually to excess. The judge tells them that the easiest thing for him to do is to send the husband to the Bridewell and be done with the matter; but that if the man is sorry, as he says he is, and will promise faithfully never to touch liquor, to go back to work and take care of his family, he will not punish him. The promise is made very readily, and the man is released on parole. But this is not the end. The court sentences the man to the maximum fine and imprisonment. He then considers that a motion is made to vacate that sentence. He postpones action on this motion for two weeks, and releases the man on his own bond of \$200 to appear at that time. In order that he may not lose time from his work, he is to come to a night session of the court, and bring his wife with him. They are then to tell him how matters have gone. If they are going well, he will continue the motion another two weeks, and so on.

If, however, the man has been drinking, the bond is forfeited. Moreover, if any of the officers see him enter a saloon for any purpose, they are charged to arrest him. Positive legal evidences of intoxication are no longer necessary. It is incumbent on him to "make good." The condition of the children became matter of inquiry. This little girl of thirteen has never risen above the second grade in school. She ought to be farther along. She is not in school at all, having been in the parochial school, and now being at home in order that her mother may work out. The judge declares this must stop. The man must support his family and send his children to school. He must no longer compel his wife to work out and his children to stay home that he may drink. And he will send some one to the home to keep in touch with matters there, and see that things improve. The parents must seek the moral betterment of their children, and the judge is in condition to compel it. That suspended sentence hangs over the man just as long as the judge cares to continue the motion to vacate. That is what gives power to the pledge. For the mere promise of this poor, crushed ignorant man is as worthless as his \$200 bond, save for the power which is to compel him to come in from time to time, and to go to jail if he does not "make good." This was the one thousandth case; and I talked with the blue-eyed little figure in the shawl, the eight year old girl that had lived thirteen pitiful years, and thought there was good reason to hope that better things were before her. She is going into the public school now, and is to have a chance to live.

A red-faced, sullen, brutal looking man, not yet as sober as he ought to be, stands before the desk. He has been in the Bridewell more than once, and it did him little good, if any. He will not work, and he will drink. The rent, which is \$7 a month, is not paid. The furniture was bought on the instalment plan several months ago and cost \$90; of this \$24 has been paid, and the payments have ceased. Last night the furniture firm sent a wagon and took every article of furniture out of the house. The landlord is here to say that he will on no account take the family back. The wife,

with an infant in her arms, has no hope in her face. She stayed last night with a sister, but can stay there only a day or two. It seems an utterly hopeless case.

"Did you get any good out of the Bridewell?" asks the judge.

The man answers that each time he came out he was sober for a few weeks.

Is he ready to go to work and be a man?

He returns a shuffling and evasive answer.

The judge continues the case for two days. The man is led back to his cell. But the judge is not thru. He addresses the landlord:

"I want you to take this family back."

"Your Honor, they're no good. That man will not work. I'll never get my rent."

"I will guarantee the first month's rent," said the judge. "Will you take them back?"

A reluctant consent is given.

"Call up Klein Brothers, and tell them I mean to compel this man to work and pay the balance due on the furniture. Ask them if they will send the furniture back this afternoon."

In a little while, during which interval other cases have come to the front, the word comes that Klein Brothers are very glad to do as the judge suggests. And the judge thinks he sees a way to make a home out of those poor, wretched lives.

Here comes a man who speaks the English language. He is a job printer, and is not a bad man, but has a weak chin. His wife is here, and his daughter of eighteen, a well looking girl. This man has been a frequent drinker for twenty years, his whole married life. Excepting for that, he has been a good husband. Last night he came home drunk. When he was partly sober he became despondent, and turned on the gas with suicidal intent. His wife in terror called the police. He finished the night in jail, his first night behind bars.

The judge says to him: "You are too good a man to be here. You have more intelligence and character than most men who come to this court. I propose to give you the limit of the law, and let you go on your promise not to touch a drop of liquor as long as you live. Will you promise?"

The weak chin quivers, the blue eyes fill; the sad wife weeps silently; the girl looks up and waits.

It is easy for such a man to promise. But the sting in the tail of the promise is the necessity of reporting, with his wife, once in two weeks, and telling how his promise is kept.

It would be easy to fill the article with the cases I heard; and I turn from these only because it is important that I give the history of some that have promised and have had time to test the promise.

Two brothers committed a burglary. They were guilty, and there would have been nothing to do but to bind them over to the Grand Jury, and have them sentenced to the penitentiary for from one to fourteen years. The judge sent out and found the parents more to blame than the boys. He bound the boys over to the Grand Jury, considered a motion as made to vacate that decision; compelled the father to give bonds for the boys, and the boys to go to work and repay the cost of the articles stolen. He brought the whole family up once in two weeks. The boys are off the streets and at work. And every one is satisfied. There is no probability that the Grand Jury will need to investigate that case.

There was a man who was not decent, who had abandoned his wife, less decent, and she had him arrested for wife desertion, which now in Illinois is a criminal offense. They had six children. The judge gave him the limit of the law; sent him to work, and compelled him to make report; he is now earning \$13.50 a week and she is keeping the house, and the judge thinks it better than that the man should have gone to jail and the woman to the devil and the children to the orphan asylum.

A boy was brought up who had a bad record. His father was sent for, and would not come.

Then the judge issued a summons, and still the father would not come.

"Send him to jail," said the father; and then added, "Send him to hell, for all I care."

The judge made some remarks which he thought suited to the occasion, and issued a bench warrant for the father. He compelled the father to give bonds for the boy, and warned him that for any

act of wantonness committed by the boy the father would be made to suffer. Then he sent them both home and now brings them up once in two weeks, and it is surprising how much interest the father now takes in his boy. Judge Cleland says he is in some danger of putting the Juvenile Court out of business by his prosecution of the parents of bad boys.

Ten months ago a woman was arrested in a saloon in a very disreputable situation. She was the mother of seven children. To compel her to leave her surroundings and go to work became a possibility under methods such as this court employs; and as all policemen are deputy bailiffs, the court can keep track of such people on parole. She is now earning \$2.50 a day in a milliner's shop, has a neat home, and is behaving herself. The judge thinks that better than to have imprisoned her, scattering her children, crushing out what little womanhood was left in her, and turning her out of jail in a few months still worse disgraced.

Cases of this kind multiply so that I cannot tell many more of them. But a word ought to be said about the night sessions of the court. There are so many of them now that the judge himself cannot attend them all; and his head probation officer presides over some of them. The people come, husbands and wives for the most part, and tell how they are getting on, and if they are doing well the cases are continued for two weeks more. The judge gives fatherly and encouraging talks, little heart-to-heart sermons, to different couples; then they have some music. There is a piano in the judge's chambers, and it is wheeled out for these night sessions. There are some flowers on the desk, and the occasion is a sort of judicial church social. And the people who are trying to do better encourage each other, and thank the judge and sing "America" and go home.

This surely is a queer docket for a court of justice; but then, as has been said, Judge Cleland had had no experience in criminal law.

Some of Judge Cleland's penalties are not in the statute books at all. He tells a woman she must clean up her house; and he has the probation officer report on

its improved condition. He tells a man that he must move to a better home, and pay a little higher rent in order to get a chance for his children to keep clean. He will not let a boy out who will not promise to stop using cigarets. The way in which these conditions are fulfilled is his material for judging whether to vacate the judgment inflicting the penalty. That penalty hangs over the guilty man till the judge is sure his reformation is complete.

Can a confirmed drunkard reform? The judge says he has been as skeptical as any one on that point. But he calls to memory the case of the woodchuck, hard pursued, that came to a tree: a woodchuck can't climb a tree, but this woodchuck had to. So, he has thought it impossible for drunkards to reform; but some drunkards have to. The stern necessity of reformation is what helps the weak will. But, considering that the clay from which he would make men is already badly tempered, he does not undertake the impossible. He remembers again a story, that of the boy who bought a bantam hen and was disappointed in the size of her eggs, but who got an ostrich egg from the parlor mantel and hung it above the bantam's nest with the inscription, "Fix your eye on this and do the best you can."

But Judge Cleland does not regard himself as conducting his court otherwise than strictly according to law. He finds the guilty guilty every time; but he says that in jury trials, so reluctant are men to disgrace other men and send them to jail, three-fourths of the men bound over to the Grand Jury and indicted by it are not found guilty, tho most of them are really guilty. Out of 388 men so tried in Chicago criminal courts in one month only fifty were convicted, and the rest, most of them guilty, went free. Those who went free did so by an overthrow of justice, and those who went to jail may not have been profited thereby. Nor is it certain that the law has exhausted its resources when it chooses between killing men and locking them up. Something less monotonous, and more constructive, ought by this time to have been discovered.

This is the way Judge Cleland talks about his methods, and he talks not like

a visionary man, but in the sanest possible manner, and he seems to be making good.

There still is opportunity enough to contrast the old method with this at close range, and to find the infelicities of the old way.

"The old way is not equitable," said the Judge. "Within a month in the same court in a certain city two men were fined for the same offense fifty dollars each. One of them ostentatiously paid his fine out of a one thousand dollar bill. The other went to the Bridewell to work one hundred days, paying that fine at fifty cents a day and coming out disgraced. And before he got out of jail his wife and four children arrived from Italy, and found themselves homeless and alone in a strange city.

"Within a month a woman was arrested dead drunk and sent up for forty days to work out a \$20 fine. Five days later, in a little hut on the banks of the canal, six children were found nearly starved; they were her children. And her crime of drunkenness was less than the crime of the State against those six children. If in some way the mother could have been saved, that would have saved the children.

"I know we have poor material, sometimes, for the making of men. But if Burbank can make a degenerate plant into a beautiful flower, our courts ought now and then to be able to make good citizens out of unlovely men and women."

A Burbank of human character, that is what Judge Cleland is making himself. And he believes that it is not only esthetic but economic good sense. He estimates that the men whom he might have sent to jail, and would have been compelled to send to jail had he followed the old method, have earned since February 1st \$450,000. He holds that for them to have earned this and provided for their families is far better than that the State should have kept them in idleness and that charitable institutions should have supported their children.

As for the legality of what he is doing, he says he has looked carefully thru the statutes, and while he can find nothing that says he may do this, he also finds nothing that forbids it; and in fact all judges are in the habit of vacating deci-

sions for good cause, only he makes it the rule and not the exception; but holds the suspended sentence as a means of grace.

What proportion hold out? Of his one thousand and seven or eight paroled men, up to this evening, seventy-seven have fallen. And these men go to the Bridewell for the limit. Two of them came up this morning.

"Didn't you promise me faithfully that you would not touch a drop of liquor; that you would be good to your wife; that you would support your family?"

"Yes, sir," but I thought it wasn't much harm to drink a little."

"You thought so, did you? Well, you shall see! Do you remember what I promised you? I promised if you broke your promise you should go up for six months, and that is just what I shall do. I keep my promise."

So there are now more than seventy men in the Bridewell who have broken their promises. But more than nine hundred have behaved themselves well enough to keep their names on the continued list and to be out and free; and most of these the judge believes are really reformed.

Judge Cleland is no visionary. He is a tall, clean-shaven Yankee; no genius, but level-headed; no enthusiast, but kind hearted; a professing Christian, but with no cant; a sensible lawyer who has been placed in a position which he never coveted, and is trying to do his work constructively. In theory he is a stickler for the law exactly as it stands. The clerk tells every man in advance that he is entitled to a jury trial, and lays before him the privilege of having all the technical nonsense of the ordinary court. The defendant having signed a form in which he waives the jury and certain other things, the judge gets down to hard sense, and finds out what the trouble is. Then he looks up the law, and gives the man not the minimum but almost invariably the maximum fine or sentence. Then he puts the man on his good behavior, and tells him to make good.

And the thing is so simple, so sensible, so economical, so legal, the judge only wonders that it should have been left to him to discover the method.

The four hundred elder brothers be-

lieve in it. Two of the Chicago banks have offered to start a savings bank account with \$5 in it for any man from Judge Cleland's court who will agree to put in \$2 a month, and many of the paroled men have personal savings accounts. The lawyers in the court believe in it. In short, it seems to be giving satisfaction all round.

I write this having just returned from a full day of it; and I can only say that it seems to me a wonderful thing. I am no

stranger to courts and law trials. I have seen the punitive side of the law in many of its phases. But this seems to me to temper justice with mercy in a way so sensible and so Christian that I hope great things from it. Doubtless the plan will be found to have its defects, as all things human have, but this is an attempt to make justice not retributive but constructive, and to be worthy of the careful study of police courts everywhere.

The Prisoning of Song*

BY GEORGE SYLVESTER VIERECK

THERE lay one weeping at Apollo's feet
Whose tuneful throat was like a golden
well;
Her tears unutterably sweet
Made music as they fell.

"Thee have I served, O Father, all my days,
Yea, ere thy hand had made the lute-string
and the lyre,
Out of my heart I snatched the terror and
the fire,
And with my body wrought thy perfect
praise.

"I am the rapture of the nightingale
Heavenward winging,
The song in singing,
Beauty audible.

"With rumbling thunder and discordance
hideous
The gods and stars shall tumble from the
sky,
But beauty's curve enmarbled lives in Phidias,
And Homer's numbers cannot die.

"To them that are my sisters thou hast given
Eternity of bronze and script and stone;
I, only I, must perish tempest-driven
In the great stillness where no moan
Is heard, wind stirs, or reed is blown."

Apollo wept. "Most sweet, most delicate,
Death fears that he might tarry at thy gate
Too fond, too long,
And that, in listening, he forget the throng
That call upon him with their piteous cries:
Thy sweetness, hence, in every song
Lives, and in each song dies."

*Copyright, 1907, by George Sylvester Viereck.

He paused, and impotent grief made dark
His shining countenance, when, mark!
There rose the proud Promethean race
Unto whose voice the thunders hark,
Who sailing in a fragile bark
Behold the heavens face to face.

Their arms both lands and oceans span,
They hold the lightning in a vise,
Yea, by incredible device,
They prisoned sound in curious shells,
And by these signs and miracles
Proclaimed the masterhood of man.

O listen, all men, and rejoice,
For lo, Caruso's argent voice
Endures as granite, even so,
And Melba's song like Plato's thought
Or like a mighty structure wrought
By Michael Angelo.

And when the land is perished, yea,
When life forsakes us and the rust
Has eaten bard and roundelay,
Still from the silence of the dust
Shall rise the song of yesterday!

OAK PARK, ILL.

The New York Rent Strike

BY WILLIAM MAILLY

[Mr. Mailly is a journalist who has made a special study of the Lower East Side of New York in its various aspects. Until recently he was National Secretary of the Socialist party of America.—EDITOR.]

BEGINNING with a complaint from less than a dozen people, the anti-high rent strike in New York has developed into a movement extending from the lower East Side to upper Harlem, and spreading thruout Brooklyn on

time so spontaneous a movement should receive such widespread support and sympathy invites special attention and inquiry. The fact that the prevailing industrial conditions tend to accentuate certain problems does not sufficiently ex-

A WOMAN STRIKE LEADER DENOUNCING THE LANDLORD.

the east and reaching as far as Chicago on the west. There have been similar strikes in the past, but none so far-reaching and so well organized as this one. Instead of a few hundreds as heretofore, it is not exaggerating to say that hundreds of thousands of people are directly involved.

This presents a phenomenon of deep social interest. That within such a short

plain a movement of this exceptional character. A review of the immediate causes of the strike will reveal some unusual features.

The rent question is a serious one all over New York, except in some favored portions, but it was natural that the demand for reduced rents should have its inception in the section where the question has become most acute. This section

is the lower East Side, embracing the territory lying south of Fourteenth street.

This comprises an area of 1,393 acres, including water front, and is the most densely populated section of the United States. Within the five years from 1900 to 1905, the population there increased from 533,394 to 602,975, a gain of 69,581. In 1900 the population was 382.9 per acre; in 1905 it was 432.8 per acre. In other words, there were in 1905 nearly fifty people more per acre than five years before.

Comparing this with other parts of Manhattan, the East Side, north of Fourteenth street, in 1905 contained 211.1 people per acre, the Fifth avenue district had 96.4 per acre and the West Side district had 90.2 per acre. If Greater New York was peopled as densely in 1905 as the lower East Side, it would have a population of 90,549,610.

In that same year thirty-seven blocks on the lower East Side had each over 3,000 population; of these blocks, one had over 5,000 and three over 4,000. Eleven of these blocks had densities of over 1,100 to the acre. In the same eleven blocks the population had increased 37 per cent. in five years, the average population per block increased to 3,528 and the average density per acre to 1,275. There were 339 more people in each of these blocks than in 1900; one block alone had a density of 1,458 per acre. Only one other block in the city, on the West Side, with over 6,000, was then more densely populated than any of those on the lower East Side.

These figures give some idea of the congestion of population in the strike district, and the congestion has since intensified until the density is much greater. But figures cannot convey the depth of misery and poverty which there exists. The lower East Side has been truthfully described as "the home of the tenements, push-carts, paupers and consumption. It is the experimental laboratory of the sentimental settlement worker, the horrible example of the pious moralist, and the special prey of the self-satisfied philanthropist."

The population is composed mostly of Russian, Rumanian, Austrian and Galician Jews. Recently there has been a gradual influx of Italians, but their pres-

ence has not been appreciably felt as yet. These people live in apartments, which, when there are four rooms, according to the Tenement House Committee, contain an average of 355¼ square feet of space.

These apartments usually comprise a front room, a kitchen and two bedrooms, the latter being generally lit by portholes in the airshaft, affording just enough light at midday to prevent absolute darkness. Such apartments rent, on the average, for \$4.55 a room per month, which is equal to 63 cents per square foot. In some places the average rent reaches 75 cents per square foot per annum.

On the East Side not alone the parent, but the whole family works. The clothing industry has its head center there and nearly every one above the legal working age has to enter the shop in order to make up the family income, which for the average family is estimated at \$600 per year. Of this income at least 30 per cent. is paid out for rent alone.

During the past few years rents on the East Side have increased enormously. Apartments in 1906 rented for \$2.50 to \$3.50 per month higher than in 1902. Experts estimate that in six years there has been an increase of 60 per cent. in rents of tenement houses in certain parts of the East Side.

An increase in rentals would naturally be expected to follow upon increased congestion. The razing of hundreds of buildings thru new bridges being erected caused an overflow of population into Brownsville, on the Brooklyn side of the East River, and some went to the Bronx, but the major part of the population remained and was reinforced considerably by immigration. But the rentals have increased out of all proportion to this increased congestion.

According to Mr. Lawson Purdy, President of the New York Bureau of Taxes, the assessed valuation of East Side property did not increase in the years between 1903-1907, as compared with Manhattan as a whole. This is because the assessment is based upon the general average increase in property valuation.

An abnormal condition therefore exists; and this is attributable mostly to the speculation in East Side real estate that has obtained for several years past, and

especially in the boom days of two years ago, when everybody who could get into the real estate business on the East Side did so. Sales of tenements were then tremendously active, and it is an accepted axiom that rentals grow with activity in sales.

Houses were bought and sold, not upon their actual valuation, but upon their prospective rent-drawing powers. In some cases as many as five transfers of the same property have been known to take place within a year. In each case the rent would be increased, for each succeeding buyer would require a higher rental in order to realize a profit on his investment.

For example, rent on the East Side is, roughly speaking, figured at 10 per cent. of the value of the house; that is to say, if a piece of property is valued at \$25,-

take this property at the increased price, not because of its actual income, but upon the speculation that he also can increase rents in the same proportion, going thru the same process of reselling also at a profit.

As a further example: one six story house on Norfolk street sold six years ago for \$28,000; today \$43,000 is asked for the same house. There have been no improvements worth mentioning, but this house has changed hands several times, and two rooms that rented for \$4 each six years ago now rent for \$6.50 each. This is only one of many cases.

Supplementing and aggravating this speculative activity is the lease system. "Absentee landlordism" is a phrase as common now among the tenement dwellers as it once was in Ireland during the Land League agitation.

HANGING A LANDLORD IN EFFIGY.

000, it is expected to yield \$2,500 in rents. If rents can be increased \$500 today, the house can be sold tomorrow for \$5,000 additional. The next buyer will

There are three classes of lessees. One class has ground leases only, the land being held by the Astors, Goetts and other large land owners. These lessees usually

own the tenements and fix the rentals, paying the taxes, water rates, making repairs and meeting all charges.

The second class of lessees are those who lease both ground and building.

Right here it may be said that in the majority of cases the tenants on the East Side have to remain there in order to be close to their places of employment, feeling they can better afford, from a ma-

THREE INSIDE DARK ROOMS, ALWAYS LIGHTED BY GAS IN THE DAYTIME.
135 Rutgers Place. Rent, \$12 a month.

Most of these leases run back for a considerable time, frequently ten to fifteen years. At the time the leases were made they were based upon the valuation of the rents then existing, which were as low as \$2 a room. These lessees are thus getting the entire benefit of the raise in rents since that time.

Another source of profit is found in the reduction in the size of apartments, in order to take advantage of the increased demand thru congestion. Where originally an apartment would contain four, five or six rooms, these rooms have been divided up, four rooms being made into two twos, and so on. A tenant that formerly occupied, say, five rooms, paying \$3 a room, would take a three-room apartment and pay the same total rent as before.

terial standpoint, to compress themselves into smaller apartments than move where transportation would mean an increased expense and more time in going to and from their work.

Then there are the lessees who are the most numerous and also the least wealthy. These get houses on lease from owners who have acquired the property in the past two or three years at the inflated valuation based upon the constantly increasing rentals. The lessee gets a small allowance from the landlord out of the gross rentals of buildings and makes up the balance of his income by increasing the rent, usually from 50 cents to \$1 per month. It is to get this increase that the sweating process takes place.

Some of these lessees live on the property and have direct charge. They are

the hardest pressed by the present strike because they are dependent upon the rents for their income, and if they cannot collect the rents they run the risk of losing the security they have deposited with the actual landlord and owner. These lessees generally took over houses based on the rent valuation of two years ago, when rents touched the highest mark in the entire history of the East Side.

In all the apartments accommodations are poor and improvements are made but seldom. It is true that the Tenement House Department has effected salutary reforms along the line of better lighting and sanitary conditions, but the laws are still inadequate and the activity of the department is greatly restricted thereby.

This intricate system of speculation and lease holding has developed a condition similar to the sweatshop and padrone system of labor. The tenants are not only underpaid in the shops, but they are subjected to exceptional exploitation as rent payers. Rentals are levied upon the principle of all the traffic will bear, and so long as work is fairly good and the tenant is able to meet the rent there is not much trouble, altho the average number of evictions in normal times on the East Side is comparatively high. There is a limit, however, and this limit has been reached within the past two months.

It is estimated that there are at this writing 100,000 people out of employment on the East Side alone, and this means that the ability to pay the high rents has lessened considerably. As January rent day drew near, agitation began among the tenants as to how the rent was to be paid, and this agitation in turn formulated itself into a question which at last found expression at a meeting of the Eighth Assembly District of the Socialist party. As a result, a committee was appointed to decide upon measures looking to a reduction in rents, and this action became known so quickly that the entire East Side was aroused ere the committee had time to mature plans fully.

Organization was hastily effected, however, and the Socialists have the situation well in hand.

At this writing the Socialist committee has secured directly settlements with over 180 houses, involving a total reduction of nearly \$5,400 a month. This does not include the larger number of settlements made without the intervention of the committee, many landlords acceding to the reduction immediately upon the demand of their tenants.

Each house is organized separately upon the tenants' signing a demand upon the landlord, the reduction running from \$1 to \$2 a month. This demand is then filed with the committee, which interviews the landlord and tries to have him sign an agreement. Failing to reach an agreement, the tenants refuse to pay rent. The landlords then appeal to the courts and get out dispossess notices.

Altogether there have been 1,000 dispossess notices for as many tenants filed in the Madison Street Court. These mean evictions if warrants are issued. The landlords are not attempting to dispossess the tenants of entire tenements, but only a few tenants in each building. How long this can continue is the question.

There has been much sensationalism about this strike in the daily papers, much exploiting by them of innumerable "Joan d'Arcs," much distortion of innocent incidents into wildly impossible ones. All this has tended to give a high color to the situation, but the fact remains that this is a serious movement, that it has its inspiration in grievous injuries inflicted upon a patient and poverty-stricken people, and that it has so far succeeded in bringing some relief to them.

It is also teaching the landlords of the East Side that if they will not voluntarily lower rents, in line with the changed conditions, they will be forced to. And to both the tenants and landlords elsewhere there is in this situation a lesson which all can heed to advantage.

NEW YORK CITY.

Pages From a Modern Textbook

BY S. STRUNSKY

I

THESPIS.

QUESTION: What is one of the crying needs of the time?
Answer: The poetic drama.

Q.: What proof have we that the public demands the poetic drama?

A.: The fact that every theater in New York is presenting Wild West shows or musical comedy.

Q.: What proof have we that the theatrical managers favor the poetic drama?

A.: The fact that when an Elizabethan poetic tragedy is produced nowadays all the poetic passages are carefully excised.

Q.: It follows, therefore, that the responsibility for our lack of a poetic drama rests with whom?

A.: With our playwrights.

Q.: What are the obstacles to the growth of the poetic imagination in this country?

A.: There are four: Our national spirit of rush; our climate; the increasing scope and precision of our knowledge, and the use of scenery on the stage.

Q.: Explain the working of your first cause.

A.: The poetic imagination seems compelled by a law of its own being to seek expression in sentences two hundred words long, with many parentheses, and the predicate placed at the end. American hustle finds this unendurable.

Q.: How does our climate enter into the question?

A.: The American climate is notoriously conducive to the development of a high-pitched, nasal and extremely rapid mode of word articulation, whereas the poetic imagination, by a second law of its own being, invariably induces a hollow, booming, monotone, like the beat of the surf on the shore.

Q.: Why should our increasing knowledge be harmful to the imagination?

A.: Exact knowledge is always inimical to fancy. For instance, now that we

are quite sure that Mars is inhabited and that life can be artificially created, two vast fields which formerly lay within the domain of fancy are now located within the realm of cold fact.

Q.: Why should elaborate scenery on the stage interfere with the play of the imagination?

A.: Because the haunting sense of the enormous expense involved, as advertised by the managers, possesses the mind to the exclusion of every other thought.

Q.: Does, therefore, the laming of the poetic imagination render a poetic drama in this country impossible?

A.: Not at all. The modern poetic drama should be just as able to dispense with imagination as other forms of modern poetry have done.

Q.: Make your point specific.

A.: Lyric poetry, once upon a time, used to deal with such matters as love, passion, aspiration, life and death—subjects, all, that lie beyond the reach of the senses and that only the imagination can grasp. Lyric poetry today deals with steam engines, automobiles, boarding-houses, strikebreakers, Wall Street, Brooklyn Bridge by night, and so on; all of these obviously call for no exercise of the imaginative faculty.

Q.: Would you say, then, that the author of a modern poetic drama errs in attempting to deal with the Sapphos, Neros, Ulysseses, Herods and Francescas of the older poetic drama?

A.: Exactly. The modern poetic drama should center about the winning of the Vanderbilt Cup race or the gradual transformation of a slum dweller's soul under the continued use of Jones's Chemically Pure Soap.

II

THE COMMUNISTS.

Question: What is a home colony?

Answer: An institution which combines the advantages of the domestic fire-side with those of the summer bungalow and the Italian *table d'hôte*.

Q.: Name two such specific advantages.

A.: An environment more favorable to the cultivation of the intellectual life than is to be found in the ordinary family circle, and superior facilities for the training of children.

Q.: What other argument in favor of co-operative housekeeping is sometimes advanced?

A.: The lack of good servants.

Q.: What fundamental error vitiates the first argument you have cited?

A.: The fallacy involved in assuming that a writer or artist whose temperament is such as to make the presence of his wife and child a frequent irritation and obstacle to creative effort will attain the necessary quiet and concentration by surrounding himself with fifty other women and children.

Q.: Is it true that the total artistic productivity of a given number of individuals is greater under the co-operative system than under the present separate family organization?

A.: No. It has been shown that in every home colony the stress of circumstance compels the most gifted minds to assume charge of the kitchen, the furnace and the dormitory, so that only the mediocre talents retain the necessary leisure for creative work.

Q.: What advantage is most often cited to counterbalance the poor quality of the food in the average co-operative home?

A.: The exceptional attractiveness of the house and the furniture.

Q.: In the perfected home colony of the future how will all the furniture be made?

A.: By hand.

Q.: And how will all the children be brought up?

A.: By machinery.

Q.: Do not the children, as a matter of fact, occupy a higher position in the co-operative family than in the ordinary household?

A.: Only in the sense that the prevailing ratio of one child to every ten adults makes the children more of a curiosity.

Q.: It is sometimes asserted that the

will power necessary to break with domestic tradition is a valuable factor in the development of the coming Superman. What is the force of this argument?

A.: Statistics show that out of every five professed Supermen living under the co-operative system one is afflicted with chronic dyspepsia, one is a believer in astral science, one is addicted to the use of his knife when eating pie, and one is under eighteen years of age.

Q.: Is not the intellectual stimulus of the communal life sufficient compensation for all the disadvantages we have mentioned?

A.: Far from exercising a consolidative influence on the fortunes of the colony, the claims of the mind often become the main cause of its disruption.

Q.: Is that because the co-operative family fails to bring together a sufficient number of equally gifted minds?

A.: Quite the contrary. There is always an excess of intellectual equality.

Q.: Explain the paradox.

A.: It has been shown that the human intellect is at its best when it is in contact not with an equal but with an inferior intellect. The poet's fancy is most vivid in the presence of the beautiful Philistine women who do not understand him very well. The professional wit is at his best when his attitude toward his companions is tinged with contempt. The critical faculty acts most justly in the absence of contradiction.

Q.: How does this principle affect the co-operative family?

A.: The members of the colony soon become aware that life among one's intellectual equals brings with it intellectual sterility. At the same time they begin to understand that the interests of the artistic temperament are best subserved by our present family system, which supplies every man with a legally constituted inferior in the person of his wedded wife.

Q.: When do the principles of co-operative housekeeping encounter their complete refutation?

A.: When the founder's wife secures a good servant.

Literature

Early Western Travels

THE completion of Mr. Thwaites's series of reprints of books of travel* relating to the early history of the West is an event of much importance in present time historical production. The great enterprises that have been undertaken in recent years are many in number and broad in scope. They indicate not only a strong and ready demand that can absorb immense quantities of works on American history, but a breadth of vision in the editors, writers and publishers that is marking a new day in American historical writing. And as each effort is successfully completed we feel an increased satisfaction at the spread of proper historical knowledge in America.

Wisconsin has for twenty years insisted upon the significance of the West in American development. A colleague of Mr. Thwaites has led in the propagation of this idea which has revolutionized the writing of American history. It has been Mr. Thwaites's own function to make available much of the material by which this idea is to be sustained. The University of Wisconsin and the Wisconsin Historical Society have thus become the symbols of careful, modern historical thought. And this series, now finished in its thirty-second volume, is a mighty contribution to the work for which they stand.

We have already commented upon the earlier volumes of the *Early Western Travels*, expressing our gratification at the beauty of imprint and the excellence of the editorial supervision. These still leave little to be desired. Since our last notice, the "Voyage" of Maximilien, Prince of Wied-Nuwied, has been completed, together with its unusual atlas of plates. The work was originally of such great cost (it was imported for sale at \$120) that its contents never became available to the general student; yet Maximilien saw everything in America

from the coal mines and early railway at Mauch Chunk to Cantonment Leavenworth and the posts of the Upper Missouri. He not only saw, but understood, which was quite as important among last-century European observers. The volumes from XXVI to XXX are also new, and contain the valuable Rocky Mountain descriptions of Flagg, Farnham, Palmer and Father de Smet. In the thirties and forties, when these narratives originally appeared, the Rockies were just showing above the American horizon. These were the books that gratified the curiosity of the Oregon and California emigrants of the fifties. The "Far West" of Flagg, going beyond the mountains in the thirties, is especially strong in its description of the route thru the Middle West, and in its account of steam river navigation. Farnham was an Oregon homeseeker and pioneer. Father de Smet was a Jesuit missionary who worked among the Indian tribes from the Bitter Root to the Oregon country. The series as a whole covers and describes the frontier thruout its romantic period. The earliest narratives deal with a frontier just beyond the forks of the Ohio, and Pittsburg represents their edge of civilization; while in Palmer's journal, which concludes the series, the beaten trail is seen crossing the prairies and the mountains until it descends into the Valley of the Willamette. The earliest mark the beginning of deliberate exploitation of the wilderness, with the Indians in possession of the whole Mississippi Valley; before the end, the last phase of the Indian struggle has begun with the concentration of the tribes on reservations and the extension of agricultural occupation well into the old-time hunting grounds. In character of travel the series reveals a great evolution, touching at one end the day of the trapper and the devious trail, thru unbroken wilderness, passing by the pack train, and reaching a period of emigration attended by the cooking stove and the rocking chair. With "the advent of the common-

*EARLY WESTERN TRAVELS, 1748-1846. Edited by Reuben Gold Thwaites. Vols. xxiv-xxxii. The Arthur H. Clark Company, Cleveland. \$4.00 each.

place" in plains travel the series ends. The primitive character of the frontier had disappeared.

The two index volumes which conclude the series are a distinct contribution to the history of the West, and are so important in their nature as to demand special notice. Scholars have at times suggested the utility of a co-operative index covering a well defined field of history, but the suggestion has never before been materialized. Here we have, in one alphabet, the whole contents, as to persons, places and ideas, of thirty-seven original works, all dealing with the same general theme. The single rubric "Indians" covers seventeen pages in the index, a random page containing 383 references. It is, indeed, the largest single entry, but its treatment is typical of the thoroughness of the whole work. Only scholars who have turned the pages of scores of unindexed, or worse, badly indexed, books can know how great is this service which prepares the series for instant reference. And only those who have traveled miles to read unique copies of early narratives can properly estimate the value of the reprints presented in the series.

Socio-Economic Fiction

THE story of a fraud perpetrated primarily to shield a family from scandal, but complicated in the sequel by sheer accident, with the unlawful retention of a great fortune;¹ a novel of social ambition and reckless speculation to gratify its aspirations, of high life and low, of extremes rather arbitrarily linked together for the sake of contrast;² a narrative whose mission it is to spread the doctrine of the single tax;³ and a rather inconclusive relation of the experiences and the conversion to the cause of labor of a young capitalist who, from a mere whim, became a laborer in his own iron mill,⁴—these are four recent additions to that latest form of fiction, the socio-economic, which, for the moment, forms

so large a part of the whole output of this form of literature.

The four stories suggest, however, first of all, a reflection upon another phenomenon noticeable in other fiction, namely the omission from its pages of religious faith as an active influence in the ordering and shaping of the life which it aims to reflect. Institutional religion is still met with as part of the plots and atmosphere, but it is mostly set up as a target to be riddled with the satire of the iconoclast, as in the first two of the four books here under discussion. In *The Jessop Bequest* there is no Christian faith, but one of its characters, perhaps the most lifelike and interesting, is a fashionable clergyman, pompous and inefficient, whose mental processes consist of mechanical attempts to fit texts to the circumstances of life, and the circumstances of life to texts—a stumbling, mild worldling without lodestar or rudder, hypocrite only because he is an unconscious adept at self-deception, a temporizer with financial temptation, whose fall is due to lack of moral backbone, not to deliberate dishonesty. The clergyman of *The Broken Lance* belongs to that now familiar type of the fictional divine, whose conscience refuses to acquiesce, in the face of appalling socio-economic conditions, who revolts at the self-complacent, fashionable Sunday lip-service that accompanies and greases so much weekday self-seeking in commerce, finance, industry and dealings with one's neighbors. In *High Places* and *Toilers and Idlers* ignore both faith and institutional religion entirely. The second of these, like *The Broken Lance*, seeks to substitute justice for charity—justice as it is seen by the toilers and the disinherited and the champions of their cause.

These be general observations, however. When one comes down to particulars, the statement must be made that in three of these four books the good intention must be largely taken for the performance. Mrs. Burr's novel far outtops the others technically. She has invented an ingenious plot, with a daring point of departure, and peopled it with rather interesting, if not strikingly original, characters, but her atmosphere is provincial, like her setting. Dealing with

¹THE JESSOP BEQUEST. By Anne Robeson Burr. Boston: Houghton, Mifflin & Co. \$1.50.

²THE BROKEN LANCE. By Herbert Quick. Indianapolis: Bobbs-Merrill Company. \$1.50.

³IN HIGH PLACES. By Dolores Bacon. New York: Doubleday, Page & Co. \$1.50.

⁴TOILERS AND IDLERS. By John R. McMahon. New York: Wilshire Book Company. \$1.25.

many phases of contemporary American life—with the love of money, with “machine” politics, with higher education, with the American girl who has the freedom of “finding herself” without guidance or interference from her elders—it lacks the wider outlook. Its horizon is that of Chillingworth, which is somewhere in Massachusetts.

The Broken Lance is a tale of much incident; in fact, its author has overcharged his canvas in his zeal to preach the economic cure-all made familiar by Henry George after its previous long struggle for recognition. There is discernible in these pages, however, a great sincerity of purpose, an ardent desire to reform and improve, to serve the poor and awaken the rich. Mrs. Bacon’s novel is of the “Frenzied Four Hundred” stamp, with, in its contrasting pictures of low life, a suggestion of the sentimentality of “The Music Master.” It gives the impression of having been based upon the reading of other stories of its class, rather than upon first-hand study of the life it attempts to depict. *Toilers and Idlers* is interesting in parts in the realism of its pictures of the life of the poor, but the work of a ‘prentice hand, as yet incapable of making the best of its material.

Poland: The Knight Among Nations. By Louis E. Van Norman. New York: Fleming H. Revell Co. \$1.50.

Here is a book about a country which does not exist, which is not to be found on any official map. Yet Mr. Van Norman shows that there is a Poland that is very real and alive even tho it is deprived of “a local habitation and a name.” There is a Polish race that has contributed many great names to the world history, a Polish language that persists in spite of the determined efforts of three powerful nations to crush it out, and a Polish patriotism that seems to be more powerful and unified now than in the days of Poland’s glory. We Americans know very little about the Poles, notwithstanding we have over 2,000,000 of them in our midst. Chicago is the largest Polish city of the world after Warsaw and Łódź. Henryk Sienkiewicz has, however, done much to arouse our interest in Poland, and made us realize the

need of such books as this. Sienkiewicz has introduced to us both old Poland and new, the proud, brutal, fiercely individualistic heroes of the past in his immortal trilogy, and to a modern type, devitalized, morbidly sensitive, introspective, Amiel-like in his “Without Dogma.” Most readers will turn first to the chapter in which Mr. Van Norman tells of his visit to the great romancer in his Carpathian cottage. It is annoying, tho doubtless inevitable, that his transliteration of Polish names should be so different from that adopted by Jeremiah Curtin in his translation that we find it difficult to recognize the names of the knights we know and love well, altho we rarely mention them in talking to our friends. Not many people know that Sienkiewicz lived for a time in the United States as a member of the Utopian colony started in California by Madame Modjeska, who contributes an introduction to this volume. Most of the chapters were published in magazines some time ago and are not exactly as the author would write them now even in cases where he is unwilling to change them. The chapter on the women of Poland is written *con amore*, for it was there that the author found his wife.

The Measure of the Hours. By Maurice Maeterlinck. New York: Dodd, Mead & Co. \$1.40.

The Intelligence of the Flowers. By Maurice Maeterlinck. New York: Dodd, Mead & Co. \$1.20.

“In the invincible ignorance in which we are, our imagination has the choice of our eternal destinies.”

“Let us therefore try, whenever a new dream presents itself, to snatch from before our eyes the bandage of our earthly life. Let us say to ourselves that, among all the possibilities which the universe still hides from us, one of the easiest to realize, one of the most probable, the least ambitious and the least disconcerting is certainly the possibility of enjoying an existence much more spacious, lofty, perfect, durable and secure than that which is offered to us by our actual consciousness.”

These sentences from the essay on “Immortality” in *The Measure of the Hours* are typical of Maeterlinck’s way of thinking, a way that appeals to many minds in this unsettled period. Following this naturally is the essay on “Our Anxious Morality,” which more than any other recalls the mysticism of “The

Treasure of the Humble," as it reviews the busy earnestness with which, among the ruins of old temples, man sets up the standards of a new morality. These, with a slashing article on "Our Social Duty," make the strong meat of the volume; the essay that names the book is a slight fantasy about hourglass, clock and sundial. The attractiveness of one of these essays, *The Intelligence of the Flowers*, is enhanced by printing separately in an illustrated and decorated volume. Like "The Life of the Bee," it is a unique combination of fact and fancy, scientific in its statements, humanistic in its interpretation of them, mystical in its philosophy, poetical in its expression.

The Shuttle. By Frances Hodgson Burnett.
New York: Frederick A. Stokes Company.
\$1.50.

"No man knew when the Shuttle began its slow and heavy weaving from shore to shore that it was held and guided by the great hand of Fate."

And Mrs. Burnett traces the weaving of closer international relations by the ever swifter flash of the "shuttle," which she does not more definitely characterize; perhaps it is a complex thing made up of commerce, travel, culture, sympathy, whatever draws continents nearer together. Mrs. Burnett indignantly denies that she meant her book to be nothing more subtle than a treatise upon international marriages. But the old story-telling instinct is too strong to be held in check by any purpose to prose and prate of international relations and world-politics, and we are soon swept away by the rushing tide of an old-time romance, with an incredibly beautiful heroine, an abominable villain of truly melodramatic blackness, an unspeakably spiritless and pallid victim of the villain's brutality and a hero out of the ages when men settled their differences out of court by might of the stronger arm. It is no small tribute to Mrs. Burnett's art that we forget the melodrama and are moved and thrilled by the story she tells so well. Bettina Vanderpoel is impossible, of course, but we like to believe in her. Sir Nigel Anstruthers is about as probable as Bluebeard, and we shudder at his black malignity in the spirit of our

nursery days, but we do enjoy the delicious shiver up and down the backbone which used to greet a giant's growl. Just such a blood-thirsty giant is Sir Nigel Anstruthers, and we rejoice at his downfall with the unsparing justice of wide-eyed childhood. His broken-spirited wife is a more conceivable character, altho her timidity is over-emphasized. Unlike Mrs. Wharton, and, in a less degree, Miss May Sinclair, Mrs. Burnett is a romanticist, and a born teller of tales. The three women have written the three important novels of the year. In "The Fruit of the Tree" and "The Helpmate" the authors are critical analysts of their men and women; their clever but essentially unsympathetic dissection in marked contrast to Mrs. Burnett's warmer-hearted attitude. Hers is no dispassionate aloofness from her characters; she loves and hates them with vivid partizanship. She writes most vehemently against the practice of American heiresses picking up degenerate specimens of foreign aristocracy from the "international bargain counter." It did not need the horrible scene near the close to prove that such are bitter bargains; the daily papers tell us that. We must protest also against the grotesque nomenclature of Mrs. Burnett's characters. She has always had a taste for bizarre names, but how she had the heart to saddle the poor, elfish, little heir of the misery of the House of Anstruthers with such a name as Ughtred we cannot conceive! He is a dear, pathetic little gnome, and his chivalrous defense of his mother is very touching. He deserves a brave boy-name. And to G. Selden we yield an ungrudging admiration. The clean and keen young American salesman, working for the Delkoff Typewriter Company "at ten per," with whole-hearted devotion, is worth all the rest of the characters weighed against him. He is a friend we are glad to make. And his taste in literature is not to be despised:

"Ruddy now. He's all right. I'm ready to separate myself from one fifty any time I see a new book of his. He's got the goods with him."

And we might echo this sentiment of the hall-bedroom hero and critic whenever Mrs. Burnett writes a new novel.

Kilo. By Ellis Parker Butler. New York: The McClure Co. \$1.00.

The genial author of "Pigs is Pigs" has written a novel immortalizing the book agent. *Kilo* is the name of the fresh-water town which is the scene of Eliph' Hewlitt's freakish activity. Middle Iowa may have a town like Kilo, just a homely, common, busy little Iowa village, as hot as Sahara and full of people queerer than any New Englanders Mrs. Freeman ever patched together out of shreds of reminiscent gossip, but we cannot help a suspicion that Mr. Butler's skittish imagination took the bit in its teeth and ran away with him in some of the chapters. Certainly it is lively reading; but the persistent effort to be funny thru 279 pages exhausts author and reader alike, and we may fail to see some passages of genuine sincerity and a few veritable folks. Eliph' Hewlitt is book agent to the marrow of his bones. "For years he had thought of woman only as a possible customer for Jarby's Encyclopedia." When such a man makes up his mind to go a wooing, and from long habit can talk of nothing but his book, there are sure to be enlivening episodes. Peer Gynt did not divert his dying mother's mind by their imaginary ride more utterly than did this Iowa book agent with his enthusiastic recital of the merits of Jarby's Encyclopedia; her last words were: "Eliph', you may put me down for a copy."

Poetry in Song, and Some Other Essays.

Studies in Literature, with a Few Pieces in Verse. By Thomas Emmett Dewey, Litt.D. Introduction by Charles Moreau Harger. 8vo. Pp. 192. Kansas City, Mo.: Franklin Hudson Publishing Co.

Mr. Dewey was a practising lawyer in Abilene, Kan., but his heart was in literature, and he was president of the Kansas Academy of Language and Literature. His professional duties and his retiring nature forbade him to publish very much with his name, but since his death his friends have issued this volume of his addresses, most of which are studies of poetry and poets. He was a lover of Lanier, Keats, Shelley, Burns and Shakespeare. These lectures were deservedly very popular, and they bring out with great clearness the beauties and characteristics of true poetry. He had

an ear for the music of verse, and had carefully studied the poetic art. The selections are made with admirable appreciation of what is choicest and best; and a study of their critical essays will wisely direct the student who wishes to know and feel, and then to understand why it is that what he has felt and known to be good is really such.

The Blue Ocean's Daughter. By Cyrus Townsend Brady. New York: Moffat, Yard & Co. \$1.50.

We do not believe this book will add to the author's literary reputation. Cyrus Townsend Brady is inclined to load the market with productions that give the impression of having been written off-hand and sent to the press room, with the ink still wet. There is no semblance of a plot or of any concrete object in the author's mind. The volume tells a wild and rambling tale of the sea, where men are murdered indiscriminately, while lovers embrace on gory decks. The following passage is typical:

"And there in the cabin, ranged about by the bodies of the dead and dying, upon the storm-tossed, weather-beaten, wounded ship, her vitals filling with that which had upborne her, but which would now soon drag her to destruction, these two clung to one another with kisses long and sweet."

The heroine of the book is a nautical amazon, who has spent her life at sea with her father, the captain of the American merchantman "Hiram and Susan." In the course of the tale four of the principal characters die hideous deaths, and some twenty others are killed with various degrees of ferocity.

Literary Notes

....There are 130 ways to cook clams, also 175 ways to cook lobsters, and other ways to cook other things, all to be found in Olive Green's *How to Cook Shell-fish* (Putnam, 90 cents.)

....Those whom the funny columns of our modern newspapers make tired may take refuge in the humor of our ancestors by carrying in their pockets the two little books of selections from *Early American Humorists*, which range from Franklin and Artemus Ward to Nasby and Billings. (Small, Maynard, Boston, 75 cents each.)

....Professor Scripture's *Thinking, Feeling, Doing*, in its second edition does not find itself so lonely as when it first appeared. "The new psychology" has won its cause and become

established in the curriculum. But there is still need for a brief popular explanation of its methods and results, and no better than this has appeared. (Putnam, \$150.)

....If ever there was an honest and delightful nature fakir, Walter Emanuel is the man. His little dog autobiography, entitled *A Dog Day*, which is now reprinted by E. P. Dutton for the holiday season, will warm the heart of every one who loves dogs and has a sense of humor. The pictures by Cecil Aldin are almost as bright as the text.

....The present crisis in the Roman Catholic Church receives special attention in the January number of *The Hibbert Journal* (issued in this country by Sherman, French & Co., Boston). Fathers George Tyrrell and John Gerard, S. J., discuss Modernism from opposing points of view and the Rev. L. Henry Schwab writes on "The Papacy in its Relation to American Ideals"

....The Report of the Commission sent by the National Civic Federation to investigate municipal and private ownership of public utilities is published in three volumes by the Federation, 281 Fourth avenue, New York. As was stated in a review of the work of the Commission, published in THE INDEPENDENT, August 1st, this is the most comprehensive, thoro and unbiased study of the actual workings of the two systems both here and abroad that has ever been made and the volumes are indispensable to all who would form an independent and well-founded opinion on the subject.

....Deserving of attention is a monograph on *The Servant of Jehovah* by Prof. George Coulson Workman, of the Wesleyan Theological College of Montreal (New York: Longmans, Green & Co.). The work is a careful historical exegesis of all the "Servant passages" in the Deutero-Isaiah. Professor Workman's view is that "the Servant is always the Israelitish nation, or the Jewish Church, contemplated by the prophet either from the point of view of its actual condition or from the point of view of its divine vocation." This has come to be the opinion of modern students generally.

....An appreciation of *The Bible as English Literature*, by Professor J. H. Gardiner, of Harvard, which is full of discerning insight and genuine sympathy with its subject, ought to do much to hasten the day when students of literature, as well as the general public, will return to the study of the Christian Scriptures as the noblest monument of English speech. On every page of Professor Gardiner's able essay one traces careful attention to the work of the best biblical students and finds evidence of a master of literary appreciation. The Bible is made to stand on its own worth, apart from any theory of inspiration, but even so there is no doubt of its power to stand where general religious conviction has placed it. Along with much detailed study of parts of the Bible, there is need of such treatises as this, which deal with it as a literary unity. (Charles Scribner. \$1.50.)

Pebbles.

BILL—Heard the new song about the subway?

Pete—No, what's it like?

Bill—Well, the words are good but the air is bad.—*Columbia Jester*.

THERE once was a fellow named Breeze,
Who pulled in his M. A.'s and D. D.'s;

But so great was the strain

Said the doctor, "'Tis plain

You are killing yourself by degrees."

—*University of Pennsylvania Punch Bowl*.

"A MIDSUMMER NIGHT'S DREAM."

THE night was warm; the moon was pale;
The moonshine ne'er was known to fail,
Near Lover's Bench, on two so fair,
As these two who were sitting there.
He was a tall and handsome youth,
None handsomer, a solemn truth—
Which all her girl friends surely know,
Because she oft had told them so.
And she was tall, divinely fair,
They were a noble-looking pair.
Their hearts beat fast, then very slow,
Which meant they were in love, you know;
And Cupid watched them 'neath the moon
And softly smiled and whispered, "Spoon."
He held her hand; he called her his'n;
His heart the while like root-beer fizzin';
But not away her hand she drew,
And so continued he to woo,
While steadily his ardor grew,
Until, in fond enthusiasm,
He clasped her to his boosiasm,
And, holding her in close embrace,
Looked down upon her blushing face,
And, in enraptured state of bliss,
He pressed on her sweet lips the kiss
Which mortal man would scarcely miss.
Ah, then the trees bent low to hear
The sound meant only for her ear;
And e'en the breezes heard the smack,
And wondered if she kissed him back,
The froggies quit their gentle croak,
To see if it was all a joke,
Or if he'd mastered Cupid's art
And with love's arrow pierced her heart.
He raised his voice—'twas low and clear—
Now drew the precious moment near—
And while the pale stars faintly glistened,
The elements held their breath and listened.
He spoke, and told the old, old tale,
About the love that ne'er would fail,
To mortal mind life's sweetest story—
Ah, then was Cupid in his glory!
His heart grew faint with sudden fear,
His suit with favor would she hear?
Would she reject his fond address,
Or say, "No, thanks," instead of "Yes"?
First hope and then despair would reign,
Oh, my, it was an awful pain!
And so, while still retaining sense,
He vowed he'd end the dread suspense.
Then on his knees he quick did flop,
And let the final question pop,
Distinct and frank, in words unstilted:
"Wilt thou?"—and then, she—wilted.

—*Chicago Record-Herald*.

The Independent

A Weekly Magazine. Entered at the New York Post Office as Second-Class Mail Matter.

Publisher, Clarence W. Bowen

Owner, The Estate of Henry C. Bowen
130 Fulton Street, New York

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE

One Year, \$2.00 Single Copies, 10 Cents

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

What Is the Dead Hand?

THE so-called "dead hand" is the condition of control imposed by any person or persons on the management or disposition of affairs for all time after his death. It often concerns the use of property left by the deceased for some special purpose which he has at heart, and which he fears those that come after him will not care for as he does. There is always connected with the dead hand a lack of faith in the wisdom or integrity of those who may succeed him. They are, therefore, estopped from doing anything else than that which the imposer of the dead hand has wished.

Often it is provided that the imposition of the dead hand shall be irrevocable and in perpetuity. Such are many cases of gifts to churches, hospitals, etc., which it is supposed will never cease to exist, and in which cases the protection of the gift is under the care of the State. Thus it was that the gifts and bequests to the Free Church of Scotland were handed over by the Law Lords to the "Wee Frees," who represented the earlier and more stringent theology of Scotland. Or the giver may provide that if the pur-

pose of the gift is perverted it may be diverted to some other person or purpose. Or a more generous dead hand may somewhat lift its burden by the provision that after a time, and with certain conditions, there may be a limited change in the uses or privileges in the deed or act creating the dead hand. A written constitution of a nation is such a dead hand to the degree in which the generation which created it makes it difficult or almost impossible to change it.

When a dead hand becomes intolerable there is always one recourse for relief—the power of the State. That right of eminent domain may be used unjustly, and there will almost always be charges that it is so used. The most notable examples are those in which the State has confiscated ecclesiastical property on the ground that it has become a danger to the people, as in France, Mexico and the South American republics. Just now, under an act before the French Chamber, even foundations for the saying of perpetual masses are to be transferred to the support of hospitals and other institutions of mercy in case the ecclesiastical authorities have failed to organize a legal association to protect them; and this is defended not only on the authority of Pope Benedict XIV, who allowed, after fifty years, certain perpetual foundations to be absorbed in the general funds of the congregations, but also on the old doctrine that "*Eleemosyna liberat a peccatis*," alms frees from sins, and thus preserves the purpose of the masses. An example nearer home we had in the case of Andover Seminary, which could not get rid of its antiquated creed without going to the courts for relief. It is a serious question in the Methodist Church whether there is any way to escape from certain inviolable rules laid down by John Wesley as never to be rescinded.

It is the question of the dead hand that has been before the trustees of Swarthmore College. It is for them to decide whether the advantage of the money offered is enough to overbalance any injury which will come to the students from not allowing them to play football with another college for a hundred years or so, at the end of which time the prohibition may be so intolerable that relief will have to be obtained—for relief always can be

obtained from intolerable conditions. When the use of a gift becomes a public danger it is the duty of the public, in a legal way, to relieve the wrong.

A constitution becomes a dead hand when it becomes practically impossible, except in some tremendous crisis, to change it. The twelve first Amendments to our Constitution were added almost immediately after its adoption to correct its omissions, while it took the tremendous crisis of the Civil War to add the three last Amendments, and even so with great difficulty were they added. There is no present likelihood of our being able to add further amendments for many years, no matter how desirable, for we are under a dead hand which we religiously declare and believe to be beneficent. The last and extreme example of the attempt to impose the dead hand of a constitution on a people is that of Oklahoma; for we as a people are coming to have so little faith in our successors that we try to put our laws so fixedly in our constitutions that our successors cannot do what they please, but only what we have pleased.

The imposition of the dead hand always involves a lack of faith in those who come after us. It is an ungenerous spirit which requires it. It might be well by law to limit the endurance of the dead hand, just as in some of our State constitutions it is provided that the people shall vote after a term of years whether they desire a constitutional convention. Certain large givers have, much to their credit, made it a rule that their gifts shall be put without restriction into the hands of the trustees controlling their use. It would seem as if fifty years were as long as the dead hand ought to be operative, and that after that period those in charge should have the right, under due legal supervision, to use the funds according to their best wisdom for the general purposes for which they were given to the public.

Georgia's Example to the Nation

WE do not always agree with the policies adopted by the State of Georgia; there are many of her existing customs and laws which ought to be otherwise. But for one thing we would praise this

State to the highest, and that is her noble act in rising up after the Atlanta riot and putting away the open barroom. With the beginning of the new year this new policy was entered upon, and Georgia is the first State in the South to do this, and, perhaps, the first in the nation with so much local sentiment behind the law, which, after all, is the thing that counts. By the slow process of local option 122 out of the 145 counties in Georgia were already dry before the riot, which proved to be the spark that set fire to the temperance sentiment of the State which bids fair to sweep the South.

Altho prohibition has been in effect only a few days and it is too early to pass on the permanent effects of the change, yet gratifying reports indicate the direction in which we may look for results. The cases in the police courts have already been lessened by half. The character of the Saturday night crowds on the street out of which the riot in Atlanta grew are changing; they make their purchases earlier and go home, not having the bar to loiter about. Decatur street, in Atlanta, ruined by the whisky traffic, is being redeemed; a bank for the first time in its history is being put in the very place of a saloon; men who once crowded around the bar to get whisky are now crowding around the counter to buy meat in the very same room. No longer are people afraid to travel the street since the drink has gone, and it bids fair to be transformed in a short time to a leading business street of the city. Further uptown a bar that cost \$20,000 is being turned into a magnificent coffee house. Breweries are being turned into factories. The loafers, white and black, are going to work, and it is easier already to get laborers in Georgia. Every place vacated by the saloon is being rented; business is brisk; a moral tone undreamed of before pervades the city, and even the rumheads are beginning to say it is a good thing.

But best of all there is a determination to execute the law, the only safeguard for such a movement. The Mayor of Atlanta—and we refer to this city because it is the chief city in Georgia and therefore the real test of the working of the law—declares in his message that the law will be enforced because it is the law.

The judges of the courts are charging their jurors in accordance with the spirit as well as the letter of the law. The public press is unanimous in the support of the law as such. The first offender has just been sentenced to twelve months in the Georgia chain-gang (and he has our pity) for the violation of the law. It looks as if Georgia meant business in this thing, and we are happy to congratulate her. With the largest population of colored people of any civilized State in the world, Georgia is putting herself in the position to teach the world something on the value of sobriety as an element in promoting peace and good will between the races. Who knows but that Georgia has come to the kingdom for such a time as this, and the issue she so nobly raises may yet change the political map of the nation?

Why not abolish the saloon from the United States? At the beginning of 1907 there were three prohibition States, Maine, Kansas and North Dakota. With 1908 there are six, for to the three must be added Alabama, Georgia and Oklahoma, with a total population of over nine million. Of these, Alabama, which was previously for the major portion under prohibition by local option, the law will not go into effect until 1909. Besides these six States local option has made rapid strides all over the country, while not less than half a dozen other States are likely to enact prohibitory laws during the early year.

Leap Year Opportunities

LEAP year has only 366 days. Already sixteen of them are gone. It will be 1912 before it comes again, and by that time many ladies will be older than they are now. Yet we venture to say that scarce one of our fair and forlorn readers could conscientiously say that she had so far been as diligent as she might have been in the use of her time and opportunities. Delays are dangerous. You'll have to hurry. Young men are getting more skittish every year and the competition is greater, and rents are high and automobiles expensive, and the hard times are near, etc., etc.

There is no doubt about woman's right

on this point. It is confirmed by the customs of centuries. We have it explicitly stated as follows in a work on "Courtship, Love and Marriage," published in 1606:

"Albeit it is now become a part of the common lawe in regarde to social relations of life that as often as every bissextile year doth return the ladyes have the sole privilege during the time it continueth of making love unto the men, which they doe either by wordes or by lookes, as to them it seemeth proper; and, moreover, no man will be entitled to the benefit of the clergy who dothe in any wise treat her proposal with slight or contumely."

Our courts have held in innumerable cases (*q. v.*) that common law holds in the United States, and there is no evidence that this has ever been repealed. If the penalty specified in the above passage is not sufficiently feared by the young men of today, resort may be had to another, equally authoritative, that any man refusing a woman's proposal on leap year shall give her a silk dress. Every maiden, widow, or divorcee has, therefore, an opportunity this year to replenish her wardrobe even if she fails to satisfy her affections. This was the way, according to the legend, that St. Patrick bought himself off, not being a marrying man, when St. Bridget wheedled him into giving to women one year in four and that the longest.

We question, however, the validity of the word "sole," at least in modern practice. The very term "bissextile year" obviously refers to the fact that on that year both sexes have the privilege of opening matrimonial negotiations, altho the dictionaries, as usual, prefer to give a more remote and less probable origin to the word. But it is impossible to ascertain what are the relative number of proposals emanating respectively from men and from women in bissextile or ordinary years, because government statistics on the subject are entirely lacking. Some questions bearing on this important point might be added to the next census. They would be as pertinent and no more impertinent than queries now on the list.

There are many who claim that the commonly accepted idea that man does the courting is erroneous. As some great poet has so beautifully phrased it, "Woman is everlastingly leading us on."

Bernard Shaw states it as a general

rule that women are the pursuers and men the pursued:

"The pretense that women do not take the initiative is part of the farce. Why, the whole world is strewn with snares, traps, gins and pitfalls for the capture of men by women. Give women the vote, and in five years there will be a crushing tax on bachelors. Men, on the other hand, attach penalties to marriage, depriving women of property, of the franchise, of the free use of their limbs, of that ancient symbol of immortality, the right to make oneself at home in the house of God by taking off the hat, of everything that he can force woman to dispense with without compelling himself to dispense with her. All in vain. . . . It is assumed that the woman must wait, motionless, until she is wooed. Nay, she often does wait motionless. That is how the spider waits for the fly. But the spider spins her web. And if the fly, like my hero, shows a strength that promises to extricate him, how swiftly does she abandon her pretense of passiveness, and openly fling coil after coil about him until he is secured forever."

The question whether women propose leads to another quite as unanswerable, Do men propose? They always do in novels, but are these true to life? The only other detailed accounts of amatory relations that we have are the newspaper reports of divorce court proceedings, but these are of no value in this case, because they deal with the end of a romance, not its beginning, and, besides, are not to be taken as normal and exemplary instances. Few men have a wide enough range of personal experience to make their evidence valuable, and a wife is not allowed to testify against her husband. We venture the opinion, altho unable to substantiate it, that formal proposals are rarer in real life than in novels. Two congenial people seem to drift together like two chips floating on the still surface of a pond without perceptible motion or motive. Probably there is usually a moment of surprise not unmingled with alarm on both sides when a couple discover that there has been imperceptibly established between them what would be called by those who object to French phrases a "cordial intention."

Nietzsche says: "If I were a god—and a well-meaning one—the marriages of people would annoy me more than anything else." The wonder is that our one-sided, haphazard way of making matches results in as many happy marriages as it does. "All the world loves a lover—except sometimes the girl he wants." It is

unfortunate that the attraction of love does not work like the attraction of gravitation, instantaneously, invariably, reciprocally and equally. Let a minor planet, a mere dull asteroid or satellite, conceive an attraction for a star shining in the heavens billions of miles above him, instantly she is mysteriously impelled toward him by a force equal to that which moves him. We have not yet reached this state of celestial harmony and simplicity. How much happier the world would be if the same law held for human beings; no unrequited love, no divorces, no novels. It is quite as important to a woman that she get the right husband as it is to a man that he get the right wife, and she ought to have an equal opportunity of choice, not as an exceptional privilege once in four years, but all the time.

Clerks, Moralists and Bernard Shaw

It is not our business to eulogize Mr. Bernard Shaw. He loves to shock the moral or intellectual sense of the public, and it proves a good advertisement of himself, for what he says he says brilliantly, and it provokes abundant reply. It gives a fine chance for certain eager moralists to utter themselves solemnly. Since he appeared on the stage with the cry, "I'm it; play tag!" they have had a strenuous existence.

It is not books that these elephantine moralists now write so much as editorials of the kind that is fit to print and safe to read. Not that they by any means commit the indiscretion of discoursing weightily upon all of Mr. Shaw's offensive utterances. There are some things so improper that they cannot with self respect contemplate them at all, even for the purpose of refutation and warning. Mr. Shaw is obviously aware of this, and so, from time to time, with that diabolic sagacity in which he is unrivaled, he chooses as the topic of his discourse a subject so entirely unrepensible that no solemn moralist at large can hesitate to discharge his whole duty in the premises.

The latest instance is afforded by Mr. Shaw's subverting deliverance upon "clerks" and the truly earnest exposures

of his shallow reasoning which have been visited upon him. We do not recall any recent examples of elephantine philosophy so eminently respectable in substance and stately in expression as some of the rejoinders to Mr. Shaw's shameful aspersions upon clerks have been.

Listen, for example, to this. Could anything of its kind be more satisfactory?

"It is well to bear in mind that most men must work for wages and obey orders until death releases them from earthly cares."

There is a literary touch in this sentence that almost recalls Tupper or Montgomery, or even Mrs. Barbauld. Indeed, it raises the hope that our literature may once more be enriched by a new volume of "Proverbial Philosophy." Of course the statement is not literally true, but poetic license is permissible within limits, even in editorial prose. The editorial writer must write quickly, under inspiration, and cannot be expected to consult the census. Then, too, the mere fact that most men in the United States and in the world generally do not work for wages or obey orders, but till their own land in an independent way, or engage in business or practise professions, as pleases them, is of course only a transitory phase of industrial evolution. The privileged corporations and the billionaires are doing as well as could be expected to remedy this state of affairs, and our moralist may very properly anticipate the future to some extent.

From the same convincing writer we select also the following, which charmingly reveals the sound underlying humanitarianism of this ponderous ethics: "The clerk and the merchant are equally useful to the community." This is a noble truth, which, in the turmoil of American industrial enterprise, we have been in some danger of forgetting. As equally useful to the community, the clerk and the merchant should, of course, have incomes not too widely discrepant, and no right-thinking moralist can for a moment regard with other than painful feelings the great wrong of compelling the clerk to live in an inadequate Harlem flat on a salary of \$600 a year, while a merchant like Mr. Marshall Field cleans up at a lick thirty-odd millions or so of unearned increment on Fifth avenue real estate. We must be grateful to Mr.

Shaw for having prompted our weighty moralist to call attention to this injustice, which, of course, now that we comprehend and acknowledge it, we shall make haste to remedy.

We regret that the limitations of space forbid numerous other helpful quotations, but we cannot close this unsatisfactory summary without just one more:

"The true way to improve society is not to make people more discontented than they already are."

This is so obviously and so profoundly true that we venture to intimate that no intelligent man can read it without amazement that no one ever thought of it before. We have too long accepted it as true that discontent is the condition of progress. We are sure that even Mr. Shaw, when it is brought to his attention, will pause and reconsider. The true way to improve society is, of course, to make people more contented than they now are. The task, we dare say, is not without difficulty, but now that we know what it is, we shall be without excuse if we do not resolutely apply our massive intellects to the work.

Richard Pearson Hobson

CAPTAIN HOBSON is a sincere, high-minded man who believes that preparation for war is the surest method of preserving peace. He has spent his time since he resigned from the navy in going about the country lecturing in defense of peace.

He says he entered Congress for the purpose of getting on the Naval Committee and doing what he could to build up a powerful navy, in view of the tremendous war sure to come. At his meetings resolutions are always presented for adoption in favor of universal peace and arbitration, and then follows one which declares that "present conditions call for the immediate adoption of a progressive naval program that will give the United States a navy capable of performing its duty." These resolutions are, of course, immediately adopted and sent to the representatives of the State, to be presented to Congress.

We are not now objecting to the enlargement of our navy—that is another

question; nor do we now object so much to making the love of peace the argument for multiplying the means of war. However paradoxical, that is the only argument that can be presented to peace-loving people, and it has its force. The argument is a double assumption—first, that we want peace; and second, that other nations want war; and therefore we must be ready to fight. What we object to is the second assumption, that other nations want to go to war with us.

The particular nation which Captain Hobson says wants to go to war with us is Japan. Now there is not one whit of present evidence that Japan wants any such thing. The two nations have always been friends, and Japan has always freely recognized her debt of gratitude to us more than to any other nation. Every expression of her Government has been peaceable, even under some provocation, and the last news is that Japan is to reduce her appropriation for enlarging her navy by \$5,500,000 a year for five years, and for the army by \$10,000,000 a year for three years. The way Captain Hobson talks of Japan is likely to exasperate our people against Japan to the point of war, and such a policy is mischievous, if not worse.

To emphasize his sentiments in favor of peace he declares that our nation is, of all nations, the apostle and example of peace. Our nation, he tells us, was "conceived in peace, born in peace." "The growth of our country has been one grand onward march of peace." Of course, this is not in accord with our history. From the beginning we had war with the natives of the country, one Indian war after another, and the French War, and thus we made our original settlements. Then the nation was born in the Revolutionary War, and we followed that soon with the War of 1812. We got our whole northern boundary, from Maine to Michigan and Wisconsin, by the French War, and Florida came to us thru several wars, the last the Seminole War. Then the whole vast territory from Texas to California came to us by the Mexican War. By the Civil War we saved our national integrity; and lately Porto Rico and the Philippines—and we may yet have to add Cuba—are the prize of our war with Spain. In

recognition of war Massachusetts early put "*Per ensem*" on her seals. In contrast with this our "peaceful" policy, Captain Hobson declares that "Japan has had the war habit for more than eight hundred years; it is with her a question of heredity." That is startling. For so many centuries Japan kept herself absolutely secluded, was a hermit nation, kept at home and had not one foreign war until foreign nations taught the nation how to fight. But this is not all. Captain Hobson asserts that "Japan has gone farther toward making plans for war than any white nation has ever gone," which is ridiculous; that Japan teaches two things, "hate the foreigner and prepare for war," which is false; that in her preparation for war she is locating on our Pacific Coast and is filling Hawaii with soldiers. And this he says, and much more of the sort:

"Japan knows how defenseless we are. Certainly she does; that's her business. As a result Japan is trying to bring on war with America at the earliest moment. If I were a Japanese statesman I'd do the same thing; it's a part of their patriotism. All the rest of the world has seen it; America has been asleep."

And he proceeds in his lecture:

"The United States Government today cannot guarantee safety and security to the States that compose the nation. We have been dictated to by a power across the ocean; an alien race. It's awful; it's wicked. Today the Japanese have the right to think, as is taught by their government, that we are their enemies. Only one thing remains for a war, and that is a pretext.

"What are our chances of getting out of danger? Build ships and eat dirt, that's our present program. It will be simply our diet while we are getting out of our misdoing. It is simply our sackcloth and ashes. We have to get our whole fleet to the Far East and keep it there. And we've absolutely got to refuse to let a crisis come up till we get there. It is doubtful if it can ever get there. The only thing left for America to do that she may be able to meet any power of Asia in the Pacific and of Europe in the Atlantic at the same time is to have a large navy. The true way to protect our coasts is to have a navy so large that no nation will want war."

This lecture, repeated over and over again, is a slander upon a friendly country. There is no evidence that Japan wants war. There are those in this country and in Europe who would be delighted to embroil the two nations in bloody conflict which would exhaust

both. There is money being spent for it. Newspapers in Paris and New York have been egging on the fight. Congressman Hobson is doing the same thing under the cloak of peace. There is no evidence, we say, that Japan wants war. Our missionaries in Japan, who know best what is Japan's wish, deny it. Secretary Taft denies it. Our representatives in the East deny it. It is scarcely less than criminal thus to libel a friendly but proud nation. Captain Hobson, whose sincere purpose we do not question, should present convincing arguments for his assertions.

The Heroes and Heroines of 1908

THERE are the generations that live and die, strange unfortunate creatures whom life itself annuls back into dust. And there are the generations that never live and that never die, phantom folk of the heart and brain, immortal descendants of human fancy. Dickens is dead, but Mr. Micawber will live forever. Hugo has passed, but Cosette and Jean Valjean are still with us. Thackeray lives only as the creator of certain persons in "Vanity Fair." Sir Walter Scott was merely an impoverished gentleman who tried to pay his debts, but the characters he depicted in the Waverley novels will survive him a thousand years. And these heroes and heroines of fancy are the only great people some of us have ever known. They are friends of the family, who have never grown old or changed or proved unfaithful. They have been the forage of our pastures, and in so far as we have partaken of their nature and spirit we are better than we might have been. They are not altogether good, but they have never led us astray. Some of the heroes drank too much, crossed swords too often, and occasionally one of them climbed into the wrong lady's window. But in that case the author placed the lady in the right category. Above all, they were such hearty good company. The heroine did not hurry madly from chapter to chapter till she reached the wrong place for a woman to be. And if the hero prowled too much at night, it was chiefly in the

spirit of adventure, and was not nearly so demoralizing to the reader as it is now to follow one of Robert Chambers's corseted scamps to an afternoon tea party somewhere around Central Park.

But must we always hark back so far to find suitable people to associate with in literature? This has become the burning question, owing to the fact that the majority of persons figuring in fiction are improper to know in real life. One of the most attractive bow-backed, arrow-eyed heroines of the year is a princess demi-monde. What will happen when our young people actually comprehend the mind and meaning of certain slim-patterned girls who have lived in some of Henry James's novels? Gifted writers have acquired an ethical vocabulary for interpreting and defending vice. They present flatulent sentimentality for charity, and they leave the interpretation of decency and righteousness to tight-twisted bigots whose stories are never worth reading—all of which is significant when we consider that the great mass of those who come after us will not get their impressions of us from church registers or state documents or histories, but from the novels that come down to them as family portraits of the life of our times.

Now this is the beginning of the New Year. It is the season when the weakest and the frailest of us morally fetch a scourge and resolve to do better. And it is certain that no other class of people among us have created so many frailties, weaknesses, or achieved such wickedness as the popular novelists. Living their own lives decently enough, they have spent all their spare time leading the heroes and heroines of their stories astray. And unfortunately the reader will only make the latter's acquaintance. For example, suppose Mr. David Graham Phillips should resolve to create a hero who is an honest man no matter what happens in Wall Street—not a spectacular, muck-raking, dramatic president of a scandalous corporation, but an old-fashioned, simple-hearted person with a patch on the seat of his trousers and only a dollar in his pocket. The trouble with Mr. Phillips is that he handles too many fiends in fiction and is afflicted with a bad financial imagination. Nothing is

more certain than that the rich will presently beggar themselves anyhow; then the person with the patch in the seat of his trousers may get a new pair. Meanwhile it would help the rest of us if Mr. Phillips would learn to hope more for the best. And if those excellent lady novelists who present their heroes and heroines in invalid chairs or languishing upon beds of pain would make a better selection there would be less need of trained nurses in fiction. But if we must have them, at least they should not be permitted to practise euthanasia upon the principal characters. It is a sort of pathological exaggeration to show off mere professional manners as if they were romantic. The elder novelists could teach the young ones a lesson here. They did not regard the ill-health of the heroine as a valuable dramatic asset. To be sure she occasionally "faded away," and the hero was liable to be killed outright in a duel, but can anybody imagine Dickens devoting half of his story to interpreting the neurotic disorders of his characters?

What we want in the fiction of 1908 is a class of heroines in reasonably good health and moderate circumstances who are not being tempted upon every page to tempt some one else to do wrong. There are a great majority of such good women in real life. And we need a few thousand men in fiction who are not so belligerent when they are right, nor so tame when they are wrong. Just decent fellows without gambling instincts or brandy and soda complexions. And if it is not too much to ask, will some one create a character who believes something beyond this world of time and sense? With the whole country teething into a kind of female Buddhism, it is only a question of time when the American "yogi" or her astral shape begins to figure in our novels. But this is an unavoidable obsession, and by no means answers to the spiritual needs of the situation. The God-lonesomeness of people who figure in current fiction is one of its peculiar characteristics. Eden Phillpotts still retains a kind of Old Testament hold upon heaven, and it is the great distinction of his work. But the almost gross materialism of many novelists is revolting to persons of respectable imagina-

tions to say nothing of respectable faith. And this is strange; for, when rated at the lowest significance, heaven is the most nobly romantic of all human conceptions.

In short, we must raise the standard of decency and righteousness in fiction. We must raise it, even if we have to appoint a national literary committee and offer a prize of ten thousand dollars for a good book. And why not? Every State expends more than that in rewards to convict unfortunate criminals every year. With a God-fearing and reasonably intelligent national literary committee we would have more decent fiction and fewer criminals.

In any case, here's to the better life and better health of the heroes and heroines of 1908. May they be more like what is good in the world, and less like what is bad in the imagination. May they serve the real purposes of literature and become memorials in personality of whatsoever things are worth recording in this generation. And, above all, may their authors bear in mind that goodness is definite, arbitrary and the only living art of immortality.

Secretary Taft's Speech

Secretary Taft's series of speeches in support of his candidacy for the Presidency has begun with two in Boston and New York. We give some report elsewhere of that in Cooper Union on "Labor and Capital," in which he invited free questions on the subject from the audience. Beyond all question his speech was an able one, and pleased his audience. Of course he believes in organized labor and that organized capital should recognize it. We believe with him that injunctions have been too freely given against labor unions; and, while injunctions are often a protection of life and property, his proposition is a good one that no restraining order should issue till after notice and a hearing. We have had races for injunctions secured without knowledge of the other party. Only the notice and the hearing must not be so protracted as to make the injunction useless. A word as to his opposition to public ownership of mines and railroads. It is not safe, says he, to put so much power in the hands of a few men

at Washington. We differ from him. We have not observed that the post office is managed less safely and honestly than the railroads under private ownership. We do observe that the nation is even now compelled to put its hand on the railroads to prevent outrageous injustice. Where would rebates be under Government ownership?

The Ways of the Jury The doings of the jury are past finding out. We illustrate this fact not by the results of such notorious trials as that of Thaw in this city and of the conspiracy trials for the murder of Governor Steunenberg, but by a case in Kentucky. One Harjis killed a man, and the evidence against him was very strong, but the jury acquitted him. Then the widow brought suit against Harjis for damages and got from the jury a heavy verdict, which Harjis paid. Then the children of the dead man brought suit, and fearing a verdict the murderer compromised by paying damages. The *Louisville Courier-Journal* is disgusted at all this and says: "It is enough to cause the defeat of the Democratic party in Kentucky." Murders are common there and the murderers go unhanged. Illiteracy must have something to do with this bad pre-eminence, for there are only three States in the Union in which there is so large a proportion of illiterate white voters, and those are the Tar Heels of North Carolina, the Creoles of Louisiana and the Mexicans of New Mexico.

The Middle Class It is doubtless true that the rich are getting richer, altho it is difficult to believe, as often asserted, that the poor are growing poorer. A lower depth is hardly possible, and the lowest has existed as long as we have had cities. But it is also clear that the great middle class is growing larger and more comfortable. Philadelphia is called the City of Homes, and in that city 52,000 separate dwellings have been built since 1900, exclusive of flats and apartments. That makes a total of 345,000 dwellings, and the new houses are larger and are better supplied with baths, ranges and furnaces than were the old. There is similar progress everywhere, and we all see it, and the most of

these houses are occupied by the families of thrifty wage-earners. It is absurd to be pessimistic and claim that the rich are absorbing all the wealth of the country. By far the larger portion of it is in the hands of those who comprise the intelligent, well-behaved and industrious middle class, and they are improving their conditions constantly. The evidence is in the long lines of pleasant homes in our cities and their suburbs.

The Thunderer The greatest, most famous newspaper in the world is the *London Times*. There is nothing like it in the United States or in France. A Paris publisher, explaining why in France books must be cheap as well as attractive, remarks that France has no such rich public as in England that is ready to buy expensive books; our highest priced papers cost 3 cents and the *Paris Temps* cost 4 cents, but the British public is eager to pay 6 cents for *The Times*. Everybody has to advertise in *The Times*. If Lord Kelvin or the Primate of the Church of England wants to say anything to the people he writes to *The Times*. Every public question, down to the last popular one, the sufferings of a vivisected brown dog, calls forth the unpaid correspondence of those interested of every rank. One *must* read *The Times*. To be sure it has not been a consistent journal. It has had principles, but they were those of the people at large and could be changed when necessary. An election had sometimes an enlightening effect on its judgments of policy. Yet its tendency, when a reform wave or a Liberal triumph occurred, was to move forward not too far, so that it could return to its real conservative love. It now becomes a stock company, managed by C. Arthur Pearson, the "greatest hustler" in England, not yet forty-one years old, and who has risen from an apprenticeship to be the owner of numerous papers and magazines. Of course we are told that the character of *The Times* will not be changed—that is always said; but it is believed that it will not only be less dignified and will thunder more crepitantly, but that it will represent the Liberal Unionists and the Chamberlain school of tariff reform. *The Times* has not the

tremendous power it had a generation ago, and this move is not likely to increase its influence. The change seems to have financial aims, and it is observed that its advertising schemes of the last few years would have shocked the older members of the Walter family.

It is not easy to say what are the influences which have set the French papers to discussing the likelihood of a war between the United States and Japan; it may have had its origin in some malign purpose here. But we are glad to see that somehow sense has begun to rule, and the French press has learnt that no war is thought of or at all likely, and that the reply of Count Hayashi, the Japanese Minister of Foreign Affairs, to the *Matin* is accepted at its face value. He cables from Tokyo:

"Tokyo, Tuesday:—Our negotiations with both the United States and Canadian Governments are characterized by eminently cordial feelings.

"There are no insurmountable difficulties in the way. We have every reason to believe that a satisfactory settlement will soon be reached."

The biblical student will be specially interested to learn that M. Pognon, Consul-General of France in Syria, has discovered an inscription of Ben-hadad, son of Hazael, King of Syria, mentioned in the Bible, 2 Kings 13:25. The Hebrew name of this king was Ben-hadad, but the Syrian form was Bar-hadad, as in this inscription. It is a sort of proclamation by which Zakir, king of Hamath, in the eighth century before our era, announces that by the aid of Baal of Heaven he and the other allies of Bar-hadad have been able to triumph over their enemies.

President Roosevelt did right in sending troops to Goldfield at the request of the Governor of Nevada. He did right in telling the Governor they should not remain there except after a call of the Legislature and the attempt to preserve order by State constabulary. Then he did right in sending an impartial commission to Goldfield to investigate the conditions, and they report that there was no insurrection and no reason why troops should have been asked for. It would

seem as if Nevada, or its Governor, was unwilling to take the pains to keep the peace, and falsely put the responsibility on the central Government.

Not exactly like some of the local church federation schemes that we hear of, but in some respects better, is that which is being organized in the Bronx district of this city. A representative meeting has been held of Protestant and Catholic ministers and laymen, and at the next meeting Jewish temples will send delegates. The purpose is to advance common interests and to work together for moral reforms. There is no patent on it; it can be done elsewhere if one or two men have the enterprise to start it.

Even if the Panama Canal costs \$250,000,000 we want it just the same, and are compelled to pay for it. But it gives no glory to expert authority that the Board of Consulting Engineers' estimate was probably \$110,000,000 too small. Did they try to fool the public and Congress, or were they incompetent to make the estimate?

Much has been said, from the Catholic side, of the cost of mixt marriages, but something may be said on the other side. John Mitchell, the labor leader, is of Scotch Presbyterian ancestry, but he married a Catholic girl, and his four children have been brought up as Catholics, and he has himself just been baptized into the Catholic Church.

Brooklyn rejoices in a subway connection with Manhattan opened on January 9th. It is now possible to go from the New York City Hall to the Brooklyn Borough Hall in eight minutes, cutting the former time by way of the bridge in half. This only adds, however, to the great congestion in the subway, and makes the projected underground lines a crying need.

The opponents of Bryan are getting together and in public meetings are crying for Democratic harmony against Bryan, while other hosts in public meetings are crying for Democratic harmony in favor of Bryan. That kind of harmony does not harmonize.

Insurance

Mr. Ide's Address

IN his address before the Association of Life Insurance Presidents last month George E. Ide, president of the Home Life Insurance Company, pointed out with much force some of the barriers against which a life insurance executive dashes because of recent hostile legislation. Some of these barriers are to be found in the law providing for uniform standard policies, uniform rates of commission to agents where the limit is known to all (good and bad receiving the same compensation), limitation in investment, a cumbersome and unworkable system of election, limitation in the amount of insurance which may be written, limitation in the protection of the policy-holder by a proper contingent fund, every encouragement given to the payment of too large dividends, the granting of wide powers of discretion to the Commissioner of Insurance (a most dangerous condition, unless that office be filled by a man of rare knowledge and absolute singleness of purpose)—these are some of the fetters which now hamper a life insurance president in the management of the trust confided to his care. Mr. Ide declared further that the time was close at hand when the people of the State and their representatives must be convinced of the un wisdom of the present scheme of insurance regulation and that reform measures lacking the objectional features that now obtain must be substituted in the insurance world. Mr. Ide's point of view was in harmony with the attitude taken by Darwin P. Kingsley, president of the New York Life Insurance Company, to which some reference was made in this department last week.

Death of George L. Chase

GEORGE LEWIS CHASE, president of the Hartford Fire Insurance Company, the oldest insurance company in Hartford, is dead. The end came at Mr. Chase's residence at Hartford, Conn., on Monday, January 6th. For some years Mr. Chase

has been the oldest fire insurance president, in point of service, in the United States. He was born in Millbury, Mass., on January 13th, 1828. He attended the old Millbury Academy in his home town and began his business career at nineteen years of age as the agent of the Farmers' Mutual Fire Insurance Company, of Georgetown, Mass., which company he subsequently served as a director. In 1848 he became the traveling agent for the People's Insurance Company, of Worcester, Mass., which connection he retained until 1852.

In 1863 Mr. Chase became assistant Western general agent of the company of which he has so long been president. In June, 1867, he was elected president of his company, in which capacity he served within a fraction of forty years. The Hartford Fire, during the administration of President Chase, past thru some extremely disastrous conflagrations, including that of Chicago, in 1871; Boston, in 1872; Baltimore, in 1904, and San Francisco, in 1906. Mr. Chase was exceedingly progressive in his ideas and methods. He was the first to suggest the use of the telephone for communication with other local fire insurance offices, and the Hartford, Phoenix and Aetna offices had such communication at an early date. This service was practically that of a pioneer in the use of the telephone in the city of Hartford. Mr. Chase was also instrumental in inaugurating the employment of stenographers by his company and in the use of the typewritten letter. The position of Mr. Chase in the insurance world was long since assured. It was an important one and his ability had long been recognized. He was exceedingly active in and out of his own company and his advice and counsel had long been sought in places where sound business judgment is valued. At the time of his death he was a vice-president of the Society for Savings, a trustee of the Connecticut Trust and Safe Deposit Company and a director of the American National Bank. Mr. Chase was identified with the Congregational Church and was sometime president of the Connecticut Congregational Club.

Financial

The New Aldrich Bill

ONE objection to Senator Aldrich's bill for the issue of additional currency in time of stress is that it requires the national banks to use their cash in buying the bonds demanded for security, at a time when their cash is needed for other purposes. Security for the proposed additional currency may be State, county, municipal or railroad bonds. These must be approved by the authorities at Washington, and currency may then be issued up to 75 per cent. of their market value. That is to say, the banks, at a time when their supplies of cash are low, and when cash is in great demand, must go into the market and buy these bonds, paying \$100 for the basis of every \$75 in new currency, and this currency is to be taxed at the rate of 6 per cent. We are inclined to think that such a provision of law would have given little or no relief in the early days of the panic, or thereafter. The bill proposed last year by the Bankers' Association, and also last year's Fowler bill (of the House Committee), provided for taxed emergency issues secured by a bank's assets and a reserve of 25 per cent. Such issues would be safe, and they would not require the banks to use their cash in paying out one-third more than the value of the new currency for bonds to serve as collateral for it. This method, it seems to us, is much to be preferred for emergency issues. For other reasons the proposed use of State, county, municipal and railroad bonds is open to objection; but the reason we have mentioned points to very practical difficulties which might, under certain conditions, defeat the purpose of the proposed legislation. The time when additional currency is sorely needed is not, as a rule, a time when the banks are willing or can afford to tie up their cash in large purchases of bonds.

....The Manhattan Securities Company, of which S. P. Trood is secretary, has declared a semi-annual dividend of 5 per cent., which is payable January 31st. This company finances and controls and underwrites various industrial undertakings and devotes its capital and

efforts mainly to the development of mining properties. It has every facility for examining and handling such properties.

....The new statement of the Fidelity Trust Company, of this city, of which Samuel S. Conover is president, shows a capital of \$750,000, a surplus of the same amount, undivided profits of \$70,201.80 and total resources of \$4,594,225.79. This company began business on May 22d last.

....The Commercial Trust Company of New Jersey (office in Jersey City), of which John W. Hardenbergh is president and William J. Field secretary and treasurer, whose capital is \$1,000,000 and surplus \$1,500,000, has undivided profits of \$378,319.77, and total resources of \$10,626,669.59, as shown by its recently published statement.

....Last Saturday the following officers of the H. B. Claflin Company were elected by the directors: President, John Claflin; vice-president, John C. Eames; treasurer, Dexter N. Force; secretary, George E. Armstrong; assistant treasurer, Stewart W. Eames. The net earnings of the company for the year 1907 were \$504,998.93, and the earnings of the common stock were 17.65 per cent.

....The Long Island Loan and Trust Company shows in its new statement a surplus of \$1,000,000; undivided profits of \$527,631.41, and total resources of \$9,260,618.05. The capital stock is \$1,000,000. The officers, who are well-known Brooklyn gentlemen, are Edward Merritt, president; Clinton L. Rossiter and David G. Legget, vice-presidents; Frederick T. Aldridge, secretary, and Willard P. Schenck, assistant secretary.

....In the new statement of the Old Colony Trust Company, of Boston, of which Gordon Abbott is president, and Francis R. Hart, James A. Parker and Wallace B. Donham are vice-presidents, and T. Jefferson Coolidge, Jr., is chairman of the board of directors, it is seen that the capital, surplus and undivided profits are \$7,771,981, and that the deposits at close of business January 1st, 1908, were \$30,022,415. The January 1st, 1907, deposits were \$28,883,127.

The Independent

VOL. LXIV NEW YORK, THURSDAY, JANUARY 23, 1908

No. 3086

Survey of the World

National Politics There are indications that the Ohio Republican convention will easily be controlled by the supporters of Secretary Taft. At the end of last week a majority of the eighty-eight counties had declared their preference for him, and it is expected that the opposing minority in the convention will be small. A long interview with Senator Foraker was published on the 17th, in which attention was directed to a reported statement of the Secretary that he himself had been responsible for the rejection of a compromise agreement with the Foraker forces, said to have been suggested in April last by Senator Crane. At the conclusion of this interview, Senator Foraker said the contest would be "fought out to the end." The questions (concerning injunctions) which were sent to the Secretary by the Federation of Labor were also addressed to him, and his replies were substantially in accord with the Secretary's. It is now understood in Washington that First Assistant Postmaster-General Hitchcock will take charge of the Taft movement in the East and South, and will soon give up his office. Mr. Hitchcock is an intimate friend of Secretary Cortelyou, and it was recently reported that he was striving to promote the nomination of the latter. It was asserted last week that Secretary Cortelyou was about to resign and would become president of the Knickerbocker Trust Company, in New York. Late reports say, however, that he will remain in the Cabinet. It is admitted that the presidency of the Knickerbocker was offered to him.—In an executive session of the Senate, on the 14th, the nominations of four postmasters for small cities in Ohio were rejected, owing to the ob-

jections of Senators Foraker and Dick, who asserted that the nominations had been made for political purposes in the interest of Secretary Taft. Senator Foraker afterward said: "Any further prostitution of Federal patronage in order to carry out political bargains will be resented."—There will be in New York, on the 23d, a conference of prominent anti-Bryan Democrats to consider plans for preventing the nomination of Mr. Bryan and the course to be taken if such plans should fail. Among those invited are Alton B. Parker, Governor Hoke Smith, ex-Governor Douglas, Richard Olney, Perry Belmont, and Morgan J. O'Brien. A recent poll of Democratic members of the House in Washington showed that of 151 who gave their opinions, fifty-three opposed the nomination of Mr. Bryan. Of these, thirty-one preferred Governor Johnson and ten were for Judge Gray. A report has been published that Mr. Bryan has recently said that he would retire from the field if it should appear that one-third of the delegates would oppose him. Speaking at a dinner in Nebraska on the 16th, Mr. Bryan said that there was not one question on which Mr. Taft had taken a reform attitude. "I do not know yet," he added, "whether I shall be the candidate for President or not, but I have got to the point where if the party goes fast enough to overtake me I shall not strain myself to get away."

Governor Hughes

Altho the Governor of New York declines to discuss questions of national politics and avoids conferences with politicians, the movement in favor of his nomination for

the Presidency attracts much attention. It is asserted by some of his supporters that he will not consent to stand for a second term in his present office. Active Republican politicians of the State are in two factions, one for him and the other for Secretary Taft. It is noticeable that among those working for the Governor are ex-Governor Odell, George W. Aldridge and others whose political ideals are not like his. There was a stormy meeting of the Republican County Committee in New York City on the 16th, at which action upon the resolutions in favor of the Governor's nomination, tabled a month ago, was postponed for another month by a vote of 302 to 222. Those voting in the majority, led by Congressman Parsons (the chairman), were clearly for Mr. Taft. Ex-Senator Brackett, who supports the Governor, afterward said that the true sentiment of the Republicans of the county had been "throttled by Federal office-holders," pointing to the fact that several of those opposing the Hughes resolutions in the executive committee and the general committee hold places in the Federal service. The Governor made several public addresses last week, and was most cordially received. His remarks were confined to questions of State policy and the local reforms which he has promoted. His recommendations for legislation against race-track gambling were earnestly defended. The tax upon the receipts of race-tracks (amounting in 1907 to \$246,000) is given to county and town fairs to be used in paying premiums. Resolutions against the proposed repeal of the racing law under which the tax is collected were past last week at a convention held in Albany by one of the fair associations. Governor Hughes promptly spoke before the association, with much earnestness and force insisting upon the reform advocated in his recent message.

Mr. Harriman Must Answer During the investigation of the financial affairs of the Union Pacific and Southern Pacific roads by the Interstate Commerce Commission, President E. H. Harriman and Otto H. Kahn (of the banking house of Kuhn, Loeb & Co.) declined to answer a series of questions re-

lating to their alleged personal interest in large sales of railroad stock to the Union Pacific Company. The matter was taken to the courts by the Commission, and Judge Hough, in the United States Circuit Court, decided last week that Mr. Harriman must answer all of the questions, one excepted. It is also held that Mr. Kahn must answer all that were addressed to him. The exception, in the case of Mr. Harriman, relates to a question as to purchases by him of Union Pacific or Southern Pacific stock previous to the declaration of the unexpectedly large dividend in August, 1906. The other questions which he is ordered to answer were designed to disclose his personal interest, if any, in the large quantities of Alton, Illinois Central, Atchison, New York Central and other shares sold to the Union Pacific. Inquiries addressed to Mr. Kahn related to the same transactions. Counsel for the two men claimed that the Commission had not been empowered to make such an investigation, and that the statute, if it granted such power, was unconstitutional. Judge Hough's decision is regarded as one of much importance, because it upholds the constitutionality of the grant of power. An appeal to the Supreme Court will be taken.—An agreement has been reached for a speedy test of the constitutionality of the clause of the Hepburn Rate law which forbids railroad companies to carry from one State to another, after May 1st, coal which is the product of their own mines. The coal railroads will co-operate with the Government in procuring a decision without delay, and the Government will not prosecute them for a failure to obey the law pending this final decision.

The Panama Canal Secretary Taft and Colonel Goethals have been giving information about the Panama Canal to committees of the Senate and the House. They estimate the entire cost of the great project at \$300,000,000, including the \$50,000,000 paid for the rights. President Roosevelt has approved the recommendation of the Secretary (and of the naval authorities) that the width of the locks be increased from 100 to 110 feet. This will involve an addi-

tion of about \$5,000,000. The Secretary and Colonel Goethals predict that the canal will be finished by July 1st, 1914. Both assert that the contract method is objectionable, if not wholly impracticable. Colonel Goethals formerly preferred the sea level plan, but is now convinced that the lock plan is a better one. It appears that traffic by way of the railroad has been reduced about one-half, owing largely to an insufficient supply of steamships on the west side by the Pacific Mail Company, and it is a question, Mr. Taft says, whether the Government ought not to go into the steamship business along the west coast, partly in the interest of its steamships on the Atlantic side. Much business has been diverted to the new Tehuantepec route. There are now 30,000 men on the payroll, and the progress recently made has been very encouraging. It is for this reason that the appropriation for the current fiscal year is already exhausted. Colonel Goethals remarked that if the eight-hour law should be repealed he could get 20 per cent. more work out of the men. Ex-Senator Blackburn, Governor of the Zone, explained that trial by jury had not been introduced because it was so difficult to determine who were an accused man's peers, as the Zone's inhabitants represented forty-two nationalities and all the races of mankind. Spanish-Americans, moreover, were very sensitive about racial distinctions. The number of saloons in the Zone has been reduced to thirty-two, and each pays a license fee of \$100 per month. Answering a question, he said it was not the intention of the Commission to get rid of all the saloons. If there were no saloons in the Zone, the employees would seek drinking places in Panama and Colon. It was better that there should be a few well regulated saloons along the canal route.

To Leave Cuba One Year Hence

In a letter transmitting to the President the annual report of Governor Magoon, last week, Secretary Taft remarked that the Governor had "conducted matters in a most clear-headed and tactful way, and with conspicuous success." The census, he added, would not be completed until April or May. This would postpone the local elections

until June, the presidential election until December, and the installation of President and Congress (with the transfer of the Government to the Cubans) until March or April, 1909. "There are important interests," said the Secretary, "that would be glad to delay our stay there for years, but good faith and good policy both, in my judgment, require us to leave at the time appointed." President Roosevelt has fixed even an earlier date for the transfer. Replying to the Secretary, he wrote:

"I direct that the installation of the President and Congress of Cuba, to be elected next December, and the turning over of the island to them, take place not later than February 1st, 1909. If it can be turned over earlier, I shall be glad; but under no circumstances and for no reason will the date be later than February 1st, 1909."

On the following day, transmitting the Governor's report to the Senate, the President said he could not "too heartily commend the action of the Governor and his civil associates, and of the army in all its parts in connection with this Cuban matter." It could be definitely announced, he continued, that the transfer would be made "by or before February 1st, 1909":

"Our word to turn over the island to its own people will be scrupulously regarded, and through their own President and Congress they will administer the government of the island a year hence."

Reports from Cuba say that this announcement caused no general rejoicing, but was quite satisfactory to leading politicians. Governor Magoon and the good faith of our Government were warmly commended by General José Miguel Gomez and Senator Zayas, leaders of the two factions of the Liberal party. Two prominent newspapers deplored our Government's decision, saying that too early a date had been named, and that Mr. Roosevelt had been moved by a desire to make the transfer before the expiration of his term. The views of the foreign element as to the stability and success of a Cuban Government are pessimistic. It is understood in Washington that the troops will remain in Cuba for several months after February 1st, 1909. Governor Magoon's report points to a very encouraging growth of manufactures and expansion of commerce during his term.

Receipts (to November 1st) were \$41,242,000, and expenditures \$39,613,000. The cost of the revolution has been nearly \$9,000,000, aside from the transportation and maintenance of the American army. — Revolutionists landed, last week, on the north coast of Haiti, their movement being in the interest of General Firmin, an exile, who led the revolution of 1902. In an engagement on the 17th their commander, General Jadotte, was killed, together with General Deslouches, the leader of the Government's troops.

The Battleship Fleet

The chief of police at Rio de Janeiro said, on the 19th, that an anarchist plot for the destruction of some of the American battleships at that port had been discovered, and that probably the conspirators would be arrested within a few days. Their leader, he said, was one Jean Fedher, formerly of Petropolis, whom detectives were pursuing. He asserted that news of the plot came to the Brazilian Government before the arrival of the ships. It appears that warning was given to Rear-Admiral Evans by the Government, and that measures for the protection of the ships were taken by him and by the local authorities. In a brief statement made by the Rear Admiral, he said that the Brazilian Government had "managed the entire matter admirably." Upon his authority also it was pointed out that among those said to be implicated there was no Japanese. At the beginning of the present week, prominent officers of the Navy Department in Washington declared that they had not heard of such a plot, and it was suggested that the Brazilian authorities had been deceived. — Replying to a cable message in which President Penna of Brazil congratulated him upon the successful arrival at Rio de Janeiro "of so powerful and well drilled a fleet," President Roosevelt wrote:

"We are all very sensible of the courtesy and distinguished hospitality with which the Government and people of Brazil have received our officers and sailors. The warships of America exist for no other purpose than to protect peace against possible aggression and justice against possible oppression. As between the United States and Brazil these ships are not men-of-war, but are messengers of friendship and good will, commissioned to

celebrate with you the long-continued and never to be broken amity and helpfulness of the two great republics."

Off the coast of Patagonia the fleet will be met and greeted by warships of the Argentine Republic. A Chilean battleship will welcome it at Punta Arenas, and a Chilean squadron will come out to meet it in the neighborhood of Valparaiso. Reports from Washington say the President has told members of Congress that the fleet will go to the Philippines and return to the Atlantic by way of the Suez Canal.

The Two Sultans of Morocco

The French column under the command of General D'Amade, which is pushing its way from Casablanca to Rabat, encountered the forces of Mulai Hafid, the Sultan of the South, near Set-

MULAI HAFID.

Recently proclaimed Sultan of Morocco at Fez.

tat. The French were passing thru a ravine at the end of a long day's march when they were attacked on three sides by Arabs under the command of Mulai Rachid. After the French troops had repeatedly repelled the charges of the

Arabs, the latter received reinforcements from the Chaouia tribe, against which the French have for many months been fighting near Casablanca, and with whom it was supposed peace had been made. General D'Amade succeeded, nevertheless, in driving back the enemy and captured the Kasbah of Settât, and later occupied that of Bu Reschid. The French in Casablanca have arrested three of the ring-leaders of the massacre of Europeans of July 31st, and they will be tried by court-martial. Mulai Hafid has formally proclaimed a jehad or holy war, and chiefs and marabouts in all parts of Morocco except the towns along the coast are trying to arouse the people to drive out all foreigners from the country. Sultan Abd-el-Aziz, who is now at Rabat, has lost all courage and is reported to be anxious to leave Morocco and take refuge in Paris, where El Mokvi, the Moroccan Minister, is now trying to arrange for a loan of \$1,200,000. The French financiers and Government do not seem inclined to provide the funds or to take any active measures in restoring his authority. It is even questioned in Paris whether the Algeciras Convention, by which the French guarantee the sovereignty of the Sultan of Morocco and the integrity of Moroccan territories "whosoever may be the Sultan who attains the throne," would not apply as well to Mulai Hafid if he became supreme. The bandit, Raisuli, has refused to recognize Mulai Hafid, and has persuaded the tribes under his control to stand by the old Sultan.

Progress in Korea

These are great days for Korea. Who would have dared to predict that what has happened would happen even within the next decade? The Korean Empress has actually ridden out, in an open carriage, with the Emperor. Dressed in her usual beautiful robes of silk gauze, her head covered only with the insignia of her rank, she drove side by side with her Imperial husband across the city of Seoul to their new home. The following day the Crown Prince, and his Excellency Prince Ito of Japan, proceeded to the Young Men's Christian Association building, now in process of erection, and laid the stones of the arch, the young Prince writing with his own hand the date.

This boy is a clever, quick-witted lad, dignified and pleasant. He is son of the ex-Emperor, and has his father's pleasant way and manner. His Excellency Prince Ito accompanied the Prince, and was kind and attentive in every way. He prepared the small writing-brush himself, and in his manner to the Prince one could see that he had a real regard for him.

Difficulties of Japanese Finance

The Japanese Ministry is in a very embarrassing situation on account of the criticism of the Opposition on its foreign policy, and also on the construction of a satisfactory budget for the coming year. Yoshiro Sakatani, Minister of Finance, tried to carry out his promise that there should be no increase in taxation in 1908 by cutting down on the appropriations for the army and navy. This met with decided opposition from those who accuse the Government of weakness in its foreign policy. He then made an effort to reduce the appropriations for the extension of the railroad systems, but this met with similar opposition from the commercial interests. Because of the impossibility of reconciling the divergent opinions of his Cabinet, the Premier, Marquis Saionji, offered his resignation to the Emperor. He declined to receive it, but accepted instead the resignations of Yoshiro Sakatani, Minister of Finance, and of Isaburo Yamagata, Minister of Communications. Masahis Matsura, Minister of Justice, will also take the portfolio of Finance, and Mr. Keihara, Minister of the Interior, will also take that of Minister of Communications. The budget, as presented to the leaders of both Houses by the Cabinet as now constituted, shows that the receipts will amount to \$305,420,000 and the expenditures provided for will amount to \$307,975,000. The deficiency will be met by an increase of taxes. The expenditures authorized for the army and navy and other appropriations, involving altogether \$50,000,000, will be postponed for another year. There is a general reduction of appropriations and an increase of taxes on saké, beer, alcohol, sugar and kerosene. It is doubtful whether the budget will be accepted by Parliament, in which the

governmental majority is very small and penurious.—The *Temps*, a semi-official organ of the French Foreign Office, calls the attention of Japan to the fact that no orders are being placed in France for military, naval and railway equipment, notwithstanding the facts that a treaty has been established between these two countries, and two Japanese loans aggregating \$115,000,000 have been placed in Paris since the Peace of Portsmouth. During the years 1906-07 Japan spent \$12,000,000 in England for cruisers, \$23,600,000 in Germany for field guns and war material, and \$24,000,000 in the United States for machinery, ships and railroad material, and nothing at all in France.

Chinese Railroad Questions

Besides financial embarrassments resulting from the war and the negotiations in regard to emigration to the United States and Canada, Japan's interests in Manchuria are involving her in difficulties with China, Russia and her ally, England. The Japanese continue to occupy the province of Chien-tao, to the north of Korea, notwithstanding the protests of the Chinese, who insist that the province does not belong to Korea, and the apprehensions of Russia, which regards the occupation as a strategic move threatening Vladivostok. The Japanese protest that the failure of China to establish custom houses on the Siberian border of Manchuria is an injustice to them, because it permits the introduction of goods free of duty into Manchuria from the north, while duty has to be paid on imports from Japan thru southern ports. Russia has warned China that unless a treaty is arranged with Japan in regard to the telegraph service in Manchuria similar to that concluded with Russia, she will abrogate her treaty. A British syndicate is endeavoring to get a concession for the railroad connecting Sinmintun and Fakumen, but Japan is decidedly opposed to this, because it would injure the traffic of the South Manchurian line, the control of which has been transferred by Japan to China. The contracts for the construction of railroads in the two Kiang provinces by a British syndicate are not yet signed on account of the strong opposition of the people of these

provinces against any foreign concessions. Taking advantage of the intention announced by the Imperial Government to give the people a voice in political affairs, the leaders of the "rights-recovery" movement are besieging the court at Peking by letters, telegrams and delegations, and if the Government consents to the contracts, it will certainly cause a bitter boycott movement against British interests in China. The chief difficulty is in regard to the proposed railroad to connect Su-chau with the cities of Hang-chau and Ning-po. A preliminary contract for this was arranged in 1889. The Anglo-Chinese Syndicate which held the concession did no work, and in 1905, Sheng, Director-General of Railroads, declared that the concession was forfeited. An Imperial edict was issued transferring it to a native company composed of prominent merchants of the Kiang provinces. The British Government, however, insists on the original obligations, and a more important contract for railway construction is being held up until this can also be settled—that is, the contract for a line connecting Tien-tsin with the Yang-tse River, which provides for a loan of \$27,500,000. This line will be 750 miles long, and will connect Peking, the present capital, with Nanking, the former capital, and, if the concession for the branch line can be obtained, with Ning-po. The line which is now being constructed by the Anglo-Chinese Syndicate between Shanghai and Nanking will also form part of the system. This line has gone as far as Chinkiang, and is used as a warning by the Nationalists against the employment of foreign contractors, because, as they claim, the cost of its construction has been so excessive that it will never pay.—The Chinese Court has decided to send the sons of princely families to America, England and Germany for their education; students in the former countries to study law and in Germany to learn military affairs. Viceroy Tuan Fang, of the two Kiang provinces, has announced his intention of sending a number of Chinese girls to study in America at public expense. The reason given for not sending the sons of princes and nobles to study in Japan is that they are likely to imbibe revolutionary ideas.

Central America's Step Forward

BY JOHN BARRETT

[We have already expressed our opinion that the recent Central American Peace Conference at Washington has marked the farthest step forward in the path of peace yet taken by the nations, and we are accordingly very glad to give our readers the following authoritative article on the subject by Mr. Barrett, who has served our country so conspicuously in various diplomatic fields and is now Director of the International Bureau of the American Republics at Washington.—EDITOR.]

PAN-AMERICANISM, as promulgated by its great expounder, Elihu Root, has experienced a decided impetus from the deliberations and conclusions of the Central American Peace Conference. This meeting in Washington of the leading men of the five Central American republics, together with representatives of the United States and Mexico, marked a long step forward in mutual help and co-operation among the American Republics. It demonstrated most emphatically that what might be termed "team play" in diplomacy between the United States and Mexico is a success. The part which Mexico played in this Conference and the invaluable aid which her distinguished Ambassador, Enrique C. Creel, gave to its sessions by his presence, advice, and kindly interest, were powerful incentives towards good results. It was fortunate, moreover, that the United States was represented by W. I. Buchanan, whose long association with Latin-American peoples made him thoroughly *persona grata* to the Central American delegates and a cordial co-laborer with Ambassador Creel.

In looking back over the Conference too much credit can not be given to the delegates themselves for the patience, perseverance, unselfishness, and good will with which they kept at their work until the necessary treaties were evolved and signed. It was immediately evident, after the Conference held its first session, that the delegates were not here merely for a good time or for spending a vacation in Washington, but that they were unquestionably intent on accomplishing something for the good not only of their respective countries, but for all Central America. Little time was wasted in getting down to business. Instead of holding long formal sessions which would be

marked by extended oratorical efforts and which would make numerous volumes if preserved through stenographic record, they at once determined to hold informal meetings where everybody could express his views, at length or briefly as he saw fit, in the form of conversation about the peace table. An admirable plan was followed of practically leaving all efforts at oratory and eloquence to the beginning and closing sessions of the Conference and to the numerous banquets that were given at one time and another.

The delegates had not been in Washington more than a few days when it was realized by everybody who met them that they were men of pronounced ability, experience in statecraft, and worthy of the trust imposed upon them by their different governments. All of them belonged to the classes of public men in their different republics who would correspond to those who are the leading Senators and Congressmen in the United States. Not one of them was here merely for the sake of holding a job given him by a condescending President, but all were selected because of their actual qualifications. The list fortunately included the Ministers of the five Central American republics in Washington, namely, Don Joaquin Bernardo Calvo, of Costa Rica; Don Luis F. Corea, of Nicaragua; Dr. Don Luis Toledo Herrarte, of Guatemala; Don Federico Mejia, of Salvador, and Dr. Don Angel Ugarte, of Honduras, all of whom stand high as diplomatists and men of affairs. There came, moreover, from Costa Rica, Dr. Don Luis Anderson, the Minister of Foreign Affairs of that progressive republic and one of the youngest men in public life holding a high position in all America. He was elected president of the Conference

and filled his office with rare tact and good nature. The part that Costa Rica played in the Conference was most helpful for a favorable issue. Its position was practically one of impartiality, being less concerned than any of the other four with the differences that have arisen in Central America and which gave rise to the Peace Conference itself. Nicaragua had as an additional delegate, Dr. Don José Madriz, one of the younger and best known statesmen of Central America, who was elected as one of the two secretaries of the Conference. Guatemala had two extra delegates, Dr. Don Antonio Batres-Jauregui and Don Victor Sanchez-Ocana, both of whom stand for what is the very best in that republic. Honduras commissioned also Don Policarpo Bonilla, the distinguished ex-President, and Don E. Constantino Fiallos, its able Minister of Foreign Affairs. Salvador was represented, in addition to its Minister in Washington, by Dr. Don Salvador Gallegos and Dr. Don Salvador Rodriguez, who are leaders in the politics of that country. Dr. Rodriguez served with Dr. Madriz, of Nicaragua, as a secretary of the Conference. If there were space, it would be interesting to reproduce the biographies of these men, for all have led interesting and useful lives, and many of them will be heard from in the future.

Between November 14th, the day the Conference met for the first time, and December 20th, when it adjourned, fourteen sessions were held, and so diligently did the delegates labor that they framed and signed seven important Conventions or Treaties, with one Convention supplemental to the first, as follows:

1. General Treaty of Peace and Amity (with brief additional Convention).
2. Establishing a Central American Court of Justice.
3. Extradition.
4. On Future Conferences (Monetary).
5. On Communications.
6. Establishing an International Central American Bureau.
7. Establishing a Pedagogical Institute.

All of these are worthy of careful perusal and study by students of international affairs. If some of them were evolved rather hurriedly in their final form they still, in fact, represented careful deliberation on the part of all or

groups of the delegates. No other International Conference in history has accomplished so much in such a short time or has outlined policies which would have a more far-reaching effect on the future of the countries concerned. If all of these treaties are finally ratified by the Central American governments and then if they are put into actual operation, the whole world will give Central America a place of prominence in international relationship that it has never had before.

By far the most important Convention is the one establishing a Central American Court of Justice, for this is the most progressive step toward international arbitration ever taken by a group of governments. There are no reservations under the head of so-called "national honor." All kinds of disputes between the various countries are to be adjusted by this court, which is to be made up of five judges, one from each country. It will sit regularly in Costa Rica, the country which approaches nearest the neutrality among the Central American nations. Those who are skeptical as to the binding effect of the conclusions of this court should read Article XXV, which says:

" . . . The interested parties solemnly bind themselves to submit to said judgment; and they all agree to lend every moral support that may be necessary in order that they may be properly fulfilled, in this manner constituting a real and positive guarantee of respect for this Convention and for the Central American Court of Justice."

The principal feature of the General Treaty of Peace and Amity is Article III, which says:

"Bearing in mind the central geographical position of Honduras and the facilities which this circumstance has afforded in order that its territory should have been most often the theatre of Central American conflicts, Honduras declares from now on its absolute neutrality in any event of conflict among the other Republics; and the latter, in their turn, provided such neutrality be observed, bind themselves to respect it, and in no case to violate the Honduran territory."

If this provision is respected it will prove a mighty influence for peace.

The Convention on Extradition will prove of great advantage in the punishing of criminals and in the stopping of crimes which might be committed in the hope of refuge in a neighboring country close at hand.

The Convention concerning Future Central American Conferences provides for the uniform adjustment of economic and fiscal affairs upon lines which will promote the good of all. Article I reads:

"Each one of the contracting governments obligates itself to name, within one month, counted from the last ratification of this agreement, one or more commissions, which shall occupy themselves preferably with everything concerning the monetary system of their respective country, especially in so far as it relates to those of the other States, and intercourse among them; and, besides, the study of everything relating to the Custom House systems, the system of weights and measures, and other matters of an economic and fiscal nature, which it is deemed proper to make uniform in Central America."

The Convention of Communication advocates the construction of the Pan-American Railway and provides that steps shall be taken to aid in its early completion. Under this head Article I says:

"The Governments of the Republics of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador, each being desirous to contribute its share toward the realization of the great work of the Pan-American Railway, and, in order to attain so important an end, have seen fit to enter into a special convention, and for that purpose they have appointed as delegates:

And Article II says:

"Each government shall name a commission, in order that it may study and propose the most suitable measures to carry out the portion of said work within its own territory. The commissions, taking advantage of the studies which exist with respect to the Pan-American Railway, and carrying out all others that they may deem necessary, shall present to their respective governments detailed reports concerning the number of miles which need to be constructed, the towns and lands thru which the lines should cross, the branches which it is proper to make to the principal line, the cost of the different sections, and all the measures that they may deem proper for the carrying out of the work."

The Convention for the Establishment of an International Central American Bureau provides for an institution which will not be in any sense a rival of the International Bureau of American Republics in Washington, but will concern itself solely with the affairs of the five Central American republics and the development of interests common to Central America. For example, Article IX says:

"The Bureau shall have a medium of publicity in connection with its work, and shall

endeavor to maintain intercourse with other offices of a like nature, particularly with the International Bureau of American Republics established in Washington," and Article X says: "The Bureau shall be a medium of intelligence among the signatory countries and shall send to the respective governments the communications, information and reports that it may deem necessary for the development of the relations and interests with which it is entrusted."

The Convention for the Establishment of a Central American Pedagogical Institute is explained in the preamble, as follows:

"The Governments of the Republics of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador, recognizing it as of the greatest importance and consequence to model public instruction on a spirit of Central Americanism and to direct it uniformly along the lines which modern pedagogy establishes, and being animated by the desire to make this recognition effective and practical, have decided to celebrate a convention, and to that end have named as Delegates . . ." and in Article I, as follows: "The Republics of Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador, animated by the desire of establishing a common, essentially homogeneous system of education, which may tend toward the moral and intellectual unification of these sister countries, have agreed to found, at the expense and to the advantage of all, a Pedagogical Institute, with separate sections for men and women, for the professional education of teachers. Costa Rica shall be the seat of the institute."

If the question should be asked "What is to be the material effect of this Central American Peace Conference?" the answer is simple and conclusive. If permanent peace is established, as a result of these treaties, in the five Central American republics, the world is sure to witness an economical, physical, and commercial development there equal to that of any other territory of similar area in the western hemisphere. No section of either North or South America is richer in the matter of resources and possibilities than that which reaches from Mexico to Panama. Four things are required to bring about a mighty change and a new era of unprecedented progress, namely, continued peace, stability of government, investment of foreign capital, and the construction of railways and various means of communication. The present prosperity of Mexico and of some of the countries of South America is largely due to the fulfillment of these conditions. When they shall be true of Central

America, the popular mind of the United States and Europe will take on a new attitude towards these semi-tropical states. No man can travel through them and note their relationship to both the Atlantic and the Pacific oceans, their nearness to the great markets of the United States, their variety of climate, their wealth of timber and minerals, their areas suitable for agriculture, the thrift of the common people, and the intelligence of the high or governing classes without being convinced that the world's idea of Central America is soon to undergo a complete alteration.

In judging what may be the future of Central America several important facts should be considered in order to readjust one's previous unfavorable opinion. A look at the map and a remembrance of the average stories told about the tropics give a wrong impression in regard to large portions of Central America, or to those parts which are at such an elevation above the sea and are so located with reference to prevailing breezes that they have essentially a temperate climate where white men can live, labor, and prosper just as well as in the southern section of the United States.

Another fact is the almost wonderful change that is now being brought about in the so-called mosquito, malarious, or low coasts of these countries, thru the introduction of modern methods of drainage, sewerage, fresh water supply, and general methods of sanitation. Immense areas of low-lying jungles that a few years ago were absolutely unsuited for the support of human life or agricultural

development are now becoming the scene of thriving towns and of productive areas of bananas and other tropical products. Still another interesting fact that should concern our gulf ports is the nearness for steamer communication. One can now leave New Orleans, Mobile, or any other gulf port which has steamers running to Central America, and reach these countries within two to four days, according to their location. The completion at this moment of the Trans-Continental Railway in Guatemala, the approaching completion of a similar system in Costa Rica, and the projects for railroads in Honduras and Nicaragua all tend to bring the Pacific as well as the Atlantic coast into close touch with the Gulf or Atlantic States. The Pacific Coast States, moreover, have direct interest in these Central American republics because there is constant communication by sea between them and these five republics.

The last, but not least, fact which I desire to emphasize is the construction of the Pan-American Railway. This has already been extended from Mexico into Guatemala and, in the course of a few years, should connect the capitals or ports of all five nations. Such a railroad, in addition to improved steamer facilities, will soon make Central America seem indeed close to the United States. American travelers, tourists, men of leisure, and students who are already surfeited with Europe and Asia can find no better alternative than that of visiting Central America.

WASHINGTON, D. C.

Literature, Literaturitis and Literalism*

BY MRS. L. H. HARRIS

THE art of literature is passing. It is passing in spite of literary dissecting departments in schools and colleges, in spite of lectures everywhere

*EMERALD AND ERMINE. *By the Author of "The Martyrdom of an Empress."* New York: Harper Brothers. \$2.00.

THE COURAGE OF BLACKBURN BLAIR. *By Eleanor Talbot Kinhead.* New York: Moffat, Yard & Co. \$1.50.

WALLED IN. *By Elizabeth Stuart Phelps.* New York: Harper Brothers. \$1.50.

THE CRUCIBLE. *By Mark Lee Luther.* New York: The Macmillan Company. \$1.50.

on the great or the minor poets, in spite of elegant gossip about the dead masters of it, in spite even of fine pastel essays by writers like Paul Elmer More and a few others who still retain a sad impotent sense of it. And we can no more keep it from passing than we can hold a comet by its luminous tail that is due to reappear only at the end of another hundred years.

But the loss is temporary, and does not indicate decadence as some suppose, but it means an advance in the scale of things. We are in the early destructive stages of a new and greater life of mind and spirit. What was true has become tradition, what was good is no longer good enough, what was love turns out to be something less. There have been tremendous and terrifying changes in human consciousness, and the lens of expression must not only be readjusted, but the mind must be schooled to compute new logarithms of experience and to receive totally new and strange impressions before we may again call literature one of the living arts. This lack of comprehension, and of the new power of expression accounts for the dearth of poetry and of all forms of epic literature.

Meanwhile, we who must live during the transition period are getting the worst of it. For literature is giving place to literaturitis, the sickness of a dying art, and to literalism, which has nothing to do with art at all. Edith Wharton's novels are examples of the former. Some one claims that she has taken down the "bouquets of dried literary grasses" and substituted fancies fresh from the "bosky dells of Arden." This is a mistake. Mrs. Wharton has an art-studio sense of natural scenery, and she sustains the same relation to human life that Mr. Burbank does to plant life. Mr. Burbank has a genius for growing artificial flowers in natural soil, and Mrs. Wharton's genius finds its expression in the naturalization of artificial human types. She portrays, with a kind of exquisite distinction, women bred to superficialities or upon curiously complex and unscrupulous theories of living. But she could never present to any bosky dell of Arden charm, the simple uncomplexed women who belong to that pastoral region, and who have nothing wrong with either their morals or their nerves. And an art which hovers so near the place where homely goodness ends and elegant badness begins is not literature. It is literaturitis, a delicate inflammation of the mind, expressed in a very admirable style.

But my purpose is to call more particular attention to the literalists who are the direct product of this transition period. The enlightened reader has repu-

diated the romantic ideality of the past. For example, any person imbued with the modern spirit of social righteousness will read *Emerald and Ermine* with almost contemptuous amusement. This is the story of a beautiful Madame la Duchesse who lives in a castle in Brittany surrounded by forests, fountains and traditions. It is written by a famous gossip about royalties with all the genuflections of an inferior person dealing with fate under a ducal coronet. Every sentence is perfumed with flunky sentimentality. And the honest hand-hardened reader, who probably has chilblains upon his plebeian heels, is kept staring as the author bows and adores before this little hothouse sprig of feudal humanity who never can justify her existence. Fifty years ago the reader would also have entered into this spirit of adulation, but now most of us are learning to regard the indigent rich with the contempt they deserve. And this book (like *The Courage of Blackburn Blair*, in which the heroine "blanches" too easily and is "fading away" from a mysterious inward malady) is a reversion to type, absurd because it is out of drawing with the mind of the times.

Now it is to escape this charge of absurdity that has made so many popular writers resort to literalism. This latter is not to be confounded with realism, for the realist always has a lurid imagination. He is not content with calling a spade a spade. He splashes it with blood and gives us to understand that it was used during the first dark night of the tale to brain the hero's grandfather. But in so far as an author is a literalist he has no imagination at all. He may be a publisher's mendicant taking tintypes of life in queer places, or he may be a famous novelist like Elizabeth Stuart Phelps. This author still retains a sweetness of the mind in describing natural scenery or even garden scenery. And we all remember when she wrote stories as if she had one ear to the keyhole of Heaven. In her last story, the suffering is not moral but physical, and the relief is not spiritual, but the kind afforded by science and a competent trained nurse. And indeed the services of a trained nurse in her story will be welcome news to all who have read her novels of recent years and

have been obliged to sit up alone with dogs and people in pain. For Elizabeth Stuart Phelps has become a literalist of the nerves, a persecutor of purely physical emotions in man and beast. Her sympathy is so intense for both that the reader is apt to forget that it is the author herself who stretches the dog on the dissecting table, or casts the professor from his automobile in such a manner as to fracture his spine. And it all comes from having neuralgia of the imagination and from the fact that the reader is no longer content to see the hero languishing in an invalid's chair, but must know the literal pathology of his case.

But one of the best examples of literalism to be found in recent fiction is mark Lee Luther's story. Mr. Luther is as devoid of literary genius as a hen is of musical sense, but he has produced a popular story because he has written literally of things about which people like to gossip—shame and scandal and the peculiar temptations of innocence and chastity. His attempts at descriptions of natural scenery are as ridiculous as Ella Wheeler Wilcox's account of her hammocked lovers in "Danger Sweet." And from first to last the book is as dreary and painful as revolting facts can make it. We meet the heroine in a House of Correction, where she has been sent for showing too much temper in a tame family. And Dickens never portrayed a worse state of affairs in the old English prisons than Mr. Luther represents as existing in a modern reformatory. The difference is that Dickens was an artist, not a traveling photographer of life. He was able to cast the charm of love or of compassion over the darkest situation. And he never failed to lighten it with a grotesque humor. But the literalist is singularly devoid of humor. All he can do is to set down what

he actually knows and sees without the lifting power of illusion. So, having served her time at the reformatory, Mr. Luther's heroine becomes a trade-girl in New York. She is the victim of poor wages and of the blandishments of unscrupulous employers. The devilish tentacles of commercialism in a great city seize upon her to drag her down into the deep places where dissolution becomes a spiritual process. The struggle she makes is dull, and one feels that but for the exigencies of the tale it would have been hopeless. She remains pure for the same reason that she prefers clean garments to soiled ones. It is instinct, not morality. And all told, life is stripped bare; it is made bleak, hard, repulsive, with no lights and shadows from a higher world crossing it, or relating it to heaven. One is almost tempted to turn from this new kind of woman who defends herself cat-tlewise, with her hind legs, so to speak, and look with longing for the young heroine of the 50's, who was accustomed to let down her dark hair over her nightgown and kneel at the moonlit window sill to pray for guidance when tempted to elope with the villain. To be sure, she always eloped. And to be sure, she had a hard time of it ever afterwards, but how rarely did she "go to the bad"! And one feels that it is quite otherwise with the class of heroines who fall into the hands of these literal novelists. It is due, of course, to the classes and places from which they choose their characters and situations. To interpret the life of the rich and indulged and over-refined, one must have literaturitis. To interpret the life of the poor in all its gross obviousness of hunger and hardship and vice, one must be a kind of sweat-shop literalist. The normal and right material for the best literature must lie somewhere between these extremes.

NASHVILLE, TENN.

Men We Are Watching

BY A WASHINGTON JOURNALIST

SENATOR DAVIS, OF ARKANSAS.

WHY the world is watching Senator Jeff Davis, of Arkansas, is more than half of it knows; and a good part of the other half—some newspapers included—seems to be watching simply for the fun of seeing feathers fly. Feathers will fly wherever Davis is—and as long as he is there. But that is not why he is worth watching. He says it was only a figure of speech—so far as he really figured in it at all—that reported threat that he would address the Senate on the first day of the session; tho he surely hit nearer to the opening day than any new Senator ever hit before. Speaking of hitting, Davis hits hard, physically and every other way; he will hit harder—every other way—as he tempers the wind to the shorn lamb, and studiously modulates his voice, his fists and his feet as well as his rhetorical figures to the sedate and somber shadows of the Sacred Senate Chamber.

An enormous man is Davis—big, broad-shouldered, sturdy and stocky. He has a fine, strong, smooth-shaven face, full of vigor, health and determination, topped by a shock of Bailey-brushed hair. He has a cordial smile always on tap and he gives you a grip like all Arkansans, which makes you thankful that, for the moment at least, you are on the right side of him. His voice is just what

you would expect of him. He thundered thru his maiden effort rather like a mad Nubian, only dropping occasionally and suddenly, as if to bring out the other better by contrast. He was furious, pathetic, humorous. He strode up and down the center aisle. He stamped his feet. He banged the desks. He shook his head, his

fists, his finger. It was not senatorial. It was a stump speech, the whole of it; and the first man to congratulate him was Senator McEnery, who is deaf as the proverbial post, and by the act paid a delicately humorous compliment to the new Senator's powers of gesticulation.

But what of it? Davis had only been a few short—very short—days in the Senate. He was fresh from stumping his way to the hearts of his constituents and—*sub rosa*—he was still talking to them. He will modify things when it comes to an effort to influence legislation. He has fallen to

Carmack's old seat in the Senate, and if he assimilates some of the wonderful self-control, the mastery of poetic irony, the sublime, sarcastic indifference which must still pervade the atmosphere about that seat, he will make of Jeff Davis, of Arkansas, something well worth watching. For there is a lot of sunshine in his soul which Carmack lacked. It comes out continually in conversation, and shows thru even the thick-

JEFF DAVIS.
New Senator from Arkansas.

est thunder clouds, when he is on his feet. He has time enough, yet. He was born in Arkansas the midsummer of '62, graduated at the Vanderbilt University and was admitted to the bar in '84, became the State's Attorney-General in '98, from which he stepped into the Governor's chair in 1900, and from there to Carmack's seat in the Senate—the only man whom Arkansas ever elected for a third term as Governor, and whom she must have valued to have ousted, for him, her idol, Senator Berry. It is perfectly obvious that Davis is not an accident or a product of madness without method.

THE SECRETARY TO THE PRESIDENT.

There is a man in Washington who, incidentally and indirectly, is better watched than some in the brightest of the limelight. The world benefits much more than Loeb by that kind of watching. We know William Loeb, Jr., secretary to the President, as the scapegoat for every executive stumble and the breakwater—more or less objectionable to visitors who think too much of themselves and their missions—against which waves must wash in working their way to the President. If there is anything bad to be said, why just lay it to Loeb. He can't answer back.

As a matter of fact—few besides Congressmen and newspaper men know it—the position which Loeb occupies has assumed colossal proportions, within recent years in the Executive department of our Government. Cortelyou started it out of darkness into light and Loeb has

tremendously increased the candle-power. He is today, practically, the *alter ego* of the President, the custodian of the Chief Executive's secrets, the safety vault for what must not leak out, the official mouthpiece for all that it is policy to make public. Men come from interviews

with the President and report what he said to them. The next day the Associated Press has the report contradicted or revised and explained. That is Loeb, and it stands. If you want to know anything, ask Loeb. If he does not tell you, forget it. If he tells you, bet on it. When I was chatting with Loeb the other day, a man came in with a matter he was determined to take to the President. Loeb was very polite. He is always polite. He said: "If you want to present this yourself, I will take you to the President, but I can tell you, now, precisely what he will say." I met the man afterward and asked him how he came out. He said he wished he had taken Loeb's word for it. It saves a lot of trouble.

All this, however, is but a small part of the duty and responsibility devolving upon the impersonal

secretary to the President. The letters alone which pass thru Loeb's hands and are directly or indirectly answered by him, count up, many a day, nearer to a thousand than a hundred. And they, too, are but an incident. The position, today, demands the delicacy of a diplomat, the strategy of a statesman, the facility of a politician, the acumen of a financier, the courage, alertness,

WILLIAM LOEB, JR.
Secretary to the President.

shrewdness and common sense essential to all success combined, enveloped in the patience of Job. And Loeb is "it," *facile princeps*.

He could earn much more money outside. I know of at least one offer of \$25,000 a year, to leave the White House January 1st, which he declined with thanks. Rumor tried to oust him, in the little political cyclone which whizzed about him a month or more ago, turning him over to Secretary Taft as campaign manager. It started with the fact, which every one knows, that Loeb is a true Taft man; and that, as every one also knows who knows anything about it, the War Secretary holds Loeb and Loeb's political acumen in the highest esteem and frequently consults with him upon important projects. But when the proposition of campaign management came up, Loeb said, as he did to the \$25,000 offer, that he was too well satisfied with his present position.

One realizes at first glance that Loeb is a man out of the ordinary. He is put together with a solid symmetry which gives an impression that he is a large man, though he is an inch or two shorter than the President—who is far from tall. He has a fine head for the mental machinery it carries, covered with black hair going a bit gray at the temples and thin at the crown, though he is only on the edge of the forties. He has large, dark eyes which move quickly and see everything without waiting for the head to turn. Loeb shaved off his mustache last summer, but it left him looking too much like Folk, of Missouri, so he put it back again. He moves and speaks with the deliberate dignity of one who thoroughly understands himself, his subject and his interviewer, and he possesses genius, as well as patience and tact, in making the other fellow understand. He is well worth watching for what he is, but he is better worth watching for what he will be when he drops the impersonality which must pervade the secretary to the President.

THE SECRETARY TO THE SPEAKER.

Another man who is indirectly watched—watched by newspaper men for the benefit of the public—is L. White Busbey, private secretary to Uncle Joe. Bus-

bey stands in much the same relation to Speaker Cannon that Loeb occupies to the President—a responsibility which works both ways, which requires a master hand in each direction and admits of no slips or blunders.

There is nothing convulsive or erratic about Busbey. He forms a valuable foreground for his chief. He is always attainable, always approachable. Politics and legislation may be surging at white heat about him, but Busbey is al-

L. WHITE BUSBEY.

Private Secretary to Speaker Cannon.

ways the same; courteous, soft-voiced and gentle mannered. It is impossible for some men to be severe and parliamentary at the same time, but it's not that way with Busbey. Many a throat has been cut with a feather during his administration as private secretary to the Speaker—which dates from Papa Cannon's assumption of the throne. In fact, it is quite generally assumed that if Cannon has a throat to cut he turns it over to Busbey, because if he did it himself the victim would know it before he left the room, while, as Busbey does it, it takes several days, sometimes, to find it

out. It is a valuable quality in the secretary to the storm center known as the Speaker of the House of Representatives.

Busbey is an old newspaper man. For twenty years he was with the *Chicago Inter Ocean*; one of the best known political writers of the middle West. What he did not know of politics and politicians, when Cannon caught him, would not be worth trying to find out.

Busbey is rather slender and not over tall. He has a heavy shock of hair, a bit frost-bitten, and a heavy gray mustache. He has cut off his Van Dyke since his last photograph was taken, removing a first impression of fierceness which was out of harmony with his inimitable gentleness. He has large, dark, wide-open eyes and a dominant nose—the

kind that go for the true inwardness of things and see into men and measures. He is a man who commands instinctive respect and confidence. Speaker Cannon trusts him to the limit, and so do the newspaper men who rely on him for much of the legislative information which daily warms the wires.

Following Reed's footsteps Cannon has made the office of Speaker of the House a tremendous power in national legislation, and by just so much has the responsibility increased which rests upon the shoulders of the private secretary. Of necessity the chief receives the glory, but the glory would sometimes be less great were it not for the intelligence, tact and loyalty of the power behind the throne.

The London Times

BY OLIVER LEIGH

THE times change, and the *Times*, of London, has changed with them.

In the great days of Delane the noble oak of the British forest of newspapers knew no change but that of natural growth, progress as the mind expands, with the old firm anchorage in the national soil. The course of change in these latter days seems a drift from the slow to the convulsive. But there were great men in those enviable days, and we have survived to the day of small things.

It seems worth while to attempt a comparison between the leading newspapers of New York and those of London, as a help toward getting a fair understanding of the London *Times* as Englishmen have for three generations known it, and accorded it pre-eminence not only over the papers of Great Britain, but of the world.

That it took the lead in high enterprise as news gatherer, and has held its supremacy in the nobler achievements possible to a perfect combination of world-wide agencies, trained journalistic diplomacy, practical grasp of the news most vital to every branch of a broad-scattered nation, and a splendid extrava-

gance that counted no cost too great for the pith of world-stirring news, all this is familiar to the statesmen and penmen of every land. What is less well known is the fact that the *Times* has stood alone in having so long sustained this position—not in the common spirit of professional competition, still less for commercial ends—but mainly in devotion to patriotism. There it has stood, the journalistic Rock of Gibraltar, proudest to be the acknowledged defiant upholder of its country's greatness.

Politics and social upsets, racking questions, ecclesiastical, moral, legal and not a few pig-headed persistencies in sticking to discredited causes, have shown that Jove with all his power and omniscience was no more infallible than his human spokesmen. He blazed the great way and set the pace for the higher journalism of the mid-nineteenth century, whose inconceivable influence for good is the proud laurel proper to the *Times*.

What is our American newspaper and what do we get for our pennies?

Speaking only of the half-dozen dailies which would be classed as the best by our citizens of all-round culture, we find

the high standard maintained in all the departments a first class newspaper must include, with unimpeachable good taste, an ever-increasing spirit of independence, and with an enterprise often agreeably surprising. This is higher praise than it may seem, because this class of journal is deplorably lacking in commercial support. The trader, as such, has no soul for fine sentiment in his advertising outlay. Here lies the blot on the escutcheon of American journalism—it is not fairly backed up by the moneyed and patriotic American people.

Proof? Look at the other class of dailies, which glare their painted faces into our sight whether we look or not. They shall be reeking with low life gore, besmeared with filthy ink, matching their wadings in all the inessentials of details too nauseous for courts to tolerate in trials, yet we shall find these very papers interleaved with costly whole-page advertisements of businesses owned and supervised by men who rank high in the commercial world, and pose as model figure-heads in the church, philanthropy, politics and society. Yet it is the scandalous fact that for every cent these patrons bestow as advertisers in the papers of which the nation should be proud, they spend a dollar ten times over in supporting the papers of which any nation would be ashamed.

The large first class of British newspapers, setting the *Times* apart for the moment, have more departments to fill than ours, because of imperial and social interests in every corner of the world. Scarcely a family with three or more sons but has a representative wherever the race has spread and this is equally true of the peasantry and nobility. Consequently the Englishman's newspaper is a gazette of world-wide news, national doings, social progress, it is, without pretending to be, a geography, a pen portrait gallery, a continuous statistical abstract, an encyclopedia of everything bearing on national life and achievement, not simply as haphazard news, but with direct purpose and effect in stimulating patriotism.

The average American paper, again to borrow a shaky descriptive, is too stuffed up with "stories," often themselves over inflated with gush, to entitle it to credit

for serious patriotic intention, even if all these paddings were substantial reading. The British people buy other papers for that sort of thing.

The writer has several times fluttered the feathers in our journalistic dovecote by doubting whether the "average" paper has ever seriously tried to understand what "news" is. Many years intimate study of this little word confirms that doubt.

The British newspaper considers that the sayings and doings of a public meeting, at which the foremost men of the country or the city, or both, meet for discussion of an important subject, is "news" of the first importance. Therefore the paper gives a *verbatim* report of all, or most of, the principal speaker's address, exactly as spoken, lit up with all the "cheers," "laughter" and suchlike side lights which make the reader feel he is at the meeting. The other speeches are shortened according to their importance but mark this—the pith of them is given in the speaker's words or vein, so that the effect is preserved. The reports of Parliament also transplant the reader from his table into the reporters' gallery.

Now the most provoking thing to a student of American life thru its newspapers is that they don't "report." They deny us our right to have the actual words of the speakers, one reason being the rarity of "reporters" capable of taking down 200 or 150 words a minute graphically and without error. The major reason is that important addresses by important men are considered quite minor "news" by our newspapers, altogether beneath comparison with the sweet and inspiring utterances of a strumpet in a murder case, or the drivel of the tribe of "literary" or "dramatic" self-anointed diluters of public intelligence. One lamentable result of this newspaper fallacy is seen in the rather ludicrous but pardonable habit of so many of our "orators," who, to safeguard themselves against being hashed up into comic "copy" by reporters who cannot report, actually write out their "speeches," read them to their necessarily bored hearers, and hand them to be printed in all their unrelieved deadness for readers too bored to read. This very morning's papers give several columns to Secretary

Taft's most important utterance since beginning his campaign, and cruelly "report" that it had taken him the whole of the previous day to dictate it to his typewriters in a locked room. The British people would never confer the title of statesman on a political leader who could not say his say in his natural way, nor would they grant the title of "newspaper" to a sheet incapable of knowing important news when it sees it, and unable to reproduce a speech verbatim, or at least honestly condensed.

The London *Times*, then, has been doing this lofty work for generations, with an all-embracing comprehensiveness and catholicity unrivaled. For his six daily cents its reader has had substantially all the national official documents, statistical and general, all the cream of great men's knowledge and wisdom in their gratuitous letters thru it to the nation, all the panorama of world news, and—which is often of more importance—its interpretation, besides the essentials of every momentous occurrence, from palaces and halls of law, light and learning to police courts and the streets, but all presented by competent discriminators between the kernel and the husk, in orderly array so that one knows where he will find what he wants, all sifted from trash and slush. And the pages holding dignified reports, dignified summaries, dignified editorials, and dignified advertisements are not degraded to the plane of dime show street posters by the thrusting into them of the

aforesaid trade magnate's puffery of business.

The London *Times* has always had imitators, here as everywhere, and the more the better, but it is likely to continue true that its columns will be the happy hunting ground for all British and other papers that aim to give solid information for statesmen, citizens and students of world affairs. It may be that the *Times* is going, some distant day, to surrender its pedestal and step down into the field of "popular" and supposedly cheap newspaperism. Whether or no, its own glorious career, and the traditions of English journalism, will for ever secure it against any descent to cater for saloon bar patronage. There will be no *Times* for the addleheaded sensation slave, nor for the revelers in second and third hand vulgar ward club gossip that spills over columns and pages as "news," and dilutes editorials into mush.

Yet, who with memories of the large times when men of might reigned by right over the English people from the fifties to the nineties, can think of the new departure of the *Times* without a pang? The days of Disraeli and Gladstone, of Darwin, Huxley, Tyndall, Dickens, Thackeray, Delane—but the list must break short here. Let the pious wish go up that the old "Thunderer" may not tempt Fate as the new Blunderer, despite its change from a venerated to a popular standard.

NEW YORK CITY.

December Nights

BY HENRY FLETCHER HARRIS

SOMETIMES when I sit with my wife by the reddening embers,
 When the house is grown still save for the chirr of the cricket,
 With our babies asleep, white-gowned, in the glow of the candles,
 While a desolate wind keens over the freezing marshlands,
 While we deeply muse in the tender and delicate silence—
 There will rise on my life the sense of a vast reassurance,
 And a love immense, all-mighty and all-comprehending,
 Flows in on my heart from the calms of Ultimate Being,
 And a Voice: "It is well with thy soul, O be of good courage!"

OVIEDO, FLA.

Music, Art and Drama

Metropolitan Operas

Much has been said and written during the last two seasons regarding the revival of Italian opera and the eclipse of German opera. Undoubtedly, some of the Italian operas that were pronounced

dead years ago have been brought to life again by Caruso and his associates. This new life will doubtless last as long as Caruso's voice lasts. As for the Wagner operas, it only needed a special occasion to show that they are as powerful magnets as ever. This occasion was provided by the first appearance of Gustav Mahler as conductor at the Metropolitan Opera House. The opera was "Tristan and Isolde"; the cast included M me. Fremstad, who for the first time impersonated Isolde, and did it very well; M me.

Homer, who now is second among contraltos only to Schumann-Heink; Mr. Knote, who has been aptly called "the German Caruso," and Mr. Van Rooy. The enthusiasm was extraordinary. Mr. Mahler was recalled many times with the singers. They were particularly glad to join hands with him because he had taken great pains to prevent the orchestral players from drowning their voices. The

audience also appreciated that virtue; it appreciated, further, the splendid control of all his forces shown by Mr. Mahler; his ability to secure every shade of expression demanded by the score; his command of the big climaxes; in short his perfect musicianship. By his engagement

Mr. Conried has greatly strengthened the foundations of his company.

One of Mr. Mahler's cardinal virtues is that he believes in shortening the overlong operas. Most of Wagner's are too long—not for the pilgrims at Bayreuth, but for busy New Yorkers who, after working hard all day, do not want to be kept in the opera house much more than three hours. By means of judicious excisions Anton Seidl used to bring the Wagner operas within reasonable dimensions without sacrificing any of the best pages.

Mr. Mahler is following his example. He has also promised to reduce the time of performance of Mozart's "Don Giovanni" from three hours and a half to two hours and three-quarters. The cast of this production, which is to be made on January 23d, is remarkable; the artists employed will be Gadski, Eames, Sembrich, Bonci, Scotti, Campanari, Chaliapine.

GUSTAV MAHLER.
At the Metropolitan Opera House.

Mr. Chaliapine, aided by the most winsome of Marguerites, Miss Farrar, has succeeded in making Boito's "Mefisto-

MISS MARY GARDEN.

fele" popular. He is extremely picturesque, especially in the Brocken scene, where he stands on a rock, clothed chiefly in his muscles, reviewing the wild dances and revels of the witches. As Don Basilio, in "The Barber of Seville," he has been less successful because he makes that music-master altogether too coarse and filthy a personage. As Mephistopheles in Gounod's "Faust," he impressed chiefly by his picturesque attitudes. He does not sing the music so well as Plançon or Edouard de Reszke; of the humor of the last named he has but a trace. The performance of "Faust" brought forward Mr. Caruso, for the first time in two years, in a French rôle. He sings it better than formerly, but to the eye he is anything but a Faust.

The center of attraction in "Faust" was Miss Farrar, whose singing has improved remarkably since last year and who now ranks among the first as a vo-

calist. As an actress she ranks above all the other opera singers now in New York except Mr. Renaud. Mr. Belasco believes she would, in a short time, be the leading American actress were she to give up music, and he has made her tempting offers to leave the operatic stage. But, after all, a prima donna has a more prominent as well as a more profitable position than an actress, and it is well that Miss Farrar has refused to give up the art to which, with the aid of Lilli Lehmann, she has given so much intelligent effort. To see her at her very best one must attend a performance of "Madama Butterfly," Puccini's Japanese opera.

Mme. Emma Eames also has distinguished herself in a Japanese opera, Mascagni's "Iris," the revival of which was attended by unexpected success with her

and Mr. Caruso in the cast. The title rôle of this opera came to Mme. Eames by right, for she was born in the Far

East (Shanghai) and as a child had a Japanese nurse. Altho this opera had never been a real success anywhere, she

At Manhattan Opera House.

made a most serious study of her part, taking lessons in Oriental deportment of the famous Japanese actress, Sada Yacco; and Mascagni, whose music is not remarkable for its beauty or originality, has to thank her vocal and dramatic art for what success his opera has won this time. When it was produced here for the first time, some years ago, under his own direction, it was a flat failure. Other operas in which this eminent American prima donna has distinguished herself this season are "Tosca" and "Lohengrin."

"Louise," or the Call of Paris

A few weeks ago Mr. Oscar Hammerstein sent to the newspapers a letter in which he complained that the public was not supporting the Manhattan Opera House as it deserved to be supported.

He was quite right, yet his protest was issued at a time—just before the holidays—when all amusements were more or less neglected. On the third day of the new year the indefatigable manager produced his third novelty of the season, and with that his luck changed. The reception of "Louise" was so enthusiastic, and the four repetitions of it so far given have attracted such crowded audiences, that it is safe to predict that it will prove a lasting success in this country. In Paris its popularity has been so great and continuous for nearly eight years that the composer has earned over half a million francs from his royalties, which include those due the librettist, since he wrote his own "book." Charpentier's work is the most successful French opera since "Carmen" was produced, in 1875.

Not only did Gustave Charpentier write his own libretto, he also incorporated in it important episodes in his own life. It has been said that Mark Twain owes his success largely to the fact that

MAY MUKLE.

nearly all his books and stories are more or less autobiographic; nor is he the only writer of whom this can be asserted.

The fact that Charpentier was describing scenes witnessed with his own eyes and participated in with his own feelings doubtless increased their vividness and stimulated his creative powers when he set them to music. At the Manhattan Opera House the autobiographic aspect of "Louise" was emphasized by the tenor, Mr. Dalmores, who made up to look like Charpentier in the rôle of Julien.

Julien is a young artist and poet who loves Louise, the daughter of a working man. She returns his love, but the parents refuse their consent because of Julien's bohemian habits. In the second

act we see Louise with a number of other girls in a dressmaker's shop. Julien sings a serenade below, and Louise is so much affected that she suddenly leaves and joins her lover. In the next act we find them dwelling in a little cottage surrounded by a garden—on a bluff overlooking Paris. The houses are gaily illuminated and rockets ascend to the sky. Presently the stage is filled with a motley crowd of their friends, and Louise is crowned the Queen of Montmartre. In the midst of the festivities her mother arrives to tell her that her father is dying. Louise follows her home; but it is no

YOUNG HORSEMAN.

longer the old home. The father recovers and tries to win back the daughter's affection, to make her forget her lover. But Louise does not listen to him; she hears the call of the wild bohemian life, and in a fit of delirious ecstasy she recalls and chants its delights. This so enrages the father that he drives her from the house and then sinks into a chair overwhelmed by grief at his loss.

Jack London, if he had written the libretto, would probably have named this opera "The Call of Paris." It presents a vivid picture of the allurements of French low life. At the same time, it illustrates the unfortunate results of the French law forbidding marriage without consent of the parents. It is difficult to see why so many experts doubted that "Louise" would be a success here because of its intensely Parisian local color. Are not many stories by Balzac, Zola and others popular here precisely because of such local color? The street cries differ from ours, but they are street cries for all that. And as for the love story itself, that might occur, and daily does occur, elsewhere.

Charpentier's opera book is skilfully constructed, and in the final scene it presents an exceptionally strong dramatic scene, which might make the play a success apart from the music. But the music is a great help. Tho recently written, it is not of that ultra-modern French type which deliberately avoids melody. On the contrary, it is richly melodious, while the orchestral score glows with modern colors. The vocalists are not asked to declaim only; they have plenty of opportunity to sing. Of this Mr. Hammerstein's artists—chief among them Mmes. Garden, Bressler-Gianoli, MM. Dalmores and Gilibert—made plentiful use; yet their acting is so fine (there used to be no such operatic acting in the good old times!) as to make the singing almost superfluous. Mr. Hammerstein has certainly shown managerial wisdom in transplanting this French opera to American soil.

Charpentier is supposed to be at work on another opera, a sequel to "Louise," but no one knows anything definite, as he lives a secluded life in the Riviera, corresponding with no one. He spent much of the money he made on his opera in educating the Parisian working girls,

POLYKLEITAN HEAD.

musically and otherwise. It was from among them that he got his wife as well as the inspiration for his realistic—yet in some aspects idealistic—opera.

Previous to the production of "Louise," the most interesting event at the Manhattan had been the production of "Don Giovanni," with Mr. Renaud in the title rôle. Last year, when this eminent French baritone appeared in this part, his voice had been so impaired by a prolonged hoarseness that he could not do himself justice. This winter he sings admirably, and there is thus no drawback to the enjoyment of his really quite incomparable impersonation of the bold, dashing, lady-killer who is the hero of Mozart's opera. There are few actors today, not only on the operatic but on any

stage, who could not learn much from Mr. Renaud—as well as from Mr. Gilbert, who impersonates the bumpkin, Mazetto.

Tetrazzini's Triumph

A few months ago London had an autumn season of Italian opera. Some good singers were in the casts, but the

several operatic concerts. Mr. Hammerstein, not having Melba this year, promptly engaged her, and last Wednesday she appeared at the Manhattan Opera House in the same opera and scored a success which appears to have been even more pronounced than her London triumph. The warm greeting she got when she first came on the stage was ob-

"THE BREAD LINE."

By Jerome Myers.

audiences were not large. One evening Verdi's "La Traviata" was sung with Mme. Tetrazzini as Violetta. She had sung for seven years in St. Petersburg, and other years in the cities of South America, in all of which she was a prime favorite. But Londoners knew her not and the house on this occasion was but half filled. The next time she sang the house was crowded to the doors, and so it was at every further appearance; and when the season was over she had to give

viously due largely to the reports that came from London regarding this "new Patti"; but the frantic applause which swept the house at the end of the first act was in recognition of her rare gift of florid song. In that lies her strength. Her vocal embroidery is delicate as lace. Her voice is of rare beauty, especially in its top register, and she sings as easily as a nightingale. She will doubtless prove as profitable to Mr. Hammerstein as Melba did last season.

Concerts and Soloists

Grand Opera may seem to take up a disproportionate space in our record of the month's music, but that is not the fault of the chronicler. It is undeniable that the two opera houses get most of the money people want to spend on music, and that the concerts are not as liberally

ducts his Boston Symphony Orchestra in our Carnegie Hall; but he, too, has not made us acquainted with any new piece that one longs to hear again. His latest offering was what the boys call "the limit"—at least one may hope so; a symphony lasting an hour and a quarter, during which its composer, Hermann Bischoff, of Munich, says less than Schubert or Beethoven would have said in one minute. Bischoff is an imitator of Richard Strauss, whose specialty is the art of concealing a dearth of ideas under a resplendent garment of orchestration.

At the same concert, South America's best musical product, Mme. Teresa Carreño, played the second concerto of her former pupil, North America's best musical product, Edward MacDowell. It was an entrancing performance, during which, as at her Carnegie Hall recital on the following Sunday, the eminent Venezuelan pianist showed that her art has matured since she was here last, seven years ago. Her playing used to have an unbridled impetuosity which caused her to be called "the Valkyr of the piano." It is now more restrained, tho none the less brilliant, and its poetic qualities are as ingratiating as ever.

Among the artists who have made their first appearance here this season none has been more cordially welcomed than Miss May Mukle, the young English violoncellist, who, after winning fame at home and in Australia as a companion of Albani, went to South Africa with Miss Maud Powell, and is now with that sterling artist on a

concert tour. Her playing is distinguished above all things by two qualities—an unusually big and sonorous tone, with an almost human quality, and a depth of musical feeling which is very rare. Her charming personality is another feather in her cap.

Mme. Schumann-Heink has sung at one of Mr. Walter Damrosch's Sunday

PORTRAIT BY JOHN W. ALEXANDER.
In the National Academy of Design.

supported as of yore. It must be said, too, that novelties are not as numerous on our concert stage as they might be. The Russian Symphony Orchestra alone distinguishes itself in that line, but its offerings seldom are of more than ephemeral interest.

Dr. Karl Muck also now and then brings to town a new work when he con-

concerts, proving herself still the greatest of living contraltos. She is to make some appearances at the Manhattan Opera House.

Mr. Frank Damrosch has made an appeal to the public for better support of the oratorios produced by the Oratorio Society. "The Messiah" always draws two crowded houses, but other works are neglected. The Musical Art Society, under the same conductor, on the other hand, always sings to a crowded audience. This seems to contradict the prevailing opinion that the public prefers the larger choral works to the shorter ones.

The Winter Exhibition at the Academy

Of the 343 pictures at the Academy exhibition which opened and closed since last month's art notes were written, hardly a half dozen were really notable canvases. A foreign visitor taken to see that

dismal showing would have wondered at the absolute lack of brains among American artists. Skill in plenty, much good tone, but rarely the glimmer of an art idea. When the rare glimmer of an idea is perceived a prize is instantly awarded, as in the case of Hugo Ballin, whose conglomeration of baby, young woman, negro servant, landscape with goats, etc., called "The Bath," received a prize for "the best figure composition"! Ballin has quite an Oriental color sense, but nothing whatever to say with it. To be sure figure compositions were scarce enough and these things have to be decided with only the presented material to choose from. W. T. Smedley won the Carnegie prize and Lydia Field Emmet the portrait prize, altho the one really fine picture in the exhibition was a portrait—that of Worthington Whitredge, the aged painter, by J. W. Alexander. But Mr. Alexander is past the prize-getting stage. This portrait is a most delicately skillful render-

A CORNER IN THE NATIONAL ARTS CLUB GALLERIES DURING THE SECOND ANNUAL EXHIBITION OF THE BOOKS OF THE YEAR.

ing of character, and shows the power of sensitive selection that marks the thinking artist. It has breadth, simplicity and direct appeal, and Alexander has rarely surpassed it. A very honestly painted canvas was that called "Reflections," by Sergeant Kendall, whose clearness of sight is, however, still a bit painful. The small child sitting with his back to a pier glass and turning his face away from us is very lovingly painted, and much more can be hoped for from this man's brush as he adds years of experience to his life if he gains in imagination thru his obvious interest in children. An academically excellent but deadly dull picture seen before this year at a dealer's was "The Maid of the Manor," by Douglas Volk, whose pictures more and more remind one of the kind dear to readers of the Christmas numbers of English illustrated weeklies. As usual landscapes outnumbered all other classes of pictures here. The Lyme contingent showed freshest impressions, and there were many small, quiet things that would have been worth seeing alone probably, but few of the pictures remain in the memory. It is comforting to hope that the recent appointment of Harrison B. Morris as manager of future Academy exhibitions will result in an improvement in their contents, if his earlier success in giving Philadelphia its excellent annual exhibitions can by any means be repeated here.

Exhibition of Books at the National Arts Club

The second annual exhibition of the books of the year was held in the galleries of the National Arts Club from December 16th-30th. A larger response was made by the publishers this year than last, when the exhibition was experimental. The leading books published during the past year were on view, and these were in many cases arranged in connection with certain of the original drawings used as illustrations in them. A number of fine art calendars were also shown and there were some notable prod-

ucts of certain of the private presses. The exhibition was in every sense a popular one and the visitors manifested deep interest. Comparisons were possible of the books issued by the various publishers represented, and many visitors in the quiet of the club's galleries were able to obtain a far better idea of the books in which they were particularly interested than would have been possible in any other way.

Some of the artists represented by one or more drawings in black and white or in full color were: W. T. Benda, Sigismond de Ivanowski, Louis Loeb, Frederick Remington, A. B. Frost, Charles J. Taylor, Charles M. Relyea, Harrison Cady, A. Mucha, Edward Penfield, Will Jenkins, Howard Pyle, and Clarence F. Underwood. Otto Zahn, of Memphis, sent two of his art bindings, and Miss Katharine Adams showed a number of her hand-bound books. Exhibits were also made by the Village Press, the Gillis Press, the Eragny Press, the Elston Press, the Acorn Club, and the Club of Odd Volumes. A few notable examples of the superb work done at the Doves Press, including some presentation copies, were loaned by Miss Preston, of the Library Committee. Mr. A. W. Drake loaned some antique end papers (hand marbled),

some of the Grolier Club publications, and certain imprints of the Caxton Club, of Chicago. Some of the Vale Press publications were likewise units in the exhibition. Enrico Caruso's Book of Caricature in tint, which was given a special case, attracted much attention, both on account of the clever workmanship displayed by him and from his notable Poseurs.

Special Exhibition of Contemporaneous Art.

At the National Arts Club, until January 25th, will hang sixty odd oils, forty small pieces of sculpture, and over eighty prints from photographic and etched plates. The works are all distinctly non-academic. They belong largely to the more thoughtful class of compositions in which sincere convictions are expressed.

THE EYE OF KING
EDWARD VII.
From a miniature painted
by Alyn Williams.

Many of them are not very good examples of their signer's work, but the general effect is of restful tone and individuality. We do not often have a chance to see the works of John Sloan,

son why a public that sentimentalized over Millet's "Man with a Hoe" takes no notice of a work by one of our own seers, portraying one of our own problems. The "Spielers" and the "Pawn-

THE CHURCH AT OLD LYME.

From the Painting by Childe Hassam. Copyrighted, 1907, by N. E. Montross, N. Y. C.

George Luks, Eugene Higgins and W. J. Glackens, and to miss seeing Luks's "Child of the Slums" is to be unacquainted with one of the most stirring pictures painted in America. It is a terrible indictment of our own cities in its pitiless truth to nature, which may be one rea-

son why a public that sentimentalized over Millet's "Man with a Hoe" takes no notice of a work by one of our own seers, portraying one of our own problems. The "Spielers" and the "Pawn-

broker's Daughter," also by Luks, are splendid bits of beautiful color. Robert Henri's best work, the sensitively seen "Lady in Black," is here, too. The works of the Dato brothers do not show them at their best.

Among the sculptures are a number

by Carl Haag, in which we see again the modern sympathy with those at the bottom of the social structure. His "Little Waifs" is a touching bit. "The Immigrants" is cleverly composed and expressive in detail. Solon Borglum's horse and man cowering into a sculpturesque mass in endurance of a blizzard is knowing, and at the same time imaginative, as this young sculptor's work often is. Louis Potter's Indian things are genuinely felt and adequately modeled. His busts are not so successful and show his shortcomings in technic. The "lions" and "sitting puma," by Arthur Putnam, make the works of most of the other wild animal sculptors look very conventional. He is a newcomer among us and in the limited field of animal sculpture he is sure to become important. The photographs shown are excellent examples of the so-called "art photography." Sloan's splendid series of etchings is here, and two beauties by Senseney with two by Pennell and two by MacLaughlan. Four drawings of fantastic subjects by Pamela Coleman Smith were weirdly beautiful.

Special Exhibitions at the Dealers'.

As we often tell our readers, the way to see the best work of American painters is not that of those who go religiously to Academy shows, but of those who patiently tramp Fifth avenue at least a couple of times a month, dropping in here and there where experience has taught us to expect carefully chosen groups of good things. At the Montross Gallery, since our last mention, have been seen the works of two men who have in common the power to give us absolute delight in beautiful, joyous nature—Childe Hassam and Willard L. Metcalf. Mr. Hassam aims a little higher and yearly reaches more surely what he seeks. This year his "Northwest Wind" is his great attainment. A splendidly realized transcription of that cold, determined offshore wind. Beautiful sunlit compositions with little nudes set in them like jewels were, in this exhibition, nearly all successful pictures. His vision of lower New York City, looking up out of the mist to the delicate clouds, and his view of Florence, Italy, from a villa garden on one of the hills above the city, were very differently

keyed, but both beautiful renderings of man-made scenes.

Mr. Metcalf has made swifter strides in the recent years than any man of his age. He, too, paints "*en plein air*" as much as any of our men can be said to do. He gives us no nymphs among his trees, which allows us to feel more at liberty to walk among them ourselves. In fact an afternoon call at the gallery, while his things were there, left one impressed with the artist's power to increase the impression of a phase of nature by rendering it with the addition of his own intensely pleasurable point of view. "The Evening Star" was a memorable number in its almost tremulous beauty. The "Passing Glory" and "The Golden Screen" are autumn scenes belonging completely to our own land. The snow-covered bits of the earth and such pieces of sea-scape as "Camden Hills," all treated as faithfully yet delicately as possible, showed us the range of this very delightful painter.

Mr. Macbeth's exhibition of the work of Jerome Myers brings for the first time into deserved prominence a painter than whom we have no one better fitted temperamentally to express sincerely in art what others are trying to express in other ways—the growing consciousness of the existence in our cities of the many who make the great crowds for whom there can be no hope under present conditions. Mr. Myers is an artist entirely, and in no sense a preacher, but because of the truth of his vision he can already move us very deeply. His work, tho already beautifully mature in color and decorative sense, is, we feel with pleasure, only beginning to say what we can expect from this man. A few canvases here can stand yet a little more treatment, but a few are absolutely satisfying. "By the River's Breath," a dark night scene on the string-piece of a pier with a few inhabitants of impossible hovels "sleeping out," and another group of hopeless-looking creatures on a bench—at "The End of the Walk," are, in the description of them, dreary pictures, but Myers never seems to sentimentalize, and he takes his figures, very much as they take themselves, as a matter of course, and so we get beautiful pictures instead of tracts. But they are human documents

in spite of the artist's detachment, and while showing us the possibility of "subjects" in our East Side streets, show us the conditions, and at the same time this artist's delicate sympathy with all that a receptive nature can be impressed with in sordid scenes. Touches of humor and pathos, the rhythm of the moving feet of children following a street organ, the toned harmonies in the old clothes of people in "The Bread Line," the freer air in parks and playgrounds, the medieval pageant of "An Italian Saint's Day"—a scene almost unbelievable to an uptown New Yorker, the mosaic-like colors of the crowds out on "A Summer Night in Madison Square." Yet there are men who cannot find material in America! Here, in one month, we have Childe Hassam giving us a view of New York's outermost appearance that shows us what a fairyland it is in color and form, and Jerome Myers showing us how, even within the darker recesses, in full view of the sadder side of life itself, there is still beauty for the man with eyes to see. A group of drawings by Mr. Myers shows almost more certainly than the quality of his color the fineness of his grasp of his material. We are not likely to have this winter anything better in itself and more promising for development in the future than this exhibition.

The portrait shows of the month have been unimportant. At Fishel, Adler & Schwartz's were shown a number of good portraits by Eugene Paul Ullman, whose portrait of his earlier master, Wm. M. Chase, was bought by the French Government. With the portraits Mr. Ullman showed a number of joyous little French landscapes that seemed to this critic much more worth while and personal than the more labored portraits. At the same time were shown five scientifically and physiologically correct statuettes of athletic figures by R. Tait Mackenzie. They have no artistic significance, but will appeal to college athletes. Some large medallion portraits and plaques by the same man were also seen. He seems to have little grasp of the technique of relief, and none whatever of the importance of design in handling it.

Adolf Benziger "caught" President Roosevelt very forcibly in a portrait shown with others at Knoedler's. He is a pupil of Bonnat and has some strong

powers and little or no subtlety or color sense.

The Union League.

Eighteen masterpieces of the Barbizon and older schools made for those privileged to visit the Union League Club an unusual feast for a few days. The pictures belonged to Mr. Henry C. Frick and included the splendid Rembrandt by himself painted late in life; Franz Hals's "Portrait of an Artist"; an example of Raeburn that makes one believe him second to none of the great English portraitists; Corot's "Lac de Garde," Romney's "Lady Hamilton With Dog" and splendid examples of every artist represented.

The Williams Miniatures

A very interesting one-man exhibition of miniature portraits was that made at the galleries of Arthur Tooth & Sons by the young English artist, Alyn Williams, now in this country. His catalog contains but twenty-seven numbers, but the work represented is all high class and remarkably uniform in quality. His colorings are rich and very strong compared with many of our American miniaturists. One of the interesting portraits shown at the Tooth Gallery was No. 19; the artist's wife. It was painted on an exceptionally large piece of ivory and the pose is very charming. No. 9 was the eye of the artist's son and suggested a face just finding a lodgment in fashionable society among us. No. 23, "The Father of Novices," was an excellent example of the monkish type. It was painted on vellum, a favorite medium in England, and which has something of the texture of ivory. A miniature shown by Mr. Williams but which was not cataloged was entitled "Carla," the daughter of Carl Heinzen, of Chicago. It was the smallest miniature shown and was mounted as a finger ring and set with small rose diamonds.

Among the attractive exhibitions of the month was another of miniatures by Eulabee Dix at the Bauer-Folsom Galleries. Miss Dix combines the charm and sentiment of her native South with a freedom of handling acquired by study of the great miniaturists of the past. As witnesses of a recent stay in Europe there

were portraits of Lady Paget and of the Countess of Warwick, while likenesses of Mrs. W. W. Plankinton and of Miss Beatrice Mills are among some of those recently executed in New York. In every case Miss Dix has given the sitter's personality and has added a touch of her own individuality.

The Drama

The season so far has not been rich in successes either from an artistic or finan-

To these must be added Mrs. Fiske's wonderful impersona of Rebecca West in Ibsen's "Rosmersholm."

Mrs. Fiske has always been partial to Ibsen, and has never had a rival in Ibsen roles until Madame Nazimova took New York by storm. People either think that Mrs. Fiske is a genius or else they do not like her at all. The same is true of Ibsen as a playwright, therefore it is impossible to pass any judgment on either that will settle matters. Certainly the production of "Rosmersholm" is one of

CHARLOTTE WALKER AS AGATHA WARREN, FRANK KEENAN AS GENERAL WARREN.
In "The Warrens of Virginia." Belasco Theater.

cial standpoint. Last month we stated that the three that stood out most prominently were Ibsen's "Master Builder," in which Madame Nazimova appeared as Hilda; Belasco's play of life in Indiana, in which David Warfield appeared as the Grand Army man, and Augustus Thomas's play, "The Witching Hour."

Mrs. Fiske's triumphs, and if Madame Nazimova has played the part of Hedda Gabler the better, Mrs. Fiske has nothing to fear from any actress in the case of Rebecca West. We are not going to rehearse the plot or the meaning of "Rosmersholm," except to remind our readers the play is thoroly Ibsenesque—

disagreeable, obscure, problematic, thoughtful and powerful. Whether the play is moral or immoral will probably never be decided, for the problems raised are settled by a dual suicide rather than by reason. But it is a play that all mature people should see and decide its merits for themselves. The cast was excellent, and we recommend it to all grown-ups. After the first week the closing speech of the play, the house-keeper's cry on looking thru the window, was cut out. This is a very questionable innovation. Ibsen's endings are usually of supreme importance, striking the keynote of the play and giving the clue to its interpretation, and in this case the spectator who has not read the play would have no assurance that the pair was safely dead; they were quite as apt to elope.

There is no more beloved actress in America than Maude Adams. Indeed a cult is apparently growing up who think, histrionically speaking, that she can do no wrong. After her wonderful success in "Peter Pan" she has turned to "The Jesters," a play in four acts translated from the French of Miguel Zamacois by John Raphael and played in the original by Sarah Bernhardt. Like "Peter Pan," the play is fantastic, but, unlike "Peter Pan," it is anything but fanciful. The English translation is written in third-rate hexameters a long way after "Cyrano de Bergerac," and the players recite their parts in a monotonous way. There is the threadbare plot of Prince Charming coming in disguise to woo his lady love amid the battlements and towers of a fifteenth century castle, and Miss Adams is the Prince. We shall be very much surprised if this play is not a total failure. It is certainly unworthy of Miss Adams's ability, and it gives her little opportunity to show the audience her winsome and elfish self.

Madame Nazimova, the Russian actress, has appeared for the first time in an American play, "The Comet." It is so called because it is written by an American, Mr. Owen Johnson, but it is foreign in setting and consists largely of fragments of foreign dramas of the modern school, conspicuously Sudermann's "Magda," Ibsen's "Hedda Gabler" and Shaw's "Candida." There would be no

objection to this, for the playwright cannot get along without preying on his predecessors, if Mr. Johnson had any central unifying theme of his own to give his play significance, but it is not apparent that he has. The biological "law," which is pronounced with such solemnity at the climax of the drama, is so obviously untrue as to be ineffective. It is unfortunately not regarded as essential that the ideas of a dramatist shall be true, but they must, for art's sake, be plausible, and everybody knows that this alleged natural law does not hold either in zoölogy or the history of man. The only value the play has is that it affords Madame Nazimova an opportunity for another of her original and unforgettable impersonations; this time as a vampire, snaky in a long gray gown, an exhausted woman of the world, old from sin and weary of sensations, reviving her youth at the expense of a young and ardent poet. Unfortunately Madame Nazimova has been something of a disappointment to the enthusiastic admirers of her first year in New York. She did her best work under the influence of Orleneff. Since his departure she has continually grown more artificial and extravagant in her make-up and action.

David Belasco has produced a second civil war play to match "The Grand Army Man," this time going back to 1865, to the thick of the conflict between the lines near Appomatox. "The Warrens of Virginia," which is written by William C. de Mille, has no actor as effective as Warfield, but Frank Keenan, who made a good part out of the gambler in "The Girl of the Golden West," does as well in this new field. The play is conventional in its plot, the conflict of love and patriotism common to war plays, but it is unconventional in its sentiment and atmosphere. There is no fighting. Not a shot is fired except in the distance, yet there is ever present a tenseness of apprehension and strain of uncertainty that vividly reproduce the war-time feeling. This gives a dark background to the tender scenes of home life and the attempts to uphold the ideals of Southern hospitality when there is nothing in the house to eat or drink.

Dramatists are beginning to recognize the value of the millionaire, not as a mere

deus ex machina to bring down the curtain happily when human nature can stand no more, but as a human being with emotions of his own and a point of view that is worth considering. Mr. Alfred Sutro, in "John Glayde's Honor," has given us the lion without the mouse. The Iron King has the sympathy of the audience all thru, even when, after the manner of the American husband, he gives way to the whims of his foolish wife. It seems to be the fashion this year for heroines to be liars or thieves.

ing himself attached to a vagrant and pilferer. The peculiar circumstances afford plenty of amusing incidents and embarrassing complications.

Ethel Barrymore, as Eleanor Alderson in "Her Sister," takes the leading role in a pleasing play of English society life. Eleanor Alderson is a fortune-teller, but captivates Ernest Bickley, of an aristocratic family. To shield her wayward sister, the fortune-teller deliberately confesses to her indiscreet but innocent escapades. Both girls are finally shown to

SCENE FROM MRS. FISKE'S PRODUCTION OF "ROSMERSHOLM" AT THE LYRIC THEATER.

Mr. Hackett appears as well as a modern captain of industry as he does in his more usual roles of romantic cavalier. He is always dignified and engaging, and he has good support in this play.

"Under the Greenwood Tree" is not by Thomas Hardy, as might be supposed, but by H. V. Esmond, and its purpose is the exploitation of the engaging personality of Miss Maxine Elliott. She has the part of Mary Hamilton, an aristocratic English heiress, who, to escape fortune hunters and other importunate lovers, takes refuge in a gypsy van, where a young squire falls in love with her at sight in spite of the shock to his dignity at find-

be guiltless, but the fortune-teller's fiancé does not prove to be loyal during the period of uncertainty. His uncle, Arnold Cullingworth, alone takes the fortune-teller's part. Instead of a grand reconciliation between all concerned, the play closes with a simple love scene between the fortune-teller and her champion. The play has a good moral tone, and presents a strong appeal not to judge people too harshly. Ethel Barrymore is at her best in making her plea for the homeless girl and the working girl, to whom temptation is strong and overpowering.

"Polly of the Circus" is a sentimental

GROUP OF ELEPHANTS AT THE HIPPODROME.
The elephants stood for a flashlight photograph for the first time.

comedy of contrasts. A circus occupies a vacant lot next to the church, and when Polly is thrown from her horse and breaks her ankle she is carried into the parsonage, where she remains a year in charge of the minister, much to the scandal of the congregation. Polly and the parson at first have difficulty understanding each other, one talking professional slang and the other book language, while in the incidental music, the tunes of circus and church wrestle together like the Venus motif and the pilgrim chorus in the overture to "Tannhäuser." The censorious deacons and uncharitable women are relieved by a manly and sincere minister.

Miss Mabel Taliaferro makes a good Polly, for she has a girlish grace and knows how to laugh and cry. Nobody but Frederick Thompson, of Luna Park,

could put a three ring circus on a small theater stage.

"The Secret Orchard," a play in four acts, by Channing Pollock, adapted from the novel of the same name by Agnes and Egerton Castle, is a society drama of high life and gay doings, filled with people with pasts. The plot is exciting, the dialogue hysterical, *risqué* and mediocre, and the acting better than could be expected. The play has its fascination for the general, but it would hardly appeal to the discriminating.

A new spectacle is now being shown at the Hippodrome called "The Fall of Port Arthur." This is full of life and action. The other features of the Hippodrome performance, including the trained elephants, have the charm of novelty. The Hippodrome is unique; every one should visit it.

Domestic Architecture at Home and Abroad

THE increased attention paid to the artistic construction of the home is evinced by the number of handsomely illustrated periodicals and books devoted to the subject. Mr. Herbert, in his *Houses for Town and Country*,¹ shows that we are developing in this country a sense for the fitness of things that will in time free us

dence on a lot 20 by 100, jammed in between incongruous buildings. But Mr. Herbert shows what can be done to make the best of such conditions as well as how to utilize the ampler opportunities of the country house. Half of the 250 pages of the volume are filled with pictures from photographs, showing a great variety of exteriors and interiors from all parts of the United States.

To become acquainted with the best

HOUSE WITH GROUNDS ENCLOSED.
From Herbert's "Houses for Town and Country."

from the habit of decking our houses with borrowed plumes and will result in the development of an idiomatic architecture, adapted to our conditions and expressive of our ideals. He finds more encouragement for his hopeful view in the cities of the West than in those of the East. Western architects have more freedom; they are less bound by Beaux-Arts convention and have larger space on which to place their buildings. It is hard to do anything with a five-story resi-

examples of foreign work Muthesius's *Landhaus und Garten*,² is useful even to those whose knowledge of German is limited, for there are 500 half-tones and eight colored plates, giving country houses of all nations, including the United States. German and Austrian are, of course, prominent. Owing to the better business conditions in Germany some of the most able Austrian architects, who

¹HOUSES FOR TOWN AND COUNTRY. By William Herbert. New York: Duffield & Co. \$2.00.

²LANDHAUS UND GARTEN (COUNTRY HOUSE AND GARDENS). Illustrations of modern country houses with plans, interiors and gardens and an introductory essay. Edited by Herman Muthesius. Munich: F. Bruckmann A. G. 12 marks.

build private residences almost exclusively, live and work in Germany. For example, Joseph M. Olbrich, the founder of the famous Darmstadt Colony, is an Austrian. He became a leader in the modern individualistic style of villa architecture, an example of which, the Villa Olbrich, will be remembered by many, who visited the World's Fair at St. Louis. Austria and Bavaria have remained true to the national spirit in their modern architecture, whereas the architecture of North Germany is rather the artificial production of constructive minds.

Muthesius himself is not at all sparing in his criticism of the architectural achievements of his countrymen. He declares that in their attempt to be showy, original and modern, they very often have sacrificed comfort and beauty. He reproaches the owners of villas with desiring to have residences near enough to the city to show them off to their friends and to continue their city life, instead of building real homes in the country. Muthesius's ideal is the English villa. It is true that the English have been living in the country for years, while it is comparatively new for the well-to-do Germans in the large cities to own country places or to live in the suburbs. They are much more accustomed to living in large apartment houses. The English, on the other hand, have had opportunities to develop a tradition in the building of country houses and they are experts in surrounding themselves with home comfort. Muthesius praises them for the fact that their houses never attempt modernity and are very simple, altho in reality they are adapted to the needs of modern life. The author has a high opinion of the practical arrangements in American houses and cites them as models in many instances.

Adventurers All

ELEVEN tales filled to the covers with doughty derring-do, with adventures such as befall none of us, except in books, and with adventurers to flutter the feminine heart, and villains not a few. The professional reviewer is inured to the strangest of ventures, whether it be a search after the lost treasure of Pizarro,

or an exploration of the psychology of the long-suffering husbands of Mrs. Humphry Ward's heroines. He finds his pleasure in voyages of discovery of his own in his memory, where he can trace the origins, imaginary or real, of many a popular tale.

There are, for instance, among these eleven stories, three based on the effective circumstance of a striking physical resemblance. To what degree, if any, do they owe their inception to the success of "The Masquerader?" In the case of Louis Joseph Vance's *The Brass Bowl*¹ one simply does not care, because the book is all that one has a right to demand from fiction of this class. A rich, young New Yorker, his family jewels kept in the safe at his country place, his bachelor apartment in the city, an eminent burglar who might be his twin-brother, a mysterious woman, and, of course, the romantic brass bowl, these are the ingredients that will keep interested from first page to last, any but the grumpiest of readers, and even he will admit, if he be honest, that this new tale of a newcomer is capital "stuff." Mr. Vance plays the changes upon the resemblance, keeps up the mysterious interest of his heroine, and rings the possible changes of his fundamental situation with a freshness and resourcefulness of invention that leads one to anticipate his next book with pleasure. Meredith Nicholson's *Rosalind at Red Gate*² comes with the prestige of "The House of a Thousand Candles" to recommend it. Its scene is that of the earlier story; its plot is based upon the close resemblance between two women who, being first cousins, have a right to it. The author does not quite repeat his earlier great success, perhaps because he has been too lavish of complications in the construction of the story, but that is, after all, a question of individual taste, and there be tastes many. The resemblance upon which Mr. George Gibbs has based the structure of *The Medusa Emerald*³ is that between two precious stones, both ornamented with a Medusa head by a medieval Italian lapidary. One of the stones is lost; the pos-

¹THE BRASS BOWL. By Louis Joseph Vance. Indianapolis: Bobbs-Merrill Company. \$1.50.

²ROSALIND AT RED GATE. By Meredith Nicholson. Indianapolis: Bobbs-Merrill Company. \$1.50.

³THE MEDUSA EMERALD. By George Gibbs. New York: D. Appleton & Co. \$1.50.

essor of the other one is suspected of stealing it. There is, of course, a love affair to complicate matters, and many an adventure by land and sea before things are cleared up. The possibilities of resemblances between inanimate objects are inevitably far more limited than those between human beings; there is no room for living contrast in the likeness.

Mr. Gibbs's hero is, among other turbulent happenings, shanghaied, robbed of his emerald by a brutal mate, and carried South, among our excitable Latin neighbors, whom one can rarely visit without happening upon a revolution. To South America travel also the heroes of two other stories in this collection, he of Lloyd Osbourne's *The Adventurer*,⁴ from London; the three of Robert Aitken's *The Golden Horseshoe*,⁵ from New York; for Mr. Aitken has pinned his faith to the "Three Musketeers" formula. In both books the point of departure is a mysterious advertisement calling for adventurers willing to enter blindly upon a hazardous undertaking. Mr. Osbourne's tale of a search for buried treasure in the unexplored country beyond the sources of the Orinoco is so capital a piece of work that one places it unhesitatingly by the side of "The Mystery" as the best of the year's books of its class. His adventurers are real—reckless men with the polish of the rolling stone, companionable, with a great tolerance of the past about which all are silent—and there is in his invention a touch of Jules Verne. A book worth reading. Mr. Aitken's story is more conventional. His three companions—an American, an Englishman and an Irishman—get mixed up in the villainous doings of a Central American dictator and his plots against his beautiful niece.

Where Anthony Hope leads with a handsome new edition of one of his earlier stories, *Sport Royal*,⁶ illustrated in tints by Simon Werner, and decorated by Will Jenkins, Mr. William Wallace Whitelock follows in the Zenda style with *When Kings Go Forth to Battle*,⁷ another of the many tales of an American

man and an American girl who become involved in the plot to depose the villainous ruler of a little principality, and to raise another to the throne in his stead. Mr. Whitelock rushes along with incessant adventure, giving his reader no time to draw breath or consider the affair quietly until the end is reached. Plot is played against counterplot in a really bewildering fashion by Mr. Ambrose Pratt in *The Counterstroke*,⁸ which tells of the extermination of Nihilism by a secret society which counts among its members the crowned heads of Europe. Mr. Pratt has overdone the thing: this is a tale for adventurous masculine eighteen. *The Powers and Maxine*,⁹ by the Williamsons, a tale of a Parisian female spy of the British Foreign Office, of a stolen treaty and a lost necklace, of love and jealousy, is good reading most of the way. The pace slackens a little toward the end, however.

Earle Ashley Walcott mixes Highbinders and the Sand Lot riots in most satisfactory fashion in *The Apple of Discord*,¹⁰ a tale of San Francisco that is worthy of a modest corner on the shelf devoted to the fictional presentments of the vanished city, which are becoming quite numerous. Harold MacGrath's *The Best Man*,¹¹ illustrated by Will Grefé, is a rather thin yet labored brief tale of a corrupt financier, a public-spirited young lawyer, a woman, and an old man with a past which the financier would hide. The author has not made the best of this material.

The Broken Road. By A. E. W. Mason. New York: Charles Scribner's Sons. \$1.50.

Since Mr. Kipling, in "Kim," unrolled an Oriental carpet of rich, dull dyes and woven arabesques before our view we have had no noteworthy novel of India. Mr. Mason in *The Broken Road* has given a new view of Indian administration, and preached a sermon to officialdom in any dependency of a stronger nation. A young Indian Prince is sent to Eton and to Oxford. He is fêted and petted while in England, spoiled for his

old home in Chiltistan, and with a broken heart, he goes back to India, to ruin himself and others in the process of becoming re-acclimated. There is a Road, too, to be built over the passes to the foot of the Hindu Kush. The novel comes near being the epic of this Road; the safety of the frontier depends upon it; men's lives are given to it; it might dominate the book and give it an artistic completeness which it lacks; but the Road is indeed "broken" and the effect of the book is episodic, tho strong in its separate parts. *The Broken Road* has not the picturesqueness of "Kim" nor the sense of national catastrophe which held us in Mrs. Steele's great novel, "On the Face of the Waters," in which one could almost hear the confused and angry murmurs of the crowd, see the cloud of dark faces which threatened the English, and feel the approach of their tragic destiny. The English education of Shere Ali, Prince of Chiltistan, is a pathetic failure. He falls in love with an exceptionally beautiful young Englishwoman whose type may, perhaps, best be indicated by the remark of a friend: "You might imagine that Violet Oliver is thinking of the angels. She is probably considering whether she should run upstairs and powder her nose." Such a woman is capable of doing enough harm in the world to keep several novelists busy and quite incapable of realizing her deadly qualities. Women like her are often called "heartless," but they lack far-seeing intelligence quite as much as they do heart. The group of Englishmen who govern Chiltistan have the fine qualities of frontiersmen everywhere in the world, integrity, energy, resourcefulness, courage; and for these traits we forgive the lack of wisdom which wrecked the life of Shere Ali.

Literary Notes

....The Rev. G. Campbell Morgan has his clientèle who value him as a biblical expositor, and to them his *Parables of the Kingdom* will doubtless appeal. (Fleming H. Revell Co. \$1.00.) It is a pity there cannot be now and then a book on the parables which interprets them as they are now understood by progressive biblical students.

....Crowell's "How To" books—or, in the publisher's more dignified phraseology, "Handy Information Series"—are supplemented by the

following recent issues: *How to Play Chess*, *How to Play Golf*, *How to Keep Well* and the *Handy Book of Synonyms*. (50 cents each.)

....The Rev. F. W. Bussell's Bampton Lectures for 1905 are published under the title *Christian Theology and Social Progress*. E. P. Dutton & Co. \$3.50.) Mr. Bussell defends Christian doctrine on the ground of its utility, seeking to show its value and necessity for the present age. He conducts his argument on a high plane, meeting philosophical objections with no small penetration and skill. He contends that Christian ethics cannot outlast Christian dogma, and that the general welfare is bound up with the faiths and hopes of Christian belief.

....We have a dainty volume of poems, *Blown by the Winds*, by Ivan Swift, the book also designed, hand-set and illustrated by the author, and the edition limited to 200 copies. Our readers know how vigorous and original Mr. Swift's verse is, for we have printed at least ten of these poems, among which we may mention, "The Song of the Cedar-maker," "The Old Courier de Bois," "The Timber Wolves," "The Coprid Beetle" and "The Dragon City." These are unusual and notable poems, such as are remembered when read. Mr. Swift is a special poet of Michigan's forests and streams, of the woodmen and French trappers of the North, one who loves the wilds rather than the streets, and has a sympathy with the lives and tasks of rude pioneers. It is the freshness of his tone that has attracted us and will please the readers of this slender volume, with its photographs and original drawings of Michigan landscapes. (Outer's Book Press, Milwaukee.)

The Independent

A Weekly Magazine. Entered at the New York Post Office as Second-Class Mail Matter.
Publisher, Clarence W. Bowen
Owner, The Estate of Henry C. Bowen
130 Fulton Street, New York

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE
One Year, \$2.00 Single Copies, 10 Cents

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Boyertown Catastrophe

SUCH an appalling catastrophe as that at Boyertown, Pa., one cannot think of without horror. It was a church festival with moving pictures, and when the curtain was down a little girl innocently pushed it aside to see what was behind it and knocked over some lamps and the fire spread; the people were in a panic and trod on each other in their eagerness to escape, and were suffocated, burnt to death, over two hundred of them, mainly women and children, and all this in a small country town, at a pleasant festival of a church for the honor of God.

We know of no special blame of any one. It is simply one of those terrible accidents, simple enough to explain under the laws of human nature and physical nature, but which more seriously task the sure faith of us who believe in an overruling Providence. It is easy for us to say that it is necessary and wise that the world should be governed by fixed laws, from whose operation God shall not deviate, laws which He has wisely imposed and to which we must unhesitatingly submit because, with all their

necessary evils, irregularity would be a greater evil.

Faith tries to escape from this iron fate by saying that the human will is free, and that as we can influence the will of a friend so God can influence the human will and can then not only foresee but rule and answer prayer. So we admit that it is all right that, when a curtain knocks over a lamp and the oil sets fire to the inflammable curtain and stage, the house should burn and those in it be killed.

But what troubles our faith is to understand why the foresight of God, which does not interfere with physical law, did not influence the will of that innocent child not to push the curtain. Is not that just the sphere for God's action beyond physical and in the spiritual realm? This is the kind of circumstance which often shocks faith even to unbelief. Some fearful instance of the problem of evil, the great problem which faith has to meet, and on the whole meet blindly.

We cannot fully explain it with all our attempts to justify the ways of God to men. We can formulate certain general statements as to the laws which God has imposed on nature, and say that the greatest good doubtless involves, under free agency, a certain amount of involved and unavoidable evil, but our final recourse is to fall back on human ignorance and the infinite wisdom above us, and assure ourselves that He doeth all things well, even when we do not understand why He did not touch that little child's will and save those ten score innocents who met a shocking death while under the direction of a church devoted to his worship.

A General Exclusion Law

UNDER the present law Chinese are excluded from admission as immigrants, but exception is made for certain classes of Chinese—students, merchants, etc. Secretary Straus in his report shows that this law is in its language invidious, and that it should simply exclude certain classes of Chinese labor supposed to be an evil.

The suggestion is a good one, but it is

fruitful of further suggestion. Why should undesirable Chinese be specified for exclusion, which is invidious and must be offensive to China, and not frame the law so as to exclude the undesirable class of whatever nationality? We have a Department of Commerce and Labor of which a good man is Secretary, who may be supposed to have no special racial antipathies. Would it not be possible to frame a law which would give the Department of Commerce and Labor the power to exclude, with the approval of the President, and for a limited time, any class of immigrants which for any reason may have been found dangerous to good order and to the welfare of our people? This suggestion is made by the *Philadelphia Press*, and it is worth considering, even if it may seem at first unusual to put such power in the hands of the President and the Department.

Exclusion based on nationality or creed or color or political opinion is provocative of serious criticism, and, when directed against nations, of ill will which endangers peace. The proposition to exclude Japanese would almost seem a cause of war. With China it is not so now, for China is in no condition to make war; she is helpless. Just now the effort to exclude the people of India from South Africa is threatening the stability of British control in India. It was Chinese exclusion and the treatment of Chinese that provoked the boycott of American products in China some months ago. It is worth while to put our legislation in such a form that it will not in its very language seem an insult to another people. Japan at present refuses to give her consent to any form of exclusion of her citizens as such and invidiously distinguished from other people, altho she is willing to take such action herself as will discourage emigration to this country so long as she wants her enterprising sons to go to Formosa or Korea.

We admit that it would be difficult to frame a satisfactory law. We suppose it would be used to benefit a certain class of our citizens as against certain other citizens. In California Chinese or Japanese labor is very much desired by farmers and others, and protests have gone to Washington against our present policy, or at least its extension. On the other

hand, there is a class of laborers who would strictly exclude competition. While we do not fear unrestricted immigration of Chinese and Japanese any more than of Scandinavians, Italians and Russians, we yet can conceive of conditions when certain classes of any of these races might be shut out for our good, even as now, with questionable policy, we exclude immigrants who are promised a job. The law is not over-wise, but it has the advantage that it is confined to no race or people. It excites no national hostility. Some law which has this advantage, a law that is general and flexible, would seem diplomatically wiser than the present law, and might save us much trouble twenty years from now.

The Papal Marriage Law

WHEN Pius X became Pope, the usual cry of reform was heard. First he tried his hand at Church music. No florid scores, no sopranos, no contraltos should thereafter be heard. The devout female sex, as the Church lovingly calls the daughters of Eve, should be seen no more in Catholic choirs. And yet they are still to the front; their trills waft thru nave and tracery as of old. Only a short while ago we read the choral bulletin of Philadelphia Cathedral. Cherubini, Mendelssohn, Gounod furnished selections.

Next canon law was to be codified. Whenever reform is called for in Rome, music and canon law are the first objects to be taken up. A commission was named and the world has received the first fruits in the new marriage decrees. No doubt the *Corpus Juris Canonici* needs codifying. The labors of Gratian, Raymond of Pennafort, the extravagantes, the ponderous tomes of various canonists, have resulted in a confusion which will probably baffle for all time the dabblers in and searchers of canonry.

The new decrees, however, are much more than a codifying; they are a distinct step forward toward absolutism. To unify spells to control. Hereafter, the world over, the marriage laws of the Catholic Church are one and the same.

The documents referring to engagements (*sponsalia*) proclaimed last week in the Archdiocese of Philadelphia and

which will become binding at Easter, would be annoying were they not so well safeguarded. Hereafter the betrothal creates an impediment which makes marriage with another invalid. The new decree sounds severe, but really it is not. To be of force, the engagement must be in writing and duly witnessed either by the parish priest or the bishop of the place or two witnesses. Now such written betrothals are unknown for the most part to American Catholics. Moreover, the new decree leaves untouched the power of dispensation, which every priest having faculties in the United States enjoys.

As to marriage itself, however, the new decrees supersede the famous decree of clandestinity of the Council of Trent ("*Tametsi*"). Because of it, Catholics marrying had to do so in the presence of the parish priest and two witnesses in all lands where it had been promulgated. For ages the Kings of France forbade its promulgation and recognition in that country; only in a few dioceses of the United States is it in force, viz., those of the old Spanish settlements. It has always been a nuisance. As long ago as Benedict XIV, because of mixt marriages in the Netherlands, formerly Spanish territory, the Trentine decree had to be modified and special rules were drafted to cover the marriages of Catholics and Protestants, which will remain in force till Easter, 1908.

Hereafter, however, Catholics need not present themselves for marriage before the parish priest. Any priest in good standing and with faculties can and may splice the knot. A fresh step this in the trend now so evident of Catholicism, viz., the uplifting of the religious orders at the expense of the secular clergy. Formerly marriage, like baptism and the last anointing, came under the *jura stolæ*; it was a strictly parochial affair. After next Easter it will not be. One result is that the synodal decrees of the odd hundred dioceses in the United States, as far as marriage is concerned, will either have to be rewritten or allowed to lapse into the limbo of forgetfulness.

Moreover, the once fanciful thesis of the Jesuit, Bouiv, may prove a prophecy. This Jesuit canonist, in a long argument,

held that the secular clergy were not essential to the Church, and that it would be good and wise to supersede them by the regular clergy, *i. e.*, by the religious orders, who, of course, include the hierarchy as well as the Counsels of Perfection. The rumors widely current that Pius X intends to select the French, and, less so, the Italian episcopate, from the religious orders, point to the same trend.

Furthermore, the new decrees raise the rather serious question: What is meant by non-Catholics? Are Russians, Greeks, Oriental schismatics to be reckoned as such? Is the marriage of an Italian to a Greek by a Greek priest to be regarded hereafter as invalid? Rome intends, no doubt, that the marriage of a Catholic with a Protestant, baptized or not, is invalid. But if non-Catholic includes Russian, Greek and the other Oriental sects, then once again Rome casts to the winds the most patent facts in all Church history. Moreover, such a view would be an affront to Russia, with which Rome coquets eternally—and uselessly. Again, unless our memory fails us, it would be the first time that Rome has put the Eastern Churches down to, in her eyes, the level of Protestantism. It would belie the reunion at Florence under Eugenius IV, which has never been officially rejected. Again, the bulk of the arguments which St. Thomas used in developing his teaching on the sacraments and the papacy are from Greek sources. True, we now know that they were forgeries, foisted upon the Greek Church by the Dominican missionaries in the Levant. Still, Rome goes far afield if she sets aside the validity of the sacraments administered by a Greek priest. At any rate, the decree is obscure, perhaps purposely, in order to give the Vatican occasion to patronize the "Little White Father" beyond the Ural Mountains and the silent Turk on the Bosphorus. Rome, no doubt, will have many inquiries from Greece, the Levant, Syria, Malta and those parts of the United States where Greeks, Italians, Lithuanians, Rumanians are many.

Another noteworthy exclusion, apparently, in the new decrees is the validity of Protestant baptism. Heretofore it was a recognized principle of canon law

that Protestant baptism was accepted as valid according to the axiom, *Standum est pro valore actus; i e.*, the validity of the act must be recognized. The one exception was orders, which had to be repeated. Cardinal Newman, however, would only consent to receive Roman orders conditionally, as he was doubtful whether Anglican orders were valid or not.

Hereafter, as far as marriage goes, whatever doubt may exist in theory, Protestant baptism counts for nothing in practice. How trivial, then, must be the potency of baptism in Rome's eyes when, with a stroke of the pen, it brushes into the same net Protestant and Jew, Quaker and Greek, Confucian and Fiji Islander.

Furthermore, in the same sweepings, are apostate and excommunicated Catholics. Has the shadow of John Calvin darkened the light-heartedness of the Vatican? Verily, only the elect now enjoy the Church's privileges. Out go the tares, altho far off is the harvest.

In conclusion, we should note that the new decrees leave untouched the present faculties of dispensation. How many costly appeals for dispensation they may involve will depend on how much they affect the faithful. For ourselves, we think about the same proportion of Catholics will marry before ministers and magistrates as heretofore. Cupid is a law to himself. And as nowadays the State recognizes only marriages performed under its own laws, and constitutes clergymen its officials *ad hoc*, the new decrees will not bar the progress of human events.

Our New Frontage

IN more ways than one 1907 inaugurated, or peculiarly accentuated, several lines of social evolution. Perhaps nothing more startling occurred that the turn over of the whole South to prohibition. Even Kentucky, North Carolina and Texas are substantially placed alongside Maine in the ranks of enforced temperance. This does not mean that the whole white population of the South has suddenly become abstinent, but it means that Southern agriculture has so evolved that it has less and less faith in mobs, and it has a very substantial faith in sobriety.

The Northern States tried prohibition half a century ago, but they had no such confirmed reason for shaping their policy to abstinence. When New York elected Governor Clark, on a prohibition platform, in 1854, it was by only two hundred majority, and it was on the rise of a moral wave. Will the North now follow the South on the same line, as a matter of social policy? We are inclined to think the reign of the saloon is nearing an end.

During 1907 industrial education received a mighty propulsion. Massachusetts past a statute of a broader and more thoro sort, creating a State-system that touches every primary and secondary school, as well as all higher institutions. The very conservative University Convocation of New York opened its classical doors sufficiently wide to invite radical leaders of industrialism to discuss the problems involved in the changes now going on. Our colleges have yielded ground somewhat charingly, but they have found the number of scientific pupils steadily increasing. The Southern States have yielded with less grace, but more rapidly. The doctrine of evolution, and the sciences which are now permeated with this view of Nature, can be taught in any university of the South almost as readily as in Harvard. Trade schools, which were opened with some doubt in our larger cities, have been overflowing with pupils. The graded town schools are slowly facing the farm, instead of the college. Mere education, or mere erudition, without application of what is learned is losing favor. During 1907 the ruling discussion in all our educational conventions was how to work the industrial elements into our common schools. These schools have been so overloaded with mind-culture that the education of the senses finds no room. We have still to find out whether a supplementary set of schools must be established.

A curious change has been going on in the view popularly held of the Salvation Army; and 1907 saw a remarkable phase of this in the triumphal march of General Booth across our continent. We remember when his first proposition to the House of Commons was laughed to scorn, while his adherents in America were subjects of ridicule in sermons, as

well as stones in the streets. They were not unfrequently legislated against by villages and cities. The change of sentiment means a growing faith in salvation for this world, and less worry over worlds not yet at hand. If General Booth should today memorialize Parliament for help in the abolition of poverty, he would be listened to with respect; and wigs as well as hats would accord him all the help that he should ask for. We are strongly persuaded that poverty *can* be abolished, and we are going to do it. A new and better resolution has taken hold of the civilized world everywhere. If it involves less of that sort of religion which consists in getting ready to die, it involves a decided increase in that sort of religion which undertakes to live righteously.

Not less interesting is the turn given to Woman's Rights. Very much less has been said of late about the right of voting, and much more is made of the privileges opened by industrialism. A good share of the garden and orchard expositions at our State fairs of last year was made by women. They are no longer confined to what is called the domestic department, but are made notable by their splendid exhibits from the orchard and garden. In the Western States there is a positive drift toward fruit-growing and small farming, as well as bee-keeping and poultry-raising, on the part of women. This has been greatly stimulated by the work of our agricultural colleges, that are steadily educating our girls to a knowledge of the land and to land lore. These colleges are doing nothing else more valuable than making industrial women, capable of taking care of themselves and their households.

President Roosevelt only echoed the sentiments of the people in his straightforward argument for an amended postal service. Postal savings banks are not an experiment, neither is a postal parcels service. They have been tried and are a notable success in all the leading nations, our own only excepted. France, England and Germany find them possible and profitable. But how long have all the farmers' associations and granges tried, in vain, for that which monopolies have refused them. We owe to the merciless wreckage of 1907 this next great

advance in social and business affairs. Nothing can long delay the establishment of postal savings banks for the scattered communities of the country, and a reasonable parcels service in the interest of the smaller tradesmen and the poorer class of purchasers.

The waterways agitation culminated, in 1907, in a national awakening. We had lost faith in water transportation, and had become infatuated with railroads. Mr. Hill told us bluntly that railroad expansion had reached a limit, beyond which there could be very little extension of track, or of business, for many years to come. The roads themselves have been slow to discover that they were not keeping up with the expansion of business—especially with agricultural development. It was a hard lesson to learn, because we were surcharged with the belief that the railroad was a finality in transit. But we are getting able to see the facts; and now for a remedy. We are learning that steel rails cannot take the place of rivers and lakes. A vast canal system will almost certainly connect the Gulf of Mexico with the Lakes, and the Lakes with the Atlantic. Another canal is sure to cross Northern Florida, cutting off hundreds of miles of transport, while cheapening carriage. We are entering a new age of transit and transport.

In politics the appeal to the people is the most notable feature of the year. It is remarkable that in a democracy we had so lost sight of the people. Our politician had faith in nothing but machinery. He was most eminently a statesman who could sit in an office and wire his henchmen over a State, and thru them carry his dictatorial measures. Secretary Root argued that our government is a government of parties. Even President Roosevelt can urge the payment by the Government of party expenses. Yet no one has done more to break the machine than Mr. Roosevelt himself—unless it be Governor Hughes, of New York. At all events the machine is a wreck, and its remnants strew the history of 1907. No men are more pitiful than our surviving bosses. New York has half a dozen who, only a few years ago, were struggling between themselves, by machine power, to rule the State; to-

day they are utterly powerless, and for the most part appear to be unable to comprehend the situation. That this is a government of the people is an axiom not yet to be erased from our escutcheon. If the history of 1908 be as full of democracy and progress as that of 1907 we shall have nothing for which we need complain.

The Alien Spirit

IF there is an American spirit which immigrants to the United States are supposed to catch by contagion, and be converted by it into desirable citizens, it is equally true that there is an alien spirit which lingers a long time in certain immigrant breasts and makes them immune, while it lasts, to Americanism in all its degrees.

This spirit is strongest among the temperamentally violent, who collect about centers of revolutionary anarchism or revolutionary socialism, like hornets about a disturbing noise. The Czolgoszes and Herr Mosts are shining examples of two varieties of this type, one dangerous because it shoots, the other relatively harmless because it talks. All nationalities have contributed to this alien-minded contingent, and it would not be possible to exclude it by either a racial or an educational test.

Nevertheless, there are conditions which favor its survival and which perhaps, in a measure, could be controlled by public action. Any segregation of men and women of the same foreign nationality which enables them to associate with their own ethnic kindred, and to speak their own native tongue, acts, of course, as a serious hindrance to assimilation. The foreign-born who rapidly become Americans are they who are speedily cut off from old associations and compelled to form new habits. Among these the American spirit is commonly quite as strong as it is among the offspring of colonial dames and heroes of the Revolution. Among all the suggestions that have recently been made for the better control of immigration, we attach chief importance to those which aim at disintegrating the alien spirit. There is good blood in every nationality that comes to America from the Old World.

Each can contribute something of value to the physical energy, the sentiment, the intellectual life of the future American people; but it must be mixt and blended in the general amalgam.

These reflections have been suggested by the singularly judicious observations upon our immigration problem that have been appearing of late in the columns of the *London Times* by an anonymous writer who is contributing his impressions of "A Year Amongst Americans." This writer emphasizes the fact too often overlooked by the American that, enormous as is the tide of European immigration to our shores, the annual accession of the foreign-born is, after all, less than 1 per cent. of the total population into which it is absorbed. It should not be impossible to bring this increment under effective assimilating influences, and, in the main, it is rapidly assimilated. The alien spirit survives only in certain characteristic centers, the "Little Italys," the "Little Hungarys," the "Little Syrias" and the "Great Jerusalems."

Segregation is an economic fact chiefly. Certain industries and certain trades, themselves localized, have afforded life opportunities to people of particular nationalities. The anthracite coal-fields have attracted the Hungarians. The cigar-making trade has drawn the Bohemians. Common labor, street vending, the peanut and the banana have provided for the Italian, the clothing trades for the Russian Jews. In many instances industrial selections have perverted good habits, instead of discouraging bad ones. Thus most of the Italians who come to America have left the wholesome way of life of the peasant or agricultural laborer to adopt the tenement house existence of the great cities. We need efficient agencies for breaking up such segregations and scattering the alien colonies thruout the national domain.

That some increase of restriction upon immigration itself is becoming desirable, however, must undoubtedly be admitted. The very fact that we have the segregation problem to deal with, and that because of segregation assimilation goes on less rapidly and somewhat less satisfactorily than it proceeded a generation ago, is in itself a warning that we must make very sure that our assimilating power is

kept well in advance of the work it has to do. Without discriminating against any nationality, we may very wisely be more particular in our scrutiny of individuals. Theoretically we exclude the criminal, the pauper, the congenitally defective and the diseased, but it needs only a superficial observation of our alien colonies to satisfy the most optimistic that we have by no means rigorously enforced these provisions of our law. It may be true, as our Secretary of Commerce said the other day, that certain of our most valued and useful citizens came thru the gates of Ellis Island as fragile children that promised to be little more than a burden and a disappointment to their parents. But we cannot afford to base our immigration policy upon the assumption that we shall in general obtain our most desirable citizens from such antecedents.

The Milyukov Incident

THE coming to the United States of the distinguished leader of the Constitutional Democrats of Russia, Professor Milyukov, to lecture before the Civic Forum upon the political situation in Russia was marked by a very significant incident. By a characteristic blunder the Russian Government has advertised to a greater extent than the Civic Forum could have possibly done the importance of Mr. Milyukov's visit to this country.

The influence which the Constitutional Democratic party has attained in Russia is shown by the misguided efforts of the Government. Doubtless the Government would have viewed the departure of Mr. Milyukov to this country with the satisfaction with which it has regarded and promoted the banishment of many of its most useful subjects, if it did not know that he would return promptly to Russia with increased prestige and influence. Mr. Milyukov had planned to spend but four days in this country. It would seem that in that time he could not do a great deal of harm to the Russian autocracy. The fear of the Government under the circumstances seems almost ludicrous. It was careful not to betray its great uneasiness in any public manner. It leaked out only thru a venthole of diplomacy.

The Russian Government could not

directly interdict his visit. He did not come to the United States to address any revolutionary organizations, but to speak before an association organized to discuss public questions and which has invited some of the most distinguished men of America to address it, among them men of different political parties, such as Secretary Taft and William Jennings Bryan. Had Mr. Milyukov returned directly from New York to St. Petersburg the uneasiness of the Russian Government, in regard to his coming here, might have been successfully concealed; but he was naturally desirous of paying his respects to the President of the United States, and the President, too, would have liked to see this fine example of Russian culture. It was just this meeting of the President of the United States with Mr. Milyukov that the Russian Government desired to prevent. That gentleman had hardly set out from St. Petersburg before it was whispered in Washington that the Russian Ambassador had made it known to the President that it would not be agreeable to the Russian Government to have him received at the White House. We have taken some pains to verify this diplomatic whisper. Tho not reaching the ears of the general public it was sufficiently distinct to be heard by the officers of the Civic Forum and by their distinguished guest himself. Mr. Milyukov might naturally, from his representative position in the Duma, have asked the Russian Ambassador to introduce him to the President; but having learned that his request had been refused even before it had been presented he had too much self-respect to ask the intervention of the Russian Embassy.

It is not likely that his position as usher to the White House for Russian officials visiting this country is a wholly agreeable one to Baron Rosen. Within a few weeks he has expressed himself in favor of constitutional government in Russia along lines of evolution, and it is hardly to be supposed that on his own responsibility he would have undertaken to bar the way to the President of the most distinguished representative of the constitutional movement in Russia.

The ambassador could not be surprised that American resource would easily give

the visitor overwhelming proof of his welcome at Washington.

This is what actually happened. No sooner had it been learned that the Russian Government, or that part of it represented by the autocracy, would frown if the distinguished member of the Duma went to the White House, than steps were taken to gather at Washington a large number of the most distinguished representatives of the legislative and executive branches of the Government, not merely to extend a hand to Mr. Milyukov, but to give him an additional opportunity to expound his views of the Russian situation. The invitation to this meeting was extended by Hon. Herbert Parsons, a member of Congress from New York, who is a warm personal friend of the President; and it is equally significant that the invitation was accepted not only by a large number of members of Congress from all parts of the country, but by Speaker Cannon and members of the President's Cabinet, including Secretary Taft, and the President's private secretary was also present.

To this distinguished audience Mr. Milyukov spoke with even more freedom and power than he spoke in New York. Thus, tho diplomatic etiquet forbad him to talk with the President, he did have an opportunity to impress himself in a most effective manner upon members of a co-ordinate part of our Government, in which, under our democratic conception, the sovereignty of the American people resides. It is only a question of time for the seat of sovereignty in Russia to be transferred from the Czar to the Duma.

It would be awkward if this Russian precedent should be followed by other governments. What, for instance, would be the result if every foreign ambassador were instructed by his government to assume that every member of the opposition is to be regarded as an enemy of the government. How embarrassing it would be for Mr. Bryce, for instance, to be told that he could not introduce Mr. Balfour to the President because he was the leader of the opposition; or the German Ambassador that he could not introduce Mr. Barth, or the French Ambassador that he could not present M. Jaures or the Count de Mun.

From the arbitrary way with which the

Russian autocracy has dealt with members of the Duma elected by the people it might seem as if the Russian Government were absolutely indifferent to the sentiment of the peoples of the world who respect constitutional government. The Milyukov incident has served to show at least that the Russian Government is affected by public sentiment in the United States. It telegraphed to Professor Milyukov just as the steamer was leaving the pier: "Imperative that you bring a full report of your utterances in America." These utterances are to be published in full in the United States, and if the Censor has the courage to publish them in Russia they cannot fail to help the cause of constitutional government in that country.

Edmund C. Stedman Mr. Stedman, who died last week in the seventy-fifth year of his age, may be called the last of the great gild of American poets of the last century, for his productive period as a poet was from 1860 to 1879, and so overlapped that of Bryant, and was parallel with that of Longfellow, Lowell, Holmes and Whittier. But poetry would not give a man a living, and he had no college professorship, but was a "banker poet"; and, if his business career was not wholly fortunate, he could and did give his later years to criticism and the editorship of the poetical works of others. Thus every good library has his "Victorian Poets" and "Poets of America" and "Nature and Elements of Poetry," and the eleven volumes of his "Library of American Literature," not to speak of the ten volumes of "The Works of Edgar Allen Poe," his "Victorian Anthology" and his "American Anthology." These show what was his fruitful labor of the last thirty years mostly divorced from poetical production. But during these years he has been a most attractive personality, dear to his friends and honored by the world. As a critic he was sound and discriminating; as a poet he was not merely critically correct, but his verse was serious and melodious. We may count him as belonging to the New England school, quite different from that newer and more unconventional school which burst on us

from California, Arizona and Indiana, of which Bret Harte, Joaquin Miller and James Whitcomb Riley have been the examples. He will be much missed as a sage among the youth of the Authors' Club. We recall that he regarded his poem, "The Hand of Lincoln," written for THE INDEPENDENT in our issue of December 20th, 1883, as the best he ever wrote. It begins:

"Look on this cast, and know the hand
That bore a nation in its hold;
From this mute witness understand
What Lincoln was—how large of mold!"

And it ends:

"What better than this voiceless cast
To tell of such a one as he,
Since thru its living semblance past
The thought that bade a race be free!"

Race-track Gambling

The law which legalizes race-track gambling in the State of New York provides that 5 per cent. of the gross receipts of racing associations licensed under it shall be collected and turned over by the State to county and town agricultural societies, to be used in paying premiums upon agricultural exhibits at their fairs. This tax yielded \$246,429 last year and \$201,053 in 1906. In all, the successful exhibitors have received from the race-tracks in twelve years \$1,742,698. It will be seen that the law was shrewdly designed to procure for the racing associations the support of the agriculturists. Fifty-nine fairs have been receiving the money, and the association of the town agricultural societies past resolutions last week opposing the reform so earnestly recommended by Governor Hughes. To the delegates who had voted for these resolutions, the Governor said that if the agricultural societies were to be assisted by the State, the aid should be given "in a manly fashion," and "not as a bribe":

"I am not praising you at the expense of my fellow citizens in the City of New York; but I do say that in the communities where life is freer and men are not quite so much under pressure, and where they walk in the open air and enjoy the feeling that they are in God's country, that there we have a right to look for that moral sentiment and strength of character without which your agricultural societies cannot prosper and nothing else in the final event can hope to prosper."

The Governor does not seek to prevent racing, but asks that the State shall not legalize the accompanying public gam-

bling of the people and the bookmakers in disobedience to the requirements of the Constitution. But it will be very difficult to repeal a statute that was so shrewdly and ingeniously made.

That Chinese Indemnity

It is a matter of pure honesty, national honesty, nothing else, that the United States should repay to China the surplus of indemnity which China was compelled to pay after the Boxer troubles. The nations compelled China to pay the damages done and the cost of the expedition to Peking up to \$336,000,000, of which the share of the United States was \$24,440,778. It is now found that, when all the expenses and claims have been paid, that everything has amounted to only \$11,655,492. That is, there is nearly \$13,000,000 that has been paid by China, or which she is under bond to pay, beyond what was really due from her. That ought to be remitted to her, and a bill to that effect has past the House and ought speedily to pass the Senate. We have no honest right to that excess. To keep it would be robbery. It would please us to hear that other Governments follow our example, but no news of that sort has yet arrived.

A Monist Church

We hear more or less which we fail to understand about Christian Monism, a doctrine which closely tends to pantheism, but the current monism of Germany, led by Haeckel, is fairly classed as materialistic, altho Haeckel declares it would be as fair to call it spiritualistic as materialistic seeing that the two phenomena are one. The followers of Haeckel have organized a sort of church devoted to the teachings of "The Riddle of the Universe," and undertake to supplant Christianity by a purely scientific religion antagonistic to the fundamentals of Christianity. They have been able to make considerable progress by establishing Monistic congregations, especially among the Social Democrats and the extreme radicals in the Church. But they are not to have the field to themselves, for there has been established what is called the Kepler Bund, organized at a meeting at Frankfurt-on-the-Main, of seven hundred sa-

vants, few of whom are theologians. This new organization is proving very popular, and dozens of non-theological professors in the universities have joined it. They propose to demonstrate that science and independent research, far from demanding a religion of Monism, is not at all antagonistic to Christian principles. The Keplerites propose to fight the Monistic science not with theology but with a truer science, and to show that Christianity correctly interpreted and science correctly interpreted are in close harmony. The Kepler Bund has already assumed national proportions.

Racial Nicknames

The Japanese in this country are much offended at being called *Japs*. They even dislike to have the name *Japan* applied to their country, insisting that a nation has a right to name itself; so we should say *Nippon*. But it is hard to check the American tendency toward verbal shorthand, especially in this case, for *Nippon* has no recognized adjective form and *Jap* fits in so neatly in newspaper headlines. However the Japanese are justified in complaining of our rudeness. So also are the Koreans in complaining of the rudeness of the Japanese. Mr. Sung Pyongchun, the member of the Korean Cabinet who accompanied the little Crown Prince of Korea to Japan to be educated, took occasion, in an address in the hall of the Doshisha at Kyoto, gently to remonstrate against the habit of the Japanese on the continent to call every Korean *Yoboyobo* and every Chinese *Chang-chang*. Such a custom, he observed, however amusing it might be to the people practising it, was not calculated greatly to please its victims. That little Korean lecture has its lesson here. THE INDEPENDENT avoids calling a Chinese a *China-man*, or an Italian a *Dago*, or a Mexican a *Greaser*, or a Jew a *Sheeny*, for it is as discourteous to call Catholics *Papists* or Disciples *Campbellites*.

The Riot in Berlin

That demonstration in the streets of Berlin, said to be made by the Socialists, but having for its purpose the demand of the

people for equal suffrage, is too serious to be past by without attention. It recalls the disturbances of 1848, when the King of Prussia fled his capital. This time the Emperor simply prudently gave up his drive. The electoral system of Prussia is shockingly unequal, but we do not see how any violence can succeed to produce reform, even less than in Russia, for Prussia is but a portion of Germany. To be sure in some other States, Saxony and Bavaria, the Socialists are very strong, but the army is not theirs. We do, however, anticipate that this electoral inequality in Prussia may be called to the attention of the German Reichstag, and perhaps Germany as a whole may put a pressure on Prussia to reform its antiquated constitution.

Senator Beveridge's bill proposes a permanent Tariff Commission of five members, each appointed for seven years, which shall collect all needed information at home and abroad bearing on the tariff, and be the advisers of Congress as to any changes in the tariff. We have had once before an important but temporary tariff commission, and such a standing commission would doubtless be of value so long as we must have successive changes of tariff. We only hope the appointment of this commission would not have the effect to delay the relief now imperatively needed, as to which we may specify hides, objects of art and antiquities.

Now that it is settled that our Government is to set Cuba on her feet early next year it is not strange that business interests are much concerned and considerably apprehensive. We have kept peace and have secured prosperity. Whether Cuba can, on this her second chance, remain an independent nation wholly depends on whether her minority have acquired the power of peaceful submission to the rule of the majority, and the majority the self-control to rule without oppression. We much fear the result, and a second return to anarchy will bring us back to stay permanently. Let Cuba be warned.

Insurance

Changes in the Hartford Fire Insurance Company

FOLLOWING the death of George Lewis Chase, sometime president of the Hartford Fire Insurance Company, to which reference was made in this department last week, the board of directors elected Charles E. Chase, the vice-president of

CHARLES E. CHASE,

the Hartford Fire, to the presidency of the company as his father's successor. Charles E. Chase, the new president of the Hartford Fire Insurance Company, was born at Dubuque, Ia., on March 29th, 1857. His father was then the Western general agent of the New England Insurance Company of Hartford. The family removing later to Hartford, the young man attended the Hartford high school and was graduated with the class of 1876. He began his business career with the local agency of the Hartford Fire in 1877 and was transferred to the company's home office in 1880. In July, 1890, he was elected second assistant secretary, and in January, 1903, was made vice-president, in which office he continued until his election to the presidency last week. Mr. Chase was elected president of the Hartford Board of Fire Underwriters in 1894 and served as such until last week. He is a director of the Hartford National Bank, the Hartford

Board of Trade and the Connecticut Mutual Life Insurance Company. He is a Republican in politics.

Vice-President Richard M. Bissell, who succeeds the late president as a member of the board of directors, was born in Chicago on June 8th, 1862. He attended Yale and was graduated with the class of 1883. He began his business life in

RICHARD M. BISSELL.

the insurance business. He was at one time a member of the Chicago firm of Cofran & Bissell, managers of the Western department of the Hartford. He left that firm to become vice-president of the company in 1903. Vice-President Bissell is a director of the Connecticut General Life Insurance Company and of the Fidelity Trust Company.

GOVERNOR HUGHES spoke at a convention of the agency superintendents of the Metropolitan Life Insurance Company on Saturday last. The Governor was introduced by President Hegeman, who had appeared before the Armstrong Committee, and faced Mr. Hughes, then counsel for the investigators. The Governor's views on the subject of insurance legislation were not in full accord with those who hold that certain prevailing insurance restrictions should be considerably modified.

Financial

The Year's Foreign Trade

LAST week's official reports show that all previous records for exports and imports were broken in the calendar year 1907. Exports were increased by \$125,000,000 and imports by nearly \$103,000,000, of which \$58,000,000 was for dutiable merchandise. Totals are given below:

| | Exports. | Imports. | Excess of Exports. |
|---------|-----------------|-----------------|-----------------------|
| 1907 .. | \$1,923,498,434 | \$1,423,326,680 | \$500,171,754 |
| 1906 .. | 1,798,243,434 | 1,320,501,572 | 477,741,862 |
| 1905 .. | 1,626,990,795 | 1,179,144,550 | 447,846,245 |
| 1904 .. | 1,451,318,740 | 1,035,909,190 | 415,409,550 |
| 1903 .. | 1,484,753,083 | 995,494,327 | 489,258,756 |

Imports amounted to \$1,000,000,000 for the first time in 1904; exports reached and past that mark in 1896. Exports were only \$824,000,000 in 1895. Since that year they have been increased by 133 per cent.

Owing to our financial disturbance, exports were enlarged notably in November and December, the totals being \$204,474,000 and \$207,179,000, respectively, against a monthly average of only \$151,186,000 for the first ten months of the year. At the same time, imports fell away, amounting to only \$92,288,000 in December, altho the monthly average up to December 1st had been \$121,000,000. The importation of \$108,000,000 of gold during November and December stimulated the exportation of grain, cotton and other merchandise, while declining demand reduced the imports of goods. Thus was our foreign trade affected by the panic.

Exports of breadstuffs for the year were increased (by \$25,000,000) to \$204,500,000, and \$56,000,000 was added to the value of cotton exported, making the year's total \$469,000,000. Iron and steel (with manufactures of the same) were sold abroad to the value of about \$200,000,000, which included about \$50,000,000 worth of steel rails, bars, plates, wire, nails, billets, structural steel, pig iron and other products of this class which are protected by high duties.

....The board of directors of the dry goods house of Lord & Taylor have declared the usual quarterly dividend of 2

per cent. on the common stock, payable February 1st.

....The Chatham National Bank, of which George M. Hard is president, has elected as vice-president Frank J. Heaney, a partner of Everett, Heaney & Co., exporters. W. H. Strawn, connected with the bank for thirty-five years, including the past seventeen years as assistant cashier, has been appointed cashier.

....Recent changes among the bank officers include the election of Samuel S. Campbell, a vice-president of the United States Mortgage and Trust Company, as president of the Night and Day Bank. The new vice-president of the Night and Day Bank is Frederick Phillips, secretary of the Lincoln Trust Company. Arthur C. James takes the place of his father, D. Willis James, as director of the First National Bank. Lewis L. Clarke has been elected director and vice-president, and Edward Burns, the cashier, has been elected a director, of the American Exchange National Bank. Vice-president Henry A. Smith is a new director of the National Bank of Commerce, and Frank L. Grant, of the Carnegie Trust Company, has been elected president of the Hamilton Bank of New York.

....The statement just issued of the Lawyers Title Insurance and Trust Company, of which Edwin W. Coggeshall is president and general manager, shows a capital stock of \$4,000,000, a surplus of \$5,500,000, and undivided profits amounting to \$348,439. The total assets, which have been examined and certified by Haskins & Sells, certified public accountants, amount to nearly \$15,500,000, as against a total indebtedness, to wit, deposits, of \$5,500,000. This shows the growth and magnitude of the company. The cash reserve in office during the recent panic was 7 39-100 per cent., although only 5 per cent. was required, and in bank there was a reserve of 16 per cent., the law requiring 10 per cent.; in fact, the deposits of the company shrank only \$1,500,000 during the year, which makes a remarkably good showing.

VOL. LXIV NEW YORK, THURSDAY, JANUARY 30, 1908

No. 3087

Survey of the World

Governor Hughes a Candidate

In a letter to James S. Lehmaier, chairman of a committee appointed by the Republican Club, of New York, on the 21st, Governor Hughes virtually announced his candidacy for the Republican presidential nomination. Mr. Lehmaier had written to the Governor concerning the club's resolution in favor of his nomination by the national convention. To further the purpose of this resolution the committee had been appointed. "It has seemed to us," said Mr. Lehmaier, "that some expression from you would be timely." He also invited the Governor to meet the members of the club in their club house. The Governor wrote in reply:

"I am deeply sensible of the honor conferred upon me by my fellow members of the Republican Club in the passage of the resolution to which you refer, and it will give me pleasure to accept the invitation. In accepting it, it is proper for me to restate my position.

"It is my desire that the sentiment of the party shall have the freest expression, and that such action shall be taken as will be for its best interests. I do not seek office nor shall I attempt to influence the selection or vote of any delegate. The State administration must continue to be impartial and must not be tributary to any candidacy. I have no interest in any factional controversy and desire above all things that there shall be deliberation, honest expression of the party will, and harmony of effort.

"I cannot fail to recognize the great honor which the nomination would confer, or the obligation of service which it would impose. Nor should I care to be thought lacking in appreciation of the confidence and the esteem which prompt the efforts of those who sincerely desire to bring it about. The matter is one for the party to decide, and, whatever its decision, I shall be content. I shall be glad to meet with the members of the club, as you suggest, and to make such further statement as may be appropriate. In view of the engagements already made, I do not see how it will be possible to have such a meeting before the evening of January 31st."

This letter gave great satisfaction to those in New York and elsewhere who had been identified with the movement for the nomination of the Governor. On the 23d, Secretary Taft sent the following letter to Congressman Herbert Parsons, chairman of the New York County Republican Committee, at the recent meetings of which action upon a resolution in favor of the Governor's nomination has been deferred by the votes of members regarded as supporters of the Secretary:

"My Dear Parsons:—I am aware that you and many other friends of mine in New York State, who are also friends of Governor Hughes, have hesitated as to the course to pursue in respect to the Republican nomination for the Presidency. I wish you and them to know that, as far as I am concerned, there should be no embarrassment in this regard.

"I have uniformly urged friends of mine not to attempt to divide in my interest the delegation from any State which has a candidate of its own. Since Governor Hughes has indicated his willingness to accept the Republican nomination, I now make the same request of you and my other friends in your State. Moreover, I would greatly deprecate a contest which might imperil Republican victory in New York in November. Anything that I can do to avoid this I am anxious to do."

After the publication of this, it was admitted everywhere that the Governor would have the entire delegation from his State. Mr. Parsons said he would call a special meeting of the County Committee, to be held this week, for the passage of resolutions even more emphatically in favor of the nomination of the Governor than those which have been pending. He and other friends of Mr. Taft asserted that the Governor would have and ought to have a solid delegation.—The legislative board of the Brotherhood of Locomotive Firemen and Enginemen past and sent to Governor

Hughes, last week, resolutions asking him to explain why, in appointing ten Public Service Commissioners, he had not given one of these offices to a member of the Brotherhood recommended to him by the organization. In reply he wrote, on the 24th:

"I may repeat what I have said in answer to similar inquiries. In making appointments to the Public Service Commissions, as in other cases, I have chosen the men whom I believed to be best qualified for this very important work. Nothing is more important to our wage earners than to secure, to the highest degree possible, efficient and impartial administration, and this has been my object in every appointment I have made. If I should attempt to make appointments for the purpose of satisfying particular interests, the result would be inevitably a patchwork of compromises. It would be impossible to satisfy all interests in this way, and for every one that would be pleased there would be many who would feel slighted. I have endeavored to obtain the best service for the State. And by this course the interest of the members of labor organizations, as well as those of all other citizens, will be most surely protected."

He was informed by vote of the board that this response was "decidedly unsatisfactory."—Dispatches from Washington say the friends of Mr. Taft claim for him 504 votes on the first ballot.

Suit Against the Harriman Roads

Attorney - General Bonaparte announced, on the 25th, the purpose of the Government to sue the Union Pacific Railroad Company, Mr. Harriman and others, in the United States Circuit Court at Salt Lake City, for a dissolution of the combination in which the Southern Pacific and several other railroad companies are alleged to be included. This suit, the most important of its kind since the prosecution of the Northern Securities Company, is a result of the investigation made last year by the Commission. The Government will proceed by filing, this week, a bill in equity, and will allege that the defendants have violated the Sherman Act. The defendants are the Union Pacific, Southern Pacific and San Pedro companies; the Farmers' Loan and Trust Company, of New York, as depository of all the San Pedro stock under a combination contract or agreement, and the following individuals: Edward H. Harriman, Jacob H. Schiff, Otto H. Kahn, James Still-

man, Henry C. Frick, H. H. Rogers and ex-Senator William A. Clark, "who are alleged," Mr. Bonaparte says, "to have conceived and carried out the conspiracy complained of." The court will also be asked to declare to be illegal the ownership by the Union Pacific or by the Oregon Short Line of stock in the Atchison, Great Northern and Northern Pacific railroad companies, their competitors. Mr. Bonaparte says the Department of Justice "regards the suit as of first importance, as it is sought by means thereof to break up a substantial monopoly of the transportation business of the country between the Missouri River and the entire Pacific Coast south of Portland." He asserts in his statement that Mr. Harriman and certain of his associates set out in 1901 to make this monopoly, and in his long statement he points out how control of the Southern Pacific was obtained, the acquisition of Northern Pacific and Great Northern stock, the Union Pacific's interest in the Atchison, and the contract for control of ex-Senator Clark's San Pedro Company, alleged to have been procured by "harassing litigation and threats." It is reported that Mr. Clark will be a witness for the Government, and it is pointed out that, with respect to the San Pedro contract, Mr. Harriman did not acquire immunity by giving testimony.—Upon appeal, the Ohio Supreme Court upholds the State's Anti-Trust law and the judgments of Judge Kinkade's court in Toledo in the cases of the convicted officers of ice companies, plumbers' combinations and brick associations, but holds that the jail, instead of the workhouse, should be the place of imprisonment. Execution of sentence in the cases of thirty men (several of these prominent in business) was suspended. They will now go to jail—Twelve members of a plumbers' combination in Mobile have been indicted for violation of the Federal law, and the International Harvester Company has been indicted in Kentucky for violation of the Anti-Trust law of that State. Senator Hansbrough asserted in the Senate last week that this company (commonly called the Harvester Trust) was striving to capture North Dakota's delegates to the Republican convention and to prevent his re-election.

The San Francisco Prosecutions

The course of the prosecution in the San Francisco bribery cases may be affected by the conduct of Abraham Ruef, the political boss, who shared a part of the bribe money with Mayor Schmitz and who is accused in 122 indictments. It was announced on the 19th that immunity was not to be granted to Ruef, and that he must be tried. This was at the conclusion of a series of conferences between Ruef and District-Attorney Langdon. The situation was explained when Langdon made public the text of a formal contract, entered into by Ruef and the prosecutors in May last. Ruef was then on trial with Schmitz in the extortion case. It was agreed in this contract that immunity in all other cases should be granted to Ruef, in return for his testimony against all the other indicted men. The contract is an elaborate document, filling two newspaper columns. Ruef was to plead guilty in the extortion case, and he did so in a dramatic speech. Afterward, the prosecutors say, he broke the contract. Complaint is made that he would not testify against Tirey L. Ford, who was acquitted. Jurors in that case attached much importance to his failure to appear after his testimony had been promised. It is said that recently he was encouraged by the remarkable decision of the three judges of the Appellate Court, who annulled the conviction of Schmitz. As he was not inclined to abide by the contract in any case, and as Judge Dunne refused to countenance the agreement, the prosecutors decided that he must go to trial. It is said that they were relying upon his testimony for the conviction of the most prominent men under indictment.

Mr. Taft's Report on the Philippines

A long special report concerning the Philippine Islands, from Secretary Taft, has been sent to Congress. He recommends that sugar and tobacco from the islands be admitted free of duty, subject to limitation as to quantity; that the present restrictions as to the acquisition of mining claims and the holding of lands by corporations be removed; that the Philippine Government be authorized to open and conduct an agricultural bank, with a capital not ex-

ceeding \$2,000,000; and that our coast-wise navigation laws be made permanently inapplicable to trade between the ports of the islands and ports of the States. In a letter transmitting the report, President Roosevelt heartily concurs in the recommendations, directs attention to "the admirable work of Governor Smith and his associates," and continues as follows:

"No great civilized power has ever managed with such wisdom and disinterestedness the affairs of a people committed by the accident of war to its hands. If we had followed the advice of the misguided persons who wished us to turn the islands loose and let them suffer whatever fate might befall them, they would have already passed thru a period of complete and bloody chaos, and would now undoubtedly be the possession of some other power which, there is every reason to believe, would not have done as we have done; that is, would not have striven to teach them how to govern themselves or to have developed them, as we have developed them, primarily in their own interests. Save only our attitude toward Cuba, I question whether there is a brighter page in the annals of international dealing between the strong and the weak than the page which tells of our doings in the Philippines.

"I call especial attention to the admirably clear showing made by Secretary Taft of the fact that it would have been equally ruinous if we had yielded to the desires of those who wished us to go faster in the direction of giving the Filipinos self-government, and if we had followed the policy advocated by others who desired us simply to rule the islands without any thought at all of fitting them for self-government. The islanders have made real advances in a hopeful direction and they have opened well with the new Philippine Assembly; they have yet a long way to travel before they will be fit for complete self-government, and for deciding, as it will then be their duty to do, whether this self-government shall be accompanied by complete independence. It will probably be a generation, it may even be longer, before this point is reached; but it is most gratifying that such substantial progress toward this as a goal has already been accomplished. We desire that it be reached at as early a date as possible for the sake of the Filipinos and for our own sake. But improperly to endeavor to hurry the time will probably mean that the goal will not be obtained at all."

The report includes a review of the progress made under American rule. Peace prevails thruout the archipelago to a greater degree than ever before. The new Assembly, Secretary Taft says, "could have done nothing which indicated its good sense so strongly as the selection of Señor Osmena as its presiding officer." It is unwise to attempt to

fix the time in which complete self-government may be granted. Conditions warranting such action "cannot be reached until at least one generation shall have been subjected to the process of primary and industrial education." It is "not unreasonable to extend the necessary period beyond a generation":

"If the American Government can only remain in the islands long enough to educate the entire people, to give them a language which enables them to come into contact with modern civilization, and to extend to them from time to time additional political rights so that by the exercise of them they shall learn the use and responsibilities necessary to their proper exercise, independence can be granted with entire safety to the people."

In the course of his comments upon the assertions and arguments of those who would give up the islands, he estimates the annual cost of keeping them to be \$5,000,000. The question is, he says, whether the United States, to avoid this expenditure, "should pursue the humiliating policy of scuttle, should run away from an obligation which it has assumed to make the Philippines a permanently self-governing community, and should miss an opportunity at the same time of building up a profitable trade and securing a position in the Orient that cannot but be of the utmost advantage in obtaining and maintaining its proper proportion of Asiatic and Pacific trade."

Hayti's Revolution

General Juneau, leader of the revolutionists in Hayti, was captured near Gonaives, on the 25th, and then shot by the Government's troops. Whereupon President Alexis announced that the revolution had been suppressed. The revolutionary movement, which now appears to have failed completely, was in the interest of General Firmin, who opposed Alexis in 1902 and has recently been in exile. He is said to have landed on the Haytian coast a few days before the death of Juneau, which was preceded by the capture of several places on the north shore by the latter's followers. The revolutionists suffered a severe loss by the arrest in New York, on the 20th, of their agent, Jose M. Giordani, a Corsican, and the capture of 2,000 rifles and 200,000

cartridges which he had attempted to send to Gonaives by the steamship which sailed on the 8th and arrived at the Haytian port a day or two after the Firminists began their work. He had packed the rifles in boxes marked "structural iron," and the cartridges were in barrels marked "cement." They are held by agents of our Secret Service, and Giordani is accused of counterfeiting. In his possession was about \$800,000 in Haytian notes. It is said these are genuine and are part of a fund received in 1902 by Giordani, as Firmin's agent. Letters found last week in the man's room implicated Charles Miot, a Haytian, who has been Consular Agent of the United States at St. Marc, and Miot was promptly dismissed. Seven months ago Giordani was engaged in promoting an uprising in Cuba.

Various Topics

Testifying before a committee of Congress, Colonel Goethals said last week that, in the original plan, the western locks of the Panama Canal had been placed too near the sea. The lower flight had practically been in the Pacific. Locks in such a position could easily be bombarded by warships lying in a basin only four miles away. The plans have been changed and the locks are to be four miles back from the first position.—Joseph L. Bristow (formerly Assistant Postmaster-General), who made for the Government a special investigation concerning steamship and railway traffic in the neighborhood of the Panama Isthmus, says that the Government should own and operate six or eight steamships on the Pacific side, for the proper maintenance of those which it owns on the Atlantic side.—The battleship fleet sailed from Rio de Janeiro on the 22d. It is said that 300,000 persons thronged the waterfront at the time of departure. Sixteen Brazilian warships escorted the fleet for 25 miles. Rear Admiral Evans expected to reach Punta Arenas in ten days.—The new railroad in Guatemala, from Puerto Barrios to the capital, 195 miles, was opened for traffic on the 19th. A new railway route across Central America has thus been made, as there was already a road from the capital to the Pacific.

Socialism and Labor in England

The conference of the British Labor party meeting at Hull on January 21st declared that socialism is the definite objective of the party. The importance of this step can hardly be overestimated, since the delegates at Hull represented practically the whole strength of the trade union movement, which, on account of its numbers, wealth and organization, wields immense power. The resolutions declared that the processes of production, distribution and exchange should be controlled by a democratic state in the interests of the entire community and that social and economic equality between the sexes should be established. Hitherto the efforts to commit the party to a socialistic program have failed, not so much because the members did not believe in it, but because of their dislike of "theory." The action of the Congress is strongly opposed by some of the members, especially by the representatives of the Amalgamated Society of Railway Servants, with a membership of 70,000. The chief argument brought against the action is that the funds of the unions will be diverted from their original purpose of directly aiding the members to the support of the socialistic propaganda. The vote is merely an expression of opinion and does not necessarily bind the trades unions or the individual members. On account of the fact that the Liberal Government relies upon the labor members of the House of Commons for support, particularly in its campaign against the House of Lords, the coming session of Parliament, which opens on January 29th, is likely to be an important and exciting one. The leaders of the Unionists are endeavoring to rally to their party all forces opposed to socialism. They also will conduct an active campaign in favor of the Chamberlain tariff plan against the importation of goods from foreign nations which impose a duty on exports from Great Britain. The Tariff Reform League is encouraged to believe that this is a winning card by the result of the election in Mid-Devonshire, where a Liberal majority of 1,283 of last year was changed into a minority of 559 this year in a campaign waged on the tariff question. The tariff reformers and the Socialists, who are in

favor of a change of England's policy, have the strongest of all arguments in that the army of the unemployed grows daily and the strain on private charity and public funds is unendurable.—One great danger has been averted by the settlement of the strike of the cotton mill workers of Manchester. Four mills with over two thousand operators struck for an advance in wages of the ring spinners. This was resisted by the Employer's Federation on the ground that it was a breach of the Brooklands agreement, and they determined upon a lockout if the strike continued. In the present depressed state of the market and the small demand for goods and the rising price of cotton the temporary closing of the factories would be rather to their advantage. On the night before the lockout was to begin the representatives of the men and the employers came to an agreement, the form of which has not been made public. At Newcastle-on-Tyne 4,000 men employed in shipbuilding struck on account of a proposed reduction in their wages.—The settlement of the Irish difficulty will be one of the most important questions before the coming Parliament. Lord Londonderry, in the House of Lords, and Walter Long, in the House of Commons, will bring forward evidence to prove that a large part of Ireland is in a state of anarchy, that law is practically unoperative and life and property insecure thru the mob rule organized by the United Irish League. The Government is expected to take further steps in the direction of Home Rule and is in the meantime making special efforts to restore order. A force of 200 constabulary invaded the Geevagh district in the night and arrested twenty men charged with unlawful assembly and riot and interfering with the mails. The landlords of the Keogh and Knox estates refused to sell land to tenants, and the latter organized a "No Rent" war. The processes for rent were sent by the landlords by mail and were suppressed. Baron Curzon of Kedleston was elected by a narrow majority over Lord Ashtown as a representative Irish peer. On his resignation as Viceroy of India Lord Curzon was anxious to be made a peer, but the Liberal Premier refused to enlarge the House of Lords. A question of the eligibility of Lord Curzon

has been raised on account of his failure to qualify for admission to the roll of Irish peers.

Suffrage Riots in Prussia

The question of the reform of the electoral law of Prussia was brought into the Reichstag by means of a skillfully worded interpellation: "On what ground does the Chancellor consider manhood suffrage, as already granted for the elections to the Imperial Parliament, to be harmful to the interests of one of the Federal States?" Chancellor von Bülow refused to consider the question and denounced in the strongest language the street demonstrations which the Socialists have been organizing. He addressed himself directly to the Socialist members when he said that the instigators of these riots would be held responsible and severely punished, but they received his threats with jeers and laughter. Herr Fisher, Socialist, accused the authorities of increasing the disturbances by the employment of police spies to incite the mob to acts of violence and sedition. Herr Kreth, Conservative, accused the Socialist leaders of cowardice in sending men, women and children into danger while they kept in a safe place. The exchange of shouts and insults thereupon became so tumultuous as to drown the debate and the entire Ministry left the house. The mass meetings of the Socialists were attended by some 12,000 persons, many of whom afterward formed processions and endeavored to reach the Reichstag but were driven back by the police, who charged with drawn swords, wounding over a hundred persons. In Brunswick similar demonstrations were held and a fight ensued between the mob and the police. Duke Johann Albrecht, Regent of Brunswick, who was attending the Court Theater, left early by a private entrance to avoid the mob. Professor Silbergleit, director of the Municipal Bureau of Statistics, states that the number of unemployed in Berlin is far greater than last year. On December 31st, 1906, those receiving relief from the city and from private sources numbered 102,510, which is 12,500 more than the number on the same date the year before.—The bill introduced by Chancellor von Bülow into the Prussian Diet providing

for the compulsory purchase of lands held by Poles in Prussian Poland and the settlement of Germans on them is likely to pass in spite of the vehement protests of the Polish and Socialist members. In its present form the land which can be so expropriated is limited to 174,000 acres.

A Republican Plot in Portugal

The police of Lisbon discovered, on January 22d, a plot to overthrow the monarchy and establish a republic. Several of the conspirators were captured in a raid made in the night on the house where they were meeting. Among them were Joao Chagres, who was a leader in the republican rising of 1891, and Franca Borger, editor of *O Mundo*, which was suppressed by the Government. Most of the conspirators escaped in the confusion and darkness when the police broke in the doors. In the cellar of the house bombs and revolvers were found. It was their intention to assassinate Premier Franco and call upon the republican and labor organizations to rise and overthrow the Government. Forty republican politicians have been arrested and confined in the fortress of San Julia, and the newspapers in Lisbon are forbidden to publish anything in regard to the matter. Premier Franco sleeps each night in a different house, guarded by a squadron of cavalry. Troops are kept in their barracks ready for any emergency. So far there has been no sign of disloyalty in the army, tho the Opposition claim that many of the soldiers and officers are in sympathy with them. Premier Franco promised over a month ago to hold an election in April and terminate his dictatorship, if the country remained calm, but the discovery of this plot will afford him an excuse for the continuance of absolutism.

Japanese Cabinet Wins

The Saonji Cabinet remains in power, in spite of the combination of all the Opposition forces to overthrow it. The Progressives joined with the Independents and with the Daido Club, led by ex-Premier Katsura, in a resolution censuring the Government on account of its financial measures, but omitted all reference to its foreign policy. After a

debate of three and a half hours the motion of censure was lost by a vote of 177 to 168. No reference was made to the emigration question in the discussion. This will in all probability insure the passage of the budget, involving increased taxation. The speech of Foreign Minister Hayashi, explaining the policy of the Government, was set for January 25th, but was postponed to the 30th on the receipt of Secretary Root's reply to the Japanese note forwarded thru Ambassador O'Brien. Viscount Hayashi made the following statement of his policy, which is said to be entirely satisfactory to our Government if faithfully carried out. The prohibition of emigration to Mexico will remove one of the chief deficiencies of the present system:

"The Government of Japan is determined to investigate the personal standing of those that go to America as students, requiring two sureties before they leave. The Government realizes that the emigration of laborers pretending to be students is liable to be embarrassing to America, and therefore we are determined to prevent the emigration of laborers. While the proposed restrictions may be embarrassing to real students all legal restrictions will be made alike, because one dishonest person may embarrass many who are honest.

"The Minister of Foreign Affairs will not hesitate to entirely prohibit Japanese emigration to Hawaii, if necessary. The Foreign Office intends to prohibit emigration to Mexico. Those who send emigrants to Mexico will be regarded as assisting emigrants to enter the United States thru the frontier, and therefore they will be treated as lawbreakers."

Foreign Notes

In Morocco the fighting continues between the French troops, under General d'Amade and the Arabs under the command of Mulai Rachid, one of the chiefs of the Sultan of the South, Mulai Hafid. The French troops occupied Settat on January 17th, after an engagement in which the natives are reported to have lost 600 men, but the French appear to have been unable to hold the town, for they have fallen back to Kasbah ber Rachid, where they have repulsed with severe loss an attack of the tribesmen. In a debate in the Chamber of Deputies, in reply to an interpolation introduced by M. Jaurés, the Socialist leader, a sensation was created by the statement of M. Delcassé that he had been compelled to resign as

Minister of Foreign Affairs in 1905 in consequence of a threat of war on the part of Germany. He had retired rather than yield to Germany's demand for an international conference on Morocco. Germany's object, he said, was to break the secret of France's alliances and friendships. But this had failed, and now France is stronger than ever, her greatest peril now being found not abroad, but in internal dissension at home. M. Jaurés accused the Government of having flirted alternately with Abd-el-Aziz and Mulai Hafid, and involving France in military adventures which would require the mobilization of 100,000 to 150,000 troops to march to Fez.—The Duma is appalled by the demand of the Government for the expenditure of \$500,000,000 for naval construction. The program is said to involve the creation of five fighting squadrons, two of which will be stationed in the Pacific, two in the Baltic, and one in the Black Sea. The Government wishes the whole amount to be authorized at once, leaving it to the Ministry to decide how it is to be spent each year. All parties of the Duma regard the proposition as impossible, and the Monarchists join with the Constitutional Democrats in opposing it. The members of the Cabinet themselves are also said to disapprove of it personally, but the Emperor is determined to create a new and stronger navy at any cost. The Duma may be dissolved if it refuses. Nothing, in fact, has been accomplished by it in the three months of its existence. The eleven minor bills which have been passed have been held up thru the failure of the Drafting Committee to come together.—The Transvaal Government has been forced to modify its severity against Asiatics, and will attempt to devise a less objectionable registration system. In the meantime all prosecutions for violation of the present law will be dropped. Fifty of the prominent Indians and Chinese in the Transvaal had been arrested for the violation of the registration law, and some of them had been sentenced to imprisonment. The Hindus claim that the law requiring them to give the names of mother and wife violates their religious ideas, and that taking their finger prints is treating them like criminals.

Edmund Clarence Stedman

BY JOEL BENTON

FRIEND of us all, and the maker of lyrics that touch and soften the heart—
Heartfelt, and lavish of fancy and beauty that golden-tripped cadence impart—
Fallen in Azrael's shadow, and borne to the Islands unknown;
Now Poetry loses her lover, and Letters a Knight from her Throne.

A Voice that could thrill, and encourage, yet winnow the chaff from the wheat,
There is now not another so genial, so tenderly earnest, and sweet;
Yet it leaves as a monument, greater than stateliest marble can show,
Rare, garnered fruits of his fancy, of music, and tintfullest glow.

Last of the troubadours early, loyal to truth and the past,
Seeing the beauty and wonder of song, and its crystalline cast—
We feel that a seat is left vacant, a voice is made suddenly still,
And a prophet has gone from his forelook, which no one hereafter shall fill.

Sad is this sorrow of Letters, and loss to the loftiest Art;
But we, who knew him in lifetime, from something still greater must part;
Not merely the critic and Poet, suddenly risen above
From this weariful world's dark troubles—but one who had dowered us with
Love.

POUGHKEEPSIE, N. Y.

Edmund Clarence Stedman

BY THOMAS WENTWORTH HIGGINSON

THERE lies before me a letter dated November 2d, 1873, from the late Edmund Clarence Stedman, poet and banker, greeting me for the first time in a kinship we had just discovered. We had one and the same great grandfather, each on the mother's side, in the Rev. Aaron Cleveland, of Haddam, Connecticut, then a noted man, but now best remembered as being also the great grandfather of a President of the United States. In the same letter which announces this discovery, Stedman goes on to speak quite disapprovingly of men who consider seventy years a proper term of life. "I never could understand it," he says, and thus continues:

"Five hundred years of Earth are none too many, could we *retain vigor and health*. Wouldn't you like to be fifty years a traveler, fifty an inventor, fifty years a statesman—to

practice painting, sculpture, oratory—and all the time a fisher, sailor, poet, author and man of the world? I should, and then might be willing to try some other sphere."

To these desires fate may already be responding, tho elsewhere and beyond our ken. The author of these wild wishes lived three years beyond seventy, dying on January 19, 1908, in New York City; and we know not where or how the career of his next self-imposed half-century, if such a thing there be, may now have begun.

We know at least that he opened his own course for varied discipline by means of a changing life. He tried Yale College and was suspended, altho pardoned and honored; went into newspaper work at Norwich, Conn.; was for ten years a journalist in New York, acting during two years as a war correspond-

ent; changed his life in 1865 from that of a literary man to that of a banker, but retired from Wall Street in 1900, after the usual alternations of success and failure. A few, at least, of his imagined conditions were thus actually tried in life. He married Laura Hyde Woodworth in 1853 and lived with her a hospitable and agreeable life in New York City. She died some years since and their son, Arthur Stedman, with their granddaughter, Miss Laura Stedman, are the only representatives of the household.

I find among his letters but one referring retrospectively to his college life, on occasion of our being associated at one time upon a committee of three with a system of prizes adopted, in connection with the elder Mrs. J. J. Astor, for rival colleges of the nation in the direction of essays and translations. Here, it will be noticed, he refers to his early Yale discipline and restoration.

"New York, Dec. 15, 1877.

"My Dear Higginson:

"It is evident that you and I know what's what—tho I don't know who's who. I *hope* 'Carolus' and 'Julian' are *Yale* men; but *Yale* rarely turns out any writers—or rather, she usually turns out what writers she has, and sometimes reclaims them afterward, as in the case of your associate Triumvir.

"Here are my rough notes scrawled in *articulo legendi*. Possibly you can make them out. I send them that you may note the singular coincidence in *language*, even, between your comments and mine. E. g. the case of *In hoc signo*. As you say, 'Carolus' and 'Partisan 2d' of the *Politicals*, and 'Julian' and 'Eckhardt' of the *Pendennises* seem to be the winning nags. Will return the MSS. to you on Monday. 'Tis now Saturday p. m.

"Ever truly yours,

"E. C. STEDMAN."

Those who have watched for many years the development of education among American women may well dwell with pleasure on the influence over Stedman of his mother, to whom he always looked with devoted attention. The following letter was received from him just after her death, when I wrote to him about a sonnet of hers called "Fading Autumn":

"44 EAST 26TH STREET,

"New York, January 16th, 1889.

"My Dear Higginson:—

"I can't say where 'Fading Autumn' first appeared, tho doubtless my mother's papers—which I have not yet had the heart to go thru with—will inform me of such matters.

But it may be properly credited to the collection of her miscellaneous poems, 1867. I have a spare copy here, which you may care to own, and I'll mail it to you. See your sonnet [i. e., that which I had mentioned] on page 198; various others, before and after. She was a correct sonneteer, for her (American) period, tho used to ending with a couplet. I will mark a few of her lyrics and sonnets which always seemed to me to show her best natural vein. She had a 'born' ear for rhythm, as one sees in the many odes which Mr. Kinney's Wordsworth-Coleridge influence led her into writing. [This was her second husband.] She used to read them aloud, superbly. If she had been in a right poetic atmosphere she would have gained by it. Her flower was the violet. The blossom on the fly-leaf was taken from a cluster of violets that was buried with her.

"Faithfully yrs.,

"E. C. STEDMAN."

I rendered some co-operation, also, on his Library of American Literature, and can testify to its thoroness of treatment—a work in ten volumes, thruout which he was assisted by Miss Ellen M. Hutchinson—and one, doubtless destined like all such compilations, to be displaced ere long. More distinctive and likely to live longer are his later works, still largely in part compilations. The latter class includes "A Victorian Anthology" (1894), "An American Anthology" (1900), while those of another class are more original and personal, "Victorian Poets" (1875), "Poets of America" (1885). Some of these past thru twenty editions, and they really remain the memorial of their author's literary maturity, apart from his poems which must be separately viewed.

It will probably be found that Stedman is one of the many men and women whose poetry appeals to a circle of friends during life, but mainly dies with them. Longer and earlier poems, even of Lowell, usually remain unread; while here and there a short one proves unexpectedly immortal. These happy exceptions may occur at the two ends of life: Holmes's fame, for instance, began with "The Last Leaf," and ended with "The Chambered Nautilus"; the rest are being rapidly forgotten. Lowell made fame early in his "A Year's Life" yet lived to omit the greater part of its contents. Both Stedman's and Lowell's "occasional" poems are apt to be failures—the latter's "Commemoration Ode" being an exception, tho his other "occasionals" are hardly exceptions.

Scarcely any of Stedman's longer poems, any more than of Aldrich's, will live, but the "Stanzas for Music" will, were it only for the power of the last two lines. "Kearney at Seven Pines" has so strong a cadence that it may be one of the few Civil War poems which will last. His sea verses, called "Surf," have a similar ring to them. His poem on "Hawthorne" before the Harvard Φ B K will hardly equal these in permanence of hold, for it is too wordy, as Lowell's similar poems often are; but "The Discoverer," on a child three years old, has more chance of remembrance. His longest poem, like "The Blameless Prince," will find few readers, and the difference of grade between his work and Aldrich's is beyond question. His Greek versions gave promise and he had life-long plans of extending them, but stopped short. He had planned a complete version of the three pastoral poets, Theocritus, Bion and Moschus, and his friends tried in vain to keep him to the work. That is where a poet loses, almost hopelessly, by the whirl of a great city. Even his longer poems for festivals and before colleges, while never without fine flashes, rarely show that continuous power, for which some share of solitude is needed.

At a time when I myself was pretty heavily drawn upon in editing works of some extent, I wrote to ask Stedman how he managed similar matters, and he sent me in return the following circular printed in a type designed to imitate handwriting. Its usefulness he sums up in a postscript:

"New York, Feb. 29th, 1888.

"Dear Sir:—

"Your letter is received. For several years so much correspondence has reached me, from friends and strangers, that their commissions and requests, and even *the letters written in reply*, have exhausted my time, forced me to abandon my professional work, and added to a burden of ill health under which I have been struggling.

"It is a question whether I shall give up all my other duties, or pray to be excused from this labor which has forestalled them. Finally

I have been *compelled* to resolve that hereafter I must not:

"(1) Read any MSS. sent me, nor give advice concerning them;

"(2) Offer any person's MSS. to an editor or publisher;

"(3) Engage to deliver poems or addresses, upon ordinary occasions, before societies, etc.;

"(4) Respond to miscellaneous requests for service, and to literary and other communications not essential to my regular work.

"I am also under strict orders to forego the pleasure of social and general correspondence

Copyright, 1903, by Pirie MacDonald, Photographer of Men, N. Y.
EDMUND CLARENCE STEDMAN.

with my personal acquaintances. It is with reluctance that I have prepared this manifold letter, which I trust you will considerably regard as *private*. My friends will not misinterpret it, and no others can justly enter a complaint.

"Very truly yrs.,"

To this he adds with pen and ink:

"This circular answers one-half of my mail. One-quarter can be answered by my secretary. The remaining one-quarter referred to in the note on the next page is the tough pull."

This additional note is as follows:

"While one reserves the precious liberty of keeping up the lost art of (true) letter writing, according to his modes and tenses, it is, after all, the letter writing to one's *peers* that is the real burden of an author who must live by his pen. Enjoyable, but exhausting. *Inter-professional* letters on literary *business* are exceptions, and belong to the comity of authors."

He wrote to me before the age of the typewriter, more profusely than men now write, and the very fact that we lived far apart made him franker in utterance. The following letter came from Keep Rock, New Castle, N. H., September 30th, 1887:

"You are a 'noble kinsman' after all, of the sort from whom one is very glad to get good words, and I have taken your perception of a bit of verse as infallible, ever since you picked out three little 'stanzas for music' as my one best thing. Everyone else had overlooked them, but I knew that—as Holmes said of his 'Chambered Nautilus'—they were written 'better than I could.' By the way, if you will overhaul Duyckinck's 'Encyclopedia of Literature' *in re* Dr. Samuel Mitchill, you will see who first wrote crudely the 'Chambered Nautilus.'"

Two years after, he wrote, April 9th, 1889:

"The newspapers warn me that you are soon to go abroad. . . . I must copy for you now the song which you have kindly remembered so many years. In sooth, I have always thought well of your judgment as to poetry, since you intimated (in *The Commonwealth*, was it not?) that these three stanzas of mine were the thing worth having of my seldom-written verse. I will write on the next page a passage which I lately found in Hartmann (a

wonderful man for a pessimist), and which convey precisely the idea of my song."

To this he adds as a quotation the passage itself:

"The souls which are without knowing it, and which can approach no nearer by ever so close an embrace than they eternally are, pine for a blending which can never be theirs so long as they remain distinct individuals."

The song itself, which he thought, as I did, his high-water mark, here follows. Its closing verse appears to me unsurpassed in American literature.

STANZAS FOR MUSIC.

(From an Unfinished Drama.)

Thou art mine, thou hast given thy word;
Close, close in my arms thou art clinging;
Alone for my ear thou art singing
A song which no stranger has heard:
But afar from me yet, like a bird,
Thy soul, in some region unstirred,
On its mystical circuit is winging.

Thou art mine, I have made thee mine own;
Henceforth we are mingled for ever:
But in vain, all in vain, I endeavor,—
Thou round thee my garlands are thrown,
And thou yieldest thy lips and thy zone,—
To master the spell that alone
My hold on thy being can sever.

Thou art mine, thou hast come unto me!
But thy soul, when I strive to be near it—
The innermost fold of my spirit—
Is as far from my grasp, is as free,
As the stars from the mountain-tops be,
As the pearl in the depths of the sea,
From the portionless King that would wear it!

CAMBRIDGE, MASS.

"Gravity Yard" and Other Shambles

BY CHARLES EDWARD RUSSELL

[Mr. Russell is a journalist of wide and varied training and has written much on social reform and the progress of democracy here and abroad. He is the author of "Such Stuff as Dreams," "The Twin Immortalities," etc.—EDITOR.]

THE switch engine had puffed laboriously up to the top of the hill, pushing before it a long line of freight cars, red and yellow, twenty-five or thirty, I should think. At the summit the engineer shut off steam, the wheezy din gave over, and along the train went the clanking of drawheads as the slack ran out on the first of the descent. The switching boss got off the engine and looked down the line to see if the men

were ready. Then he took off his hat and wiped his hot forehead. He seemed to me anxious and depressed, and as one that at the moment cared little for his job. But he gave the signal, and the engine pushed ahead a little. Then the couplings were pulled between some of the forward cars, and they began of their own weight to slide down the hill.

For the next two miles ahead of them the main track was joined at intervals by

spurs leading to side tracks. The descent was continuous but easy, tho I noticed that before the cars had gone far they had gathered momentum and rolled along at a speed of ten miles an hour; perhaps more.

On the tops of the cars, or in some instances standing on the bottom step, were several men, young men, sturdy, wholesome-looking young men. As the separated cars ran down the incline quickly thrown switches shifted them upon the side tracks, and thereupon the young men worked the brake wheels to bring the switch cars to a standstill. Often to make the brake more effective they would thrust into the spokes of the wheel a wooden lever, as if it might be an ax handle, and throw upon that their whole weight and strength. Yet sometimes the flight was not wholly checked, and bang! went the switched car into another car that stood on the siding. The spurs went forth at rather wide angles to the main track, and when the car struck the spur the car always lurched violently, and at such times the young men always clung hard to the brake wheel, that they might not be hurled to the ground. Because at those places many men before them had been so hurled to the ground or between the cars, and the switchmen knew well enough what that meant.

This was in what is called a "gravity yard." For certain reasons of security to certain men it seems wise not to mention which "gravity yard," but that is no matter: the "gravity yard" is about the same everywhere. It is designed, I may explain, to enable a freight train to be arranged and made up quickly and cheaply. It is a most ingenious device, also useful and economical; but it does fill the hospitals and graveyards; of that there is no denying. This is how it works:

Here comes along a freight train, approaching, let us say, Chicago. It has forty cars in it, cars picked up all about the West and destined to places all about the East. Here are cars billed to leave Chicago on every one of a dozen railroads, but scattered through the train; one for the Michigan Central, one for the Lake Shore, one for the Wabash, another for the Michigan Central, one for the Pennsylvania, another for the Lake Shore and so forth.

You have never thought of it, but when that train gets to Chicago to break it up and distribute its cars is a tremendous task. There must be a side track for each road, and in the crowded city and among the always crowded and overcrowded yards how can that be? And then the switch engine must run back and forth picking out each car and putting it down on its proper siding, and all that consumes time, much time, and moments of time in the railroad business are like nuggets of fine gold: or railroad men think they are.

So the gravity yard was devised to save all this time. They choose a place for it some miles from the terminal, and construct the long decline, sometimes two or three miles of it, with spurs running from the main track. Then they let the train (in pieces) slide down of its own weight, and as it goes along they distribute the cars upon the proper sidings. Thus all the cars for the Michigan Central, let us say, are switched off upon side track No. 1, and all those for the Lake Shore upon No. 2, and all those for the city of Chicago upon No. 3, and so on. And when the train has past thru the yard all the cars have been assorted and made ready for instant and easy delivery in Chicago. It is like a huge sieve or automatic separator.

This is a grand device for car-switching, but it is to human life and limb the most perilous invention ever used upon a railroad. Every single car run thru this sieve must carry with it a brakeman; to avoid being slung from the car at the switch or catapulted from it on the side track requires almost superhuman strength, skill and presence of mind. The brakeman must often apply the brake at the same time that he is clinging to his perilous perch. But the brake he uses is of the old hand-wheel pattern, and since the compulsory introduction of the air-brake the hand-brake has become chiefly a nominal thing. In many instances it is operated with the greatest difficulty; in many others it cannot be operated at all. The result is that the car flies around the curve with undiminished speed, and the brakeman struggling with the useless apparatus is flung upon the ground or the tracks to be maimed or killed.

I have here the record of one of these

terrible places. In thirty-two days the foot of one man was torn off, one man was scalped, two lost their arms, three lost their legs, and three were killed outright—that was all that happened in that particular yard in thirty-two days. I have here also a photograph of six of these victims, six young men with their crutches and canes, crippled for life; bright, intelligent looking young men, you would know them instantly and anywhere for young Americans; young men with good faces and good heads and the stamp of the public school upon them; the oldest twenty-two or thereabouts, all crippled and sent forth legless or armless into this seething battle we call life.

Six of them. They were working for the railroad company. They were performing with their utmost skill and diligence a dangerous task that in the view of the company must be done by somebody. They had fallen in the service and the power they had served and been maimed for had thrust aside what remained of them as no longer useful to the enterprise. They were broken cogs removed from the machine and already forgotten, for new cogs had taken their places, to be in turn broken and cast aside.

Such are the facts. They are typical of the gravity yard and they are typical of many other phases of this monstrous slaughter. Day by day they fall all around us, the men that make it possible for us to ride at ease and so swiftly. Of American railroad trainmen in 1901 one in every 137 was killed and one in every eleven was injured. To comprehend the hideous significance of these figures is almost impossible. The truth is that railroad employment in the United States is more perilous than the average soldier's life in war time; and far more cruel. Of every ten trainmen at work today one will be killed or maimed within a year.

No figures are available, but from observation and general report I am convinced that in the gravity yards one person in every five employed is killed or injured every year. We have many other fatal appendages upon our railroad management—the "permissive block," the overworked employee, the boy operator, the trust-made defective rail, the "facing switch," the rotten tie and others, but none of these equals the gravity

yard for persistent slaughter. Nobody ever hears of these victims; they are not printed in the newspapers, their names are not mentioned in the annual report. Yet every gravity yard is, in the course of the year, a place of dreadful death and disaster to which the railroad operations of all the rest of the world can furnish no parallel.

Another undesirable peculiarity of the American railroad system and responsible for much of the terrific death record was pointed out in 1904 by Hoff and Schwaback, German railroad experts, tho I think very little attention has ever been paid to the matter here. It appears that, compared with European countries, our rails are inadequately watched. Thus Hoff and Schwaback declared:

"The saving in expenses which the American railroads effect thru diminished watching of the rails is extraordinary. In the United States only 49,961 persons are engaged in watching the lines and guarding crossings. If the United States had proportionately the same number as are thus employed in the Prussian system the figures would be 636,000, an increase of 586,000, which is greater by 356,174 than the total number of employees in the Prussian system."

Then one need not wonder that, proportionately, the death lists among our railroad men lead the entire world. Here are some comparative figures from the records* in the office of the Interstate Commerce Commission:

THE SLAUGHTER OF RAILROAD EMPLOYEES.

| IN GREAT BRITAIN. | | | | |
|-------------------|---------------------------|----------------------------|----------------------------|-----------------------------|
| Year. | Em- ployees killed. | Em- ployees injured. | Propor- tion killed. | Propor- tion injured. |
| 1895..... | 489 | 7,480 | 1 in 951 | 1 in 62 |
| 1896..... | 490 | 14,110 | 1 in 949 | 1 in 32 |
| 1897..... | 566 | 14,402 | 1 in 821 | 1 in 32 |
| 1898..... | 542 | 12,979 | 1 in 985 | 1 in 41 |
| 1899..... | 584 | 15,582 | 1 in 914 | 1 in 34 |
| 1900..... | 631 | 15,698 | 1 in 946 | 1 in 34 |
| 1901..... | 565 | 14,740 | 1 in 1019 | 1 in 39 |

| 1905..... | 3,361 | 66,833 | 1 in 411 | 1 in 20 |

*Compiled by Mr. Lewis S. Boyd, the acting librarian. Mr. Boyd's tables on this subject are not only the best in the world, but the only tables that give complete and trustworthy data.

Therefore, while in Great Britain the life of the railroad worker steadily becomes safer, in the United States it steadily becomes more perilous.

These 70,000 soldiers of our industrial army thus stricken every year—what becomes of them? Invariably they are poor men, very poor; for the most part they are now not only very poor, but incapacitated for earning their living. What becomes of them and what care do we take of the men that fell thus in our behalf?

Practically none at all. Some of the railroads maintain sick benefit or accident funds, from which a measure of relief may be obtained. In order to secure this relief the employee must contribute from his wages a monthly sum fixed by the company. Should he change his employment he commonly loses what he has paid. The control of the fund is solely in the hands of the officers of the company; they decide how much shall be paid in the event of an accident. Practically, the extent of the employee's participation in the control of the fund is his enforced monthly payments. He gets what certain officers of the company are pleased to allot him from his own and others' accumulated savings, and as long as these officers are pleased to let him have it. How these savings of his are invested, whether they are well or ill managed, whether he and his fellows reap from the fund as much benefit as might otherwise be secured for them, he does not know. All he knows is that month by month something is taken from his wages, and if he lose a leg or an arm, something is paid to him until the stump heals up. Whereupon he shifts for himself.

On railroads where there are no accident funds he shifts for himself from the start.

This is a plain statement of practical conditions. Of course, nominally things are very different. Nominally the law provides remedies and compensations for those that suffer in accidents. Nominally the railroad employee that loses a leg or an arm can bring his case before a jury, and, on proving his injury, receive a judgment that the company, his employer, must pay to him.

But in practice this is not so. One of

the conditions of the accident relief fund, as it exists on our railroads, is that, before an injured person can partake of its benefits, he must release the employing company from all legal responsibility for his injury. Hence he is offered the choice between immediate tho inadequate assistance and a long, costly and doubtful contest in the courts, pending which he shall be without funds. This, of course, is no choice at all; it is coercion, with pistol at your head.

How barren, how long, costly and doubtful the legal fight would probably be can be estimated by any one that will take the trouble to reflect upon our methods of litigation. In many of the States any action for accident damages is enormously complicated with the "contributory negligence" and "fellow workmen" phases of the statutes. An injured man cannot recover if it can be shown that he did not take all necessary precautions for his own safety, and he cannot recover if it can be shown that his doing of a hazardous thing was on the instruction or instance of another employee. These barriers narrowly wall in the actions that the injured may bring, because there are not very many accidents in which one or the other condition cannot be shown. Then the cause is always liable to the attacks of clever lawyers, the idiosyncrasies of juries and the peculiar charges of judges, and, above all, it is subject to the abominable delay that make our court proceedings so pathetically absurd. In most parts of this country an injured man must wait from six months to two years from the instituting of his suit to its first trial, with the comfortable knowledge that if he wins the case will be appealed, and that from two to five more years will be consumed in waiting for the decision of the appeals. Whereupon the whole case may be ordered to a retrial in the first court after a lapse of time in which memories have grown dim and witnesses moved away or died. When a prominent lawyer of Chicago declared not long ago that, under the court methods of Illinois, he would guarantee to keep any man for fourteen years out of his rights, no matter how clear his case and just his cause, he did not overstate the existing conditions.

In Germany, the care of the injured

and of the sick among all men that labor is not left to chance nor caprice nor good luck, but is carefully and minutely provided for by the Government. For all men that incur injury at their vocations there must be adequate compensation—and support. That is the fundamental doctrine. It has been worked out into Accident Relief, Sick Relief, Invalid Pensions, and Old Age Pensions, all under the care of the Imperial Government, which maintains a vast department to direct these enterprises, and annually expends thru them hundreds of millions of dollars. I should like to describe all the operations of this department, because it is a great and memorable object lesson in practical beneficence; but what comes home most sharply to us (in view of the American accident figures) is the part that relates to the care of injured workmen on the German railroads.

Out West once I knew a freight conductor that was a sober, decent man of family; and one night the engineer of his train misunderstood the dispatcher's orders and plunged into a head-on collision. The conductor was caught between two cars and lost an arm and a leg. When he got well there was next to nothing he could do in his crippled state, and the railroad company was esteemed gracious and kind when it allowed him to be a crossing flagman at \$30 a month. I don't

as a shambles, nor to regard injured railroad men with less concern than we have for injured cattle. It is quite possible to be decent and still maintain an efficient transportation system. In Germany, for instance, the maimed railroad employee is invariably held to be the patient and care of the public; he has been injured in the service of the community, and the state, which operates the railroads for the community's benefit, proceeds at once to the relief of the fallen public servant. And for many reasons that seems to be wise policy.

All the processes in this relief are wonderfully direct, simple and speedy. No court proceedings are ever necessary, no summons and complaint, no lawyers, no trials, no juries, no witnesses. Contributory negligence has nothing to do with the matter; neither have fellow servant clauses. The accident is certified by the local railroad authorities and the physician of the railroad department. Then from a fund provided by the State for the purpose, and accessible without courts and without delays, the Government's great insurance department begins to pay an indemnity that is continued as long as the injury lasts, no matter how long that may be, and calculated on the fixed basis of a percentage of the man's wages. Here is a table used in calculating these indemnities:

PERCENTAGES OF WAGES PAID BY THE GERMAN GOVERNMENT FOR INJURY IN THE RAILROAD SERVICE.

| -----Fingers----- | | | | | | | | | | | | |
|-------------------|-------|--------|--------|--------|--------|---------|-------|---------|---------------|--------|------------|------------|
| | Eyes. | Arms. | Hands. | Thumb. | Index. | Middle. | Ring. | Little. | Four fingers. | Legs. | Lower Leg. | Great Toe. |
| Right .. | 33½ | 66⅔-80 | 60-80 | 20-33 | 15-33½ | 10-15 | 10-12 | 6-10 | 50-20 | 55-75 | 50-66⅔ | 6-10 |
| Left | 33½ | 60-70 | 50-66⅔ | 10-15 | 10-12 | 8-10 | 8-10 | 6-10 | 40-50 | 55-75 | 50-66⅔ | 6-10 |
| Both ... | 100 | 100 | 100 | | | | | | | 90-100 | 80-90 | |

know what perverted views we had then about responsibility, but we all thought it was good of the company, and the man thought so, too, and refused the kind offers of various attorneys to bring suit. After some years the company was compelled (very tardily) to elevate its track at this particular place, and had no more use for the flagman there. So the flagman made his way to the river, preferring that to the poorhouse.

Every man that has intimately observed railroad matters knows of such cases; indeed, once in this country we scarcely knew of anything else. Yet it is not really necessary to conduct a railroad

Similar bases exist for internal and other injuries.

These indemnities are paid for life by the Government voluntarily, and without other action by the injured man than the filing of an application.

The physicians attached to the railroad service certify, after an examination, to the extent of the injury. Some of the "remarks" on the official circular to these physicians are interesting. Thus:

"1. *Arms.*—In case of injury to the arms you must consider whether the arms can be raised to a horizontal position, or beyond.

"2. *Hands.*—In the case of a left-

handed person the percentages must be reversed.

"3. *Fingers*.—You must note especially whether finger stumps can be used in whole or in part; whether patient can grasp anything. Any exceeding stiffness is also to be noted. As, for instance, can the patient lift tools?

"4. In case there has been a former injury, has the present accident increased it? Has there been any illness or breakdown?"

These are mere specimens of the minute inquiries the physician must answer. But once answered and the answer filed, there is an end of the matter. The indemnity is paid until the man dies.

All this is subsequent to the first relief. From the scene of the accident the Government removes the man to the hospital, provides him with medical attendance, nurses and medicines until he is discharged; and meanwhile applies his indemnity to his family.

In the case of a fatal accident to a railroad employee a pension is paid to his widow and his minor children, and should the widow remarry she receives a lump sum in quittance of further claims. But the children continue to be pensioned until they become of age.

Sickness not resulting from accidents is relieved among the railroad men by the operation of the Workingmen's Sick Fund, which is contributed by the employed, the employers and the Government. Old Age Pensions are provided by compulsory insurance of all persons in receipt of less than \$500 a year income.

The railroad men are only a small part of the vast army of German workingmen and women, numbering close to 20,000,000 persons, that are by their Government provided with insurance against misfortune and old age, in all the world the most conspicuous and extensive scheme of government insurance. The annual receipts of the Workingmen's Sick Benefit Fund amount to more than \$50,000,000, of the Accident Insurance Fund to more than \$40,000,000, of the Invalidity Insurance

to more than \$50,000,000. It is the conviction of all the German writers upon these subjects that the existence of these funds has not only furthered the national strength, vigor and happiness, but has tended to diminish accidents and to increase the safety of the public.

When Emperor William I, on May 17th, 1881, sent a message to the German Reichstag requesting a national system of indemnity and insurance, he said:

"We consider it our imperial duty to impress upon the Reichstag the necessity of furthering the welfare of the working people. We should review with increased satisfaction the manifold successes with which the Lord has blest our reign could we carry with us to the grave the consciousness of having given our country an additional and lasting assurance of internal peace, and the conviction that we have rendered the needy that assistance to which they are justly entitled. Our efforts in this direction are certain of the approval of all the federate governments, and we confidently rely on the support of the Reichstag without distinction of parties. In order to realize these views a bill for the insurance of workingmen against industrial accidents will, first of all, be laid before you, after which a supplementary measure will be submitted providing for a general organization of industrial sick relief insurance. But likewise those that are disabled in consequence of old age or invalidity possess a well-founded claim to a more ample relief on the part of the State than they have hitherto enjoyed. To devise the fittest ways and means for making such provision, however difficult, is one of the highest obligations of every community, based on the moral foundations of Christianity. A more intimate connection with the actual capabilities of the people, and a mode of turning these to account in corporate associations, under the patronage and with the aid of the State, will, we trust, develop a scheme to solve problems for which the State alone would prove unequal."

Good words! And the Emperor is commonly referred to as the father of the gigantic Government insurance organization that has revolutionized life among the wage-earners of Germany and enormously contributed to the sum of happiness there. But of course the real author of the scheme was not the Emperor. It sprang to life in the sagacious and powerful mind of Bismarck, and the real impetus to it was the first manifestation of the German socialist movement.

NEW YORK CITY.

The True Experiences of a Consumptive

BY SYDNEY C. HALEY

[As the following article raised the very important questions of the duty of the general public toward the consumptive, we have thought it worth while to make comment on it this week in our editorial columns.—EDITOR.]

IT is wholly impossible for the great public of our country, the healthy, prosperous, respectable majority of our citizens, to realize what it means to be a poor consumptive. The sordid and recurring cares of poverty are bad enough; the torture of physical weakness and the fear of a lingering death are worse; the persecution arising from an almost venomous dread of the disease is the worst of all; but a combination of the three is a situation whose concentrated horrors can never be described in words. Being one of the few who have tasted all the bitterness of this ordeal, and have survived it, I venture to tell my story in the hope that by so doing I may, in some manner, have the privilege of contributing my mite toward the righting of an intolerable wrong. I believe that if the facts were generally understood something might be done.

I was just twenty-two years of age when the first symptoms of tubercular mischief manifested themselves in my case. I shall never forget the wild terror that seized me when, seated in my office one wintry afternoon, the blood burst from my throat, and I knew that my blackest fears had been well founded—I was a consumptive. For more than a year I had been apprehensive; but five physicians had assured me that my lungs were intact, while my friends had foolishly concealed their own doubts concerning the matter, and this had lulled me into inaction. The medical men had all known that I was diseased. One of them, who was a friend of mine, simply lacked the courage to tell me the truth. The others were strangers, and could not possibly have had this motive. That they realized my true condition is shown by the fact that they gave me remedies supposed to be good for tuberculosis, tho this significant fact was concealed from me at the time.

Forthwith I resigned my position, and, acting upon the advice of physi-

cians and friends, resolved to leave St. Louis, which was my home. I have never regretted this decision, for long experience has taught me that, when practicable, there is nothing so beneficial as frequent changes of climate, which seem to act as a natural tonic upon the nervous system. On more than one occasion I have been saved by a timely move of this sort.

But here arose a difficulty. No two authorities could agree on what was the best place for me to go. Finally, after learning all I could from inquiry, I made up my mind to try Texas. I could not enter a sanatorium, because I could not pay the price required in these places, nearly all of which are conducted on commercial principles. And so I made my way to B——, a little town in the mountains of the Lone Star State, forty miles from the nearest railway. And it was here that I experienced my first taste of phthisisphobia—that dread of tuberculosis that has since then arisen to the height of a public panic. My landlady was a German. Taking it for granted that I knew nothing of her language, she spent the greater part of the first two days “cussing me out” in her native tongue, and expressing the firm conviction that I could not live a month—all within my hearing. That was delicious, for there was no other boarding-house in the town, and the river had swollen behind me so that I could not get away.

Finally they told me that I must leave. I was at that time in the third stage of tuberculosis, for my illness had been allowed to progress until my chances of recovery were nil. A thousand miles from home, in a God-forgotten hole in the Texas mountains, without friends, poor, dying, and about to be thrown into the street, I was scarcely to be envied. Moreover, the story of my condition had got out, and no one else would have me. My plight was desperate.

Fortunately for myself, I had, even at that early age, mastered one or two of the essential principles of human nature. There was a young lady in the family, a kind, sweet-natured girl, who evidently pitied me. I succeeded in getting her alone one afternoon and made an appeal to her sympathy. She took my part with her parents, and I was allowed to remain till the river subsided. When I left, six weeks later, the old lady deducted three dollars from my bill in recognition of the fact that I had been of so little trouble to them. I mention this to show that the persecution that has followed me thru nine years of sickness has not, in any way, been due to my own uncleanness or want of consideration for those about me.

I left B—— on a cold, raw day in April, and rode forty miles across the mountains, over the roughest road I have ever felt. When I reached the railway my lungs were bleeding profusely and my temperature stood at 105 degrees. How I survived that ordeal I know not. But I did survive it, and the next morning I reached San Antonio. Here I succeeded, by rare good fortune, in getting a good boarding-house. But a few days later I had the pleasure of lying in my room and overhearing a conversation between my landlady and a professional nurse, wherein the latter was trying to persuade the former to throw me out. She succeeded. It was carnival week, and everything was full to overflowing, and I was so feeble that it was only by a tremendous effort of will that I could walk; but I managed to drag myself around the city looking for accommodations. Everywhere I was refused, or the price asked was more than I could pay, for poverty has, from the very first, been close ally to the disease. At last, when I was about to despair, my landlady took pity on me, and consented to keep me till I could make arrangements to leave.

Before this time I had tried several so-called "cures" for tuberculosis. Creosote did me almost irreparable injury. In San Antonio I took the serum or tuberculin treatment; and at the end of ten days was reduced to such a condition that my physician, who was an honorable man, told me that science had failed; and that nothing remained for me but to go

and die in comfort. But to die was the very last thing in the world that I intended to do. As soon as I could arrange for transportation, I left Texas for Michigan; for it was now mid-summer, and I wanted a cool climate. The change held me up for a couple of months, and saved my life. But everywhere I went I found the people in deadly terror of "catching consumption," as they called it. Some of these foolish folks went to such an extreme that they were afraid to pass me, or to talk with me; and if forced to do so would sit looking at me as if I were an infernal machine with a lighted fuse. How delightful it all was!

From Michigan I went to Kentucky, and became worse. My death was expected in a few weeks; and all preparations made for the funeral, such as the choosing of pall-bearers, and so forth. A premature report of the event came out, and my parents received eight letters of condolence, which I had the pleasure of reading.

But my old-time aversion to being dead came to my rescue; and I made up my mind to try Florida. I succeeded in getting there alive; but hardly had I got well settled when I was requested to leave my boarding-house, on account of my affliction. My friends, however, took my part, and the landlord was compelled to permit me to remain, or to lose six other boarders. But I was tired of this absurd persecution, and so, as soon as I could, I scraped some money together and bought a small place, with a grove and a fairly good house on it. That was directly after the great freeze of 1895, and property was selling for a song.

On this place I lived for five years, a mile and a half from the little town of Eustis. I was alone during the greater part of that period. As no one wanted to board me, and as I could not afford to pay much, in any event, I was compelled to do my own cooking, and all of my other work. I was socially ostracised—for the same old reason—and utterly forlorn and melancholy. For months at a time I was in daily, almost hourly, fear of death from hemorrhage, for at times the bleeding from my lungs was the most profuse I have ever seen or known. Still, amid a thousand discomforts, heartbreaks, disappointments and hard-

ships, I was slowly improving. I had a little garden, in which I worked when I could, and that, more than anything else, kept me from losing my mind. My chief malady was complicated with a large number of minor ones; and I was naturally handicapped by having one of the frailest physiques I have ever seen, being six feet three in height, and measuring only sixteen inches across the chest. Words utterly fail to do justice to the horribleness of my situation.

After five years of invalidism I seemed to be out of danger. Then I was forced to go thru a fearful ordeal of a nature not necessary here to describe, and as a consequence of this I went down with nervous prostration, and was almost *in extremis* for eighteen months. When I at last got over this, an accident occurred that set me back for another eight months; and just when I was once more upon my feet a runaway team put me out of commission for a year, and it seemed that I should certainly die of very despair. But I recovered once more, and got so much better that I went to a cheap local hotel to board. Alas for the vanity of human wishes! There was a silly old man among the boarders who knew that I was a consumptive. He was afraid that a fly might get a germ from some part of my person, light upon his hand, drop a deadly thing into some chance abrasion, and "give consumption" to him! This may seem funny—but when I was ordered from the hotel as a consequence of it, it did not so appeal to me.

After this misadventure I secured a room with some poor but kindly folk who, being old-fashioned, did not believe consumption "catching." They were the only people in the town who would have me. Then, for the sum of one dollar a day, I was granted the precious privilege of going to a nearby boarding house and having my food passed out to me on a tray, at the kitchen door, so that I could carry it off to my cell and eat it in solitary grandeur. I soon discovered that my landlady had a special knife, fork and plate, and a special tray covered with a special napkin, kept on a special table in a special corner of the kitchen, and that these utensils were washed in a special dishpan, with a special rag and soap, and dried with a special towel, all

for my most especial benefit—to keep the deadly contagion from spreading. *O tempora, O mores!* Could the force of human folly further go? And yet this silly woman was no sillier than many I have met.

Disgusted with such incredible foolishness, I left the place, and again began cooking for myself. After nine years of this kind of thing I am so far convalescent that I can now conceal my malady; but even so recently as last spring I was repeatedly refused lodging at Saint Petersburg, Fla., because I had a little cough. I met one poor fellow there who was in the same condition that I had been in during my stay in Texas. He told me he was going home to Tennessee. "Do you know what that means?" I asked. "It means death," he replied. "But better death at home, among my people, than on the streets of Saint Petersburg." And so he went—and died.

Such, in brief, is the story of my quest for health. I have told it because it is typical of what the poor consumptive may expect; and because I hope that, by bringing these facts before the people in the form of a personal narrative, I may have the privilege of influencing public opinion on this important subject. My story is not overdrawn. Indeed, I have told but half of it. For obvious reasons I cannot, in this place, give the details of my suffering, or tell of the obscure and private trials from which most of my misery sprang, tho all of this grew out of the general condition I have endeavored to describe.

The blame for this public panic, which the doctors call phthisiphobia, lies with what I may call the semi-quacks of the medical profession; not the honest, conservative majority, but the unscrupulous money-mad minority of physicians, who pose as regulars and pretend to have "cures" and "treatments" for tuberculosis. These men, for purely business reasons, encourage and foster the belief that tuberculosis is highly contagious, tho many of the greatest authorities, such as Von Behring, scout the idea. As a result of this policy, the poor consumptives, who cannot afford to go to sanatoria, are treated as criminals and lepers; and the gentlemen with "cures" at \$50 and upward a month grow rich. I have not here the space in which to describe the common-

sense treatment of consumption by which I have cured myself; but after nine years of experience, during which I have been attended by forty-two doctors, I can unhesitatingly say that every man who professes to have a "cure" which he administers at a high price is either self-deceived or an impostor.

Now, it seems to me that the Government could, without committing itself to a general policy, take this matter up. A hundred thousand young men and women die yearly of tuberculosis. Counting each life at a thousand dollars, this is an annual loss of a hundred million. It would be good business, if nothing more, to stop this terrific drain on the nation's resources. Or, is there not some private individual, in whom a great heart and a great fortune unite, who could take up the matter? An Anti-tuberculosis League should be established with a permanent organization, with trained solicitors, who should collect funds from all over the country for the purpose of building sanatoria for poor consumptives. Any person who will do this can earn the thanks and gratitude of millions.

And O the bitterness of such an experience as mine has been! To see the precious days, and months, and years go

by; to know that the passing opportunities will never recur; to be ostracised, shunned, feared and avoided; to realize that the priceless strength of manhood is being dissipated and wasted in an obscure and inglorious struggle against disease; to awake every morning and see one's brightest dreams, one's dearest ambitions, one's fondest hopes, lying on the paper at the bedside in the form of a loathsome putrescence—and yet to feel that, with a little help, the malady could be overcome, and happiness once more achieved! It is terrible beyond the power of words to portray, terrible beyond the power of imagination to conceive. It is an earthly hell, a present perdition; and yet, in some form, it is the fate of a hundred thousand young Americans each year. And, pity of pities, it could be avoided! The sacrifice is not necessary. A fair understanding on the part of the public, a reasonable expenditure on the part of the Government, and the curse could be ameliorated. There is no valid argument against such a course, and every preventable death from consumption is an irrefragable argument for it. It seems to me that *something* should be done.

EUSTIS, FLA.

Phil. B.

BY FLORA L. MASON

A MESSAGE to me from the Oracle came:
"Wouldst know thyself," said she,
To Radcliffe College at Cambridge go,
And study Philosophy B."

I started in with an open mind,
From previous wisdom free,
And fully expected to answer the Sphinx,
When I'd studied Philosophy B.

From Descartes's clear and distinct idea,
"*Je pense-e, donc je suis,*"
I learned that I was a consciousness,
When I studied Philosophy B.

Spinoza no individuals found:
"All being is one," quoth he;
So I learned I was nothing if not *à la mode*,
When I studied Philosophy B.

Then Leibnitz came with his doctrine of force,
To make matter and mind agree,
And a windowless monad I called myself,
When I studied Philosophy B.

I was quite complacent till Locke appeared:
"You're only a blank," said he,
And I learned I was just an experience,
When I studied Philosophy B.

Now Berkeley came and politely said
There was nothing the matter with me;
So I learned from him I was simply idea.
When I studied Philosophy B.

But Hume took away my conceit, for he
proved
I could have no identitee:
A mental modification was I,
That studied Philosophy B.

I'm glad I've a little dog at home,
And I trust he will still know me;
For I don't know who or what I am,
Since I studied Philosophy B.

TAUNTON, MASS.

The Insurance Laws of New York

BY DARWIN P. KINGSLEY

[Mr. Kingsley, President of the New York Life Insurance Company, while vigorously attacking in the following article certain sections of the Insurance laws passed at the last session of the New York Legislature as a result of the Armstrong investigation, heartily acknowledges the general advantage which will come from these laws and would conserve and preserve that benefit by eliminating certain extreme features before they work a disaster which he holds will be worse than the condition in life insurance disclosed in 1905—worse because, being in the statutes, they are almost beyond reach.—EDITOR.]

MANY people take pride in the success and importance of the business institutions of the Empire State. They even take some satisfaction in the fact that the banks, the trust companies, and the life insurance companies of the State are stronger and larger than many in other States. This attitude may not be altogether philosophic, but it is human.

Such people were disturbed by tables which I submitted thru the columns of the *New York Times* on January 5th last, showing that the life companies of this State not only have not prospered under our new laws, but have actually retrograded, and showing at the same time that, while these laws have injured the companies of other States, the injuries have not gone so far.

My tables and their logic are now officially confirmed by the head of the Insurance Department of the State. Completing my exhibit by adding the figures of 1907—which at the time I did not have—Superintendent Kelsey shows that the loss of business in the New York companies reported in 1906 continued in 1907, that within two years the companies of this State have begun a process of liquidation, and that today they have less insurance in force than at the close of 1905 by an amount aggregating \$256,000,000.

This as a fact by itself is quite sufficient to startle the ordinary unphilosophic citizen. He doesn't like to see the business institutions of his State going back-

ward. The exhibit will convince most men that the laws have gone too far and that it is time some remedial measures were undertaken. But let us deal with the frame of mind of the man who is so completely philosophic that he brushes all such considerations aside and is disposed to assume that the fault is not in the laws but probably in the companies. Let us assume for the sake of argument that instead of the exhibit which the Superintendent of Insurance has made he was able to submit an exhibit which showed that the companies of the State of New York had flourished under these laws and had moved ahead at an accelerated pace. Even under that condition of affairs, I should still maintain that a number of the laws enacted by the Legislature of this State in 1906 are vicious and dangerous. They can never be anything else. They are fundamentally, economically wrong, and modification or repeal is the imperative duty of the State in any event.

The fact is that the average citizen has never read these laws, and is not at all familiar with the principles involved in the legislation. What he knows is that there was an insurance investigation; that the investigation developed conditions which cannot be defended on any theory of business or on any theory of morals. He knows that men had been unfaithful, that they had betrayed their trust. He knows that there was an immense scandal. Appreciating the value of life insurance and

the high character of the duty of trustees, he demanded quick and drastic action. He didn't stop to analyze the laws proposed to ascertain whether they were economically wise or unwise. He was shocked at existing conditions and he demanded that those conditions be obliterated. He thought the laws proposed would accomplish that, and so thru the countless avenues of information which reach a Legislature, the citizenship of the State made known its wish that the laws be passed and they were passed.

What are some of the principles written into the insurance statutes of this State in 1906?

First, a law which arbitrarily limits the amount of business which a company may do within a calendar year. What economic principle is involved in this? It is exactly the principle against which Herbert Spencer protests when he says in "Social Statics":

"Suppose . . . that all men having incomes under £50 a year were to resolve upon reducing every income above that amount to their own standard and appropriating the excess for public purposes. Could this resolution be justified?"

Assuming now that fundamentally Mr. Spencer is wrong, and that those modern leaders of public opinion who advocate substantial confiscation of private fortunes when they exceed a certain amount are right, after all, and assuming that the Legislature of this State would have been justified if it really appeared that some of the life insurance companies of this State were so large that they had become a public menace, how, then, does the case stand? Were the life insurance companies a public menace? Were they likely to become a public menace? Was it a fact, as the so-called Armstrong Committee claimed, that the membership in the three great life companies of New York is already so large and the resources so vast as to make the question of responsible control and conservative management one of extreme difficulty; and that their magnitude if permitted to grow unrestricted would soon become a serious menace to the community? A conclusion that such a condition existed and that the State was face to face with such a menace certainly ought not to have been reached hastily. The mere statement that such conditions existed was startling. Abuses of power

and malfeasance in office are things with which the public has had experience, but no one before had seriously supposed that beneficent institutions could thru sheer success, and by that fact become malevolent forces in society. If such a metamorphosis had actually taken place, the State was faced with what was almost a new problem in government.

Arbitrarily to take a duly chartered institution by the throat and strangle it on the theory of public policy is a departure so startling and so radical, and involves such far-reaching and fearful possibilities, that the deliberate judgment of the people of the State ought at least to have been carefully ascertained, after time for discussion and an investigation not made under the lash of the daily press. But between the 6th of September, 1905, and the 26th of April, 1906—a little over seven months—the investigation was begun, was completed, a report made, and laws written which reverse all ordinary theories of individual and corporate rights.

I deny emphatically that any such condition existed or that the community was confronting any such menace, and I claim that the question of the exercise of such extraordinary legislative discretion—which involved almost a voluntary declaration of bankruptcy—should have been turned back to the people for consideration and discussion. The people should have declared whether the emergency which the legislative committee believed they found did as a matter of fact exist, and that legislative proceedings of such an extraordinary character were, therefore, warranted.

There had been wrongs committed. Can any kind of business be named in which wrongs have not been committed? Can any kind of business be named involving as great interests in which the wrongs have been relatively so small?

The amazing fact is that the companies aimed at in this legislation had been strikingly, almost phenomenally, successful. No one ever questioned their solvency, altho financial solvency in interests like those involved in life insurance has ordinarily been rated as a great virtue. They had carried out the purposes for which they had been chartered in masterful style. They were serving the State in a remarkable manner. They

were gathering together the small savings of millions of people, savings which would otherwise mostly be squandered, and were investing them soundly for the protection of dependents and in the general interests of society. All the enormous activities of these companies were distinctly on the side of sound civilization, good morals, peace and social progress. And yet because the men who were largely responsible for these achievements developed in a few instances the ordinary weaknesses of mankind, a legislative committee suddenly came to the conclusion that the institutions were a public menace, that society had broken down. Principles were written into the statutes of the State of New York of which the people had no conception, principles which involve the right of a legislative majority to attack any business or to curtail the natural rights of any man.

Space forbids a discussion at this time of other sections in which similar doctrine is lodged.

The investigation of life insurance by New York State in 1906 has resulted in enormous public benefits. No fair-minded man will deny that. Many of the laws written at that time were good and should be retained. The evils uncovered were properly ended. But the reforms achieved, not only for the benefit of life insurance but of all corporate life, are jeopardized and may in the end be destroyed because legislation introduced at the same time principles which under our form of government can be tolerated only after the fullest discussion and to meet a great public emergency. Such an emergency has never yet arisen in our society, and is not likely to arise at any time.

NEW YORK CITY.

Our Currency Question

BY CHAUNCEY M. DEPEW

UNITED STATES SENATOR FROM NEW YORK

CURRENCY legislation is inevitable. The demand for it is imperative. The necessity is inexorable. We have been doing business with almost miraculous success upon makeshifts. It is the one formidable barrier against our aspirations as a world power, today.

In national wealth, in marvelous productiveness, in agriculture and manufacture, in ability to command the world's markets, in the genius, skill and industry of our citizens and in unparalleled opportunities, infinite possibilities lie before us. But there are ways in which we are weakly opposing insurmountable obstacles. The obstacles must be removed before we can achieve success.

The flag upon our battleships, today, is almost the only evidence on the sea and in ports and harbors of foreign lands of our existence as a maritime power. No nation can hold a first place among nations whose goods and mails depend

upon foreign ships for transportation. But the lack of ships is not so detrimental to us, commercially, as the weakness and inability of our financial system. It hampers the natural flow of money to meet industrial necessities and prevents our holding the place which our resources should command. Passion and politics have governed our currency legislation, rather than a careful study of the lessons taught by the successful practices of other highly developed countries, and our own failures. Our lessons are not to be derived from marvels which we have accomplished in spite of the deficiencies of our fiscal system and its unscientific methods, but from the greater marvels which were possible if we had been wise. The wheat fields of the West and the mines in the mountains were productive with primitive appliances and hand-power, but it is the aid of steam and electricity which has brought about the present results.

One of the greatest creative geniuses the world has ever known, Alexander Hamilton, when Secretary of the Treasury under General Washington, devised our system for treasury and customs, which has expanded, but has not been altered from his day. He made to Congress the report upon manufactures which has been the basis of all tariff legislation and of the development under the tariff from his day to ours. He went much farther in efforts and advice. With prophetic vision he saw that a country like ours, of infinite, undeveloped resources, with its vast latent wealth of forests, mines and agriculture, and its limitless possibilities of manufacture must, to attain perfect results, have a sound and scientific financial system, both as regards the money collected by the Government and in the issue of currency. At this point, however, unhappily, there came the breach between the ideas of Hamilton and Jefferson, which has retarded our growth and antagonized the people at different times for a century.

The first national bank was the product of the teachings of Hamilton, and during its existence it was a most efficient help to both the Government and the people. Thru the persistent opposition of Jeffersonian principles it was refused a second charter. It took a panic which shattered the credit of the Government and ruined the business of the people, to bring about the organization of the second national bank, founded upon sound principles and which proved a great success; giving the Government an agency by which it could use its credit to advantage for the market of Government bonds and thru which the money collected from the people for taxes and customs could be made available for the people's use; thru which the people had a circulating medium which contracted and expanded according to the necessities of trade. But by strong and able men about him, Andrew Jackson was made to believe that the bank was being used as a political machine for his overthrow, and after four years of determined warfare he drove it out of business.

This was followed by the panic of 1837, in which practically the whole

country was sold under the hammer. Then we tried the device of State banks, for the deposit of public moneys and for circulating medium under charters which differed as widely as the States, until by the failure of many such banks the Government lost large sums of money and the business of the country was deranged. Then we tried the subtreasury scheme of locking up the Government funds and leaving the States to provide their own currency. Some of them, like the New England States, under the Suffolk bank system, did it wisely, but some others did not. Business everywhere was demoralized by the uncertainty, and when the panic of 1857 came there was no banking means of preventing or controlling it. In the necessity for preserving the nation during the Civil War, our helplessness, because we had no financial or banking machinery which the Government could use, very nearly lost the day for us. The present national banking system sprang from the necessities of the hour, for the purpose of creating a market for the sale of the bonds of the Government. And to still further meet immediate demands the Government issued an irredeemable currency which fluctuated between par and forty cents on the dollar and made the war cost us a thousand million dollars more than it would if we had been upon a proper financial basis.

Again, as the natural result, there followed the panic of 1873, the most disastrous, revolutionary and ruinous which a country has ever experienced. It is not from what we have accomplished but from these lessons where we have failed that we should be warned for the future. Ignorance on this subject has been a very fruitful source contributing to fresh failure. In weak and uncertain ways we have tried from time to time to help the matter by legislation which should prop up the present system. In the last Congress a law was passed by which the customs receipts—which last year were over three hundred millions of dollars—can, in the discretion of the Secretary of the Treasury, be deposited in the banks. But it should not rest absolutely in the discretion of any one man, no matter how able, how pure, how great he is, to contract or expand the currency

of a great nation. The power has never been abused, but there is always the possibility of scandal, even when it is not abused; for the market responds instantly, and prior knowledge means a fortune.

There is not another highly organized financial and industrial country on earth which has a currency that of itself is absolutely inelastic—a currency which does not and cannot respond automatically to the requirements of business and the needs of the people. Our interest rates leap as high as a hundred and twenty-five per cent. per annum upon call loans to bankers and brokers on collaterals which are listed at the Stock Exchange. These rates have contracted money so that the business community was seriously injured. The banks could give only very limited accommodation on commercial paper, and borrowers were compelled to sell their notes through brokers at ruinous discounts. A number of solvent corporations and firms were driven into bankruptcy.

But the volume of our currency never changes except by long processes which are of no avail in panics. In England, France, Germany, Canada, the volume of currency contracts and expands automatically, according to the needs of business, while the interest rates never fluctuate more than two or three per cent. That is an object lesson which we should take to heart and an experience of others from which we should benefit.

In Canada, where conditions are practically the same as ours, the banks are authorized to issue a credit currency, based upon their assets, to one hundred per cent. of their capital, taxed less than one per cent. to provide a guaranty fund for banks which fail. In the autumn, as with us, there is a marked increase in the amount of money called for. When the emergency is over the notes return to the banks for redemption and the circulation is decreased, according to the immediate necessity. The average life of a note in France and Germany is about ten days, in Canada about thirty days. The notes of our national banking system remain out, on an average, over two years. This duration graphically indicates the immediate response to the needs of the community in countries

which have a scientific banking system. The fact that our currency remains out till the paper is used up, shows that it does not respond at all to the fluctuating demands of our business.

In all great manufacturing and producing countries the conditions are practically the same. They only differ in degree. The results are more serious and the need of a scientific system is greater in the United States than anywhere else in the world, on account of the extent of our territory, the quantity and variety of our products and the tremendous volume of our internal commerce. Between two and three hundred million dollars is required by our farmers in harvesting and moving their crops in the fall. They make demands upon their local banks. It is past on to the banks in the reserve cities and again on to these in the central reserve cities, New York, Chicago and St. Louis. The demand is imperative and must be responded to immediately, and this vast sum of currency is taken from the centers and shipped bodily, for distribution all over the country. As it must come out of the reserve of lawful money it must result in the contraction of credits to four times the amount called for—eight hundred to twelve hundred millions of dollars. No wonder that demand loans are called in and accommodations refused, that interest on money rises by leaps and bounds to abnormal figures, and that business contracts and disasters come, that the wheels of industry slacken when they ought to revolve the fastest, that the worker's time is reduced when it is most needed, and that detrimental results reach every home, from the banker to the farmer and the artisan. Then, when the harvest is over, the farmer returns the money to the local bank, that to the reserve bank and so on, back again, and in the effort to put out the redundancy, interest rates go down to one or two per cent. There is a carnival of speculation and a subsequent harvest of disaster and distrust. It has occurred year after year, ever since the Civil War. It increases with the growth of business. It is an incident, not an accident. And politics, and century-old prejudices, accentuated by demagogues and doctrinaires, have thus far prevented any remedy. It puts us out of competi-

tion for leadership in the world's markets and controllership in the world's finances. The Old World will not suffer from advance in our material interests so long as there is no corresponding progress in the development of our financial system and tools of trade of commerce.

During the last panic the crisis became so acute, with money ruling at over a hundred per cent., in New York, that the New York Chamber of Commerce gave careful consideration to the causes of the trouble and their remedies. The investigation covered the whole field of financial legislation in the United States and the currency conditions in Europe and Canada, and the Chamber of Commerce and the Associated Bankers of the United States came almost unanimously to conclusions which they embodied in the following suggestion:

"First. Any national bank having been actively doing business for one year and having a surplus fund equal to 20 per cent. of its capital shall have authority to issue credit notes as follows, subject to the rules and regulations to be determined by the Comptroller of Currency:

"(a) An amount equal to 40 per cent. of its bond-secured circulation, but not to exceed 25 per cent. of its capital, subject to a tax of $2\frac{1}{2}$ per cent. per annum upon the average amount outstanding: *Provided*, that if at any time in the future the present proportion of the total outstanding unmatured United States bonds to the total capitalization of all going national banks shall diminish, then the authorized issue of credit notes shall be increased to a correspondingly greater percentage of its bond-secured notes.

"(b) A further amount equal to $12\frac{1}{2}$ per cent. of its capital, subject to a tax rate of 5 per cent. per annum upon the average amount outstanding in excess of the first amount mentioned. The total of credit notes and bond-secured notes shall not exceed the capital.

"Second. The reserves shall be carried against credit notes as are required by law to be carried against deposits.

"Third. The taxes provided upon credit notes shall be paid in gold to the Treasurer of the United States, and shall constitute a guaranty fund for the redemption of notes of failed banks, and for the payment of expenses of printing and the cost of redemption.

"Fourth. The Comptroller of Currency shall designate numerous redemption cities conveniently located in various parts of the country. Through the agency of the banks in such cities adequate facilities shall be provided for active daily redemption of credit notes."

This suggested means to secure an elastic currency, coming from the source it does, is worthy the most profound consideration on the part of our legislators.

Experience has taught us that the bond-secured currency, alone, instead of responding to commercial needs, fluctuates according to the price of United States bonds in the market; but the foregoing proposal enables the banks to issue additional currency within the limits of the present law, which will be sufficiently elastic to prevent annual perils due to the present unscientific system. For while the banks are sound, safe and ably managed, they are at present so curbed and hampered as to be restrained from performing an essential public service for which they can be readily equipped.

It is not surprising that to European financiers our present system seems a relic of barbarism. We are bound by traditions—fetiches of our ancestors which have become religions of our own, but which we ought to have outgrown. The dead hand of Andrew Jackson holds our banking development by the throat and a central bank, such as maintains the equilibrium in all other highly organized commercial countries, is still a political impossibility. Every day increases the damaging influence, for the greater the commerce, internal and external, the greater the productiveness of the farms and mines, the greater the output of the factories, the larger the demands upon transportation, the more the need appears of a sound and scientific financial system upon which the wealth, prosperity and development of the country depend. So true is this that our advancement, thus far, has been largely due to the ingenuity of our bankers and business men, by checks, drafts and clearing-house certificates overcoming, to the best of their ability, the effects of Government hoarded money and inelastic currency.

The marvelous strides we have made in growth and expansion are something unequaled in all history, in everything which makes a nation great. But most of all it should suggest to us greater things which might have been; because for two months in the year business is retarded, partially paralyzed and demoralized. Scientific methods in every other department have added immeasurably to the productiveness of the soil, the capacity of factories, the facility of transportation; while a compromise, makeshift and unscientific system of finance has re-

tarded our development at home and our equality abroad. The recent shock to our credit, upon which rests our entire fabric of industrial stability and development, has awakened us from a false sense of security engendered and fostered by our phenomenal prosperity.

It is a reproach to the financial intelligence of our legislation that there has been no earlier action by Congress to meet these constantly recurring emergencies, when it has been universally admitted that our only means for averting disasters has been some makeshift for lawful currency.

Just what the outcome of the present currency legislation will be remains with the future, but for the first time since Jackson's leadership we have reason to hope for the completion of measures of relief which were partially successful in the last Congress.

While the sentiment in Congress is now practically unanimous for an emergency currency, it is evident that the majority favor an extension of our present bond-secured system. This will enlarge the volume, but it lacks the essential principle of response to the demands of commerce.

There is an element of liberality in adding State, municipal, and possibly railway bonds to Government issues. Certainly \$250,000,000 and probably \$500,000,000 of this temporary currency will be permitted. The privilege will be granted to banks to issue currency on seventy-five per cent. of the bonds deposited with the Treasury. This will require a quick purchase and afterward a rapid sale of over three hundred millions of bonds at the minimum, and six hundred millions at the maximum. This condition is based upon the idea that the banks cannot hold these bonds in their vaults for emergencies. It is a most interesting question if the bonds can be secured and, if obtained, the purchase and sale can be effected without loss. Some law, however, is an immediate necessity and probably this will be adopted. It may be hoped that experience with it will at no distant day lead to amendments which will put our whole currency system upon a sound and scientific basis, and that we will no longer be handicapped by an experiment which the unanimous financial judgment of the world calls barbarous.

WASHINGTON, D. C.

The Transformation of Rio de Janeiro

BY L. S. ROWE, Ph.D., LL.D.

[For the past few days the papers have been filled with accounts of the hospitality of Rio de Janeiro to our fleet on its way to the Pacific. We are glad therefore to present this interesting article to our readers on the Brazilian capital from the pen of the Professor of Political Science in the University of Pennsylvania and a delegate of the United States to the recent Pan-American Conference at Rio de Janeiro.—EDITOR.]

TO the northern mind the name of Rio de Janeiro is so closely associated with yellow fever and other tropical diseases that it is difficult to realize that during the last five years the capital of Brazil has been undergoing a transformation so complete as to make it practically a new city. Public improvements have been undertaken on a scale which can only be compared with the reconstruction of Paris during the Empire.

It would be hard to imagine a more difficult task than that which confronted the local authorities. For generations no

attempt had been made to regulate the growth of the city. The narrow, winding streets, the tropical climate, the interminable rains of the summer months, the habits of the population in all matters relating to personal and public hygiene complicated the situation and made the task of improving the public health seem almost hopeless. Administration after administration drafted plans but they all seemed impossible of execution and were permitted to rest quietly in the offices of the Prefect of the Federal District. With the inauguration of Dr. Rodrigues

Alves as President of the Republic the administration of Rio entered upon a new epoch. The leading principle of his presidential program was the execution of great public works. During his term the great port works of the coast towns of Brazil have made remarkable progress, the construction of new railway lines has been encouraged and important steps have been taken toward the exploitation of the great mineral resources of the country. The reconstruction of Rio was an integral part of this great program of public improvements. In this task the Federal Government has undertaken a portion of the work and has delegated the remainder to the authorities of the Federal District.

The administrative position of Rio is similar in many respects to that of Paris. The local executive authority, known as the Prefect of the Federal District, is appointed by the central Government and local legislative power is vested in an elective Assembly. Owing to the commanding position occupied by the Prefect, the District Council has never acquired great importance. Many of the rules and regulations which, under our system of local government, are matters for legislative action are, under the Brazilian system, determined by executive decree. Under the guise of such decrees the Prefect is able to conduct the government of the Federal District without the need of constantly consulting the District Council. That this mixt appointive and elective system would develop serious antagonism was as unavoidable in Rio as in Paris, and the relations between the Prefect of the Brazilian capital and the local council are about as cordial as those existing between the Prefect of the Seine and the Municipal Council of Paris.

President Alves, soon after his inauguration, determined to place the Federal District in charge of a man upon whom he could depend for the execution of the great sanitary improvements of which the city stood so sorely in need. For this work he selected Dr. Passos, whose executive ability had been tested in a number of important public positions, but especially as manager of the Brazilian Central Railway. The problems demanding immediate attention were improved drainage, more abundant water supply

and the clearing of insanitary districts. To each of these Dr. Passos directed his attention with such energy and determination of purpose that the inhabitants of Rio were at first alarmed, then astonished, and finally won over to the new order of things. In order to carry out his plans the Prefect had to overcome many traditional prejudices, overthrow many accepted principles and disturb many acquired rights. But with a singleness of purpose which disarmed all petty criticism he continued to carry on the work of regeneration. During the four years of his administration the water supply of Rio has been made one of the best in the world and the benefits of underground drainage have been extended to large districts which, formerly, were the victims of typhoid and yellow fever, and other epidemics directly traceable to insanitary surroundings.

The greatest work undertaken by the District was the construction of a series of new streets and avenues, with the two-fold purpose of improving the sanitary conditions and utilizing the magnificent possibilities of the water front. Work was begun simultaneously on two series of avenues. The first of these cuts thru the most congested sections and is planned to open new arteries of traffic as well as to improve the circulation of air. The other will give to Rio de Janeiro the most magnificent driveway and promenade in the world. After repeated attempts to do justice to the wonderful beauties of Rio harbor, writers, both in prose and verse, have abandoned the task in despair. It seems impossible to find words adequate to the magnitude and grandeur of these prodigalities of Nature.

To make the bay accessible to the inhabitants of Rio and at the same time serve the requirements of commerce, a broad avenue following the shore line to the entrance of the harbor was necessary. Until recent years the shores were used as a dumping ground for city refuse and had become a source of infection. To fill in the swamp land and to build great stone sea walls along a water front of four miles is no small task. Nevertheless this task has been undertaken and is now being carried to successful conclusion. No city in the world will have any-

thing to compare with the Avenida Beira-Mar. In spite of the high price of materials the work has been carried out without unduly burdening the city with indebtedness. A loan of twenty million dollars was floated, a portion of which was used for refunding purposes and the remainder—over ten million dollars—for the new avenues.

Had the cost been double it would have well repaid the city, for the construction of this avenue contributed more than any other factor toward the extermination of yellow fever. The filling in of the marshy shores of the bay destroyed the breeding centers of the mosquito and thus eliminated the only known vehicle of contagion. During the last two years the city has been free from this scourge and the vigilance of the local authorities is such that it is not likely again to re-enter the city.

In order to supplement and make more permanent this great achievement, the District authorities established a system of house-to-house inspection, the principle object of which is to remove stagnant pools in courtyards and to cleanse and disinfect possible centers of contamination. This service is now so thoroly organized that a new standard of domestic cleanliness is making itself apparent. In this respect Rio is but one instance of a movement which is becoming general thruout Brazil. The incidental effect of the great port works in most of the coast towns is the elimination of yellow fever. The most notable example of this is the city of Santos, which for many years was known as the "cemetery of the foreigner" and in which today yellow fever is unknown. The construction of the magnificent dock works made necessary the filling in of the surrounding marsh lands and thus destroyed the mosquito foci. In the organization of local inspection service the Santos authorities are no less vigilant than those of Rio.

Altho all these improvements mean much to the commercial advance of Rio, the great need of the city as a trading center is the construction of port works which will furnish adequate dock facilities. The necessity of lightering all cargo has weighed heavily on the commerce of the city. Altho both the Federal and

District Governments recognize this fact, the magnitude of the undertaking was beyond the financial resources of the District and even offered a serious financial problem for the Federal treasury. The solution was finally found in a general law under which port works are being constructed in all the important coast towns. Under this law an additional customs tax of 2 per cent. ad valorem must be paid in gold on all merchandise imported, the revenue from which is used for the payment of interest and amortization on indebtedness contracted for the construction of such works.

The construction of the port works of Rio involves an expenditure of seventy million dollars. When completed the dockage facilities will be the finest in South America, if not in the world. The plans include not only the construction of the most modern dock system covering more than two miles of shore line but also a series of highways which will furnish the most ample means of communication between different sections of the city. One of the most important of these avenues was recently completed. It was cut thru a network of narrow, ill-smelling streets and involved the destruction of a large number of insanitary dwellings. At present a great modern avenue, one hundred and twenty feet wide, runs thru the most important business section and at the same time connects two portions of the bay, thus constituting a link in the chain of highways which will furnish the means of communication between the docks and the center of the city.

Although intended primarily for commercial purposes, the construction of the Avenida Central constitutes a great sanitary improvement and has greatly enhanced the artistic beauty of the city. In exercising its right of eminent domain for the construction of the avenue, the Government appropriated territory sufficient to secure the building lots on either side of the new highway; adopting, in this respect, the plan of the French Government in the construction of the Avenue de l'Opera, in Paris. The ownership of these lots enabled the Government to accomplish a two-fold purpose: First, to make the sale of these lots con-

tribute a large amount toward the expense of the avenue, and, secondly, to control the general architectural design of the new buildings. In order to preserve the street perspective the purchasers of lots along the avenue were compelled to observe certain general rules in the construction of façades and to submit all architectural designs to the approval of a special commission. The result has been that the beauty of the new avenue has been greatly increased by the harmony of design of the newly constructed business houses.

In order still further to increase the architectural effect of the new avenue the Government reserved the choicest sites for the construction of new public buildings. The first of these to be completed is the new Monroe Palace, which commands the entrance to the avenue and is a reproduction of the Brazilian Building at the St. Louis Exposition. Other

noteworthy structures occupying prominent positions are the Municipal Theater, which is being constructed at a cost of over one and one-half million dollars; the National Library, and the National School of Fine Arts. With the completion of these great public works the reconstruction of Rio de Janeiro will be well under way. The example set by the Government is stimulating the inhabitants to make Rio the finest capital on the American continent. Nature has done more than her share toward this end. Unless present indications are fundamentally misleading the Federal and District Governments, with the co-operation of the people, are determined to do their share to make a reality of this possibility. The Rio of 1908 is a new city when compared with the Rio of 1898, and it seems likely that the Rio of 1916 will give evidence of an advance no less remarkable.

PHILADELPHIA, PA.

The Theaters and the Panic

BY DANIEL FROHMAN

[Our readers hardly need to be told that Mr. Frohman is one of the most successful theatrical managers in the United States and has also done much to educate the musical public.—EDITOR.]

USUALLY, when a financial panic happens in the United States the theater, it is said, thrives quite as well, if not better than ever, simply because the people flock to it in order to forget their troubles. Undoubtedly such was the case for many years. But during the last decade the business of the American theaters increased to so great an extent that the supply of entertainment frequently proved to be somewhat in excess of the demand. In other words, since the theaters must be supplied with some class or form of entertainment and the quantity of this being generous, there is of necessity much in the offerings that is more or less mediocre. The amount of first class dramatic material being generally meager, recourse is had to musical comedies, extravaganzas and vaudeville,

the last named occupying the larger share of the theaters in the United States. Therefore, in the past, owing to the fact that the theatrical attractions in the country were vastly fewer than they are today, these managed to thrive fairly well during periods of financial depressions, and plays of only fair degree of merit succeeded in pulling thru the season.

But now, when intervals of financial stringency occur, tho the popular desire to attend the theater has in no whit abated, the public exercises more careful discrimination. Instead of spending its money for two attractions, one mediocre and one first class, it concentrates upon the latter. So attractions which might ordinarily draw a fair share of patronage are, by reason of this discrim-

ination, forced to the wall in favor of the bigger and more striking offerings.

The period involving the recent "flurry" has been an unfortunate one in which to produce new plays, since, unless these turned out to be of most unusual attractiveness, they were denied a patronage to which the fair degree of excellence which they possessed would have given them in "flush" times.

The taste for and judgment of theatrical attractions in America is of the most liberal and cosmopolitan kind. All classes of entertainment find favor here when each is good of its kind. No form of dramatic work is likely to receive greater patronage than another because of its kind or class. What the public demands is quality. Under this impression, managers do not hesitate to put forth their offerings. But the quality of the play is decided by the public the first night of its production, and it is then the great prizes and surprises are awarded; it is then the unexpected in the way of success as well as of failure frequently happens. As a general thing, failures are due to the inherent shortcomings of the play or other form of entertainment offered. Recently, however, some works of really good quality have failed when they doubtless would have met with some degree of success, if the public had not felt "pinched."

Fortunately for the drama, periods of financial depression in the United States are rare. They come at long intervals and are not usually regarded as factors in the theatrical business. And when they do occur they prove a blessing in disguise, since, notwithstanding the inconvenience suffered by the individual manager, they eliminate the less worthy offerings, and operate as a kind of dramatic clearing house in favor of the fittest.

The principal losses that occur during normal conditions are almost invariably suffered by plays that are not entitled to public support. Such losses sustained thru the production of plays, farces and other forms of entertainment in this city alone during the present season, run from \$500,000 to \$700,000. On the other hand, the loss of patronage suffered by the better, the accepted entertainments, owing to financial depression, has been

slight, and has but a temporary effect. The theatrical business in the country at large has suffered greatly. Reports from the West show that business with the traveling companies is very bad. But the better ones of these have, because of the discrimination which I have pointed out, and which is decidedly more marked in the smaller cities and towns than in the metropolis, suffered very little. In other words, they have got the whole of the business which, under normal conditions, they would have had to share with the less worthy attractions.

The actor has suffered a good deal by reason of the financial depression. The flurry has sent back to the big cities, New York, Chicago, Philadelphia, Boston, and the like, many capable actors who had been engaged with touring companies. A considerable element of relief to actors and actresses, however, is found in the employment given to many in the large number of located stock companies in the United States. These companies secure from the producing managers the big successes of the past and at low prices offer them in rapid rotation to popular patronage in the various towns and cities of the country. In many of these places the less well-to-do people, deeming the prices of admission to the first class traveling entertainments exorbitant, have recourse to the cheaper theaters. At first glance it might appear that the low-priced theaters might operate to the detriment of the better class. It is hardly probable that they do so even temporarily. On the contrary, these theaters, by reason of their small prices of admission, create a taste for good and sound theatrical entertainment, acting as missionaries for better acted and newer plays as well as for the popular stars. A man's taste having been developed, it stands to reason that so soon as his earning capacity increases he will seek to gratify it by patronizing better acting, if not better plays. The man who pays 50 cents for a "popular priced" show will presently pay more for high class drama.

The drama is not a fleeting entertainment. It is a fixed institution. Without wholesome plays there would be smaller intellectual and moral progress by the people.

NEW YORK CITY.

Sunday Closing in Kansas City

BY W. R. DRAPER

[The fight of Judge Wallace, of Kansas City, for Sunday closing has been the subject of much discussion thruout the Middle West. We are glad to give our readers Mr. Draper's account of the fight and the following statement of his position by Judge Wallace himself.—EDITOR.]

IT would seem the Sunday theater, the open cigar store, the barber emporium, the soda fountain and other places not required to keep open shop on Sundays would enjoy a vacation during the summer of 1908—a forced vacation as it were. The old blue laws put on the statute books of Missouri fifty years ago are to be rigidly enforced by Judge William H. Wallace, of the Criminal Court, at Kansas City.

The judge began his war against Sunday labor early in October, 1907. The fight has waxed warm and furious since that time. The results are apparent: three of seven theaters, and all of over one hundred cigar and billiard parlors, every barber shop and numerous soda fountains, candy stalls, etc., have the doors locked Sundays and the workers are taking a rest.

Kansas City is now the example par excellence of the blue law Sunday. It is a happy town none the less and is enjoying splendid business relations with the outside world. No stores have failed, no breweries bankrupt, no suicides, and all seems to be well in the town at the mouth of the Kaw.

When Judge Wallace began his campaign in October the theatrical managers got together and raised a huge fund to oppose the indictments found against them by the grand jury. Judge Wallace was the first object of attack. Reports were spread industriously that he was crazy—that he was working for notoriety, and a fat political job. The law was said to be unsound, and when the Supreme Court got hold of it, there wouldn't be a fragment left of Judge Wallace's decisions against the Sunday worker.

But it seems Judge Wallace had based his arguments on sound law—sound law in that it was a part of the Missouri statutes and had never been repealed. Six efforts have been made in six differ-

ent courts on six different pretexts to set aside the decisions of Judge William H. Wallace, of Criminal Courts, Division No. 1. All have failed.

Judge Wallace was appointed to his position in April, 1907. He has been a resident of Kansas City for twenty-five years. When a young man he helped prosecute the James outlaw gang and was prosecuting attorney then. He is a State politician and a stump speaker. But he does not aspire to further political jobs and has recently turned down an offer from the Democrats to endorse him for Governor.

Since the fight began the attorneys for the local theaters have made efforts to get the cases out of his jurisdiction, but each time they have failed. The first known of the judge's effort to prosecute Sunday workers was his open charge to the grand jury, as follows:

"All unnecessary labor on Sunday should be punishable. All persons engaged in the sale of merchandise not needed at the moment are also violators of the Sunday law. The theatrical manager and the actors and actresses are the worst offenders because they aid in the corruption of public morals. Our Supreme Court has upheld the enforcement of the Sunday laws and I charge this grand jury with doing its duty along these lines."

Indictments followed by the hundred. Theatrical managers, cigar dealers, grocers, barbers, soda fountain vendors and others were brought into court on charge of working on Sunday. Numerous convictions followed.

The judge at first was easy with the shows, and allowed them to play all thru the week before bringing the indictments. After fifty or more traveling actors had skipped out before their trials the judge caused indictments to be made and the Sunday law violators brought into court Monday. Monday was therefore theatrical day in Judge Wallace's dingy courtroom.

One of the actresses recently tried before him provoked quite a lengthy argu-

ment with the judge on the moral ethics of the Sunday theater. She was in charge of a moving picture exhibition, which showed religious scenery and argued for her release. The judge agreed that the work would tend to the betterment of the Sunday theater goer, but it was out of all harmony in its surroundings. She was held under \$300 bail like the rest of the Sunday workers.

Judge Wallace dislikes to be classed as a crusader. He contends he is not a reformer in any sense of the word and that his fight against Sunday theaters has long been in his mind even before he went on the bench.

Meanwhile the indictments go merrily on, and every actor that comes to town

and plays on Sunday pays a visit to the Criminal Courts Building, puts up a \$300 bond and goes on his way.

The final argument on the validity of the law will be brought before the Supreme Court, and when it is decided finally the bonds will be forfeited. The judge is warmly supported by Governor Folk, of Missouri, and the Supreme Court, having refused to interfere, has caused cold chills to attack several Kansas City theater owners who have cancelled their Sunday shows after the judge agreed not to press the charges against them. It is believed the entire seven theaters will eventually come to the terms of the law.

KANSAS CITY, MO.

My Views on Sunday Closing

BY WILLIAM H. WALLACE

JUDGE OF CRIMINAL COURTS, DIVISION NUMBER 1, KANSAS CITY

Sunday is a day of rest. It was made so by higher laws than ours, but has been concurred in by the Missouri statutes and practically every other State. Laws relating to the observance of the Sabbath date from 321 A. D. The Sunday law has existed in England since the seventh century. In Missouri these laws have been on the statutes for over fifty years.

Human experience teaches us that workers require one day's rest in seven. The law is plain that unnecessary work shall not be done. No man can dispute that the Sunday theater, the billiard hall and saloon are demoralizing agencies. The theater directs attention to the coarse and base passions—few uplift public morals.

I have based my fight against these agencies upon the law, but I have appealed to the public moral supporters for assistance. In this I was not mistaken, for every business man of the higher type has come to my assistance. Only those who wish to cash in on the baser element have opposed me.

Every city is interested in the protection of its youth and its women. Every city should therefore be interested in the

suppression of Sunday traffic. Make Sunday a day of rest, when women and children, and men, too, can go into the country and the public parks and listen to sacred concerts, or lectures on travel, on history or on the Bible. Men and women all have the inborn desire to be good and moral and upright, and it is these coarser agencies that destroy the pure and righteous purposes in the growing mind and body. I believe every city should destroy these agencies, on Sunday at least, which should be a day of rest and uplift rather than intense excitement and degradation as brought about by visits to the average Sunday show.

Again, in the closing of cigar stores, grocery stores, dry goods stores, etc., everyone can purchase from these shops what they need for Sunday the day previous and give the helpers a day of solid rest. These stores are not agencies of immorality, but they are unnecessary Sunday laboring places. If our people get in the habit of doing all their shopping on Saturday, everything will move along just the same.

KANSAS CITY, MO.

British Telegraphs and Telephones

IF government ownership and management of public utilities in Great Britain is to be studied with any success it must be approached from all sides. Its advantages must be examined as well as its weak spots exposed, as has been done in the report recently published by the Civic Federation. Obviously this is not the frame of mind in which Mr. Hugo Meyer has approached the subject.* It would seem rather that without much examination of conditions on the spot—none that is evident in what he writes—he had come to the conclusion that government ownership of any public utility is all wrong, and that it was his duty to assail it. His book on "Municipal Ownership" was marked by characteristics that warrant this suggestion; and the same characteristics are manifest in his study of the working of the system of State ownership of the telegraphs. It is, in fact, giving more credit to Mr. Meyer than is his due—perhaps more than he himself would claim—to describe his book as a study of the working of State ownership of telegraphs. It is an examination of some of the weaknesses of the system, with an over-emphasis on each of the defects exposed.

The points that Mr. Meyer sets out to make are (1) that the Government made a bad bargain with the telegraph companies and the railway companies when it took over the telegraph system in 1870; (2) that it made also an unprofitable agreement with the newspaper proprietors; and (3) that the employees of the post office—the State department that operates the telegraph system—have used political influence to secure increases in salaries and improved condi-

tions of service. Mr. Meyer's methods in his new volume are much the same as he used in compiling his book on municipal ownership. He has ransacked Hansard's Debates, and the reports of commissions and of House of Commons and departmental committees for the last thirty years in order to make good these three points. His diligence in this direction has been phenomenal; but it could all have been done at the Public Library at Boston, which possesses a complete set of all British official publications for nearly a century past, without Mr. Meyer having gone to the trouble of spending even a couple of weeks in England. Nothing in these official publications—minutes of evidence before committees and questions to the Postmaster-General in the House of Commons—that would tell in the remotest degree against government ownership of the telegraphs has been permitted to escape him. It is all set down in detail. But as to the general working of the British system of telegraphs he has given himself no concern. There is no contrast with private ownership in this country; and there is no hint anywhere in his pages that the people of Great Britain are satisfied with the system and its workings, and would be astounded beyond measure were any English statesman to have the hardihood to suggest that the telegraph service should be again turned over to private enterprise.

It is a matter of history that the British Government did not make a good bargain with the old telegraph companies and the railway companies in 1870. It is equally a matter of history that the newspaper owners in 1870, acting thru the Newspaper Society, stole a march on the Government when they induced it to commit itself to the present ridiculously low rates for the transmission of news over the telegraph lines. Had Mr. Meyer relied a little more on his own individual inquiries and observations in England and less on committee reports and Hansard's Debates, he might

*THE BRITISH STATE TELEGRAPHS. A STUDY OF THE PROBLEM OF A LARGE BODY OF CIVIL SERVANTS IN A DEMOCRACY. By Hugo Richard Meyer. Pp. xvii, 408.

PUBLIC OWNERSHIP AND THE TELEPHONE IN GREAT BRITAIN. RESTRICTION OF THE INDUSTRY BY THE STATE AND THE MUNICIPALITIES. By Hugo Richard Meyer. xviii, 386. New York: The Macmillan Company. \$1.50 each.

have laid even more stress than he does on this unprofitable arrangement with the newspapers. He would have discovered that the dissemination of much of the news that goes over the public wires for these ridiculously low rates is against public policy; and that while Parliament has of late been enacting laws to suppress gambling on horse racing, the post office goes out of its way to facilitate the transmission of racing results to the newspapers, and that the wires during the racing season are overburdened with sporting results and predictions—tips from turf correspondents—for publication in the newspapers, the suppression of which would do more than any act of Parliament which has yet been past to make an end of the gambling evil in England. Mr. Meyer is on safe ground when he is exposing this weak spot in the British telegraph system; for if the existing news tariff were raised, and an end made to the system under which messages can be duplicated to any number of newspaper offices on the payment of twopence for each additional address, the deficit that now results from the working of the telegraph would begin to disappear.

In tracing the movements by which the post office employees have in the last thirty years secured increases in wages Mr. Meyer slurs over the fact that in this period wages of all skilled labor in England have advanced. Political influence has been used to bring about the increase in the wages of post office employees; but the civil service vote is not as powerful in English elections as Mr. Meyer insists. There is no strong and widely-prevalent feeling in England that post office employees are overpaid, notwithstanding the advance in wages. In spite also of the defects in the labor system on which Mr. Meyer is disposed to lay so much stress, there has never been a strike of telegraph clerks like that which paralyzed business in this country for some weeks in the autumn of 1907; and since the Government took over the telegraphs in 1870 no one ever filed a telegraph message and left the post office with a feeling of uncertainty as to whether it would get thru. This certainty of the telegraph service and also

the confidence in its inviolability, together with the low rate charged for an excellent service, go a long way to offset any disadvantage arising from the influence of the post office staff in politics; and even Mr. Meyer shows that this influence is openly exerted, and is not characterized by hole-and-corner methods.

One of Mr. Meyer's complaints is that promotion is not always by merit; that seniority too often counts when promotions are made. Promotion by merit is not always the rule in England; but no British city within the last thirty or forty years has imposed on it as postmaster a middle-aged failure at the bar or in business, simply because he had a political pull. Mr. Meyer makes no mention of the service which people in all ranks of life in England get out of the telegraphs system except to sneer at some of its social uses. Nor does he contrast its charges and its service with those of telegraph companies in the United States.

A manifest unwillingness to see any but one side of a question and special pleading so constant that it becomes tiresome are the characteristics of Mr. Meyer's second book, *Public Ownership and the Telephone in Great Britain*. Admittedly the telephone is not nearly so general in service in England as it is in this country. English people look more closely into expenditure on telephone rentals than do people in this country, both as regards business and social use of telephones. Mr. Meyer pays little heed to this attitude of English people toward expenditure, and attributes the lack of progress in telephone development to the muddleheadedness of the Government, which has been anxious to safeguard its interest in the telegraphs, and to the muddleheadedness of Parliament and of the municipal corporations. The only men of any common sense or of common honesty, in telephone politics, according to Mr. Meyer, are such men as the late Mr. J. S. Forbes and his colleagues of the directorate and management of the National Telephone Company—a company which is glorified by Mr. Meyer on nearly every other page in the later chapters of his book as "a public-spirited institution which obeyed not only the letter but also the spirit of the

law"; and for whose every shortcoming—or what are considered shortcomings by telephone users and by Parliament and Parliamentary committees—Mr. Meyer is ready with a plausible explanation or excuse. Mr. Meyer's indictment of Parliament and the municipal corporations for stupidity is really an indictment of the nation; for he continuously overlooks the fact that Members of Parliament, members of municipal corporations, and of the Association of Municipal Corporations, are all where they are by the votes of the English people, and that none of them could for long occupy their positions if they had not the confidence and support of the Parliamentary and municipal electors.

For Health and Good Spirits

ONE of the most striking features of certain present-day literature is the deliberate effort made by writers to do away with sources of disquiet founded on apprehension as to the future, which may be, of course, and is, indeed, in most cases unfounded, or in the event proves unnecessary and merely gratuitous. The motto of much of this rather perfunctory writing might well be, "I am an old man and I have had many troubles, but most of them never happened." There is no doubt at all that much good can be done by the inculcation of this philosophy of life, and two recent specimens of this literature are before us. Dr. Saleeby calls worry the disease of the age,¹ but it is probable that men have always worried about as much as they do now, at least those of them who have had a sufficient knowledge of the possibilities of evil to anticipate them. Dr. Saleeby calls attention to the expression of Shakespeare, "What a piece of work is man. How noble in reason in apprehension! how like a god!" and points out how significant is the change in the meaning of the word apprehension, which in Shakespeare's time meant understanding, but to us means worry. It would seem inevitable, however, that men should worry almost

in proportion to their increase of understanding. This is true for nearly every advance in the sensitive as well as intellectual life. We get added pleasure from development, but also added possibilities of pain. It is charming to have a cultivated ear for music, but to have to live in a noisy neighborhood with raucous discords all round us is a heavy compensation. It is part of the price apparently that must be paid.

As far as it is possible for the educated to put off their worries the reasons and the encouragements for doing so will be found in Dr. Saleeby's book and in Orison Swett Marden's *The Optimistic Life*.² Both of them are eminently suggestive and are likely to prove helpful. We find no source of worry that has not been discussed, and we are glad to see that in so distinctly modern a book prayer finds its proper place as one of the cures for certain of the most difficult forms of worry. The main feature of Mr. Marden's book is its very practical application to the ordinary affairs of life. The titles of some of the chapters show this very well. There are, for instance, "The Man Who Couldn't Afford a Vacation." "Does It Pay?" "Don't Take Your Business Troubles Home." "Do You Know Enough to Keep Young?" "Let It Go," etc. That the book has its applications only for the business man, however, must not be imagined. There are chapters on "The Watched Boy," "On the Cost of an Explosive Temper," "On the Habit of Not Feeling Well," that have their applications for the mother of the household as well as for her husband. There is a tendency to platitude that is a little appalling if we consider that many more books of this same kind are almost sure to be written along similar lines. Man's troubles, however, do not differ much from generation to generation, and so it is that consolation must come about in the same form.

We are in the midst of a period when people are taking their health much more seriously than ever before, and as a consequence it seems that we are to have a number of books with regard to the art

¹WORRY: THE DISEASE OF THE AGE. By G. W. Saleeby, M. D. New York: Frederick A. Stokes Company. \$1.35.

²THE OPTIMISTIC LIFE; OR, THE CHEERING UP BUSINESS. By Orison Swett Marden. New York: Thomas Y. Crowell Company. \$1.25.

of preserving the health. Most physicians would be very apt to say that the very best way to keep in good health is "to forget it." The peasantry of most countries probably has better health than any other class of people in the same latitude. Outdoor air, simple food, not too much of it, and to have to earn your own living are probably the best factors for good health. Many of the books that are being issued call attention so much to matters of health that a good many people will become neurotic trying to keep the rules laid down. Dr. Sager's book³ contains a large amount of excellent information, and yet we think that it is not likely to be productive of unmingled good. Just at the present time there are so many repetitions in the public print of the necessity for moderation in eating; so many expressions such as men dig their graves with their teeth and the like occur that many people are limiting the amount of food taken more than is good for them. It is an absolute rule that each individual must be a law to himself and that no one else can dictate what another shall or shall not eat. Even quantity is entirely individual and may differ most surprisingly. This is the crux that makes such a serious test for most books on the matter of diet. Dr. Sager's book has much of our present scientific dietetics, some of which is universally accredited, but some of which has not as yet been confirmed sufficiently to make it absolute.

François Rabelais. By Arthur Tilley, M. A. Philadelphia: J. B. Lippincott Company. \$1.50.

This is the latest volume of the series of monographs on French men of letters, edited by Dr. Alexander Jessup. Edward Dowden's "Montaigne" and a translation of Brunetière's "Balzac" are the earlier volumes of the series, which, it is to be hoped, will be extended until it includes as many names as the "English Men of Letters." All that the ordinary English-speaking student of Rabelais requires is a good translation—or a good text if he can read the original—and an accurate account of his life and

works. The perfect text has not yet been constructed, but Smith's translation and the present volume are each admirable in its own way. Our knowledge of the life of Rabelais has been greatly increased in the last five years by the publication of the quarterly *Revue des Etudes rabelaisiennes*, and Mr. Tilley is the first English biographer who has been able to make use of this new material, and in consequence this book supersedes all other biographies in English. Following the biographical portion of the work is a serviceable analysis of the various books of Rabelais, which will be found of the greatest use to students. There are also chapters on Rabelais's art and philosophy which are carefully, if somewhat coldly and academically, done.

Comrade John. By Merwin Webster. New York: The Macmillan Co. \$1.50.

The hero of *Comrade John* is not the man who names the novel; the most dominant figure in the book is Herman Stein, "at forty-five a success as the prophet of a new and growing religion." He is a bold and bloated charlatan, who publishes his *magnum opus*, "Toil and Triumph," himself and sells three hundred and sixty thousand copies of the work. His mind was filled with a not unpicturesque mixture of Ruskin, William Morris, Froebel, Whistler, the New Testament, Rossetti and St. Thomas Aquinas; he believed in "salvation by work," joyous work with the hands; and he lived at Beechcroft. The name would seem to point to the rosy-fingered philosophic dawn at East Aurora; but Herman Stein has much of Alexander Dowie and even of Mrs. Eddy in his mental makeup. New religions are not rare, nor, unfortunately, are men of the Stein type, shrewd observers and exploiters of the pathetic follies of mankind. Like so much of the literature of satire, *Comrade John* fails of poignant effectiveness through being more a caricature than a portrait of life. The most absurd of social theories has flecks of lucid light and the most egregious of prophets has his virtues and sincerities, or he would have no followers. *Comrade John*, however, is a study in morbid psychology among the more or less deluded followers of a fakir who is not only dishonest but immoral to

³THE ART OF LIVING IN GOOD HEALTH. A Practical Guide to Well Being Through Proper Eating, Thinking, and Living in the Light of Modern Science. By Daniel S. Sager, M. D. New York: Frederick A. Stokes Company. \$1.35.

an unbelievable degree. His architect, Comrade John, consents to be a party to the deceit, but not to the hideous immorality of the prophet who gives laws to Beechcroft and to the wide world of the gullible. The heroine is hypnotized, alternately, by the two strong men who both desire the girl whose beauty is described as "lambent—like a great cathedral candle burning. Luminous, she made me think of the angel of the resurrection." After that, it is no wonder that she makes a good deal of trouble for the hero, the villain and various subordinate characters. Even a "cathedral candle" might drop destructive sparks in a powder magazine. Such a magazine is the undisciplined nature of the evil prophet who presumes to teach a "new morality" to men. Altogether the story has interest in spite of its perverse exaggeration, and may serve a purpose of warning to those who mistake the desires of their own faithless hearts for the inspiration of God, and who yield to the cunning temptation to serve Self by means of an arrogant "service to Humanity." Such men desert their wives and children; forget that the morality of common men is the painful achievement of generations and not to be lightly discarded. Perhaps that is the lesson of *Comrade John*.

Literary Notes

....*The Youthful Haunts of Longfellow* (\$1.50), written and published by George T. Edwards, Portland, Me., contains a good deal of information about the Portland of Longfellow's early days, and tells of the setting of many of his poems. The book is well printed and contains many interesting illustrations not before published.

....The standard French annual, the *Almanach Hachette*, 1908, contains many interesting features not found in American works of this kind. Great ingenuity is shown in presenting in graphical and pictorial forms the statistics of commerce, politics, finance and human life; more attention is paid to scientific progress than to sport; there is much instruction on the management of the household, and many maps are included. (Librairie Hachette et Cie. 3 fr. 50.)

....*The Peter Pan Picture Book*, intended for the very youngest readers, and prettily illustrated by Miss Alice B. Woodward, is published by George Bell & Sons (London, \$2.00). The text is the usual commonplace prose, which is the invariable result of "writing down" to children, but no *résumé* can quite spoil the imaginative play which has been the delight of so many children. The illustra-

tions are in color, and tho not so charming as those of Maude Adams's "Peter Pan," they are attractive and pleasantly toned bits of fairy portraiture.

....A personal tribute of love and admiration to the late Ernest Howard Crosby, by his friend, Leonard D. Abbott, is published in neat form by the Ariel Press, Westwood, Mass. (40 cents). Mr. Abbott shows that his unique personality was the resultant of two powerful forces, the spirit of Puritanism and the spirit of restraint. His character was full of apparent contradictions, yet no one who knew him could accuse him of personal inconsistency or insincerity. His attitude was that of goodwill toward all men, yet he was unable to co-operate with any organized movement. He was a non-resistant, of the Tolstoyan type, giving up a judicial career because he would not judge. He dreaded the tyranny of socialism as he did that of militarism. Altho he was rich he classed himself with the poor; altho he had a strong antipathy to violence and sexuality, he became the defender of anarchists and free lovers.

Eminent Surgeon.—Thank you; remind me to add ten dollars to the bill for material.—*Puck*.

AN Atchison man refuses to eat a meal away from home. He refuses to eat with any one outside of his immediate family. Several young girls heard of his peculiarity and told a story about that he had been disappointed and that he had had a romance. This is the truth: Years ago he went to a dinner party. There was a big bowl of salad sitting in front of him and he got the idea that it was a private dish and he ate it all. Pretty soon the hostess began asking, "Where is that big bowl of salad," and he got up and went home.—*Atchison Globe*.

THERE are several girls in Atchison who have an Art Class. They meet two or three times a week and an expensive man who looks like a professor shows them how to paint. The other day the professor arranged some stuffed birds in his studios as subjects. The birds were suspended from the ceiling by wires. One of the young ladies, and by the way she has all that art talk down fine, not only painted the birds, but painted in the wires that supported the stuffed figures. The professor went into an esthetic rage. He said she never could learn to put a coat of paint on a barn or house; in other words, she was not eligible for the painter's union, let alone painting a picture. This particular girl says she just loves to put zigzag lightning in a storm scene.—*Atchison Globe*.

The Independent

A Weekly Magazine. Entered at the New York Post Office as Second-Class Mail Matter.

Publisher, Clarence W. Bowen

Owner, The Estate of Henry C. Bowen
130 Fulton Street, New York

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE

One Year, \$2.00 Single Copies, 10 Cents

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Index for Volume 63 Ready

The index for the last six months, July to December, 1907, is now ready and will be sent free of charge to any subscriber requesting a copy. If the issues for the last six months are sent us we will supply an index and bind them at the terms given at the head of this column.

Our Cement Mill

ONE of the duties of an American President is to coin convenient phrases to express our movements and ideals. Cleveland was good at this, and it is to him we owe the words: "It is a condition, not a theory, that confronts us." This expresses our political psychology so admirably that it would do as well for a motto as "*E pluribus unum*." For the average American hates to be confronted by a theory. It is about the only thing in the world that he is afraid of. But confront him with a condition, however appalling, and he will adopt any theory—in so far as it may be necessary to help him out of that particular difficulty.

The Government engineers who have charge of the Salt River irrigation proj-

ect are true Americans. We do not know that any of them are enamored of the theory of socialism. We know, on the contrary, that some of them are opposed on principle to any extension of governmental activity, except, of course, when the conditions demand it. But the conditions did demand it, and they nobly met the demand. May we all be equally ready to throw aside our principles whenever they interfere with our doing something that ought to be done.

They were engaged in turning 200,000 acres of desert into farms where crops and people can grow. In the make-up of that region the water got misplaced in some way, and land without water is about as useless for agricultural purposes as water without land. In this case the water is not up in the sky where it is most convenient, but down in the bed of Salt River, and in order to get it where it was available the great Roosevelt dam was planned, 270 feet high and 1,080 feet long on top. This will make an artificial lake covering 25½ square miles for the storage of water capable of supplying 1,300,000 acre-feet to the valley below.

The dam was to be a concrete masonry structure, and in its construction there would be required 200,000 barrels of cement. In accordance with our governmental policy of doing everything as far as possible by proxy, informal bids were requested from cement manufacturers. It appeared that the best price they could make on cement delivered at the dam site was \$9 a barrel. It was not regarded as an attractive proposition even at that, because the nearest railroad point, Globe, was 43 miles away.

But as soon as the Government announced its intention of constructing its own plant there was a vigorous protest from the cement manufacturers of the country, who requested that formal bids be asked for. The Government complied, with the result that the lowest bid received was \$4.98. This again was promptly rejected, for it was much higher than the cost of manufacturing, plus the cost of the mill, according to the estimates of the Government engineers. The manufacturers made strenuous efforts to have the Secretary of the Interior set aside the decision of the Reclamation Service officials to construct their own

plant, but in vain. In spite of friendly and patriotic warnings against embarking in such a hazardous and un-American scheme the Government persisted.

The mill was built and has been in successful operation for over two years, making cement from materials found in the neighborhood. The actual expense of production was \$2.10 per barrel in the month of April and \$1.92 in May, with the prospect of material reduction in the future when the plant is run continuously at its full capacity of 350 barrels a day. At the time when the bids were asked for cement was selling at the works at \$1.10 a barrel; today at the same points it is selling for \$2 to \$2.10, so the Government is making its own cement on the spot for what it would have to pay for it at the works of private manufacturers. The utility of the plant is not limited to the Roosevelt dam. Near Phoenix a large diversion dam is to be built requiring 50,000 barrels of cement, and it is estimated that it will be cheaper to make it at the Government mill at Roosevelt and haul it sixty miles to the new dam than to buy it in the open market.

The total cost of the cement mill was \$218,380.57. It has already paid for itself and will effect a saving on this job alone of something like a million dollars. That is, the settlers who will occupy these irrigated lands would have had to pay about five dollars an acre more if the Government had accepted the first bids.

We have a bigger job on our hands down in Panama. We are going to make an artificial lake of 164 square miles by the dam at Gatun. To this lake, 85 feet above the sea, vessels will be lifted by the double flight of triple locks, which will cost between fifty and sixty million dollars. This structure will be the largest mass of artificial stonework ever put together by man. Under the first plan it was calculated that 5,000,000 barrels of cement would be needed to make the concrete, but if the locks are to be widened to 110 feet this will be considerably increased. The materials for making it are to be found on the spot. There is mud to burn, dredged from the Chagres River or the old canal. Coral rock from the Colon beach will supply the purest of lime. Rhyolite tuff, to supplement the

clay, can be obtained near the Panama Railroad. They make good cement. It has been tried. The geologist of the Isthmian Canal Commission, Mr. Ernest Howe, states with confidence his conclusion:

"that Portland cement equal to the best grades manufactured in the United States or Europe may be made on the Isthmus and at a cost not greater than \$1.34 a barrel, and probably less."

If that is so why should we not make it? Whenever we have tried to do things by contract in Panama, whether it is digging or running hotels, we have found it did not work well and had to fall back on more direct methods.

Colonel Goethals, chief engineer of the Panama Canal, said last Saturday before the Senate Committee on Inter-oceanic Canals:

"I think it is much more economical and practical from every viewpoint to prosecute the work, as now, by the Government. I have never known a piece of contract work to be done cheaper than if done by the Government. I don't believe any contractor or firm of contractors can do the work as cheaply or as quickly as the Government can."

To be sure a long haul by water is less formidable than a short haul across the desert, but we believe the same policy that has been successful in Arizona would be advantageous in Panama. Cement manufacture is a well known process. There are no trade secrets of importance and the machinery can be bought. It would probably pay to build a Government cement mill at Gatun, even if it were never fired up. It will serve as a styptic for Uncle Sam.

Tuberculosis Actualities

WE publish this week the life story of a consumptive, because it contains some precious lessons for those who have consumption, and some others quite as precious for those who have not the disease, all gleaned from the actual experiences of one sufferer.

There is no doubt at all that as the result of the recent diffusion of the knowledge of the contagiousness of tuberculosis, a dread of the disease has been engendered which makes life much harder than it need be for the consumptive. While tuberculosis is contagious, it is not virulently so, and no

one has ever caught the disease except after long-continued careless contact with sufferers, themselves careless in their habits.

Proper precautions absolutely prevent the spread of the disease. Nurses who serve in hospitals for the tuberculous do not contract consumption. This has been shown by the carefully kept statistics of all of the German sanatoria. Nurses who are suffering from the disease to a slight degree may be sent to such a sanatorium, where they may be allowed to do as much work as their strength will permit, and if they are favorable cases they always recover. The dread of the disease that has arisen in recent years has well been called phthisiphobia. The *phobias* in medicine are the dreads that arise in people's minds without any good reason for them. Some people cannot look down from a height without an attack of vertigo; this is acrophobia. Some people cannot go thru a narrow street without an intense sense of depression; this is claustrophobia. Some people cannot cross an open place or square without a sense of trembling; this is agoraphobia. These terms give the best possible idea of the meaning the physician would attach to what he calls phthisiphobia.

There is no doubt that the spread of tuberculosis can be prevented by the wide diffusion of the knowledge that the disease is contagious. This does not mean, however, that consumptives must be avoided as if they had plague or typhus fever. One may associate with them for years without danger, provided the proper precautions of cleanliness are observed and the patient himself is careful. A large amount of suffering may be and is actually being inflicted on sufferers from the disease without any good reason. The inhumanity of the attitude assumed by many persons in this matter can scarcely be sufficiently deprecated. One out of eight of the population die of tuberculosis. Not all those affected die from the disease, so that about one-fifth of the human race has tuberculosis. At least one-half of these can either have their disease arrested or their life prolonged for a considerable period if they are given proper

opportunities. If, however, the first sign of the disease is to be followed by such ostracism as is mentioned in the "Life Story of a Consumptive," the chances for recovery are sadly diminished, and untold suffering is inflicted on the human race. Such unreasoning states of mind are not uncommon, but they are a sign of lack of mental poise. We hear much of the danger of leprosy, which, it must not be forgotten, is classed in the same category, that of the infectious granulomata by the pathologists, yet those who talk wildly about it evidently know nothing of the disease. No one has ever contracted leprosy who has been less than seven years in intimate contact with a leper, and the Moravian missionary authorities announced not long ago that some of their men had been in contact with lepers now for a much longer period than this, and their work among the lepers has extended over half a century, yet none of them has ever contracted the disease.

The lessons from the side of the consumptive himself are very interesting and will appeal to that one-fifth of the population who are suffering from the disease. Unfortunately, many doctors consider it advisable to hide from the consumptive the existence of the affection just as long as they can. This is always a mistake. The idea, of course, is to spare the patient the shock of such a revelation. Friends, indeed, often plead that if there is anything the matter in the lungs the patient must not be told. Those who have had most experience with consumptives know that the most prominent symptom of the infection is what Hippocrates long ago called the *spes phthisica* or phthisical hope, which makes sufferers from the disease plan the day before they die what they will do next year. There is a momentary depression after the announcement of the diagnosis, but this is followed by a reaction that will save the patient's life if the proper stamina are present. If consumption exists the patient must give up work and devote himself to regaining health. Any other arrangement is almost sure to be fatal. Let him know the worst then and let him arrange his life according to that knowledge. He can-

not pursue a strenuous life in town thereafter, and the sooner he gets out of it the better.

What characterizes all the consumptives who get better is pluck. That is brought out very well in the story we publish this week. Consumption soon takes away all the quitters. It is a curious compensation of nature that the toxine of the disease produces a certain sense of exhilaration, makes the pulse rapid, and, when not in too large quantities, so as to produce fever, gives a renewal of strength, a vigor of purpose, and the "consumptive's hope," so characteristic of the disease. If patients will only follow the promptings of this conservative reaction all will be well. Some of the other experiences are very instructive. Practically no remedies do any lasting good in the disease. What is necessary is to live out in the air and gain in weight. Some of the remedies do lessen the amount of cough when first taken, but this is a very dubious advantage. Cough is meant to remove diseased material. So long as material continues to break down in the lungs it should be removed by coughing. When patients live out in the open air and properly ventilate their lungs, tissue no longer breaks down and then the cough stops naturally. Practically all of the cough remedies hurt the appetite. Nearly all of them interfere with digestion. The stomach is the consumptive's sheet anchor. He must supply his body with sufficient nutrition not only to repair ordinary waste, but also the waste caused by disease. Otherwise the inevitable end is not far off. These are the lessons that the sad story of this consumptive's life will tell our readers if it is read aright.

Afraid of a Girl

THERE was a commotion on the acropolis of New York City when Columbia University received the names of the debaters whom Cornell had chosen for the intercollegiate debate of February 28th, for on the list was "Miss Elizabeth A. Cook." A vigorous letter of protest against the inclusion of a woman on the team was sent to Ithaca by the Columbia debaters. They were, they ex-

plained, afraid of being beaten, since she would be sure to win the decision of the judges because they would be prejudiced in her favor.

There is no real reason for their alarm. Miss Cook may not be so good a talker as they fear, and the judges may be of the same stamp as themselves, prejudiced against women on the platform. But the attitude of the Columbia students is quite comprehensible. It is the natural result of their environment and training. They are accustomed to see women shoved off into an annex across the street and deprived of a large part of the freedom and advantages they enjoy. They are aware of the prevalence of the opinion among the faculty that to admit women to their classes would lower the standard of scholarship. They know that women are by a law of the university excluded from entering the newest and finest building on the campus, Hamilton Hall. Women may enter it on their knees for the purpose of cleaning off the filth left by masculine habits; they may come for office consultations or as assistants and stenographers to write the letters of the professors and take down their ideas for future books, but they are not allowed to express in these sacred precincts any ideas of their own. It is inevitable that young men seeing women employed only in a servile or subordinate capacity should come to regard them as only fit to wait on men, and should be shocked at the idea of meeting them as equals, as comrades and as competitors.

The attitude of the Columbia boys is not only natural, but it is also wise from their standpoint. The only way they can avoid being beaten occasionally by a girl in debate is to bar them from the contest. The only way to prevent being beaten in many of the studies is to shut them out of their classes. The only way to prevent their capturing the Phi Beta Kappa and the prizes and the scholarships and everything else of the kind that is obtainable by combined intellect and industry is to confine them arbitrarily to masculine students. The whole history of the world shows that brute force is the only way by which men can prevent women from becoming their equals and occasionally their superiors. The only way to keep a woman down is to knock

her down. So far this weapon of last resort has been successful, but look out; the girls of this generation also have their gymnasiums.

The Columbia boys may ultimately succeed in their effort to get women students excluded from the Triangular Debating League, altho the Cornell students are standing gallantly for fair play and equal rights. The authorities of Columbia may continue to guard the students against feminine competition with great vigilance, and the debaters of that university may do the best they can to save themselves from the possible ignominy of defeat by a member of the despised sex, but do they realize that this protection can only last a few years at the most? They cannot forever remain in the monastic atmosphere of the college, and when they come out they will find themselves in the twentieth century instead of the tenth. They will then come into competition with women whose training has given them an equal knowledge of books and a better understanding of the conditions of modern life. If they would be authors they will be confronted with the fact that nearly half of the best selling books are written by women. If they enter the law they may have to argue cases in court against the women they refused to meet in debate. If they would become doctors, teachers, artists, financiers, preachers, merchants, in short, if they would enter any occupation above the level of bricklayer or ditch digger, they will be forced to recognize the ability of women, and they will wish that their chivalry or bashfulness had not kept them from acquiring earlier in their career the knowledge necessary to their success. If the Columbia students do not back out from the present contest they will find that the opposite sex is neither so formidable nor so contemptible as they now suppose. In the good old days of the little red schoolhouse on the hill every boy was taught, on his first day at school, not to be afraid of girls.

Hughes and Taft

IN his course with respect to the promotion by others of his candidacy for the presidential nomination, Governor Hughes has been true to that ideal conception of duty and propriety which has

shaped the administration of his present office. Engaged in the work for which, as he once said, he had been "retained" by the people of his State, he ignored the utterances and efforts of those who desired that he should rise to a higher place until the beginnings of factional bitterness convinced him that he ought to speak.

His brief letter to Mr. Lehmaier is a model of its kind. He does not seek office. He will not attempt to influence the selection or vote of any delegate. The State administration at Albany must continue to be impartial and must not be tributary to any candidacy. He desires, above all things, harmony, deliberation and free expression of his party's will. And he will accept the party's decision, whatever that may be.

Following this was the manly letter of Secretary Taft, urging his friends in New York to seek for him no part of the State's delegation, because the whole of it is due to the Governor, now that the latter has permitted it to be known that he will accept its support. The Secretary, too, desires harmony, and is most anxious to avoid a contest which might imperil Republican victory at the polls. He means what he says, and we are glad to see that his friends in the State are promptly honoring his urgent request. Mr. Taft is for fair play and for straightforward work in the open. The Republicans of New York will not forget all this, if the Governor shall not have enough votes in the national convention.

This desire for harmony, as to which we believe both of these admirable candidates to be perfectly sincere, should be felt and shown by all of their friends in the State. Factional strife should cease at once. Governor Hughes should have the united and solid support of the State of New York. If this should prove to be insufficient, there should be nothing in the history of the canvass to prevent every Republican in New York from voting with hearty good will for Secretary Taft, if he should be the nominee of the convention.

Governor Hughes richly deserves the support which his party in New York will give to him. He has been faithful not only to his party, but to all the people of his State. An earnest Republican, he laid aside his party affiliations when he

assumed the duties of his high executive office. Representing all the people who desired good government, he believed that if he should do his duty he could rely upon them to hold up his hands. Having speedily earned their respect and confidence in the early part of his term, he appealed to them when a combination of the unworthy at Albany sought to thwart his purposes. They promptly and gladly responded, and their influence caused the enactment of important reform legislation. They will never forget either his firm confidence in them or his devotion to their interests.

It is not our purpose now to set forth in detail the Governor's qualifications for a higher office, but we must refer briefly to his just and admirable views as to the relation of politics to the work of a responsible executive officer in the public service. With respect to this relation, never has a Governor's administration been conducted on a higher plane. From the beginning he let it be known that there was to be on his part no interference with the legislative branch, no attempt to control legislation by executive rewards and punishments, no submission to the party "organization" in the matter of appointments, no use of State or Federal patronage to affect legislative action, no attempt to build up a Hughes party. At a certain crisis he rejected or ignored an attempt to assist him by Federal patronage. Probably he felt that he preferred failure after honest and just endeavor to victory won by such aid.

This is a part of the record which shows the man's character and the rules which govern his conduct in office. In due time the public will have from him a clear statement of his views concerning the great national questions of the day. Not that he has hitherto withheld them. For example, at Elmira in May last, he said, in answer to a speaker who opposed official regulation of public service corporations and who asserted that such regulation was causing popular revolt:

"What American citizens are in revolt against is dishonest finance. What they are in rebellion against is favoritism which gives a chance to one man to move his goods and not to another; which gives one man one set of terms and another set to his rival; which makes one man rich by giving him access to markets and drives another into bankruptcy or into combination

with his more successful competitors. It is a revolt against all the influences which have grown out of an unlicensed freedom and of a failure to recognize that these great privileges, so necessary to the public welfare, have been created by the public for the public benefit and not primarily for private advantage."

But as a rule in his public addresses he has dealt with the varied interests and difficult problems of the State whose Governor he is.

It is conceded, we think, that the foremost candidates today are Secretary Taft and Governor Hughes. The Secretary is abundantly qualified for the office by great ability and exceptional experience. Without disparaging several others, some one of whom may yet win the convention's prize, we must say that both the Republican party and the country are fortunate in having at the top of the list two men of such excellent quality. Not with the approval or consent of either will the contentions of those who support them be marred by injustice or bitterness.

The Futility of American Art

LAST week we discussed the Winter Exhibition of the National Academy of Design from the artistic point of view. But there is another aspect of the subject that is quite as important to consider: Does American art represent the ideals of the American people? Is it national, is it modern, is it living? Has it any connection with what we are all doing and thinking and hoping? Does it have any lesson, inspiration or influence? Everybody knows and deplores that the great mass of the people of this country take very little interest in the paintings that are being turned out by the thousand every year. Is it altogether their fault, due to their lack of culture or to the sordidness of their lives?

Here is an exhibition claiming to be "National." In how far has it a right to that honorable title? Suppose the exhibition to be preserved intact for two thousand years, and then opened to the antiquaries of that day to determine from it what sort of people we were and what we cared for most. Their first and most assured conclusion would be that we loved scenery more than anything else in the world, and ourselves next;

that we spent most of our time looking out of the window or into the mirror. Seventy-six per cent. of the pictures exhibited are either landscapes or portraits. We have classed as landscapes those where human and animal life is absent or inconspicuous. To him who, in the love of nature, holds communion with her visible forms in an art gallery, she speaks a various language. But many people are not vitally interested in the mineral kingdom or in any forms of life lower than the mollusca. The sight of painted stones and trees does not influence their thought and affect their actions. There is this to be said in favor of landscapes, that they are the easiest and cheapest form of art. An artist can paint them after a fashion some years before he can attain an equal degree of proficiency in figure work, and he is, therefore, less of a burden on the community during the unproductive period of his apprenticeship. Slight inaccuracies in the outline of a cliff are less conspicuous than in drawing a man's nose. The landscape artist does not have to study history and literature and theology. He does not usually agree with Ruskin that a knowledge of mineralogy and botany is essential to his craft. He does not have to hire models or buy costumes, and many of our landscapists show a creditable intention to demonstrate the beauty in common scenes by never going more than a mile away from a trolley line in search of their subjects.

The landscapes, amounting to 54 per cent., are, by their inevitable limitations, outside the range of this discussion; so also are the 22 per cent. of portraits. This is the best paying branch of painting and also one of the most useful, but in one way it is more limited in its appeal than the landscape, for the artist has in most cases practically no choice of subject and little in style of treatment. We find portraits of "Miss X.," "Mr. Y." and "Mrs. Z.," but these are unknown quantities to us, and the pictures do not usually give any high opinion of the value of the personalities represented by these symbols. They are not people we would turn our heads to look at on the street, nor has the painter made them more interesting or significant on canvas. He has not chosen young women because their faces are beautiful, or old men be-

cause their faces are full of character, but has taken the men and women who have money enough to pay for portraits. He is guided in his choice by the same motive as the tintype artist who stands in front of his tent on the beach and picks out certain individuals from the passing crowd; it is a most commendable motive, that of a desire to earn an honest living; would that every one had it! It's business, but is it art? At least there is no reason for expecting people to be interested in individuals who are neither beautiful, distinguished nor related to them.

In searching the walls for some pictures which bear internal evidence of having been painted in America in the twentieth century, we run across all sorts of queer relics of antiquity. Venus—but she has been painted before, if we remember right. Sirens no longer attract. Great Pan is dead; do not our artists know that? Even the poets found it out years ago. Peter Pan is alive, but Ivanoski is not in the Academy. Mermaids—it has been at least five hundred years since a real live one has been seen. In all probability the species is extinct. Angels with wings, saints with halos—do they appear to people nowadays, or are they second-hand visions borrowed from books? So much trouble has been taken to hunt up places in America where oxen are used; they are almost as rare as purple cows.

Here over the door is a large picture undeniably modern and American, a prize-fight, but nobody but a second class saloon-keeper would hang it on his walls. The same artist, Mr. Bellows, has essayed the excavation for the Pennsylvania Railroad station in New York, a wonderful sight in itself but insignificant in the picture. Here is a view of Madison Square after the rain by Paul Cornoyer, which gives us a new conception of the artistic possibilities of sky-scrapers; a beautiful and significant picture. "After the Wedding," by L. W. Hitchcock, also has a message. It is the sort of thing that W. D. Howells would do if he were a painter instead of a novelist. Some Indians, mostly taken from Cooper's novels; a fire engine in action, not very exciting; a bootblack with clean face and manicured hands; a tenement or two with no particular

meaning, and that is all—no, there is Smedley's "Booklovers," a portrait group which took the Carnegie prize of \$500, and deserves it because it contains a Teddy Bear.

It is saddening to think of all the magnificent opportunities our artists are missing. We have our heroes; the Carnegie committee finds them, the artists do not. We have our faiths that men and women are devoting their lives and ready to die for, but they do not find expression in art as they have at former times. We have our daily commonplace interests and duties, but men of genius who could idealize them for us and show us their deeper meaning are lacking.

The most distinctive characteristic of the present age is the advance of science and its application to life, yet our antiquary of the future would not suspect this from the specimens under consideration. The wealth of new forms and color combinations, revealed by the microscope and polariscope, are ignored by our decorators. The miracles of the laboratory are unnoticed. The inventor, the surgeon, the railroad employee, the factory operator, the bridge-builder, the sand-hog of the caisson, the printer, the financier, the electric-light mender, do not exist for the modern artist. The whole range of college life, full of interest, picturesqueness and significance, is not represented by a single picture of these 383. Where are the summer hotel, the Coney Island, the Bowery melodrama, the Sunday school, the kindergarten, the sweat-shop, the steam plow, the bachelor maid, the subway, the social settlement, the department store, the cowboy on the range, the miner in the mountains working his prospect alone, the baby tied on the fire-escape, the fleet going to the Pacific on its mysterious errand, the run on the Knickerbocker, the delivery room of the public library, and the grandstand at a foot-ball contest? Can our artists find nothing worthy of their brushes in the international peace movement, the cause of labor, the rise of woman, racial conflicts on the Pacific Coast and in the South, the development of the Philippines, the digging of the Panama Canal, the dominance of the trust, the opening of the irrigation empire, and the problems of immigration?

We could keep an army of artists busy

on the pictures we want to see painted, and every one of our readers has as many more that he wants. These are not impossible subjects. We cannot tell how they could be painted; that is the business of the artist, that is why he has been endowed with genius. If he cannot see these things on a blank canvas he is not an artist. The usual objections are quibbles. Our clothes are ugly and conventional, but that does not prevent the painting of good portraits. It is no more difficult now to advocate free trade with paint and brush than it was to defend the doctrine of the Immaculate Conception. There is no subject too abstract to be rendered concrete, none so prosaic that it cannot be transmuted into poetry, none so ugly that it cannot be made attractive, if the artist is a genius and will work hard.

American artists as a class seem to be lacking in both ideas and ideals. They are absorbed in the questions of technique until they forget what technique is for. They practice their arpeggios in pigment and expect the public to applaud. They think of a picture as merely a rectangular surface covered with masses of color harmoniously placed. If that were all we wanted we would spend our 50 cents for a kaleidoscope instead of an academy ticket and then we could have an infinite number of such color schemes, some of them quite as good as those on the walls of the gallery. It is not well for an artist to be too absorbed in his art nor to insulate himself too completely from contact with the Philistine mind. The great artists of the past were men of importance in their day, influential in court or city, active in affairs, interested in life about them; and in consequence they were able to interpret the meaning of their age, to give symbols to its patriotism, and to fix the forms of its religion.

Where Civilization Breaks Down

A CAREFUL investigation conducted by the Charity Organization Society results in the cheering demonstration that in New York City there are only 35,000 willing-to-work but unemployed unfortunates, instead of the 150,000 that unscrupulous agitators and sensational newspapers have estimated. The rent

strike on the East Side of this same good town has amounted to nothing beyond the turning of a few hundred quite un-influential families into the streets. It is a pity that snow and cold weather came on just at this time, because some of the homeless folk may have suffered a bit. But let us be thankful that Indian summer prevailed until a few days ago. In Chicago a threatened mass meeting of the unemployed was valiantly routed by the police, who behaved themselves with exemplary restraint. "A good many heads were broken in the fighting, but no one was seriously hurt," a special dispatch to the *New York Times* assures us.

It is plain that the general distress among the working classes consequent upon industrial depression, which was so freely predicted after the October panic, is not going to be so dreadful, after all, and there is no immediate reason to fear that the constituted authorities will be unable to preserve order. We must still regret that a business disturbance had to come, because it has considerably cut down dividends thereby compelling the charitable to curtail somewhat their usual benefactions and to refrain from their customary generosity in giving—thru charity balls and similar functions—for the relief of distress. These misfortunes, however, quite often come at inopportune times, and we must view them philosophically. It is sufficient to give mild expression to our regret by indorsing the calm summing up of it all by Mr. John D. Rockefeller in the remark that President Roosevelt ought not to have done it.

In view, then, of these assurances that things are not, after all, as bad as they might be, we are unable to see how sincere men, prejudiced and misguided tho they are, can maintain, as they now and then do, that in financial crises, industrial depressions and periods of unemployment, our boasted civilization breaks down. If it could be shown that hundreds of thousands of working people were actually starving to death, or that, failing to bear patiently the ills that are the common human lot, they indulged in riotous demonstrations which seriously threatened the existing social order, we might, indeed, say that our civilization had not yet attained perfection. But nothing even approaching such a state of affairs is alleged. We are sorry—all

kindly disposed persons must be sorry—that there is a contingent of even 35,000 unemployed persons in a city of great wealth and activity like New York. It would be gratifying if our many prominent families, who are in comfortable circumstances, felt that they could afford the time and the means to provide occupation for the unintentionally idle, but of their ability to do this, they themselves must be the conscientious judges. It is not becoming in those who have not themselves attained to great worldly success to pass judgment upon men and women who have demonstrated their intellectual and moral superiority by "arriving."

Civilization has not broken down. The temporary disturbance of business will give place to returning prosperity. Dividends will be restored. Great fortunes will be amassed in the coming years, as they have been amassed hitherto. Employment at living wages will once more hold out its opportunities to the industrious, who, by prudence, patience and virtue survive their present hardships, and it is not extravagant to predict that within a year or two at the longest, the treasuries of the charitable societies will be as bountifully filled as of yore and that the charity ball will again be a resplendent means of grace and beneficence.

America's Greatest Composer

Announcement of the death of Edward Alexander MacDowell, on January 23d, came with a shock of surprise, notwithstanding the general knowledge that his career as a creative artist had ended nearly three years ago, when, in March, 1905, his brain was shattered by the strain of overwork. Yet, early as the end came (he was born in New York City in 1861), the rare quality of what he accomplished ranks him easily and beyond the possibility of dispute as the foremost musician America has yet produced—foremost in the originality and the poetry of his conceptions and foremost in the technical proficiency of their expression. Some of his compositions bear distinctive and distinguishing marks of certain characteristics which the world has come to recognize as typically American. From the "Indian Suite," one of the first fruits of his maturity, to the "Keltic" sonata the

range is a wide one in sympathy and in depth of emotion, as well as in growth of power. While he possessed unusual command of the orchestral palette and wrote many charming songs, the bulk of his work was written for the pianoforte, for which instrument, indeed, he accomplished something of what Richard Strauss has done for the orchestra, in making it the medium for a delineative, descriptive, music of the highest kind. And tho he said his aim was not so much the depiction of an object as a commentary on it, in such entrancingly beautiful piano pieces as "To a Wild Rose," "To a Waterlily," "Told at Sunset," "A Deserted Farm," "Starlight," "To the Sea," "In Mid-ocean," and the rest, he sang with a lyric fervor scarcely to be met with in any other composer of his time. His place is in the small group of the world's greatest lyricists.

The New Biblical Manuscript

The announcement made by Professor H. A. Saunders, of the University of Michigan last week, as to the nature of the Freer Bible manuscript acquired by him from excavations in Egypt is very interesting and whets appetite for more. He says it covers two-thirds of the Bible and compares for value with the three best and oldest manuscripts, the Sinaitic, Vatican and Alexandrian. Professor Saunders puts the age from 400 to 600 A. D., and imagines it was buried and lost at the time of the Moslem invasion of Egypt in 640 A. D. He tells us that it does not contain the Revelation of John, but instead of that probably the Revelation of St. Peter, which was found in the same place some years ago. It is well known that the Revelation of St. John came late into the canon and it is not in the oldest of manuscripts, the Vatican, altho it is in the Sinaitic (with the Epistle of Barnabas) and in the Alexandrian. But the late discovery of the Revelation of Peter proves that it by no means compares in value with that of John, and that the Church was right in putting John rather than Peter into the canon.

More Scrap-iron

Will the nations never cease provoking each other to greater military extravagance? Will no agreement be made be-

tween them to limit expenses for more battleships until each nation shall hope to surpass in expenditure all its neighbors, and all on the plea of insurance for peace? It seems impossible to see an end of this enormous waste, for all the wealth and labor spent in military supplies, ships or cannon, is so much taken from productive industry. It gives neither food nor shelter nor clothing, nor even the comforts and luxuries of life. Here is Great Britain determined to keep a navy equal to the sum of any two other Powers. And here is the United States determined to be no lower than second; and here is Germany fully planning to surpass either the United States or France. Great Britain built a new and much more powerful "Dreadnought," and now Germany plans to have sixteen Dreadnoughts in six years, and forty-seven in twelve years. We can hardly hope to keep up with that rate of production of scrap-iron; for scrap-iron we all hope it will be; and we believe it will be before many years. Whatever rulers may choose the people will not submit many years longer to settle their differences by murder.

Here is Governor Vardaman's doctrine of unequal rights as enunciated in a formal appeal to the peace officers to "make an honest attempt to drive crime from the State" of Mississippi. He thus tells them how:

"Men talk of justice and the enforcement of the laws upon the white men and the negro alike as though such a thing were possible. Justice must be the end and the aim of all, but justice to the negro does not mean that you must treat the negro in all matters, even in the enforcement of the law, as you would the white man. There are certain laws that are suited to the white man that cannot be adjusted to the negro's peculiar condition. There are certain things that must be done for the control of the negro which need not be done for the government of the white man. In spite of the provisions of the Federal Constitution, the men who are called upon to deal with this great problem must do that which is necessary to be done, even tho it may have the appearance at times of going somewhat without the law. The races are not alike, and the law cannot make them alike, nor is it possible to treat them exactly alike before the law."

That is frank nullification of the Constitution and of Federal law, and the denial of the doctrine of equal rights. There will and must be eternal war against the

undemocratic and unchristian theory on which Governor Vardaman's instructions are based until the principles of our Declaration of Independence, our Constitution and the Gospels are accepted and put into life as well as law.

We have the first published evidence of the effect in this country of the Papal encyclical requiring that information be given of any suspected taint of Modernism, in the delay in the acceptance at Rome of the choice of Rev. Edward J. Hanna, of Rochester, N. Y., as Coadjutor-Archbishop of San Francisco with the right of succession. It is evidently a case of what the French call *delation*, that is, of information sent to injure one, as in the case in which the choice of the Bishop of Providence as the Coadjutor of Archbishop Williams, at Boston, was, it is said, annulled at Rome on a false report sent as to his health. The Modernism charged against Father Hanna, who is an able and scholarly man, appears in his two mediating articles in the *Ecclesiastical Review*, in which he insisted too much on the human ignorance of Christ, and his enemies are using Modernism as a club. The curse of such documents is the power they give the evil-minded to injure their fellows. We learn that both the Papal Legate Falconio and Cardinal Satolli favor Father Hanna.

In a letter by Stedman, quoted by Colonel Higginson in his article this week on the deceased poet and critic, Mr. Stedman speaks of his mother's sonnets as flawed by their ending with a rimed couplet. We well know that the present critical school objects to this final couplet, but we venture a heresy in this matter. Wordsworth's "Sonnet on the Sonnet" ends with Milton, and says that in his hand:

"The thing became a trumpet whence he blew
Soul animating strains, alas too few!"

There is a final couplet for you. And Milton occasionally did the same thing in his "trumpet" sonnets:

"Help us to save free conscience from the paw
Of hireling wolves, whose Gospel is their
maw;"

And he did it oftener in his Italian sonnets. A rimed couplet seems to give completeness to a sonnet, whose rime-system is difficult to follow, and gives it a recognized termination.

The most extraordinary legends may reproduce themselves in veritable facts. One of the most remarkable stories told by Herodotus is that of the Lydian king who was warned that his good fortune had been so dangerously great that he ought to break it by destroying his most precious possession. This was a wonderful ring, which he threw into the sea, but a day or two after the ring was returned to his palace in the body of a fish. The late parallel is that of a too happy fiancée who not long ago lost her engagement ring in the Passaic River, at Belleville, N. J. She wept over her loss for a week, but a day or two ago a fisherman found it in the body of a carp he had hooked, and it goes back to the happy, but, we believe, not too happy owner.

Without any great amount of observation the process of public ownership goes on. Here in this city the Boro Presidents of Manhattan and the Bronx ask leave to establish an asphalt paving plant, on the ground that it is impossible to make the paving companies live up to their contracts. And now the city authorities are seeking the legal right to acquire possession of or run the ferries. That is right; ferries as well as bridges and tunnels, and street cars as well as either.

The right thing has been done for once in a students' riot. The University of Pennsylvania sophomores, in an attempt to break up a freshman banquet, pretty nearly wrecked the restaurant. The police were called in and three of the young men arrested, held in bail for trial, and instructed meanwhile to pay the damages, amounting to a thousand dollars and over. It is to be hoped that they will not be let off with paying the damages, and the university authorities ought to have something to say and do.

While in this Christian State Governor Hughes is engaged in an almost hopeless effort to abolish gambling at racetracks, in pagan Japan a proposition is influentially before the Diet asking the prohibition of horse racing, on the ground that it does not improve the breed of horses and does injure the breed of men.

Currency Measures

THE Aldrich bill will not be improved by the changes which are said to have been agreed upon. One of these would increase the total issue from \$250,000,000 to \$500,000,000; another would remove the original bill's restrictions as to the population, age and financial records of cities whose bonds may be accepted as security. If there is to be legislation, it will probably provide some form of emergency currency, as the passage of so radical a measure as the House Committee's new Fowler bill cannot be expected. Some of the objections to the Aldrich bill have been forcibly set forth by a sub-committee of the Currency Commission of the Bankers' Association. The Aldrich plan, it is pointed out, would involve possibly fatal delay, cripple a bank's lending power, create a fictitious market for municipal bonds, and serve as an entering wedge for the use of comparatively undesirable bonds as security. We have remarked that it would require banks in time of stress to tie up cash by the purchase of bonds. It may be added that it would discriminate in favor of banks owning the specified classes of bonds, and therefore in favor of banks in the East. The Bankers' Association committee proposes a bill upon the lines of last year's Fowler bill and of the Association's last year's report, a bill for taxed emergency issues upon the security of assets and reserve and a guarantee fund, with the new feature that the notes are to be a prior lien. It is a good bill, except that the proposed tax is not high enough.

Legislation for emergencies is all that can be obtained at this session. This legislation should either be on the lines of the proposition of the Bankers' Association or should provide for the utilization of clearing house association loan certificates as security for emergency issues of currency. The latter plan was clearly and strongly advocated last week by James G. Cannon, vice-president of the Fourth National Bank, in a lecture at Columbia University. He would have clearing house associations in Sub-Treas-

ury cities incorporated and authorized to do business with the Government, and would empower the Treasury to advance emergency circulation upon the security of their loan certificates to the amount of 50 per cent. of their face value, with interest at 6 per cent. to insure prompt retirement.

....Building expenditures in the United States during 1907, according to *Bradstreet's*, were \$622,818,000, or less by about 7 $\frac{1}{4}$ per cent. than those of 1906.

....Estimates recently published make the world's output of new gold last year \$403,230,000, or less by \$2,700,000 than the quantity produced in 1906. There was a reduction of about \$4,500,000 in the United States.

....The capital of the Lincoln National Bank has been increased from \$500,000 to \$1,000,000, and, in addition to the usual dividend of 16 per cent., an extra dividend of 100 per cent. has been declared. During the recent financial panic 600 new accounts came to the bank, bringing \$3,000,000 of deposits, making the deposits \$22,000,000 and the total resources \$24,500,000.

....The Corn Exchange Bank has made an increase in its dividend, so that the stock is now upon a 16 per cent. basis instead of 14 per cent. as heretofore. The board of directors last week presented to the president, William A. Nash, who is also a member of the Clearing House Committee, a silver loving cup, as a token of their appreciation and in celebration of Mr. Nash's twenty-fifth anniversary as president of the bank.

....The Seaboard National Bank celebrates this month its twenty-fifth anniversary. Its original capital was \$500,000. Its present capital, half of which was earned, is \$1,000,000. Its surplus and profits, all of which have been earned, now amount to \$1,575,000. It has paid dividends regularly since organization, and now has deposits of \$27,000,000. S. G. Bayne is president; and Stuart G. Nelson, vice-president.

The Independent

VOL. LXIV NEW YORK, THURSDAY, FEBRUARY 6, 1908

No. 3088

Survey of the World

Mr. Roosevelt's Special Message

A long special message sent to Congress by the President on the 31st ult. is generally regarded as one of the most remarkable papers of the kind that has come from his hand. At the beginning he recommends the immediate re-enactment of the employers' liability law (recently found by the Supreme Court to be unconstitutional), so changed that it shall apply only to employees engaged in interstate commerce, as the court's decision suggests. He is confident that the States will make similar laws relating to intrastate employment. He also very earnestly advises that an act be past providing for compensation, to be paid automatically, by the Government to all employees injured in its service, repeating the arguments of his recent annual message for placing the entire trade risk for industrial accidents upon the employer. He directs attention to the need of action relating to the abuse of injunctions in labor disputes. In such cases, he says, injunctions have sometimes been used heedlessly and unjustly, "inflicting grave and occasionally irreparable wrong upon those enjoined." If some way of remedying the abuses is not found, he adds, "the feeling of indignation against them among large numbers of our citizens will tend to grow so extreme as to produce a revolt against the whole use of the process of injunction." The Interstate Commerce Commission, he says, should be empowered to pass upon any rate or practice on its own initiative, and to issue an order prohibiting a proposed advance of rates, pending investigation; it should also have means for making a physical valuation of any railroad. Over the financial operations

of interstate roads the Government should exercise supervision:

"In no other way can justice be done between the private owners of those properties and the public which pay their charges. When once an inflated capitalization has gone upon the market and has become fixed in value, its existence must be recognized. As a practical matter it is then often absolutely necessary to take account of the thousands of innocent stockholders who have purchased their stock in good faith. The usual result of such inflation is therefore to impose upon the public an unnecessary but everlasting tax, while the innocent purchasers of the stock are also harmed and only a few speculators are benefited. Such wrongs when once accomplished can with difficulty be undone; but they can be prevented with safety and with justice."

Railways should be permitted to make traffic associations, he says, and he repeats his recent recommendation for a modification of the Sherman Anti-Trust law. Each of the laws or amendments thus recommended, he remarks, "would represent part of the campaign against privilege." Our laws hitherto "have failed in precisely this point of enforcing the performance of duty by the man of property toward the man who works for him, and by the man of great wealth, especially if he uses that wealth in corporate form toward the investor, the wage worker and the general public":

"I do not know whether it is possible, but, if possible, it is certainly desirable, that in connection with measures to restrain stock-watering and overcapitalization there should be measures taken to prevent at least the grosser forms of gambling in securities and commodities, such as making large sales of what men do not possess, and 'cornering' the market. Legitimate purchases of commodities and of stocks and securities for investment have no connection whatever with purchases of stocks or other securities or commodities on a margin for speculative and gambling purposes. There is no moral difference between gambling

at cards or in lotteries or on the race track and gambling in the stock market. One method is just as pernicious to the body politic as the other in kind, and in degree the evil worked is far greater. But it is a far more difficult subject with which to deal. The great bulk of the business transacted on the exchanges is not only legitimate, but is necessary to the working of our modern industrial system, and extreme care would have to be taken not to interfere with this business in doing away with the 'bucket-shop' type of operation." He suggests that the Federal Government could forbid the use of the mails, telegraph and telephone wires "for mere gambling in stocks and futures."

Concerning Predatory Wealth

The subject of the remaining two-thirds of the message is predatory wealth and the policy of the Administration for the restraint of it. Taking up the statements recently "published broadcast" by the Standard Oil Company and the president of the Atchison Railroad in their own defense, the President submits a letter from Mr. Heney, the San Francisco prosecutor, inclosing one written by the freight traffic manager of the Atchison company to the company's auditor, relating to a rebate agreement alleged to have been the result of negotiations with President Ripley. This is cited to "illustrate the methods of the high officials" of the Atchison, "and to show the utter falsity of their plea of ignorance, the similar plea of the Standard Oil being equally without foundation." Wide circulation has been given, the President says, to the "elaborate, ingenious and untruthful" attacks of the two corporations already named by writers and speakers who act as the representatives of predatory wealth—"of the wealth accumulated on a giant scale by all forms of iniquity, ranging from the oppression of wage-workers to unfair and unwholesome methods of crushing out competition and to defrauding the public by stock jobbing and the manipulation of securities":

"Certain wealthy men of this stamp, whose conduct should be abhorrent to every man of ordinarily decent conscience, and who commit the hideous wrong of teaching our young men that phenomenal business success must ordinarily be based on dishonesty, have during the last few months made it apparent that they have banded together to work for a reaction.

Their endeavor is to overthrow and discredit all who honestly administer the law, to prevent any additional legislation which would check and restrain them, and to secure, if possible, a freedom from all restraint which will permit every unscrupulous wrongdoer to do what he wishes unchecked provided he has enough money. The only way to counteract the movement in which these men are engaged is to make clear to the public just what they have done in the past and just what they are seeking to accomplish in the present."

The Administration, he says, and those who support its views, are strenuous upholders of the rights of property:

"We attack only the corrupt men of wealth who find in the purchased politician the most efficient instrument of corruption and in the purchased newspaper the most efficient defender of corruption. Our main quarrel is not with these agents and representatives of the interests. They derive their chief power from the great sinister offenders who stand behind them. They are but puppets who move as the strings are pulled. It is not the puppets, but the strong, cunning men and the mighty forces working for evil behind and thru the puppets, with whom we have to deal. We seek to control law-defying wealth; in the first place, to prevent its doing dire evil to the republic, and in the next place to avoid the vindictive and dreadful radicalism which, if left uncontrolled, it is certain in the end to arouse. Sweeping attacks upon all property, upon all men of means, without regard to whether they do well or ill, would sound the death-knell of the republic; and such attacks become inevitable if decent citizens permit those rich men whose lives are corrupt and evil to domineer in swollen pride, unchecked and unhindered, over the destinies of this country."

He speaks of the large sums recently spent by representatives of "certain great moneyed interests" for the publication of "huge advertisements attacking with envenomed bitterness the Administration's policy of warring against successful dishonesty," and also in the circulation of books, pamphlets and speeches:

"The books and pamphlets, the controlled newspapers, the speeches by public or private men to which I refer, are usually and especially in the interest of the Standard Oil Trust and of certain notorious railroad combinations, but they also defend other individuals and corporations of great wealth that have been guilty of wrongdoing. It is only rarely that the men responsible for the wrongdoing themselves speak or write. Normally they hire others to do their bidding, or find others who will do it without hire. From the Railroad Rate law to the Pure Food law, every measure for honesty in business that has been passed during the last six years has been opposed by these men on its passage and in its administration with every resource that bitter and unscrupulous

craft could suggest and the command of almost unlimited money secure."

Some attack cunningly by complaining because the Government does not procure imprisonment instead of a fine:

"The man making this assault is usually either a prominent lawyer or an editor who takes his policy from the financiers and his arguments from their attorneys. If the former, he has defended and advised many wealthy malefactors, and he knows well that, thanks to the advice of lawyers like himself, a certain kind of modern corporation has been turned into an admirable instrument by which to render it well-nigh impossible to get at the head of the corporation, at the man who is really most guilty. When we are able to put the real wrongdoer in prison, this is what we strive to do; this is what we actually have done with some very wealthy criminals. . . . But it often happens that the effort to imprison a given defendant is certain to be futile, while it is possible to fine him or to fine the corporation of which he is head; so that, in other words, the only way of punishing the wrong is by fining the corporation, unless we are content to proceed personally against the minor agents. The corporation lawyers to whom I refer and their employers are the men mainly responsible for this state of things."

The apologists of successful dishonesty always declaim against any effort to prevent or punish it on the ground that any such effort will "unsettle business," but it is they who have unsettled business by their acts. Business panic, they say, is the necessary penalty of attempts to secure business honesty. They would oppose efforts to prevent a repetition of the insurance, banking and street railroad scandals in New York, the Alton deal, the corruption in San Francisco, or the offenses of the Standard Oil Company:

"The 'business' which is hurt by the movement for honesty is the kind of business which, in the long run, it pays the country to have hurt. It is the kind of business which has tended to make the very name 'high finance' a term of scandal to which all honest American men of business should join in putting an end."

The movement in which we are engaged, he says, is "fundamentally an ethical one," to secure national honesty in business and in politics:

"We do not subscribe to the cynical belief that dishonesty and unfair dealing are essential to business success, and are to be condoned when the success is moderate and applauded when the success is great. The methods by which the Standard Oil people and those engaged in the other combinations of which I have spoken above have achieved great fortunes can only be justified by the advocacy of a sys-

tem of morality which would also justify every form of criminality on the part of a labor union, and every form of violence, corruption, and fraud, from murder to bribery and ballot-box stuffing in politics."

Under existing laws much has been accomplished during the past six years. It has been shown that they can be enforced against the wealthiest corporation and "the most powerful manipulator of that corporation," and "above all, against the very wrongdoers who have for so many years gone scot free and flouted the laws with impunity"; but these laws should without delay be supplemented (he says) by the further legislation he has recommended. Thoroging and satisfactory control of interstate common carriers can in the end be obtained only by the action of the national Government, which should have full power to do what ought to be done, and what the States cannot do effectively. If Congress does not provide for reasonable and effective supervision, the States will take action, "sometimes wise, sometimes ill judged and extreme, sometimes unjust and damaging to the railroads and other corporations, more often ineffective because unconstitutional." Speaking, in conclusion, of the panic, the President, deploring the sufferings of the innocent, says there is no warrant for a feeling of gloom and fright. "There is no nation so absolutely sure of ultimate success as ours":

"I do not for a moment believe that the actions of this Administration have brought on business distress; so far as this is due to local and not world-wide causes, and to the actions of any particular individuals, it is due to the speculative folly and flagrant dishonesty of a few men of great wealth, who seek to shield themselves from the effects of their own wrongdoing by ascribing its results to the actions of those who have sought to put a stop to the wrongdoing. But if it were true that to cut rottenness from the body politic meant a momentary check to an unhealthy seeming prosperity, I should not for one moment hesitate to put the knife to the corruption."

—Among the published comments upon the message are those of Chancellor Day, of Syracuse University, who remarks that "much of it reads like the ravings of a disordered mind," and other portions are "large with the suggestion of the adroit and cunning, the shrewd but reckless, demagog." Dr. Day says he has received no pay for his published

defense of the Standard Oil Company and attacks upon the President. The message is warmly commended by Mr. Bryan and Senator La Follette.

Governor Hughes's Platform

Before the members of the Republican Club, of New York, on the 31st ult., Governor Hughes spoke at length upon national questions, setting forth the views which may be regarded as the platform on which he stands as a candidate for the presidential nomination. At the beginning he emphatically commended President Roosevelt and his work:

"We are contemplating a new Administration at the close of one which to a degree almost unparalleled has impressed the popular imagination and won the confidence of the people. The country is under lasting obligation to President Roosevelt for his vigorous opposition to abuses and for the strong impulse he has given to movements for their correction. Differences of opinion now as always exist with regard to the best means of solving some of the extremely difficult problems that are presented. But those who earnestly desire progress and the establishment of our security on its necessary foundations of fair dealing and recognition of equal rights appreciate the great service he has rendered and the fundamental importance of the purposes he has had in view. We shall have in the next campaign a notable vantage ground, gained thru the general admiration of his strong personality and the popular appreciation of the intensity of his desire to promote the righteous conduct of affairs and the welfare of his fellow men."

He did not profess to be able, he said, to speak the last word with regard to the questions which confront us. Many of them were difficult, and in the effort to reach true conclusions mistakes might be inevitable. Political contributions from corporations had wisely been prohibited, and publicity of campaign expenses should be enforced. The battle for free institutions had been a struggle against special privilege. There must be no encroachment on the common right for the purpose of serving the interests of the few at the expense of the many. Respect for the rights of property was the security of thrift, but the unlawful acquisition of property must be prevented or punished. He desired to see the opportunities for labor protected and enlarged, and the conditions for labor improved. He would have the employers' liability law

re-enacted, within the limits defined by the Supreme Court, and he approved the laws concerning safety appliances and the hours of labor on railroads. The Constitution in its entirety must be observed. The division of powers between the Federal and the State Governments must be recognized. It was essential to the permanence of free institutions that each community should attend to its particular affairs:

"The necessary extension of the activities of the Federal Government as to matters inevitably committed to its control should make us the more solicitous that the administration of State governments should show the highest degree of efficiency. There are two dangers. The one is that serious evils of national scope may go unchecked because Federal power is not exercised. The other lies in an unnecessary exercise of Federal power, burdening the central authority with an attempted control which would result in the impairment of proper local autonomy and extending it so widely as to defeat its purpose. It must be remembered that an evil is not the proper subject of Federal cognizance merely because it may exist in many States. All sorts of evils exist in many States which should be corrected by the exercise of local power, and they are not evils of Federal concern altho they may be widespread. On the other hand it cannot be regarded as a policy of unwise centralization that wherever there is a serious evil demanding governmental correction which afflicts interstate commerce and hence is beyond the control of the States, the power of Congress should unhesitatingly be exercised."

Our forests and public lands should be protected. He did not believe in governmental ownership of railroads, but regulation of interstate transportation was essential to protect the people from unjust discriminations and to secure safe, adequate and impartial service upon reasonable terms. He approved the new Railroad Rate law:

"I believe that the Commission should have the most ample powers for purposes of investigation and supervision and for making rules and orders, which will enable it to deal to the fullest extent possible, within constitutional limits, with interstate transportation in all its phases. This is a just policy."

The Sherman Anti-Trust law should be clarified and made more explicit. It could be made stronger and more effective by being made more definite. Combinations and practices in unreasonable restraint of trade should be condemned in precise terms. But provision might well be made for railway rate agreements, subject to the approval of the Commission. In his

judgment oppression through the conduct of large enterprises could most effectively be prevented, and the enforcement of law against illegal attempts to monopolize be secured, by explicit definition of what is wrong, and by adequate punishment of the guilty:

"I am not in favor of punishment in the shape of fines upon corporations except for minor offences. The burden of fines imposed upon such corporations is either transferred to the public or is borne by stockholders, the innocent as well as the guilty. Nor am I impressed by the argument that American juries will generally be indisposed to convict where the evidence is clear because the crime is punished by imprisonment of the offenders. But if the law be definite and the evidence warrants the presentation of the case to the jury it is better, in my judgment, that the responsibility for failure to convict should lie with the jury than that conviction should be followed by penalties which are either inadequate or bear unjustly upon those who have had no complicity in the offence."

He believed in a protective tariff, as essential to the interests of our wage-earners, but the protective policy should not be a cover for exorbitant rates or for obtaining special privileges not based upon consideration of the general welfare. He believed the tariff should be revised, and he thought an expert commission should be appointed, so that the facts to be considered might be ascertained without delay. With regard to the Filipinos, we were under the most sacred obligations:

"In justice to them and in justice to ourselves we must omit no effort to prepare them for self-government. When they are able to govern themselves and are in a position to maintain their independence the American people will not deny them the boon which we ourselves have so highly prized. In the meantime the work of education and training must proceed, and everything that can be done consistently with the interests of our own people must be done to promote their prosperity."

It was consistent with our devotion to the interests of peace and our desire for friendship with all nations, and it was our duty, to maintain the efficiency of the army and the navy. In conclusion he said:

"I do not come before you in any spirit of rivalry or self-seeking. There are many Republicans who by virtue of their character and distinguished services are worthy of the highest honor the party can bestow. I ask no favor, and I make no claim. I desire that the party shall act for its best interest. We must not underestimate the labors of the next campaign. It will be a hard fought battle. We

cannot expect victory unless we are united, and nothing should be done to imperil success in this State."

Labor Decisions

In the case of William Adair, master mechanic of the Louisville & Nashville road, who was prosecuted under the Erdman law of 1898 for discharging a locomotive engineer because the latter was a member of a labor union, the Supreme Court has decided that Adair had a right to discharge the man for such a reason, and that the section of the Erdman law which he violated is unconstitutional. This section is held to be an invasion of the personal liberty as well as the right of property guaranteed by the Fifth Amendment. It is also characterized as an unjustifiable interference with liberty of contract, and the court remarks that there is no legal connection between interstate commerce and an employee's membership in a labor union.—The dissolution of a labor union in Ohio has been ordered by a court on the ground that it is a combination in restraint of trade and against public policy. In the Amalgamated Association of Window Glass Workers the blowers and gatherers were a majority. The cutters and flatteners, a minority, insisted upon being permitted to use machinery. This was forbidden by the bylaws, which the majority refused to change. After a tedious contest, the complaining members brought suit for a dissolution of the union and a distribution of the funds, said to be \$110,000. They also asked for an injunction restraining the union from prohibiting their withdrawal and formation of a separate union. Judge Phillips, in the Common Pleas Court at Cleveland, decided last week that the union was an illegal organization and ordered the dissolution of it, with a distribution of the funds among the 7,000 members. He remarked, however, that this was an exceptional case, and that labor organizations generally were a necessity. It appears that enforcement of the bylaws prevented many members from obtaining employment.—President John Mitchell bade farewell to the United Mine Workers at their recent annual convention in Indianapolis, and many wept at the close of his address. He was unwilling

to accept a gift of \$2,700 from the miners of Montana and Wyoming, but finally consented that it should be given to Mrs. Mitchell for the education of their children. With much emphasis he urged the miners to keep their agreements with the mine owners.

The Opening of Parliament

The British Parliament was opened on January 29th with a speech from the Throne read by King Edward in the presence of Queen Alexandra, the Prince and Princess of Wales, court officials and diplomats. In regard to foreign affairs, the King said that Great Britain, France, Germany and Russia had joined in a treaty for the preservation of the integrity of the kingdom of Norway. He said that the difficulty which had arisen respecting Japanese immigration into Canada had been settled to the satisfaction of the respective governments. Negotiations were being conducted with the Government of the United States for an agreement to refer to the International Court of Arbitration at the Hague the Newfoundland fisheries questions. He referred to the disturbed condition of Macedonia, necessitating intervention on the part of the Powers, and expressed anxiety regarding the treatment of the native population of the Kongo Free State. In regard to the legislation of the House of Commons, the King said that the Scottish and Irish land bills, which were vetoed by the Lords, would be again introduced, also bills providing for elementary education in England and Wales, a new licensing system, the regulation of the hours of labor in coal mines, providing for the housing of the working classes, amending the system of valuation of property for the assessment of taxes, and extending university education in Ireland. The opening of the debate on the reply to the speech from the Throne brought, as usual, attacks from opposite sides upon the Government program. The Opposition considered it preposterous and impossible to carry thru except by unprecedentedly violent use of the closure and the suppression of discussion. The Opposition leaders, Mr. Balfour in the House of Commons and

Lord Lansdowne in the House of Lords, criticised the Anglo-Russian Convention on the ground that it did not sufficiently protect Great Britain's interests in the Persian Gulf, and hoped the Government would exercise caution in regard to the establishment of the proposed International Tribunal of Appeal in prize cases as recommended by The Hague Conference. The Irish members expressed dissatisfaction because no measures leading toward home rule were introduced. The radical members were disappointed in that the references to old age pensions and measures for the relief of the unemployed were not more specific. In defending the Government, John Burns, president of the Local Government Board, denounced the indiscriminate giving of relief in London as tending to pauperize the people and entice loafers into the city. He told how, after leaving a recent official function at Buckingham Palace, he joined the bread line of 2,000 unemployed on the Thames embankment, and said: "I was in my court dress, but pulled my bowler hat over my eyes and looked miserable, and I got my bowl of soup and hunch of bread." On the first division, in which the Irish members, most of the Unionists, and a few Radicals joined the Socialists and Laborites in opposing the Government for not recommending legislation for the unemployed, the Government was supported by a majority of 49. Lord Curzon took his seat without opposition in the House of Lords as an Irish Peer.

The Assassination of the King of Portugal

The political imbroglio in Portugal reached a tragic climax on February 1st in the assassination of King Carlos and Crown Prince Luiz Filipe. The royal family were returning to the palace in Lisbon from the Villa Vicosa and, taking carriages at the Barreira railroad station, they were passing from the Praca do Commercio into the Rua do Arsenal when a group of men on the corner drew firearms from under their cloaks and poured a volley into the carriages. The King and the Crown Prince each received three bullets and were instantly killed. Prince

Manuel, the second son, now king, was struck in the lower jaw and arm, but not seriously wounded. The Queen threw her body in front of her husband and son trying to shield them, and struck with her bouquet one of the men who approached the carriage. The guards returned the fire and killed some of the regicides. Another was captured, but instantly shot himself. Thirty or more armed men had gathered in different groups along the route by which the King was expected to return. The immediate

MANUEL II, KING OF PORTUGAL.

provocation of the deed was a decree issued in the name of the King earlier in the day giving Premier Franco almost unlimited power for the suppression of revolutionary movements and political opposition. The decree was retroactive from January 21st, and authorized the Cabinet to expel from the kingdom or exile to the colonies the members of any associations deemed inimical to the State or that were conducting a campaign against public security. Even members

of Parliament were not immune. Suspects were to be tried within two days and no appeal from the sentence was to be permitted. Last May the Premier, Joao Franco, with approval of the King, dismissed the Cortes and refused to call for new elections. The reason given for this action was that the corruption and factional spirit of the leaders of all parties was bringing the country into financial ruin and political chaos. Since then Franco has been practically dictator and has kept down all opposition by wholesale arrests, the use of the troops and censorship of the press. Of late the manifestations of discontent have become more threatening and the repressive measures of the Premier correspondingly more violent. Depots of bombs and arms had been discovered in Lisbon, and a revolution was feared which would put Dom Miguel, Duke of Braganza, on the throne or turn Portugal into a republic. The late King Carlos I was born December 28th, 1863, the son of Luiz I and Maria Pia, daughter of Victor Emmanuel II of Italy. He married May 22d, 1886, Marie Amélie of Orleans, eldest daughter of the Comte de Paris, and ascended the throne of Portugal October 19th, 1889, on the death of his father. His reign has been an unusually peaceful one for Portugal, and his affability and good nature made him popular at home and in European capitals. Altho he weighed over 300 pounds he led an active life, and excelled in swimming and shooting. He was fond of automobiling, the opera and yachting, and his reckless expenditure of the scanty revenues of his country on his personal amusements was one cause of the financial difficulties leading to his death. His eldest son, Prince Luiz, has not approved of his father's high-handed proceedings of late, and there was some talk of deposing Carlos in his favor. The crown now devolves upon his only other son, Manuel Maria Filipe Carlos Amalia Luiz Miguel Gonzaqua Xavier Francisco D'Assisi Eugenio, Duke of Beja, who will become Manuel II, the first being Manuel the Fortunate, who reigned from 1495 to 1521, when Portugal was foremost in exploration and colonization. He was born in Lisbon November 15th, 1889, and is

now a lieutenant in the navy. The officers of the army and state officials have sworn allegiance to the new King, and the leaders of all the monarchist parties have declared their willingness to support the Government. According to official reports many prominent republicans are implicated in the regicide, but there are no indications of a revolutionary rising. Franco has resigned, and a new Ministry has been formed, with Admiral Ferreira do Amaral as Premier.

Japan and China The Canadian House of Commons has ratified the agreement negotiated by Rodolphe during his recent visit to Japan, by which that country voluntarily restricts the emigration of Japanese laborers to Canada. It is authoritatively stated in Tokyo that a satisfactory arrangement has also been practically concluded with the United States on the same matter and that the measures taken by the Japanese Government have completely checked the influx of Japanese which our Government complained of. Baron Chinda, Vice Foreign Minister, in defending the policy of the Administration before a committee of the Diet, stated that South America offered a favorable field for Japanese, and that special arrangements would be made to facilitate emigration to Chile and the Argentine Republic, adding: "Wherever our emigrants are welcome the Government will not prevent their going." Minister of War Terauchi, when asked why Japan should maintain a large military force and continue preparations for war at a time of assured peace, answered that European countries did so even when there was not the slightest possibility of war. Japan's armament was not, he said, directed against anybody, but the nation must always be prepared against eventualities.—The Russian Minister of War has ordered four brigades of infantry from Odessa to Transbaikalia to protect the Russian-Chinese frontier.—No settlement has yet been reached on the many points at issue between the Japanese and Chinese Governments in regard to telegraph and postal regulations, the working of Manchurian coal mines, the extension of railroads, the fishery disputes, the

tariff regulations, the cutting of timber on the Yalu River, local administration in Manchuria, and the province of Chentao, claimed by both Korea and China. Neither Government seems disposed to make any concessions on these matters or to facilitate the negotiations, and the continued existence and increase of such contentious matter seriously threatens the peace of the Far East.—The final contract for the railroad from Tien-tsin to the Yang-tze has been signed at Pekin by the Chinese Government and the representatives of Deutsche-Asiatische Bank and the British and Chinese Corporation. It provides for a loan of \$25,000,000 at 5 per cent. to run for thirty years. The construction and control of the road are vested in the Chinese Government, with European chief engineers appointed by the Chinese to advise on construction, and subscriptions to the loan will be invited in Europe and in China on equal terms. The German section of the railway will run from Tien-tsin thru Tschau, on the Grand Canal, and Tsi-nan-fu, the capital of Shan-tung, to the southern border of Shan-tung; thence the British section will run thru Kiang-su province to Pu-kou, on the Yang-tze, opposite Nanking. The question of the extension of the railroad in the Kiang provinces is left open on account of the opposition of the provincial capitalists.

Persia and Russia Turkish troops are reported to have invaded Persian territory and occupied the town of Suj Bulak. The people of Tabriz are in a panic because Prince Firma, Minister of Justice, who was sent to protect the Persian frontier, is powerless to defend them. The province of Tabriz is within the Russian sphere of influence as delimited by the Anglo-Russian Convention, and accordingly Russia protested to the Porte against the occupation of disputed territory, while the boundary line is unsettled. The Porte replied that the territory of Persia had not been invaded. On receipt of this response Russian troops were sent from Tiflis to the frontier, and the Julfa railroad opened for traffic, which will enable Russia to defend Tiflis and Urumia.

The Issues and the Candidates

[In our issue of January 9th we asked our readers to anticipate somewhat the action of the coming political conventions by indicating what, in their view, are the chief issues which should be formulated in the platforms and who are the candidates best representing those principles. We have space to print only a few of the great number of replies, but they are fairly representative of all we have received, and we may presume they represent the sentiment of the country at large. To not a few Eastern people and journals that have talked of "Roosevelt's Panic" it will be both startling and instructive to see how nearly unanimous the sentiment is in favor of maintaining and strengthening the present policy of the Government for the restraint of privilege. Indeed, that is the only issue raised except a few letters in favor of prohibition and socialism. All our letters received show that in the Republican party Taft leads with a poll of 43 per cent. of the votes, closely followed by Hughes with 38 per cent. La Follette and Roosevelt tie, each with 7 per cent. apiece. The remaining 5 per cent. are scattered between Knox, Cortelyou and Foraker. Cannon and Fairbanks are not even mentioned. In the Democratic party Bryan leads the field, having 72 per cent. of the vote, with the remainder distributed about equally between Johnson and Folk. We comment on these letters further in our editorial pages.—EDITOR.]

My choice for the Presidency is William H. Taft; he is big enough for the job.

W. G. ALLEN.

CINCINNATI, OHIO.

Platform: Fair play for saint and sinner. Ticket: Taft and Hughes. Taft with the fuller experience has the broader sympathies; Hughes has the stiffer backbone and his arrows hit the mark.

S. L. STILSON.

BROOKLYN, N. Y.

Republican Party. President: George B. Cortelyou.

The principle of National Prohibition adopted into the party creed for the Presidential summer of 1908.

(REV.) JOHN HERRON.

WOOSTER, OHIO.

The chief issue is for all men the right to vote regardless of education. Only one thing ought to bar him, proof not to be a good citizen. We want an effective civil rights bill. We want to force the service of colored men on the juries of the South. Senator Foraker is the best candidate.

P. G. SHADD.

MARTIN, TENN.

Question No. 1.—The control of special interests by the people.

Question No. 2.—La Follette. Why?

1. Because we can elect him.

2. Because he stands for the policies of Roosevelt, the people's policies.

3. Because he is the only Republican who can defeat Bryan.

JOHN LEE.

TOMAHAWK, WIS.

No reactionary, whether nominated by Republicans or Democrats, has the slightest chance of election. Conservatives of both the old parties will have to choose between present policies and policies more radical. The escape of the country at present from attempts at State socialism lies in wisely continuing the work that Roosevelt has begun.

CHICAGO, ILL.

C. F. CASTLE.

The most important issue in the coming campaign will be the "Initiative and Referendum" for the reason that what we most need is to bring the Government closer to the governed, the officer to a condition of respect and fear for the wishes of his constituents. Experience teaches that the more power given the people the less they need to use that power.

JOHN A. SIMPSON,

President The First National Bank.

WEATHERFORD, OKLA.

The most important issue in the coming national campaign should be "Equitable distribution of the proceeds of industry." The second most important should be "More national revenue derived from wealth."

Many of us Democrats realize that Bryan could not accomplish much if elected on account of the legislative branch being Republican.

Governor Hughes would make the best President for the whole nation

HUNTER YOUNG.

BIRMINGHAM, ALA.

There is only *one* important issue, and that is the issue between Capital and Labor. All other of the so-called issues, if they can be called issues, are not *important* issues.

The best candidate is William D. Haywood, who will be nominated at the coming Socialist convention.

Representing a principal which will abolish the fundamental cause of financial stringency and industrial depression, he will be brought to the front and carried to a glorious victory on Election Day, next November.

GEO. E. HARRIS.

LEOMINSTER, MASS.

W. J. Bryan is the logical successor of President Roosevelt. All principles advocated by him are stronger and more popular than ever.

The other man I would consider for the Democratic nomination would be Folk. He has done something. He shows where he stands. Cannot consider any man brought for-

ward by the New York *World* or *Sun*, or any subsidized press.

If the above-mentioned men are not nominated, and Taft or La Follette, preferably La Follette, are nominated by Republicans, will vote for them. I am a farmer.

RAWLIN A. KINZES.

LITCHVILLE, N. DAK.

Let efficient service and a "square deal" be our motto. By a "square deal" is meant equality of opportunity and equality of justice for all—the corporation and the individual, the rich and the poor, the white and the black and the yellow.

Governor Hughes seems the one man above all others given us for this particular place. He is not a blind follower in the footsteps of others; but he will see that the good work begun by our present Executive does not languish and we may trust him to act wisely in whatever emergency may arise.

A. E. FULLER.

EAST CHATTANOOGA, TENN.

If there is one issue more important than another, it would be the controlling or owning the transportation companies by the Government.

First, because they have it in their power to ruin (financially) individuals or communities, or to make individuals or communities; and, second, because the companies would know what to depend on; would not be subject to the whims of every State Legislature, as they now are.

Governor Hughes would be my first choice for President, and if you will allow a rock-ribbed Republican a second choice it would be Bryan.

C. D. M.

OAKWOOD, OHIO.

We want for our next President a man who is first a thinker and then a performer, not a mere performer. We want a man who by training and quality of mind is able to foresee the effects of any course of action and who will not take action until he is certain that the cure will not be worse than the disease.

Above all we want a man subservient to no class or political party, a man with sound convictions, and most-important of all, a man with the courage of those convictions.

Such a man, Charles Evans Hughes, by his policies and actions during his term as Governor of New York, has proved himself to be.

IRVING G. STETSON.

BANGOR, ME.

A return to well-balanced government in accordance with the Constitution as adopted by the founders of the nation and as it has been and will be amended from time to time, is the most important issue for the coming Presidential campaign. Present conditions strikingly demonstrate that the general welfare is best conserved under a government that is made up of the organized representation of all the elements of our national temperament.

I do not think Hughes is exactly the man. Taft is a very good man, but he ought to be rejected under the circumstances. Knox, in my opinion, comes nearest to the requirements and would be my first choice. I also like Fairbanks and he would be my second choice.

A GOVERNMENT EMPLOYEE.

The policies of Bryan and Roosevelt will ultimately triumph, regulation and reform, weeding out evildoers. Capital operated in any way affecting the masses should be subject to their control. The man for the occasion is Hughes. He stands out the peer of reformers. He has manifested more nerve, coupled with conservatism, than any man now offered. He has his first mess of crow to eat; his first public failure to mend; his first time to ask for public office, his first time to seek self-aggrandizement. Such a trustworthy servant deserves the suffrage of the American voter, regardless of his party preferences.

Failure to nominate Hughes will give Bryan a clear track to the White House.

J. B. LOTSPEICH.

WEAVERVILLE, N. C.

The most important issue before the American people this year is not the tariff, nor yet the currency question, but the fearless enforcement of all laws against oppressive corporations and grafters, and especially against the liquor traffic, and the enactment of further measures to curb, and, as soon as practicable, to completely abolish the liquor traffic, which more than any other one thing weakens our citizenship, and vitiates politics. Once this question is solved and solved right, the other economic problems of our nation will be much easier to handle. The party and the Presidential candidate who will have the courage to come out openly against the liquor traffic in the campaign of 1908, will, if all signs deceive not, have a splendid victory at the polls.

(PROF.) J. G. EVERT.

HILLSBORO, KAN.

The Republican platform must endorse the views and acts of President Roosevelt, and insist on the thoro execution of the laws enacted in harmony therewith. Such additional legislation as needed must be passed, but, until laws on the statute books are thoroly tested, additional legislation must be enacted very sparingly and in a most conservative manner.

The man who will possess in a pre-eminent degree the qualities needed to lead the Republican hosts is Governor Hughes

I know of no one who meets a wider variety of representative men and women in Montana, Northern Idaho, and Eastern Washington than I do, and I believe that I am voicing not only my opinion, but the opinion of a larger number of people in this locality than will stand for any other platform or candidate.

JOHN F. DAVIES.

BUTTE, MONT.

William Howard Taft. The issue is an honest treatment of his constituents, the people of the United States. We are tired of the men who use words to conceal their position, and keep postponing expected action on any pretext but the right one. The whole tariff crowd from the "stand-pat" Republican to the "Revenue (for my home constituents) only" Democrat, have disgusted the common people, who are not fools at heart. It is refreshing (Roosevelt is a symptom of it) to have somebody without concealments, to whom the interests of the whole people are neither sectional nor selfish. The risk of Federalism under such leaders is better than State Rights under Janus-headed politicians such as Fairbanks, Knox & Co.

(REV.) G. F. GOODENOUGH.

NORTHFIELD, CONN.

The continued and insinuating attacks on the President by Eastern interests are having the effect here of making people more than ever devoted to Mr. Roosevelt. He prosecuted evildoers without fear or favor. This is right and the President's duty. There must not be any backing down from Roosevelt policies. This situation naturally makes the President the logical candidate. He alone typifies the desire of people here. If they cannot get him or some one in close sympathy, they will vote for Bryan as against a reactionary. Nor can this feeling be educated out of the people. The most important issue in the campaign is the enforcement of law. If the laws cannot be enforced as under the present administration, then the current will set in toward public ownership and socialism.

F. D. STEEN.

WEST LIBERTY, IA.

The politicians of Michigan are endeavoring to line up the State for Mr. Taft, but from all present indications they will meet with stubborn resistance. We do not find in Mr. Taft the qualities we need to combat the tremendous influences of the times. We are tiring of excessive talk, we want a man who will do something, who fearlessly does his duty, who cannot be cowed or tricked by designing corporation attorneys. The only candidate at present to whom the people can look is Governor Hughes. We believe there is no other man who can carry to successful completion the work Mr. Roosevelt has begun.

The farmers of Michigan want no general revision of the tariff, only such amendments as are needed to bring some of the trusts and combines under better control. We got enough during the existence of that infamous Wilson law; there never was a greater crime perpetrated on the American people.

O. C. WHEELER.

MARSHALL, MICH.

The most important question before the Americans to-day is the saving of the country for the common people. This cannot be done without the prevention of such transactions as the Standard Oil offences, the Ryan, Rockefeller and Morgan life insurance deals, the

Harriman scandals, the recent Whitney street railway deal in New York in which alone the people have been mulcted of more than one hundred million dollars. Such wholesale offenders in high places make common criminals seem like angels in contrast.

And how may this salvation be accomplished? Only by continuing and extending the honest and fearless policy of Theodore Roosevelt. Otherwise "we, the people of the United States," need expect nothing better in the not too distant future than England's starving masses or Russia's oppression-dulled mujiks.

My Presidential choice is Roosevelt first, last and all the time.

A SOUTH DAKOTA REPUBLICAN.

SUMMIT, S. DAK.

I was for Roosevelt, but since he is out of the race, I am for W. J. Bryan, because he is utilitarian rather than partisan. We are better acquainted with him than any other possible candidate. Third, Wall street is against him. Fourth, insurance grafters are against him. Fifth, tariff-fattened trusts are against him. Sixth, he is right on the centralization question. Seventh, Mr. Bryan is for the farmer, who has been exploited until he has become weary of life and is seeking other pursuits. Eighth, he is right upon the bank deposit, or guarantee fund. Ninth, corrupt politicians have searched for wrong in him for a decade, and found none. Tenth, college and university students who persecuted him a decade ago, to-day honor him. Eleventh, Mr. Bryan is known and honored the world over.

S. T. PIDGEON.

JAMESTOWN, OHIO.

I belong to the laboring class, or did until I was retired by the infirmities of old age. Shall corporate aggregations of capital and vast fortunes like that of Rockefeller be controlled, or shall they govern the country? Shall the policy of the present administration be continued, or shall a policy such as is indicated by Senator Foraker be adopted? In this township, having a voting population of some 500, there are not 2 per cent. who favor the latter—(Taft is the nearly universal choice as candidate). I know one who favors Hughes.

The Democrats are mostly for Bryan. And should some Republican like Foraker be nominated a large Republican vote would go to the Democratic candidate. In my opinion, Taft or Bryan will be our next President.

B. F. PERRY.

WEST ANDOVER, OHIO.

Doubtless the issue that most seriously affects the public well-being is the liquor traffic, which bids fair to be most prominent when Governmental control of business is settled.

Were this issue not in sight, my first choice for the Presidency would be Secretary Taft. But he is reported to have uttered on several public occasions that shibboleth of the saloon interests, "Prohibition does not prohibit," which the President of a large brewery in St.

Louis declared is the utterance of either a fool or a liar, as not one glass is sold in dry territory to twenty in the same territory under license. Still worse, that most disreputable of politicians, the Cincinnati boss, who never serves for naught, is said to support Mr. Taft. I fear that Mr. Taft would veto any measure helping prohibition.

So my first choice is Governor Hughes, and my second Senator La Follette. Is neither of these nominated, I am likely to vote for Mr. Bryan.

HENRY COLMAN.

MILWAUKEE, WIS.

Theodore Roosevelt, in his Annual Message, December 6th, 1906, said:

"Many times people who were slothful or timid or short-sighted who had been misled by false teachings, have shrunk in unmanly fashion from doing duty that was stern. If there is no intention of providing and of keeping the force necessary to back up a strong attitude, then it is far better not to assume such an attitude."

How can Theodore Roosevelt refuse a second elective term as President of the United States of America without making himself liable to the same criticism that he applies to others.

A large majority of the people believe:

First.—That Roosevelt is the right person to handle the issue.

Second.—It is his duty to do so.

Third.—If he refuses he is not the "little Father" they supposed he was.

C. J. CARLSON.

WAHOO, NEB.

The greatest national need is the embodiment of practical honesty and justice in the simplest, more concise and direct-working laws possible, to be found, and their execution entrusted to the manliest, most able and self-sacrificing men among us, to the end that opportunity be secured for each and all to engage freely and to the full in any right enterprise; that no individual, class or section might exploit, or be exploited by, any other individual, class or section, but that the whole should be superior to any one of its parts.

There is a proper promotion of private interests by a wholesome participation in the welfare of our fellow-workers.

Let this be crystallized in legal, practical, authoritative form, and let us participate in its efficiency.

"Righteousness exalteth a nation."

Governor Hughes evidences the qualities necessary to command not only support but admiration for this magnificent and fundamental work.

F. D. VERGASON.

FITCHVILLE, CONN.

The issue which overshadows all others in importance is the tariff, it being a concrete expression of the principle of the exploitation of the many for the aggrandizement of a few.

The national campaign of 1908 will not decide this issue. Even if the result should be the election of a President and a House of Representatives favorable to tariff for revenue

only, the forces of protectionism are too firmly entrenched in power in the Senate to be dislodged until after years of hard fighting. The campaign of this year may, therefore, be regarded as a prelude to that of 1912.

What the country needs is the election of a President having the wisdom, the courage, and the ability to educate the voters, between 1908 and 1912, to a realization of the injustice wrought by the tariff, so that, four years hence, the people may have a chance of coming into their own.

The only candidate now before the people thru whom there can be any hope of this result being attained is Mr. William Jennings Bryan.

JAMES E. GREEN.

TOWSON, MD.

The most important issues of the coming national campaign should be strict enforcement of the laws of the country, affecting rich and poor alike, as already carried on by President Roosevelt and his Cabinet; and, second, a fair and equitable adjustment of the tariff to suit the changed conditions of the times, special attention to be paid to those articles which would tend to the cheapening of the necessities of life.

From every standpoint the best available candidate for the Presidency is Secretary Taft. He has had a long trial, and his magnificent work in the Philippines, Cuba and Panama: his excellent character and his great experience deserve not only to be highly commended, but richly rewarded. It would be base ingratitude on the part of the American people not to reward him for the arduous work he has so creditably performed for many years for the good of his country. Governor Hughes is all right, but he can wait his turn.

THOMAS RUSSELL.

SCRANTON, PA.

The chief issue in the coming national campaign should be tariff revision. Our monstrous tariff system that permits the selling of the products of our home industries in foreign markets at prices far below the prices exacted from home consumers is a heinous trespass on popular government.

Lesser issues should be the liberation of the people from rough rider strenuousity and a return to a more tranquil and sublime conservatism. A restriction of corporate power and paternalism. These reforms cannot be achieved by evolution in a party lulled by its benefice, reforms from within a party that lessens the luxurious living of its leaders cannot be genuine. We must look to other sources for redress from these grievances and there is none other in sight but the minority party placed under the guidance of that pre-eminent genius and statesman, William J. Bryan, whose strong natural bent is the welfare of the common people. His election would insure the people against the shocking spectacle of their President on a barrel inveighing against his creators or to cater for the trusts.

R. R. HOFFMAN.

BECKNAP, PA.

The most important issue of the coming national campaign will be the question of the continuation of the policies inaugurated by President Roosevelt.

No man can be elected who fails to convince the people that none of the ground won for them by this Administration will be surrendered, or who is not pledged to carry forward to completion the work already under way, and to quickly begin that which has been recommended. This last must include the construction of the projected waterways, the establishing of postal savings banks, the extension of the parcels post, and the continued prosecution of violators of the Federal laws, without fear or favor.

The best candidate at this time is Mr. Taft. Perhaps if Governor Hughes were nominated he might be able to convince the people that he could be safely trusted to carry out the Roosevelt program, for his record is excellent. But a reactionary of the Cannon or Foraker type is impossible, as is also any man who is merely an amiable invertebrate. As against any but the strongest candidate, Mr. Bryan is almost certain to be elected.

WILBER L. STONEX.

GOSHEN, IND.

During the last half century the people of Europe have been steadily making their voice heard more and more in their parliaments, while here the trend has been with equal step in the opposite direction, the control passing more and more under the power of combinations of private interests.

The question of the nomination of the President and of Senators and Representatives in Congress by the people, instead of caucuses and conventions too easily manipulated by shrewd politicians for personal ends, should be kept to the front in every campaign until the emancipation of the people is complete.

Such questions as the control of corporations and other private combinations, the modification of tariffs, and the regulation of currency, will be rightly settled when motives of private interest give place to public good in all departments of government.

Those who have watched the fight for this principle successfully waged in Wisconsin under the leadership of Robert M. La Follette will agree that he should be the candidate and lead the fight in the coming Presidential election.

G. A. MARSHALL.

DARLINGTON, WIS.

The most important issue in the coming campaign is the trust question. This is a very broad subject because it involves the currency, tariff and railroad questions. Private monopoly should be abolished. This is the only remedy. Men are too selfish to be intrusted with the power to monopolize human necessities. The discussion of "good trusts and bad trusts" is simply child's talk. The only good trust is the one in which all the people are stockholders.

Who is the best candidate for President? William J. Bryan. Because he is absolutely

honest and has the courage of his convictions. His ability as a statesman is not surpassed by any living American. His love for power, popularity or money will not swerve him from a position which he knows to be right. Mr. Bryan is a courageous, consistent and persistent advocate of the reforms which the people need. His greatest ambition is to make the world better—to improve the condition of the human race by helping men and women to be better morally, mentally and physically. He would rather be right than to be President.

W. D. VINCENT.

CLAY CENTER, KAN.

The attributes of God are Truth, Love, Mercy, Goodness, Intelligence, etc.

These attributes grouped together are expressed by the one word—Christ. Jesus the Christ possessed the God-attributes in greater degree than any man who ever lived.

Now, a man who possesses the God-attributes in greater or lesser degree may be said to have so much or so little of the Christ in him.

Lincoln, for instance, had more of the Christ in him than most of the Presidents. His deeds proved this. In proportion as a man possesses the Christ so will be his proportion of right acting.

Therefore, the man who would make the best President is he who has most of the Christ in him. In my opinion, amongst the likely candidates for Presidential honors William Jennings Bryan best meets this requirement.

The most important issue is now (as always) to do what is right, and right doing can only be the action of the President who has developed the Christ in himself.

P. WAXMAN.

BUFFALO, N. Y.

How can we prevent the further concentration of wealth to the possession of a few persons?

Some distinct but inseparable questions involved in this issue are:

First.—A regulation of corporations so that neither by consolidation nor by increasing stock or securities can they get an unearned profit from the people.

Second.—A complete revision of the tariff.

Third.—A graded scale of taxation which will give the poor man a home exempt from taxation and which will practically confiscate for government support the income of the multi-millionaire.

Had he not disqualified himself by interpreting his first election as his second term Roosevelt would through his tested loyalty and the work already accomplished be the logical candidate. His "big club" methods, however, would prevent him being an ideal candidate.

By an unusual perception of the meaning and use of public office Governor Hughes is easily the best man for the present campaign. If we judge by his promises Mr. Bryan should be next. They can't lead us up to Uncle Joe.

MYRON C. MIGHILL.

SUGAR GROVE, ILL.

The most important issue before the country at this time is patriotism and honesty of office-holders. Second, such control of large corporations and trusts as will give the smaller dealer and capitalist a fair show in business in competition with large trusts and corporations, and will afford every laborer, whether union or non-union, an equal chance to secure employment and enjoy the remuneration to be paid for such labor.

Issues of great importance, but perhaps somewhat less important, are economy in administration of public affairs, the temperance question, and tariff.

For candidate we would name, first, Governor Hughes, of New York, and give as our reason for supporting him that so far as we know he has spent no time and given no effort to persuading the people they would get poor service and make a great mistake if they did not vote for him. A man who can go forward faithfully, continuously and incessantly in the discharge of his duties as a public servant and pays no attention and expresses no opinion as to who shall be elected to a particular office certainly challenges the admiration of a very large portion of our people.

OTTAWA, KAN.

A. WILLIS.

The leading issue of the coming national campaign seems to be whether our Government shall be run for the benefit of the banks, trusts and railroads, or whether a new way shall be tried, and the Government run for the good of the mass of the people. The money question will occupy the foreground. The banks will, thru the two old parties, attempt to get a stronger controlling hold on the country's life-blood of trade—money, so that they may continue, with the railroads and trusts to dominate the policies of the Government.

Among the Republican candidates La Follette seems to me to be the best man—a man capable and qualified to uplift his party, if given an opportunity.

The Democrats seem less fortunate. The perennial Bryan would, with some misgivings, be my choice were I a Democrat.

In the Socialist ranks will be found my favorite candidate. There the candidate, whoever he may be, will be the party's servant and not its boss. He will get my vote. I think Debs the best man. His party will eventually win.

ERNEST R. OSTROM,

Vice-President Fruit Growers and Shippers' Association.

SILLOAM SPRINGS, ARK.

The most important issues are either a continuance of the unwise laws and governmental policies that concentrate in the few, inordinate wealth with its abnormal power and corrupting influence; or, a return to a government of equal rights thru constitutional methods under our dual system, by and for the people, with provision for such direct action by them as will make representative agencies reflect the popular will.

Ability, knowledge of political philosophy,

courage, candor in discussion, insistence upon right rather than expediency, purity of character, capacity for work and extensive personal acquaintance with the statesmen of this and other countries—these constitute a valuable equipment for the Presidency. More than any other man I know William Jennings Bryan possesses these qualifications. Moreover, he wears well. Twelve years of unreserved criticism reveal him one of the most admirable and remarkable characters the world has produced, and despite clashing opinions that beat around every public man, he stands to-day unrivalled in the confidence and affections of the people. Hence I regard him as the best candidate.

LESLIE E. BROOKS.

MOBILE, ALA.

The most important issue in this campaign is a question not of special legislative action but of method.

Shall we continue to pay the price of progress even tho it costs us a more limited States rights, guarded business interests or infringement on a so-called personal liberty, when needed for the good of the commonweal; or shall we permit the dead hand to dictate the spirit and method of our legislation?

That the executive chair may do its part in carrying out this policy it should be filled by a man who in the prime of life has established unquestioned character and ability, who is in keen sympathy with needed reform yet has a fair and judicial mind, who is not satisfied with a penalty for a few but insists on justice for all, who will differ heartily with opponents and never bring reproach on his high office by forgetting the dignity and language of a true gentleman, who is not the creature of a self-perpetuating administration, yet would carry on its work with more of force and less of demonstration, who is not seeking the office yet will respond gladly and vigorously when sought for it. I should like an opportunity to vote for this man; for Charles Evans Hughes, of New York.

(REV.) H. C. NISSEN.

LEHIGH, IA.

The farmers, as well as many others, are disgusted with a tariff that is protecting and adding more millions to institutions of gigantic wealth that already compete with the world outside our own country.

We are commencing to feel that protective tariff is a thing very much for the other fellow, but a change made by the Republicans would likely be less disturbing than one made by the Democrats.

Those Rooseveltian principles which I can best embody as a theory to build the nation by first increasing and developing the resources and opportunities of the fundamental elements of any nation (the people) rather than concentrating his efforts at the pinnacle of a structure, with flimsy latticework as its support—a broader and stronger builder, not a higher one—will be mothered by both parties. And the candidate opposing his principles, with

possibly the exception of his army and navy expansion idea, is certain of defeat.

Mr. Roosevelt, because of his superior force and courage, should remain President until we obtain a representative Senate.

Senator La Follette is the next choice, because of his more central location and his acquaintance with the great agricultural interests.

My home and interests are on the farm.

JOHN GRATTAN.

BROOMFIELD, COL.

I am not a writer, but a farmer, and while plowing and harvesting the mind has much time for thought, and here is what I have been thinking for some time:

Every business interest except the farmer's is rapidly forming combinations for raising and maintaining prices of their product.

Then why can't the farmer? He certainly has as much intelligence as a hod carrier or a teamster, and they have their unions.

There is a tariff of 25 cents per bushel on wheat, and how is the farmer benefited? As he stands today, \$1.25 per bushel would not affect him in a normal year, simply because he is not in a position to take advantage of it.

We raise more wheat than we consume, so the tariff is inoperative.

But with an organization we could place a minimum price within the 25-cent tariff, for home consumption and, like other trusts, take what we could get for the surplus.

Wheat growers should combine, corn growers, cotton growers, etc., should do likewise, and then, if necessary, a federation could be formed afterward.

Five hundred thousand farmers growing a thousand bushels each could handle the wheat proposition easily.

The regulation of trusts is the most important issue and Mr. La Follette the best candidate.

W. P. FAULK,

STARKWEATHER, N. DAK.

A policy that will insure the equality and protection of all alike, and yet that legislation shall be for the benefit and the protection of the greatest number rather than a few privileged ones, for the common people rather than the influential and the wealthy; for the individual rather than the corporations and trusts. That the tariff laws should be so revised that they may not foster monopolies and trusts; that they may afford a protection to the greatest number rather than a few.

That all corporations and others doing an interstate business should be subject to the full control and under a license issued by the Interstate Commerce Commission.

That the Post Office should be so managed as to benefit the majority rather than the few. A parcel post system should be inaugurated. The Post Office should include a telegraph service. Postal savings banks should also be created as recommended by Postmaster-General Meyer.

That national bank deposits should be guar-

anteed by the national Government, from a fund created by a tax on all national bank deposits. This measure with postal savings banks would prevent the hoarding of money and would tend to solve the currency question.

For President, William H. Taft, as the best and most available candidate.

ALBERT C. PEPOON.

NORTHPORT, WASH.

One commonplace man, thru the weakness and non-enforcement of the law, has become a multimillionaire, while millions of others equally thrifty and industrious have failed to even gain a competence. Scores of honest investors have been fleeced by the Union Pacific-Alton deal. This one act has done more than anything else to "destroy confidence" in those who have their savings invested in the securities of corporations. The great corporations of this country have become the masters of the people and are greater than our Government.

The *readjustment* and *enforcement* of the laws so that everybody will get a "square deal" is the desire of all honest men. This should be the main issue in the coming campaign. A man who has the courage to advocate such reforms and then enforce the laws with a "big stick," if necessary, unmindful of the sneers of a subsidized press or the bluff of a semi-artificial panic is the man for the hour. The language of Lincoln's time, about changing horses amid stream, seems very appropriate at this time, and it is very unfortunate that the great American citizen cannot continue his work.

Mr. Hughes, of New York, and Mr. La Follette, of Wisconsin, would make a team that could not be beaten, for they would receive the support of the best in all parties.

INDEPENDENT VOTER.

SCHENECTADY, N. Y.

As a Republican of fifty-two years' standing observation and devotion and as a subscriber for THE INDEPENDENT of from fifteen to twenty years (can't say exactly), I have to say that I have never before had such difficulty in coming to a *preference*. Without knowing fully his qualifications I should take all the risk of preferring Hughes for President before all others, but for a candidate I fear he is *too good a man*, i. e., that it is *too soon* for a man of his stamp *to win*, combining, as he probably would, all the bad elements against him, the hards and the roughs, the sports and the grafters and professional politicians. I have little doubt Taft is the best qualified for the office, but he has little popularity or drawing qualities and well-known features to arouse bitter and unreasoning class antagonism; and above all the strange, and I am almost prepared to say the selfish and unscrupulous, determination and persistence of the President to force his nomination and inauguration, and give his great influence and sanction to the policy of an administration selecting its successor instead of the people themselves gives me just now more concern

to see Taft "put out of the running" as soon as possible, than any other pending question.

Fairbanks, Cannon and Knox are good, safe men, and it would be hard to predict which of them would be the wisest choice and most available candidate.

W. W. SICKELS.

INDIANAPOLIS, IND.

As viewed from the standpoint of to-day, the nominee of the Democratic National Convention at Denver in July is likely to be William J. Bryan. This will be a serious mistake for the party. Not that Mr. Bryan is not an able, honest and clean man, and would make a "magnetic" candidate, but he cannot be elected. Undoubtedly he is the most popular man in his party to-day, and the second most popular man in the country; but there are enough Democrats that are unalterably opposed to him to secure his defeat. No man can be elected on the Democratic ticket unless he has practically the united party back of him. Mr. Bryan, like Henry Clay, may run a third time, but, like Clay, he will meet with a third defeat if he does.

The man for the Democrats to nominate is Governor Johnson of Minnesota. He possesses many of the good qualities that Mr. Bryan does, and is in accord with most of his views on public questions. But there is not the prejudice against him that there is against Mr. Bryan on the part of thousands of old line Democrats whose votes are needed to secure success at the polls. Johnson could come nearer to uniting the party than, probably, any other man who could be named. He is an ardent tariff reformer and believes in making that the issue in the coming campaign. With Johnson, of Minnesota, and Wakefield, of Maryland, or Douglas, of Massachusetts, as the nominees, and tariff reform as the battle-cry, the Democrats would enter the contest with bright prospects of winning a brilliant victory in November.

DENVER, COL.

P. AUGUSTUS WIETING.

The tendency all over the United States to-day is for voters to disregard old party ties and divide into two camps, which are best designated as "Radicals" and "Reactionaries." The corporations of the United States will put forth the most strenuous efforts to control the Democratic and Republican conventions; and, owing to the divisions among the Republicans and the opposition to Bryan in the Democratic convention, buying delegates at so many thousand dollars each, they will succeed in having nominated by both the Republicans and Democrats anti-Roosevelt, reactionary candidates.

Let us, therefore, obliterate party lines altogether. Let these four good, patriotic Americans, who are the most influential men in politics to-day, namely, Roosevelt, Hearst, Hughes and Bryan, sinking their private differences for the public good, get together and have the Independence League nominate:

For President of the United States, Charles E. Hughes.

For Vice-President, William Jennings Bryan.

For Governor of the State of New York, Lewis Stuyvesant Chanler.

And just as in 1776 the issue was, "Shall we be governed by the British, or shall we govern ourselves?" and in 1860 the issue was, "Shall we be governed by the slaveholders, or shall we govern ourselves?" so in 1908 the issue is, "Shall we be governed by the corporations, or shall we govern ourselves?"

CHARLES NAISMITH.

NEW YORK CITY.

The great question at issue will be dishonest trusts versus the people. It will have another name on the part of the trusts. Honest men fear neither Roosevelt nor his policies. Roosevelt is strongest from the enemies he has made. If an honest administration, seeking justice and equality thru the enforcement of law will ruin the business of the country, then good men ought to pray for ruin—to such business.

A great mass of people believe in government ownership of all public utilities. These are not from the ignorant classes, but largely from the sober, thinking people, who compare the Post Office business with the railroad, express, telegraph and telephone business, to the utter discomfiture of private ownership, as compared to the Government's. These people are patiently waiting to see if the honest policies of President Roosevelt can be enforced. If they fail, the country will witness a mighty crusade against dishonest trusts. As in all great reforms, the innocent will suffer with the guilty.

No doubt Secretary Taft is best fitted to succeed President Roosevelt, and while we naturally dislike to have a President select his own successor, that seems to be the only way he can hope to see his policies fairly tried. The Roosevelt idea of government needs a Taft to carry it out, why quarrel with what we ought to accept as manifest destiny?

(REV.) JOHN KIMBALL.

MARLBORO, N. H.

The question of tariff revision is the most important one to come before the people at the next general election. Our great monopolies can be traced directly to the protective tariff. It has killed foreign competition, thus affording the opportunity for domestic industries to combine, and has yielded enormous profits to the monopolies formed, thus affording the means of subsistence and growth. Hence, with a revision of the tariff, which would reduce rates enough in the monopolized fields of commerce to permit legitimate foreign competition, the question of trust control would be minimized. With the disappearance of the trust evil the question of railroad rates will be reduced in importance, for all the flagrant abuses of the railroads in this matter have been committed in dealing with the trusts.

The people must bear firmly in mind, when choosing the men to do the revising, that they want men who will represent the interests of the people and not the interests of the trusts. This, in itself, is a harder problem to solve than most men realize.

As an admirer of President Roosevelt's ideas, and one who wishes to see them executed, I would favor Bryan as the most suitable candidate, for close inspection of the public utterances of the two men show that their views upon important questions are surprisingly similar, although the means proposed by each for reaching his ends are not always so similar.

E. P. KREUTZINGER,

Principal Tippecanoe School.

LAFAYETTE, IND.

Powerful interests are determined to turn back to the state of affairs of six years ago, and they have some very plausible reasons to present at this particular time, owing to the disturbance of our industrial and financial conditions. Unless these are skilfully and resolutely met, many voters will be led to think it desirable to have a rest, at least for a time, until we can get upon our feet.

As to the standard bearer at this time it appears to me Taft is the man because he is committed more than any one else to the ideals that have been presented by our President. He is believed to be sincere and resolute. His methods are different from those of our President and this is a distinct advantage to him, as many business men, especially, feel that the situation demands more tact and quieter, not to say less resolute, methods.

This is not to be considered as a criticism of our President. What he has done is going to grow upon the people more and more as the years go by. He has won undying fame.

In the carrying on of the cause further, a new order of talent is required, and I believe our President has seen that and this is the basis of his firm resolve not to run again, a position worthy to be compared with the high resolution of our first President.

Aside from Judge Taft no other person named so far has the qualifications demanded for the situation except Governor Hughes. I think the people generally are not so sure of him, because of their comparatively little acquaintance with him.

W. P. SAWYER,

President National Exchange Bank.

WAUKESHA, WIS.

During the last few years the disclosure of evils has been so widespread, the application of remedies has been so rapid and cures in many instances have been so complete in matters of the most vital importance to the welfare of the people and the preservation of the fundamental purposes of our Government, that we are apt to lose sight of both methods and men in the bewildering swiftness of the transformation.

While thru it all the central, commanding figure in the crusade was a brave and brilliant President, as the struggles practically all involved the rehabilitation and enforcement of old, and the framing and enactment of new laws, the arm upon which he rested, the mind upon which he most relied was that of his trusted personal friend, Attorney-General Knox, who, with unflinching courage and unerring clearness, pointed out the pathways

over which the journey must be made if the eternal principles of justice were to prevail in the obliteration of great evils and the elevation of the functions of the Federal Government above the atmosphere of doubt.

With this record to his credit, and with every line of it written into the history of his country, and with his splendid capacity proven for every great emergency, what more profitable act can his people perform with reference to their own welfare than to place him at the head of this great Republic, to which his heart has been so near, and to which his service has been so great?

JAMES FRANCIS BURKE,

(Member of Congress.)

WASHINGTON, D. C.

The most important issue in the coming campaign is the continuation of the policies of President Roosevelt: The equalization of rights and the establishment of righteousness, the overthrow of corporate and tariff oppression, justice for every man and special favors to none. The cry of the people is, "No steps backward." They want a President who will carry out the desired reforms with the least possible injury to any interest concerned; but they prefer one who may be a smasher to any "stand-patter" who might be content to allow things to be as they have been. They dread breakage, but they are determined to have justice at any cost.

If the money powers are wise they will not seek to prevent the nomination of a Roosevelt candidate. Mr. Taft is the strongest man, and he would prove stronger, even in New York, than Mr. Hughes; for, whether it be true or not, Mr. Hughes is regarded by many as the candidate of the anti-Roosevelt faction of his party, and he seems to have more sympathy than is necessary with certain corporate interests. Why should he fear that a two-cent mileage law might be confiscatory? Such laws are common in Europe. The highest mileage rate I paid last summer on a trip through several countries was for the poorest car over the worst track from New York, by way of the Erie, to my home. There was no need of the reference of that act to the P. S. C.

If Mr. Foraker, Mr. Cannon or a man of their stripe is nominated Mr. Bryan will not need to ask for the vote of one Republican.

(REV.) PETER CRISPELL.

MONTGOMERY, N. Y.

Doubtless you have read the article by the editor, I think, of the new magazine, *Human Life*, entitled "Weighed and Found Wanting," in which Governor Hughes is held up as a mere tool of Ryan, *et al.*, with the idea of belittling him in public estimation.

I trust you will not let this article go unanswered—it seems to me so grossly unfair. To any informed person the idea that Ryan could have long postponed an investigation of the insurance companies is unbelievable. That Hughes performed this service with marked ability and fairness cannot be denied.

There are several things that Hughes has

stood firmly for that make, I believe, a vast multitude of people look to him as the only proper candidate for President that has appeared. His appeal direct to the people in support of legislation; his freedom from political trading, dickering and clubbing makes one feel that such men are the ones to restore confidence in government by the people. Also his attitude as to corporations is one to inspire confidence of fair dealing on both sides, and of progress toward legal prevention of overcapitalization and kindred abuses, at the same time insuring justice to and prevention of corporate mulcting. Also to those who look at character, the contrast he makes to the Administration candidate is all in his favor. It would be well for the anti-saloon people of Ohio, who defeated Governor Herrick, to look up the Taft speech at New Haven, to Yale graduates several years ago, in which he made a statement, as I recall, to this effect: young men cultivate the friendship or acquaintance of the saloon-keeper, etc. Would such a man dare to take the stand Governor Hughes has, on racetrack gambling.

LOREN P. FIMPLE.

COLON, MICH.

The next issue will be one of reform—the demand for an impartial enforcement of law, and for new laws designed to protect all interests equally and fairly.

The issue will probably hinge more upon men than upon principles, for both parties will *platform* to revise the tariff, to curtail the trusts, to amend the financial laws, and to carry out reforms generally.

But the mass of the independent voters—who now hold the balance in power—will vote for that candidate who is a genuine reformer of proven ability.

Pre-eminently among the Republicans stands Governor Hughes, but since he has many advocates I shall pass him by.

Among the Democrats the most promising are Francis J. Heney, of San Francisco, and Gov. Joseph W. Folk, of Missouri. The former is not so well known nor so even-tempered as the latter.

Governor Folk has a record and a character that appeals to the honest thinker desiring the best government.

His action in fearlessly prosecuting all evil-doers in St. Louis, even tho these men were his political friends, started a reform movement that has touched every department of municipal, State and National government.

His answer to the Democratic leaders when, as a candidate for Governor, he was asked if he would support the party ticket regardless of who was nominated, shows clearly the character of the man. In effect it was, "I shall support my party ticket in so far as I believe that its election will be for the best interests of the State. But if any man is nominated whom I know or believe to be corrupt, undeserving or incapable, that man shall not receive my support."

These and many other acts, both public and private, endear Governor Folk to the masses

and make him a Democratic Presidential possibility of no mean reputation.

A. M. FOURT.

HOUSTON, MO.

The great issue is the curtailment of special privilege and its final extinction. Special privilege takes various forms. We have it in unduly high tariff, in combinations made by our transportation companies so that they have become monopolies and are able to dictate terms to their customers and have it in their power to make or unmake cities or individuals, and in power exercised by public utility companies of various kinds in the cities by which the public is compelled to pay excessive rates for light, transportation, or other services rendered. The revelations which we have had of the methods used to acquire special privileges of some sort or another and the frauds practised have convinced me and others that these special privileges must be cut out root and branch and that this is the great issue to-day.

Now, as to the man to meet this issue, my choice is Mr. W. J. Bryan, who has been the champion of popular rights and the enemy of special privilege ever since he began to take part in public life. He has always stood for a reduction of the tariff, for the curbing of the trusts and combinations and for the public control of natural monopolies. Many of the reforms which he has advocated and for which he was ridiculed in the past have been taken up by men who were his bitter opponents at those times, and it would be only a case of justice to place Mr. Bryan in a position where he can successfully promote the ideas and principles which are now being accepted by a great many American people. His high character, his devotion to the principles which he believes in, and his statesmanship commend him as the great leader whom the people to-day can safely trust.

My second choice would be Senator La Follette, of Wisconsin. With President Roosevelt eliminated from the campaign these two men stand in the front as the advocates of popular rights to-day.

SAMUEL TORGERSON.

GRAND FORKS, N. DAK.

The leading issue in the pending national campaign is the prohibition of the liquor traffic. We have reached a period in our national history when there is no longer any issue between the Democratic and Republican parties except the question of which one shall hold the offices. Mr. Bryan's party has absorbed the Populist party and platform, and Mr. Roosevelt has absorbed the Democratic platform. Indeed, there are now no two leading Republicans or Democrats who are so well agreed as concerning national policies as are Mr. Bryan and Mr. Roosevelt.

There can be no issue with these men as leaders between the Democratic and Republican parties, unless one of these parties shall forsake its traditional alignment with the liquor traffic, and declare for prohibition. This

can be scarcely hoped for, and yet the prohibition sentiment is so rapidly increasing in the South that the Democrats may be forced to take up the issue when their National Convention meets. If they do, they will carry the country this year, and the end of the Republican party will have come. If they do not, and if the effort shall be made to pitch a national campaign between these two parties on the old fictitious issues, the National Prohibition party can easily so impress itself upon the country as to make a victorious campaign possible this year, and certainly insure success four years hence.

As to candidates, almost any member of the Prohibition State or National committees would make good Presidential timber. There are A. A. Stevens and Homer L. Castle, of Pennsylvania; Alfred H. Manierre, Frank Taylor and Clinton N. Howard, of New York; J. A. Van Cise, of New Jersey; Charles R. Jones, E. W. Chafin, Oliver W. Stewart and Alonzo E. Wilson, of Illinois; Fred F. Wheeler, of California; I. H. Amos, of Oregon; A. G. Wolfenbarger, of Nebraska; Finley C. Hendrickson, of Maryland, and—as I have stated—almost any other member of our National or State committees.

J. B. CRANFILL.

DALLAS, TEX.

It is a fairly well conceded fact that the rank and file of the people are so well satisfied with the vigorous policy of the first modern President that the country has ever had that they actually deplore the necessity of change, while the reforms that have been inaugurated within such a comparatively short time are yet in their swaddling clothes.

It is therefore self-evident that the coming Presidential campaign will resolve itself into a question of selecting the man whose temperament will not only lead him to continue the reforms under way, but will inspire him to put the breath of life into new problems as they arise from the growing complexity of modern social conditions. This man must back up his moral courage with an enduring physical as well as a perfect mental make-up. He should be a young man, free from old prejudices, and thoroughly imbued with the idea that the new order of things has come to stay. Among the Republican candidates three men would fit my description thus far. But they differ in the fact that Senator La Follette is apparently considered a little ahead of the times, and for this reason would commend himself only to the more radical elements of his own and other parties. Governor Hughes is unusually reserved, and tho requested to do so, has declined to commit himself to any definite policies, but expects the people to judge him on his record, which is embodied in the Public Utilities Bill, now in force in New York, and a veto of the two-cent rate measure passed by the New York Legislature upon popular demand. A man who has given himself up to the practice of law as long as Governor Hughes has done may look at things from an impartial but seldom from a thoroly human standpoint.

The other man whom I have in mind first came into prominence in like manner, not on account of any special political backing, but because he was the most available man to inaugurate a new idea in colonial government. His tactfulness then and remarkable executive ability in his subsequent career are well known. His experience and close identification with the Roosevelt régime mark him as the one best qualified to carry on the present policies. He has come sufficiently in contact with all classes of people to appreciate their ideas in a practical and sincerely human way. In order to prevent any *coup d'état* in the Republican Convention, every one should make it a point to reconcile minor differences of opinion so as to insure the nomination of Secretary Taft.

FRED R. MICHAEL.

KANSAS CITY, MO.

The Issue: I believe it to be the policy of many leaders in both parties to make the tariff the main question of the coming campaign. And I believe that their object in so doing is to take the public mind from the consideration of the real issue—the one that must be settled eventually as decisively as the slavery question was two generations ago—that of the relation of public service corporations to the public.

1908 will not be the year in which the question shall be settled. Indeed, there are not lacking signs that, while it may be widely discussed, it may receive a temporary setback. Circumstances at this moment are such that it is probable a large section of the public are desirous of hearing no more of it, and this feeling is skilfully fanned by special pleaders, who insistently proclaim that all our troubles are due to malicious attacks on vested interests. But it will not down—except temporarily; probably not even to that extent. Therefore, that ought to be the issue.

The Man: Not Taft. Although he ostensibly represents the policies of Roosevelt, he is a reactionary. And even if he sincerely represents those policies, what do they amount to save noise? If there is any good thing which has come out of Roosevelt's course, it is that he has directed public attention to the greatest question this country has ever faced. But if Roosevelt remained in the White House a century we would not advance. Taft might echo; he would not do more.

Cannon, Fairbanks, Knox, Cortelyou—peas in a pod could not resemble each other more. Vested rights—and vested wrongs, too—need fear naught from these. Hughes—(?).

For the other side there is Bryan. Bryan is Roosevelt out of office. Johnson, of Minnesota, has stated that the tariff is the ruling question. It is not, because both parties have declared for revision; it only remains to decide which shall revise it. That exhausts the prominent Democratic possibilities.

But there is one man who has done more than he has talked: A man who has proved he is headed in the right direction. As Governor of Wisconsin and as a United States Senator, Robert La Follette has been a mighty man of valor, and his fight has been the fight

of the people. Another advantage—his candidacy would surely bring to the fore *the* issue.

Therefore, La Follette and the question, Shall corporations rule the country, or the country rule the corporations?

A. J. PORTENAR.

BROOKLYN, N. Y.

In the West we find it hard to say whether the revision of the tariff is the chief political issue or else the consummation of loan policy of the rectification of the "interests" which President Roosevelt has so grandly inaugurated. Little attention is paid to the tariff by the old line politicians, who fancy they own the country, but the sense of outrage on the part of us lay people over its abuses, its opportunities for plunder, is growing and deepening and will eventuate some of these days in a protest so overwhelming that it will be sufficiently revolutionary to be reconstructive.

On these great subjects, which are sufficiently interlocked to be identical, it is easy to see that Taft is the appropriate representative candidate. He is near enough to the people to champion their interests out of a sympathetic heart and good enough to unite the antagonistic sentiments of every section and class in their efficient promotion. Taft enjoys the prestige of a career of integrity, his statesmanship is comprehensive enough to hold conflicting claims and well balanced equilibrium, and it is well understood that he is sufficiently brave and tenacious to adhere to a course his conscience approves without danger of surrender to cajolery or threats.

Massive of intellect, quick of penetration, candid, versatile, experienced, human, patriotic, the American people have an incontrovertible apprehension that the affairs of State will be safe in the keeping of Taft, that he is bone of their bone and flesh of their flesh in a true spiritual sense, and with irresistible determination they are determined to repose in this man, who so thoroughly grasps the claims of their diverse needs, the Presidential administration of their political welfare for the next four years.

Of Bryan, his only possible competitor, nothing prejudicial to the honor of a Christian gentleman can be said, but as an administrator he is too weak and vacillating ever to be trusted with the helm of the national affairs. For one while he is very persistent in his advocacy of municipal ownership, and then apparently for reasons of expediency vacates his defense of this article of his platform as if his convictions were never seriously lodged in it. And then his pains to come to the side of Haywood and the Federation of Western Miners, when on his Western tour, has blackened his record irretrievably. Shall it be said that a prostituted judiciary will permit the murderers of Steunenberg and Brown to go unavenged and that a Presidential candidate must pander to a series of assassinations around which unstinted money has succeeded in throwing the sancity of law because the labor vote is essential to the election of the Democratic candidate for President. Not while the heart of the West cherishes its indignation at the foulest judicial wrongs of the century—those in connection with the Steunenberg trial. CIVITAS.

Our Prejudice Against English Game Preserves

BY DWIGHT W. HUNTINGTON

[Last October we printed two articles from Mr. Huntington arguing that our present game laws are actually exterminating our game and that we must reverse our entire policy if we are to have hunting for the sportsman or game in our markets. These articles have excited so much interest thruout the land that we have asked Mr. Huntington to develop the subject in several more articles of which the following is the first.—EDITOR.]

TWO reasons may be assigned for our not having adopted long ago the English system of game-handling which we know makes game plentiful. There was no necessity for game preserves so long as the birds were abundant in the fields and came in carloads to the markets; and there always has been a prejudice in America against the English methods of individual and

syndicate ownership¹ and of sport. This prejudice, I have observed, is most strongly entertained by those who know the least about the subject.

So long as the birds were plentiful in the markets neither game dealer nor sportsman needed preserves, of course. As the late Mr. Charles Whitehead well

¹This will be discussed more at length in another paper where an important legal blunder will be pointed out.

said it requires the extinction of a valuable game-bird to teach the average American the importance of its preservation. Some of our game-birds have already met the requirement and can never be restored; others have been exterminated in some States and have so nearly met the requirement in many others as to cause the great alarm, which has been expressed in a thousand futile game laws which can only delay the evil day of ex-

in nowise warrant the assumptions above stated.

Before proceeding to examine the English methods I wish to point out that the prejudice against big bags and the sale of game (which has been literally lashed into us by those who believe that restriction is the true and only method of game preserving) must not be entertained against those who have grouse or quail or turkeys or wild fowl in such abun-

PRINCE OF WALES GROUSE SHOOTING.

inction and meantime put an end to good sport.

Our prejudice against the English system is based on the assumption that in England the shooting is only for the rich; that all bags of game are excessive and that the shooting is at tame birds.

The majority, quite naturally, are selfish enough to be unwilling to turn the shooting over to those who have abundant means. We have been taught by somewhat drastic methods to believe that the taking of more than a very small number of birds is indecent and even criminal, and high-spirited sportsmen, such as we rightly believe ourselves to be, do not care to shoot at tame birds. We shall observe presently that the facts

dance that the birds are in danger of epidemics from overcrowding. This would evidently be unfair to the birds as well as their owners.²

It must be remembered that vermin plays a part which is highly beneficial to the birds, because they increase with startling rapidity and soon become far too numerous for their own good if unchecked. "Lighten any check," says Darwin, "mitigate the destruction ever so little, and the number of the species will

²I say "owners" advisedly. I cannot but regard birds imported from England and even native birds which are raised on private grounds as being practically the property of those who have the legal right to prohibit others from taking them. Until we give the care of the birds and the practical ownership of them to the land owners no large number will look after them or protect them from vermin. Our legal blunder will be discussed later.

almost instantaneously increase to any amount." The increase is well known to be in a geometrical ratio,³ and such tendency to increase, Darwin says, "must be checked by destruction." Here we have the scientific principle upon which

THE BAG.

practical game preserving is conducted. The checks to increase are removed (very easily, as we shall observe);⁴ the birds increase with wonderful rapidity; the shooting is good because the birds are plentiful, and necessary because "increase must be checked by destruction," and we have removed the natural cause of destruction, *i. e.*, vermin. If we destroy vermin and thus make the birds abundant, and then cannot shoot over five of them without being denounced and arrested, it is evident that the birds will suffer from epidemics on account of our folly; it is also evident there will be little practical game preserving so long as we can shoot only five birds.

We must, therefore, dismiss from our minds the idea that big bags of game and the sale of the birds are disgraceful, and we must eliminate from our laws the sections which make this disgrace a crime, at least so far as those who preserve the game in a sensible and practical manner are concerned. It has been proven be-

yond a doubt that game cannot stand the ravages of vermin when cats, roving dogs and rats are added to the long list of their natural enemies; and it is evident that those who wish to shoot must first relieve the game from such checks to increase before there can be enough birds to make the shooting worth while, or even to save the race from extinction as population increases and illegal shooters, trappers and the destruction of covers and other ills are added. Our teaching so far as big bags and the sale of game are concerned has been so much overdone that most of the people and some of the game officers now believe that big bags and the sale of game are wrong *per se* and that they should not be countenanced in any place or under any circumstances. There is cumulative evidence that this idea prevails. In their last report the Minnesota Game and Fish Commissioners say:

"We believe it to be a *crime to allow our game and fish to be sold as merchandise*, because it belongs to all the people in their sovereign capacity."

This is peculiar, since in effect it says that it is a crime to allow the majority of "the sovereigns to have any game, since we may safely assume that the majority of the people do not shoot but like to eat quail or grouse."

The idea expressed by the game officers has been carried into the Minnesota statutes recently and applied to wild fowl, so that it is now unlawful to sell even wild ducks in that State.

There can be no doubt that the minority of "the sovereigns" of Minnesota have been actively engaged in connection with duck banks, prairie falcons, coyotes and other vermin in destroying the State property. The president of the Minnesota Board of Game and Fish Commissioners, in a letter to the writer, says that three of the best game birds in the State "*will soon become a thing of the past*"; but it should be remembered that two of these birds (in many States) have had a full measure of the protection now given to the Minnesota ducks.⁵ As population increases the ducks will become as

³See the statement as to the increase of bobwhites from a single pair in THE INDEPENDENT, October 10, 1907, page 650.

⁴In a paper, to follow, on game enemies.

⁵One of these birds, the prairie grouse, has been reduced to four covies in the State of Michigan. The ruffed grouse has decreased in many States under restrictive laws.

scarce in Minnesota as they now are in New England mill-ponds, unless some one looks after them properly.⁶

The poetical Indian word, Minnesota, means land of the sky-tinted waters, and the State is dotted with many thousands of beautiful ponds and lakes which not only reflect the image of the sky but are peculiarly suited to the needs of wild fowl. If one-tenth of these lakes were properly looked after, as such waters are in England, and the ducks were multiplied as they are there, there would be more ducks in Minnesota in a very few years than all of the people could possibly shoot or eat, and a vast amount of money would flow into the State on account of the duck shooting, just as money now goes to Scotland in large amounts on account of the grouse.

The shooting would be best, no doubt, near the preserved ponds and lakes, but there would be better shooting on all of the Minnesota waters than there is today, and, in the writer's opinion, the ducks would be so cheap in the markets as to make market gunning unprofitable.⁷

There are many so-called duck preserves in Minnesota, as there are everywhere in the United States. There has been a general complaint that the desirable places for duck shooting have all been taken by the clubs. There can be little doubt but that the shooting at the clubs contributes to the diminution of the fowl, since for the most part they destroy more than they create.⁸ This is because they do not understand game preserving.

I have referred to the foregoing matters at some length before discussing our prejudice against the English system, since it is evidently necessary, as I have intimated, that we should disabuse our minds considerably before a study of the English system can serve us in any way.

We may assume that we are not prejudiced against the English system because

it makes and keeps the game birds abundant, since we are now spending millions of dollars in the effort to do the same.

We proceed to examine the prejudice which is based on the belief that in England the shooting is monopolized by wealthy men who shoot tame birds in a way quite foreign to our taste.

It cannot be denied that there are many large estates in England, owned by wealthy men; that these estates are well stocked with game; that large bags are made on these estates every autumn, and that the shooting is often done at the *battue* where, I may observe for the benefit of the non-sporting reader, the birds are driven from the covers over a line of guns.

Our ideas of English sport are largely, if not entirely, formed from reading the accounts of the big shoots which are the only ones of sufficient importance to be mentioned in our papers and magazines. We have even been led to believe that shooting over dogs has been abandoned. The English magazines, however, con-

SHOOTING PRAIRIE CHICKENS.

tain many stories of days afield which resulted in small bags of game which were made over pointers and setters in the same manner that our small bags are made. I had, quite recently, an account of a city man who spent his holidays

⁶The method of making and keeping ducks tremendously abundant and cheap in the markets will be discussed in the paper on "Wild Ducks," later.

⁷To argue that this is not so is to argue that we are not as intelligent as the English people, who restored the wild fowl and made them "absurdly cheap" in twelve years' time. This also will be referred to later.

⁸For accounts of excessive shooting at the clubs see "Our Feathered Game," p. 31. The shooting is only excessive because the clubs do not first increase the number of the fowls as they should. They are not game preserves probably because it don't pay; most likely because they do not know the method of increasing the game as stated.

shooting on a small farm in England. The first day his bag contained three and one-half brace of pheasants, one woodcock and two and one-half brace of partridges—thirteen birds all told. Similar bags were made during the other vacation days. The shooting was over a dog and was more difficult than similar shooting is in America, since the birds were wild and did not lie well. It is a well known fact that the English and French partridges (both of which were in the bag) do not lie as well as our bob-white partridge does. The birds were on the farm because the farmer was a game preserver; the price paid for the shooting was small, and if the sportsman sold the birds he did not use, his shooting cost him very little and probably nothing.

The many English syndicates formed to share the expense of a game-keeper do not hesitate to sell the game, and the proceeds so reduces the cost of the shooting as to enable men of moderate means who do not own estates to shoot. A point that should always be remembered is that the birds are abundant because they are properly looked after.

The grouse on the moors of Scotland are shot at the *battue* and also over dogs. Some Americans who go to Scotland take their dogs with them and shoot the red grouse in exactly the same way that we shoot (or used to shoot) the prairie grouse. It was recently stated in an English paper that an American had the best dogs on the moors.

Both the red grouse and our prairie grouse nest in a wild state and the two birds furnish similar shooting, save that the tramping in the highlands is, if anything, more difficult than tramping over the prairies is. The important difference is that the red grouse are always abundant on the moors because they are protected from vermin, and our prairie grouse are everywhere scarce, growing scarcer and soon will be extinct, because they are not so protected.

Our idea that the shooting in the British Isles is always at tame birds, which are easy marks, has been formed from reading the accounts and looking at pictures of pheasant shooting, but even the shots at the hand-reared pheasants passing overhead at full speed are far more difficult than the shots at our prairie

grouse over dogs are. A writer for *Harper's Weekly* says:

"There is no kind of shooting, I think, that requires surer marksmanship than the *battue*. . . . It is not a wild sport, but it is a sport in which skill is everything. Its sporting equation would be: 'The *battue* is to stalking grizzlies as billiards is to football.' I have shot prairie chickens over a good red setter in the stubble of Wisconsin fields, and have had my day in a boat on the reeds for wild ducks; now, believe me, in neither instance does the game have so fair a chance for his life as he does in a *battue*, when he is flagged out of the bush or copse, and driven down upon your gun."⁹

I am inclined to dislike such shooting because, as the writer says, "It is not a wild sport." I much prefer (as I believe most American sportsmen do) the ramble behind the dogs and the seeking of game in picturesque fields and woods to a stand where the fast-flying pheasants are driven overhead; but, to be fair, we must admit that such shooting is more difficult than most shots over dogs are. Pheasants which are reared in poultry-yards¹⁰ and turned out for the shooting are not nearly so interesting as our own bob-white and ruffed grouse are.

When we consider that such prejudice as we have against the English system is due to the half-tame "poultry-yard" pheasants, it seems unaccountable that our State game officers should propose to give us pheasants from State "poultry-yards" in exchange for our native game birds, which we regard as true game on account of their wildness and refusal of domestication, and which are, in fact, the best game birds to be found anywhere thruout the world.

I view with alarm—we all should—the tendency of our State officers to substitute pheasants for quail and grouse. Think of it! Half tame pheasants handed out from State coops in exchange for bob-whites and ruffed grouse! Would it not be far better for us to unite in groups or syndicates, as they say in England, and not only save our native birds from extinction but make them plentiful. There is room enough in America for all. I have the evidence that we can do this and that the shooting will cost the sportsman

⁹See "Our Feathered Game," p. 54. The writer's name is not given in Harper's. American field shots who shoot at the *battue* for the first time are usually beaten by the Englishmen.

¹⁰Stuart Wirtley, a talented English writer, uses the word in connection with pheasants.

little or nothing—*absolutely nothing*¹¹ on individual and on syndicate preserves which are economically conducted. The shooting will be just such as we like and our fields as they are today; and besides we can shoot when the weather is fine and bag enough birds to give some to friends who do not shoot.

The substitution of pheasants for our native birds seems to be the last despairing act, necessary not because of any fault of our game officers¹² but only on account of our legal system of game-handling which stands directly in the way of practical game preserving.

There is an abundance of evidence that

for the shooters of that State and foreseeing (what has since happened) that they could buy no more, say:

"The Lacey act and the stringent laws preventing the removal of game from the other States, *even for propagating purposes*, makes it doubtful whether we will be able to secure more birds in the future, and we believe it is only a question of a short time when it will be impossible to purchase quail at any price from a sister State.

"With this condition rapidly approaching it behooves the people of New Jersey to provide a substitute, and the ringneck PHEASANTS are the only birds TO TAKE THE PLACE OF QUAIL.

"The more your commission comes in contact with and studies the habits of this noble

DUCK SHOOTING NEAR CHICAGO.

this wretched substitution is necessary, and that it has already begun.

The New Jersey Fish and Game Commissioners having purchased some quails

¹¹This evidence should be set out at length and must be diffused. The proof is ample and interesting. The methods are also interesting.

¹²It will be observed that the laws of the United States (the Lacey act referred to) and State laws tie the hands of the game commissioners.

bird, the more we are convinced of the fact that it is the coming game bird to take the place of the quail."¹⁴

¹³The time came almost immediately as predicted by the observing game officers.

¹⁴Two important questions are deferred to another paper (1) Can the bright plumaged pheasants be expected to survive in fields where the protectively marked quails have been exterminated? (2) Do the pheasants fight ruffed grouse and quails and thus aid the extermination in places where any native birds remain?

Our game laws and the notions which precede them are like the measles. One State after another catches them. The State, where New Jersey purchased the quail, caught the notion that it was "a crime" to permit the sale or shipping of birds for propagation and the notion became a law as usual. The quail crop of Alabama had been yielding thousands of dollars. The birds are still plentiful there.

If the land owners in Alabama will properly look after the quail crop it will immediately yield more than potatoes as it was doing before the epidemic set in.¹⁵ "Mitigate the check" due to vermin, "ever so little and the number of the species will almost instantaneously increase to any amount." Would it not be wise for the State to impart this information and say to all who will properly look after the birds, you may have a license to shoot, sell and ship the birds as freely as they do in England? Alabama is no better equipped to look after foxes, hawks, crows, cats and other vermin and illegal shooters than the other States are, and restrictive laws will do no more for her than they have done for other States. No crop on earth can be made to grow and increase by restrictive laws.

That the idea that we must abandon our native game birds to their fate and substitute pheasants and other foreign beauties in their stead, is spreading, is well known to all who study game. Witness the following from far-away Utah:¹⁶

"With the strong prospect of our native grouse running out, as they undoubtedly are doing fast, something should be done to introduce some of the best Eastern and Euro-

pean varieties of game birds, such as the capercailzie, which is a game bird attaining a weight of fifteen pounds."

How the Utah vermin, wild and tame, and the illegal shooters, specially complained of in the report of the commissioner,¹⁷ can be expected to overlook the fifteen-pounders I fail to comprehend. If a few of the big capercailzie should by chance run this gauntlet safely I believe the unorganized Utah sportsmen can hit such marks since they seem to have about finished the remnant of grouse according to the statement above quoted.

Utah has an abundance of large-sized vermin which will, no doubt, appreciate the big birds. The vermin is said to be increasing:

"From all reports received from the county wardens and deputy State commissioners, the predatory animals, such as the bear, cougar, lynx and wildcat, seem to be increasing and it is a matter of common and truthful report that they are all preying vagabonds upon all domestic animals and birds and wild game as well. They are a howling calamity difficult to get rid of."

Any one who has heard the vesper chorus of the beasts in the Utah woods, as the writer has, can appreciate the poetic sentence last quoted.

The sportsmen of Utah should overcome any prejudice they may have against the English system and organize a few syndicates to own large preserves where good gamekeepers will prevent vermin from eating most of the game as it is now doing. Men can be enlisted to prevent the grouse "running out" in Utah if they are granted the right, as such men are in England, to deal with the game they save as if it were their own.

We may easily adopt the English system of game saving without adopting the English method of shooting at driven birds,¹⁸ and places where the birds are made abundant (more so than they ever were) will surely be of great value and will grow more so provided, *and provid-*

¹⁵ "The potato crop in Alabama last year yielded \$645,746." (Year Book, U. S. Dept. Agr.) "Not less than 9,000,000 quail are killed in Alabama each year." (Report State Game and Fish Commissioner.) Quail were worth last year \$10 per dozen for propagation.

¹⁶ Illinois also has started a large poultry yard for pheasants. Ohio and Indiana both had such establishments and I am glad to record their failure. Massachusetts has one and has turned out a lot of pheasants. Minnesota and some other States are giving attention to this business. The writer insists that the time and money should be expended in organizing and aiding private game depots thruout the State where the native game birds will be made tremendously abundant by those who are encouraged to do so. Such game preserves will be a benefit on account of the overflow, as they have been in other States (this will be referred to later), and they can supply birds to the State if it wishes to continue restocking empty fields. The amount taken by vermin will be stated in another paper. The figures are almost beyond belief and indicate that the trouble we have is on account of the destruction that occurs before the shooting begins.

¹⁷ Italians, Greeks and Chinese are mentioned. The first named shot seven game officers in Pennsylvania according to a State report. It is evident, as we have insisted, that the State cannot be expected to look after foxes, weasels, etc.

¹⁸ The writer believes the shooting at driven birds on the sage plains and on the prairies will prove an interesting diversion and will be deemed highly proper provided the birds are made tremendously abundant, as they can be, by good gamekeepers. Such places would command high rentals provided they be not restricted by law.

ed only the laws favor those who will do something practical.

I am sure the plan of perpetuating field sports by the introduction of the capercailzie as proposed by the Utah Commissioner is a mistake. I do not hesitate to point it out since it illustrates the rapid growth and spreading of an idea which is surely wrong. I am much pleased to observe that the Utah Fish and Game Commissioner has made a bold stand against another prejudice which stands in the way of game preserving, and to say that he makes a valuable suggestion which, if applied to game birds, will do much to solve the game saving

¹⁰I refer to the commissioners *aiding* those who are going into the business of trout rearing *for profit*. If the ignorant prejudice is as strong in Utah as it is claimed to be in New Jersey, and undoubtedly is in most States, the commissioner is a brave man. I believe he has pointed out the way to save the game birds and make them abundant, and is entitled to much credit for so doing. "*Aiding*" not "*Restricting*" will surely save the birds.

problem, not only in Utah but everywhere. I shall refer at length to the statement of the Utah Commissioner at another time.¹⁰

There is some evidence that our prejudice against the English system (which prefers game birds to vermin) may be made to disappear before "the birds are gone." I have visited a number of places in several States where the prejudice has been overcome, and have seen our native game birds tremendously abundant in the care of English game keepers who justly were proud to show me quantities of dead cats, hawks and other such vermin and more live game birds than I have ever seen anywhere in the United States when they were abundant in our markets. Believe me the sight is well worth seeing; the act is well worth doing, and it will pay.

YONKERS, N. Y.

The Japan of 1907

BY J. H. DE FOREST, D.D.

JAPANESE CORRESPONDENT OF THE INDEPENDENT

THE one strange fact of the year is the sudden change of feeling toward Japan by sections of people in pretty nearly every nation, and especially in the United States. It will go down in history as the year that disclosed mistrust and even ill will by the nation she has always regarded with deep affection as her very best friend, and for whose sake she would make heavy sacrifices if need be. From this great republic, whose sympathy during the war with Russia was one of Japan's most prized assets, has come slap after slap right in her face. A blow from a friend, repeated blows and insults, until the insane cry of war was taken up by our sensational press and responded to by the same style of press in Japan.

Nothing has amazed Japan as have these insinuations, and even charges, that she was only watching for a chance to

attack us, knowing that she was fully prepared while we were in no position to defend our island possessions of the Pacific!

What Japan has endured during this last year, of astonishment, of pain, of bitter disappointment, of rising resentment, it would be hard to tell. For not only has our republic been her best friend and her "beloved teacher" for half a century, but Japan has never ceased to have a rare and profound friendship for America. To be held up by her former friend as one with sinister designs, as treacherous, has given her a wound that would be hard to heal were it from any other nation. The real heart of the real Japanese nation is sincerely expressed in the words of a high official to me: "We cannot fight America—our friend."

And the millions of Americans are beginning to see thru the purposes of

our jingo press and thru that envious section of Europe that would delight to involve us in war with Japan. The new year opens with a better understanding of each other. Mob violence against Japanese in a section of our land and the immigration problem are serious matters, but they have not broken the real friendship between the two nations.

It seems to me that now is the time to call in mind the very great debt of gratitude we owe to Japan. For decades everywhere I have been in Japan I have been profoundly thanked by Japanese of every class, high and low, army and navy, men and women, for the exceptional friendship of our republic ever since Perry's day. During the war with Russia I could hardly hold a conversation with any Japanese without an expression of this deep sentiment. To which I often replied: "Yes, the sympathy of our republic at this time I know is of very great value to Japan. But we Americans do not forget that this war is one of representative institutions and religious liberty against despotism in church and state. Sooner or later we Anglo-Saxons would have to fight this war, were it not for you. You are in truth fighting our battles for us. We shall never forget the vast sacrifices you have made for the liberties that are dear to us."

This statement was founded on the fact that in Russian advanced schools it was taught that the destiny of Russia is to conquer and control all Asia, which meant the subjugation of Japan and the expulsion of England from India, and ultimately desperate war for the control of the Western Hemisphere.

Since then one of our ablest and best known American citizens has put in my hand the following impressive information:

"In 1840 a number of American diplomats were in London and a banquet was given at which only Americans and Englishmen in public life were present. Lord Palmerston was one of them. He spoke last. For awhile he indulged in a prevailing tone of pleasantry, but after awhile he fell into a far more serious strain. He spoke with great earnestness of the importance of closest friendship between the two great English-speaking nations, and how helpful they could be to each other. He said that men in their position could see, if they would but look, far more in the political situation than appeared on the surface. He looked with apprehension to the future. He

believed that before the close of the nineteenth century the most gigantic war in the annals of the world would be precipitated on the nations. In that war it would not be a struggle for territory, nor for mere commercial advantage, but it would be a contest of ideas—of opposing principles. It would be a conflict between absolutism and constitutional government; between despotism and liberty—whether the people should rule or the will of one man or class should be the law. In that conflict, said he, Russia, by the necessities of the case, must lead the forces of absolutism and most of the organized governments of Europe will support her. The Czar stands for personal authority in its baldest form. By a like necessity England must lead the forces that strive for constitutional freedom, for civil and religious liberty. He sadly confessed that his own country had often been untrue to her ideals, had often been unscrupulous and oppressive in advancing her interests, yet, wherever she had gone and established her rule, there she carried free institutions, and had given to conquered peoples the benefits of her own civilization as fully and as rapidly as they could receive them. She established order and administered justice according to law. He then said with great solemnity: "In that terrible conflict I believe that liberty will win; but England, standing almost alone among the nations of Europe, will be prest and strained beyond any past experience. Her resources will be tried to the utmost, and if in her extremity she cannot reach forth her hand to her mighty daughter beyond the Atlantic and receive help and encouragement, then woe to the hopes of the world for civil and religious liberty. If the forces of freedom be not united, ruin is certain."

Instead of falling to England to fight this "gigantic war," it fell to her noble and brave ally, Japan. Her marvelous victories on sea and land, while saving her national existence, have given strength and joy and safety to all the nations that love liberty. It is simply political madness and a huge crime for sensationalists to try to poison the minds of those who have no time to learn the real situation, and to attempt to make war in this twentieth century with one whose army stood shoulder to shoulder with the allied armies of the West in the relief of our representatives in Peking, and whose battles in Manchuria were, as Count Katsura, the then Premier, expressed it to me, "*Jiu sen*," a *Liberty War*.

Moreover, the possibility of a war far greater than Lord Palmerston foresaw may fall to this century. The millions of the East and the millions of the West are coming together, differing in their civilizations, their religions, their moral standards, and, more than all, in their

languages. The one power that can help us of the West to solve peacefully the staggering problems that are already looming up is Japan. If we of this great republic can only retain unimpaired the invaluable friendship of Dai Nippon, in whose diplomacy there is no shadow of "treachery," and in whose national character is a deep love of righteousness, we shall pass down to our children problems difficult enough, but by no means insolvable. On the other hand, if we alienate the warm friendship of this nation, so that world problems must be solved on lines of yellow and white, it will be "after us the deluge" for our descendants. The invisible line that separates the East from the West now runs thru the Yellow Sea. Don't let us shift it back again into the middle of the Pacific.

So far I have mentioned only the international aspect of the Japan of 1907. The great problem within itself is Korea, and possibly the great problem in Korea is the amazing missionary success. That all sorts of irregularities, accompanied by barbarities, have taken place in Korea goes without saying. Had the Korean problem fallen to us or to England, the world would have witnessed just about the same wicked and brutal incidents, probably on a much larger scale, for Anglo-Saxons have very limited powers in handling a people of different color and language and religion. Japan's action simply saves the peace of the East and consequently of the world. And no nation ever tried with more sincerity and sacrifice to save another than has Japan to save Korean independence. But with such a deceitful Emperor and such an ignorant people, who had nothing to correspond to our laws, who were utterly unable to protect themselves not only from the outside world but from themselves, who knew intrigue as their best path, who were debased and dispirited by ages of oppression, it was to be expected that all kinds of injustice would befall

individuals. Yet Japan has given Prince Ito to Korea, a man of righteousness and justice and peace, the ablest and kindest statesman of her Empire. I know some of the men he has taken from responsible positions to aid him in Korea, men above reproach. I know he hates the adventurers who have swarmed there from Japan and are making the troubles so hard to control. If any man can control them it is Prince Ito.

That wonderful missionary conquest of the northern half of Korea is attracting the attention of the Christian world. But for Prince Ito, I believe that movement would be in grave danger of ending in some political disaster. When Korean young men got hold of the Y. M. C. A. movement, they jumped the traces and began to rush it thru town after town as a political movement of a dangerous character. The real Y. M. C. A. at once had the authorities stop the use of that name for any organization that was not sanctioned by the central Y. M. C. A. With a suspicious and easily excited people, with no time to educate the crowds coming into the church, with no power on the part of foreign missionaries to get the clues to any secret movement that might spring up, what a chance for a political movement to recover Korea's rights, one that would bring suspicion and disaster to the missions of all the East. But with Prince Ito in charge everything is as safe as can possibly be. There is no nation on earth that handles religious problems with the skill that Japan has shown. There is no native church in all the mission fields so powerful in touching national life and so free from martyr-blood as is the growing church of Japan. The question of state and church stands high in France and England and even in the United States, where "In God we trust" is omitted on our coins; but Japan is really the teacher of all nations when it comes to problems of church and state.

The Trouble in the Navy

BY PARK BENJAMIN

MOST people do not understand what all the trouble in the Navy, now filling columns in the daily newspapers, is about. Small wonder, seeing the multiplicity of questions involved and the complexity of some of them. This is an attempt to make things plain.

There are three distinct subjects. First, the ordering of a naval surgeon to command a hospital ship. This is important because it involves not only a fundamental subversion of the customs of the sea from time immemorial, but strikes directly at the discipline of the Navy. Second, the resignation by Rear Admiral Brownson of his office as Chief of the Bureau of Navigation. This is a result of the foregoing subversion. Third, certain alleged defects in the construction of the battleships. This has nothing to do with either of the other subjects, but happens to be brought with special prominence before the public coincidentally with them. I shall deal with each in turn.

I. The Naval Surgeon Command Question.

A year or so ago it was decided to construct and equip a naval hospital ship called the "Relief." Secretary Bonaparte endorsed, on the recommendation of the board appointed to consider the matter, a suggestion that the ship be commanded by a naval surgeon, with the assistance of a merchant master or navigator, instead of by a line or military naval officer. When the ship was completed his successor proposed to follow that suggestion, which was approved by the President. The line officers of the Navy, and, indeed, about everybody conversant with sea customs and naval discipline, believe this course to be wrong. To see why, it is necessary first to understand what a naval hospital ship really is, and what it is for. It is a vessel forming an essential part of every fleet, especially fitted and designed immediately to receive and care for the wounded in event of an engagement. The modern army hospital system gives the wounded soldier immediate assistance from the moment he falls in action until he is restored to health or discharged from service for

disability. The navy ambulance or hospital ship does the same thing for the wounded seaman. On board a modern fighting vessel no proper facilities for dealing with the sick and injured exist. Nor are the "horrors of the cockpit" of bygone days very materially lessened. The sick-bay is usually dark and very small—smaller than in the old wooden vessels—the operating room contracted, and, of course, during action there is no security. At no time is a ship where drills and target practice are constantly going on a place for people to be sick in, nor is it ever possible for her to carry enough surgeons and nurses to afford proper attendance to all who may be hurt in action, even if ample room were available. Add to this the fact that every inch of space in a fighting ship can be utilized for military purposes, and is in fact needed therefor, and the value of a fast steamer with ample operating rooms, abundant beds, all the appliances of sanitation and antiseptic or aseptic surgery, ice plant, laundry plant, cold storage, mechanical means for handling crippled men, and a thoroly skilled medical and nursing staff, which *stays by the fleet at all times*, needs no demonstration. Her function is to take the wounded or sick as soon as she can get them, assist them at once, and, as occasion offers, convey them to hospitals on shore.

There are, however, certain rules governing hospital ships to which all civilized nations have substantially agreed. They are not warships, and their use for any military purpose is strictly forbidden. They are not liable to capture, nor are they subject to be driven out of neutral ports within a time limit. They are required to afford relief and assistance to both belligerents, and both sides have the right to direct and visit them. Either party may order them to withdraw, or prescribe a fixed course, or, in case of military necessity, detain them or even put a commissioner on board. They may approach the fleets in action, but at their own risk and peril, and must not in any way hamper the movements of the combatants. They may also be fitted out either by the State or by private parties under State control, and in either case

their names must be communicated to the hostile powers at the beginning or in the course of hostilities. Finally, they must fly the Red Cross flag and bear a distinguishing color—usually white, with a green stripe for national ships, and with a red stripe for privately equipped vessels.

The point clearly to be perceived is that naval hospital ships are not mere transports for the sick or wounded, and that therefore, wholly unlike army floating hospitals, they are as much an integral and necessary part of every war fleet as are the colliers, the repair ships, the supply ships, the tenders, or the scouts. In brief, they are fleet auxiliaries under the immediate command of the admiral. He directs them by signal or wireless telegraph as he does any other ship. They take station and maintain it in the fleet formation, and while the fleet is under way.

The foregoing is perhaps enough to indicate in a general way why, even if the law and the immemorial custom of the sea be set aside, neither a surgeon nor a surgeon assisted by a "merchant master" is a competent commander for such a vessel. In the presence of the enemy or of fleets in action his duties are difficult and dangerous. They require exact knowledge of the laws and customs of war, trained military discretion, and the capacity for prompt decision, which in nautical matters is only got by long sea experience. He must know the relations of a unit to the fleet whereof it is a part, and the management of a ship in the fleet formation, for otherwise he is a danger to everybody else. He must understand the military modes of communication and the military discipline of the navy, for he has not only a working crew to keep in order, but possibly a collection of wounded prisoners who may need something more than medical control. And, because he may have the latter on board, he must clearly understand his military powers with respect to them. Both the law and the Navy Regulations expressly declare that only military or line officers shall have the right to command ships, and with equal positiveness expressly deny that right to officers of the staff. Merchant masters know nothing about military affairs, and naval surgeons are not educated in them.

Finally, naval hospital ships are something entirely new. Army transports and a little paddle-wheel Mississippi boat during the Civil War (not commanded by a surgeon) are not precedents, for they were never co-ordinated with the modern naval fleet. As the Surgeon-General of the Navy said at the time in his official report, the "Solace," fitted out by us during the Spanish War, was "the pioneer in her work, and indicates a step in advance that it well became the United States to take." The Secretary of the Navy called her "a new departure in the care of the sick and wounded in naval warfare." And she was. She had accommodations for two hundred patients. She took the wounded of San Juan, of the marines who fought at Guantanamo, all the Spanish wounded after Schley had disposed of Cervera's fleet, and plenty of the others; and of our injured men but one died of wounds aboard of her.

The President, under some strange misinformation, goes out of his path to illustrate the "absurdity of permitting a line officer to command a hospital ship" by reflecting on the captain of the "Solace," as in one way or another violating neutrality. The instances given do not appear in the official reports, the captain of the "Solace" was not called at any time to answer for them, and the Surgeon-General of the Navy, reviewing the splendid service of the "Solace" during the war, generously praises that officer as "an ideal commander."

Surgeons of the Navy have actual rank and the power to command in their own departments. A surgeon-captain of a hospital ship has no more real authority over her medical equipment and attendants than the law now gives to a surgeon not a captain. The chief surgeon of the "Relief" would never be interfered with in his medical control by the military captain; for to do so would be to assume a responsibility which no military officer would willingly take. The captain of a fighting ship has always had such power of interference—and never uses it. The ordering of a line officer to the command of the "Relief"—the first naval hospital ship completely equipped in time of peace, and without doubt the most complete vessel of her kind in the world—would not hamper the medical officer in his professional duties in any particular. It would

simply conform to the custom of all sea nations since time immemorial, execute the law and not break it, insure military co-ordination of the ship with the fleet of which it is a part, prevent and not foster ignorant violations of neutrality, avoid a new and dangerous precedent and insure the safety of every one on board.

Despite all the foregoing, and despite endless satire, ridicule and cartoons, the President has ordered a surgeon to the command of the "Relief."

II. *The Resignation of Admiral Brownson.*

The Chief of the Bureau of Navigation is the immediate naval adviser of the Secretary of the Navy. He also details officers for their various duties, controls the distribution of ships and fleets, has charge of enlistments, and, in brief, is the Adjutant-General of the Navy. He does not hold office by reason of his naval rank, nor is the assumption of that office a duty to which he can be ordered by the Secretary. He is nominated thereto by the President and confirmed by the Senate and has a tenure of four years only. The position is administrative, and in that respect does not differ from the headship of any other bureau under any of the Government departments—say, for instance, the Bureau of Engraving and Printing. When Admiral Brownson found that the President contemplated sending a naval surgeon to command a ship, he submitted reasons based on the laws of Congress why, in his official judgment, such a step would be inexpedient and derogatory to naval discipline. The President nevertheless affirmed his intention to take it. Thereupon Admiral Brownson tendered his resignation as Chief of Bureau, and thereafter the surgeon was ordered to command. Admiral Brownson did not refuse to obey a superior's order, nor did he resign hastily or because of wounded pride. The conditions are no different than they would have been had the President ordered the Chief of the Bureau of Engraving and Printing to keep his force at work ten hours a day. The official would simply have pointed to the eight-hour law, and, finding the President still insistent, would undoubtedly have resigned to enable the Executive to substitute some one in his place more in accord with the proposed

policy. Rear Admiral Brownson had already retired from active service because of having attained the age limit of sixty-two years. His continuance in active work was therefore purely voluntary, and his right to resign is unquestionable.

It is unfortunate that the President should have seen fit severely to condemn Admiral Brownson's motives and to have withheld Admiral Brownson's argument in his own behalf from the public until called for by Congress.

III. *The Defects of the Battleships.*

These are purely technical matters. They are being exploited in the newspapers with more or less owlsh ignorance, and the more the layman tries to understand the details of them the less he will probably know. For some years past the line officers of the Navy have been complaining about the practical working of the ships and pointing out structural difficulties requiring remedy. These complaints culminated in a sensational article published in *McClure's Magazine* which not only contained nothing new to those who were following naval affairs, but which omitted by far the worst shortcomings of the Navy. So much of the matter contained in the *McClure's* article as was of real public interest had been published in *THE INDEPENDENT* months before, and the rest of it was not deemed worth printing.

The so-called "charges" fall into three groups:

- I. Those concerning matters about which experts vigorously disagree. Chief in this class is the armor belt question. A heavy armor belt protects the vital parts of a battleship at the water line. On our battleships it is said to be misplaced and to be too low, so that when the ship is fully loaded with coal and ammunition, it is submerged, in which case it serves no good purpose because projectiles will not dive in order to hit ships. The naval constructors say that it is not too low to protect the exposed underwater body of the ship when she rolls, and that ships do not remain fully loaded, inasmuch as they burn coal. The water line of a ship is a variable level, depending upon her total weight. How the heavy belt should be placed with respect to this constantly shifting line involves a great many fac-

tors, and the question is not one which can be decided either in or by the newspapers. Neither can it be settled by the ex parte statements of the very officials who put it where it is. Of course they will defend themselves. What is needed is the judgment of an impartial board of naval constructors and engineers not connected with the navy.

2. Those concerning matters of past history. Chief in this class are the charges that some of the ships are too low in the water to fight their guns in a seaway, and that the gun ports are too big, and the extremities of the hull are unarmored, and so on. This is hindsight. Ships designed a dozen years ago cannot well embody the results of subsequently acquired experience, especially when the whole conception of the objects, purposes and uses of battleships has changed in the interval. Then we regarded them as exaggerated harbor defense monitors. Now they are units of possibly flying fleets which may thrash out conclusions anywhere on the sea, and in any weather. Then we thought about ship duels or possibly squadron actions—now we know that the next war will be decided on the ocean in a few hours by the collision of the fleets of the opposing nations. The low freeboard, "soft ends" and big ports represent accepted practice of the bygone day and resulted from a chain of other conditions not now existing. What we want to know about these is how much do they diminish the actual present fighting efficiency of the ships. Assuming, for instance, the efficiency of a selected best modern battleship to be represented by 100, what numbers approximately represent the efficiency of the "Kentucky," "Kearsarge," "Indiana," "Oregon," "Iowa" and "Massachusetts." Some go so far as to insist that the first two are mere floating slaughter-houses, inviting the fate of the Russian "Orel." This matter is also one for impartial trained judgment and is not to be settled by the assertions, however fervid, of the designers and builders of the criticized vessels.

3. Those concerning matters confessedly wrong and under remedy.

Here the chief charge is the direct connection between the turrets and the ammunition rooms, so that there is constant

danger of the ship being blown up by burning gases or sparks dropping on cartridges. Several accidents with large loss of life have already happened. The present construction resulted from another chain of causality not necessary here to explain, because the defect is admitted and liquidated in a definite and not large sum of money which Congress is asked to appropriate, in order that the proper repairs may be made.

Now, to sum up the whole trouble. A surgeon having been ordered to command a naval ship, the only thing to do is to wait and see what happens. That he can succeed in the existing order of things is incredible. The Navy has a way of quietly disposing of such troubles in its own body by "carrying out regulations." No one can exactly explain how it happens, but the cause of offense always sooner or later vanishes.

Rear Admiral Brownson simply passes from the active naval scene as have all his professional forbears. Some people, including about all the line officers of the Navy, think he is a hero—a latter-day Thomas à-Becket "Saving the honor of my order." Other people fail to see why he could not have left the responsibility with the President and have done whatever he might have been told to do.

What our fleet is worth is urgently a matter for Congressional investigation. So is the administration of the Navy Department, now bad. How far the existing troubles are due to the hasty and wrong interferences of the President, the vapid inefficiency of the Secretary, and the persistent obduracy and lack of enterprise of the bureaus is something to be found out. What we want is rigorous cross-examination of the jarring factions in the presence of one another—and, if it be possible, the elimination of "politics" from the inquiry. The country does not suppose that its ships are perfect, but it has believed that they are as good, unit for unit, as those of other nations. If they are not, we want to know the fact. If individuals have been reprehensibly at fault and are still in office, we want them put out. If the system of naval administration is wrong—and there is overwhelming evidence that it is—we want that system reformed, and quickly. And we would like a little more intelligence,

a little less flabbiness, a little less willingness to obstruct rather than to promote, and much less deference to the needs of the "big ship" builders on the part of both Congressional committees than they have hitherto shown. The public has been talked to enough about the troubles

in the Navy. It now demands of its servants an accounting for them; and for whatever preventable faults, defects or shortcomings may be established it puts the responsibility, and the whole of it, squarely on Congress.

NEW YORK CITY.

Moving Picture Drama for the Multitude

BY GEORGE ETHELBERT WALSH

THE moving picture drama furnishes entertainment for the millions, literally reproducing comic, tragic and great events to some sixteen million people a week at a nominal cost of a nickel or a dime. The effect of this new form of pictorial drama on the public is without parallel in modern history, for it more graphically illustrates the panorama of life than the photographs and texts of the daily newspaper and intrudes upon the legitimate theater thru the actual dramatization of plays that have had a good run. The moving picture drama is for the multitude, attracting thousands who never go to the theater, and particularly appealing to the children. In the poorer sections of the cities where innumerable foreigners congregate, the so-called "nickelodeon" has held pre-eminent sway for the last year.

All of this has been developed within half a dozen years, and the remarkable growth of the industry is due to the perfection of the biograph, vitagraph, kinoscope or cinematograph—whichever name the moving picture machine goes by—within the last year or two. Edison first invented the moving picture machine, but he did not perfect it, and others rushed in to secure patents on its improvements which gave them certain protective rights. There have been upward of two hundred patents taken out in the last five years on moving picture machines, and there are something like three-score names applied to the different machines in use. They are all essentially the same in at least one respect—they reproduce enlarged photographs on a screen at

such a rapid rate that lifelike action of the actors is obtained thereby. The question of clearness and sharpness of outline, the speed of reproduction, and cost of operation, concerns only the different owners of the patents, and not the public.

The improvement of the biograph so that strips of photographs could be enlarged and reproduced was costly at first, and the exhibitions were made chiefly for advertising purposes. Large photographs had to be taken, and the cost of a strip of films was very great. Then by improving the magnifying lens it was found that pictures one-eighth the old size could be made equally serviceable. These magnifying lenses cost all the way from \$25 to \$100. The old biograph driven by a motor had to take and reproduce pictures at the rate of thirty a second, but the modern instrument can reproduce equally good results at fifteen per second. A complete outfit for a small exhibition hall can be obtained today for \$125, but from this the cost runs up to almost any price desired.

In the last two years "nickelodeons" or moving picture theaters or exhibition halls have opened in nearly every town and village in the country, and every city from the Klondike to Florida and from Maine to California supports from two or three to several hundred. Millions of dollars have been invested in the shows, and it is estimated that on an average two or three million people in this country attend the shows every day in the week.

The large companies engaged in renting the films for these biograph shows are

THE BURGLARY.

chiefly responsible for the great changes in our cheap entertainment halls. These companies have invaded nearly every department of life to secure interesting photographs. The films used today are five-eighths by one and one-eighth of an inch in size, but they can be enlarged 200 times by the magnifying lense when thrown on the screen. They are projected on the screen and each separate picture is held there one-twentieth of a second. The continuous motion deceives the eye and produces perfect lifelike action. Where greater speed is desired, such as a reproduction of an automobile race or a fast mail-train in motion, the speed of the machine is increased until the eye is fairly deceived by the performance.

The most difficult and interesting feature of the industry is getting the photographs. In this work intense rivalry exists between the different film-renting companies. A first-class set of films becomes a valuable asset, and it is in demand all over the country. The expense to the companies is frequently enormous. For instance, in photographing the Jeffries-Sharkey fight at Coney Island, in 1899, the film company which secured the contract took 198,000 pictures and had over seven miles of film to exhibit. Besides paying the chief exhibitors in the fight a large sum, the film company had to go to great expense in lighting up and focusing the cameras for the work. Yet in spite of the thousands of dollars thus spent, the investment proved a financial success.

Most remarkable tricks can be played by the camera, as every photographer knows, but for reproduction in the biograph these tricks are intensified a thousandfold. For instance, the building of a skyscraper within a few minutes is a feat easily accomplished on the screen. In order to do this a camera is placed in position when the foundations begin, and by means of slow time exposure extending over months an exact reproduction of the building can be projected on the screen, occupying less than ten minutes. When the old Star Theater in New York was demolished a number of years ago a camera took time exposure pictures of the operation, and when finished it was possible to throw on the screen a perfect

reproduction of the work. The theater could be demolished within five minutes, and by reversing the films rebuilt within the same period.

The Passion Play has been reproduced

LOADING DELIVERY WAGON.

by the machines, and when first presented in Paris it proved a huge success. In this country it has met with equal approval. The biograph man is everywhere, and almost any day a pedestrian in our crowded streets may be made a part of a moving throng that flits across the screen to entertain immense multitudes. The story is told of an American who, while watching moving pictures

in a hall in Paris, saw a reproduction of a Broadway throng at the noon-hour. His interest in the old familiar scenes was intensified when he saw his own face and figure in the crowd. When he was close to the camera he was still more surprised to see a valuable watch-charm which he had always worn attached to his fob drop and disappear from sight. He had mourned the loss of this jewel for several months, but had no idea where it was lost. Then out of the moving throng appeared a young lady, who suddenly stooped and picked up the charm from the pavement. The man gasped and dropped back in his seat when he recognized the features of the woman as she approached closer to the camera. A few weeks later he recovered his watch-charm after he had cabled to the woman to ascertain if there was any truth in the strange coincidence or whether it was all fiction.

To secure lifelike exhibitions of strange and difficult scenes the film renting concerns keep a corps of experts engaged all the time. One part of their work is to arrange theatrical groups in an outdoor theater constructed for this special purpose. The favorite place for the enactment of these outdoor scenes in New York is on the roof of some tall building where there is little danger of outside interruption. The roof theater is provided with glass screens and canvas roof to regulate the light. Up there on the roofs plays are being enacted every clear day with no audience. Elaborate scenery is provided, and the costumes of the actors are in many cases as accurate in detail as any used in our high-priced plays. Historical scenes are here enacted, and many popular and classic plays are attempted. The actors and actresses in these plays must be perfect in pantomime, but their ability in declamation does not count. The comic plays produced are the most popular. The average audience of the "nickelodeon" cares more for the comedy and *opera bouffe* than anything else. In some of the higher class plays actors of high standing are employed during the day.

The demand for legitimate picture drama is growing, and within a short time most of our popular plays will be reproduced in the "nickelodeon" shortly

after they have had a run on the road. More than this the film companies are developing their own plays, paying experts in pantomime to invent plots and scenes which will show up well in moving pictures. In Paris this work has reached a higher development than in this country. A considerable class of expert pantomime actors depend entirely upon the film companies for their living. They receive all the way from \$15 to \$40 a week

The story is not written out in magazine form, but is a brief description of scenes and acts which have a well-defined plot. Some of the companies are experimenting with the phonograph in connection with the moving pictures, by means of which the actors in the scenes will actually speak and declaim as the various pantomime scenes are thrown on the screen. This may be the next development in this method of furnishing cheap plays for the multitudes.

Outdoor scenes are also in demand, and these must be obtained by the photographer who goes forth and risks life and limb. The man who stands in front of a fast moving train to secure films invites certain risks that now and then result disastrously. The man who is run over by a train is not after all a real man. By means of a little trickery with the camera he appears to step directly in front of the engine, but it is a well-made-up dummy who is really run over. Moving pictures of bear fights and of animals ranging the wild woods are obtained with great difficulty, and when good films are thus procured they are frequently used for exhibition before scientific societies. A swimming moose or a fight between two wild animals is of invaluable aid sometimes to students.

A storm at sea with the inevitable shipwreck may be imitated in the studio of the professional, but frequently the photographer faces great danger to secure films from actual life. The photographing of important events of the day is another startling feature of this new amusement method. If a steamship is wrecked on the rocks or a railroad train is demolished in a great accident the film makers try to get good photographs of some important part of it. The first visit of the *Lusitania* to this port was photographed in a series of pictures that when reproduced on the screen will give a perfect lifelike birdseye view of the notable event. The building of great bridges and the construction of tower-like skyscrapers are made the subject of moving pictures. One cannot question the value of such pictures in preserving for all time views of important engineering and structural works.

In France they have succeeded in a way in coloring the films so that when

SAYING NOTHING BUT SAWING WOOD.

for their services. Then, too, the story writer comes in for a share of the profits of the new profession. A good story suitable for moving picture reproduction may sell from \$5 to \$30 or even more.

projected upon the screen the lifelike movements are greatly improved. These colored films are now used in many of the higher priced places of amusement, but they cost something like 50 per cent. more than the ordinary black and white ones. Court-room scenes of noted trials

Eames, Nordica or other prima donnas in their great rôles on the stage. It brings grand opera in a way down to the level of the poorest, and when we consider the perfect reproduction of the voices in the modern phonograph and graphophone there seems to be little left to be desired.

The employment of the moving picture exhibition for instructive purposes is also quite extensive. Travel pictures are popular methods of lecturers. Views of a country from the observation car of a moving train carry one thru Europe and America. One can, for a few cents, view panoramic pictures of the famous canals of Venice with all their throngs of moving boats and people, or take a trip thru the canals of Holland or see the market places of the great European centers. From the deck of steamers one gets moving pictures of the coast of Greenland, Iceland or the islands of the South Pacific. Even the growth of plants and flowers is observed. By time exposures extending over months it is possible to reproduce exactly within a few minutes the budding and flowering of plants. Oranges spring from the flower and turn into golden fruit while you wait, or apples come into existence like magic on the trees which a few moments before were bare and leafless. There is in fact hardly a field which has not been exploited, and the use of the moving pictures increase every year as the experts study new methods and ways of securing films.

The average expense of running one of these halls for exhibiting moving pictures is placed from \$150 to \$250 a week, the greatest single item being for rent of hall and the next for wages of manager and assistants. The rent of the films runs as low as \$50 a week for two changes of reels a week, and the cost of the projecting machine is as low as \$10 and \$15 a week. The actual cost of reproducing costly drama and important scenes of the day is thus more dependent upon the rent of buildings and wages of employees than upon the films and machines which are responsible for their exhibition. The field thus offers golden opportunities for those who can induce the multitudes to pay their nickels and dimes to witness up-to-date entertainments.

NEW YORK CITY.

THE TRAMP AND THE GIRL.

are reproduced today in moving pictures so that the public can get perfect views of the actors in these great events. Photographs of great singers and artists in grand opera are made at considerable expense, so that it is only a matter of a few cents for the poorest to view Caruso,

Literature

The Gospel of John

A few months only have passed since attention was called in these columns to a treatise on "The Fourth Gospel" by Rev. Ernest F. Scott, which, with singular acuteness and thoro mastery of its subject, brings out the underlying conceptions and the religious teaching of the most difficult book of the New Testament. The merit of Mr. Scott's work is its occupation with the content and purport of the Gospel, rather than with the questions of authenticity and date with which previous writers have largely busied themselves. It is of small moment when and by whom the book was written, compared with the larger question of the character of the writing and its place in the development of Christianity. Unfortunately more recent discussions are occupied with the less profitable topics of the particular author and at the time at which he wrote. Professor Riggs' threshes over the old straw that the author was a Jew, a Palestinian, an eyewitness, etc., which has been well beaten since the days of Lightfoot, and concludes that the Apostle John composed the book in the last decade of the first century. He admits that the teaching of Paul and the "Ephesian environment" helped to produce the Johannine type of utterance, but he does not see that these later forms of Christian thought changed in any essential degree the conception of Jesus's personal teaching. Paul "helped John remember," but he did not put into John's thought that which John himself subsequently attributed to Jesus. When the Fourth Gospel meets the needs and problems of the Christian faith at the turn of the second century, it is not that its author ascribes to Jesus truths for the situation of his own day, but that this situation called to his remembrance declarations of the Master sufficient to meet the difficulties which

had then arisen. This position of Professor Riggs, which is essentially that of Dr. Sanday, is a difficult one to defend. One may deny that there is any evidence of the thought of Paul in the Fourth Gospel, and that the problems of the third generation of Christians had anything to do with its composition, but, if these contentions are admitted, as they are by Professor Riggs, it is hard to see how the Johannine authorship can be saved.

A large part of this volume is taken up with a paraphrase of the Gospel itself, in which the trend of the argument and the meaning of each paragraph is made clear. The value of such an endeavor is open to question.

The remarkable success of the *Religionsgeschichtliche Volksbücher* has called forth a similar series by writers of the conservative school, the *Biblische Zeit- und Streitfragen*, and in the translations of the first series, edited by Rev. R. J. Cooke, may be found a vigorous brief for the authenticity of the Fourth Gospel.² The author, Professor Barth, of Bern, seeks to minimize the difference between John and the Synoptics, rightly discerning that it is the wide divergence of the two portraits of Jesus which is the chief difficulty in holding to the traditional opinion. Texts are cited in large number which are held to be similar in tone and purport, but when the references are examined they fail often to support the author's contention.

One is impressed in reading both these essays by the fact that their authors seem to hold that there is something better and more Christian than Jesus's own words and life. Dr. Riggs distinguishes between reports which are "true to history" and statements which are "true to truth," and he finds Johannine utterances which are scarcely "true to history," discourses put into the mouth of Jesus which he did not utter, which nevertheless possess the superior merit of being "true to truth."

¹THE MESSAGES OF JESUS ACCORDING TO THE GOSPEL OF JOHN. The Discourses of Jesus in the Fourth Gospel, Arranged, Analyzed and Freely Rendered in Paraphrase. By James Stevenson Riggs, D. D. New York: Charles Scribner's Sons. \$1.25 net.

²THE GOSPEL OF JOHN AND THE SYNOPTIC GOSPELS. By Fritz Barth. New York: Eaton & Mains. 40 cents net.

He speaks of a truth "which is even superior because it in part is a Spirit-inspired interpretation of words that were actually said, and a life that was really lived." This would appear to be most dangerous doctrine. It may not be orthodox to hold that any of the sayings ascribed to Jesus in canonical writings are not recorded exactly as he gave them utterance, but if there be a distinction, and if some of those sayings came to the mind of an apostle only after one who had never seen Jesus "made him remember," it is surely perverse to hold that those are most valuable which are farthest removed from the founder himself. The common man is certainly right in thinking that the nearer he can get to Jesus the more perfect is his view of Christian truth.

Some Genre Stories

IN books, as in painting, the genre is both artless and artful. Whatever is typical of life or inherent in the nature of events appeals to our own experience, and renders us at once sympathetic and discriminating—appreciators and critics. How *en rapport* we are, for example, thousands of us, with the *Van Dwellers*¹ thru their evolution into commuters. From the first "not very large and not very light, while the price was more than we intended to pay" flat to that palace of onyx and gilded halls presided over by the fallen nobleman; in the turning from the tyranny of janitors to the tyranny of boarding-house keepers and back again to janitors; in the first abortive attempt at commuting, with its inevitable one more season in the city before becoming permanent suburbanites; in the fall by furniture, by rugs, by bargains, by stocks, seeds and servants, the author speaks whereof we know. Altho the book is essentially a hodge-podge, touching upon almost every known subject, the final chapter on "Things I Have Not Told" fills us with regret at the meagerness of the preceding 402 pages. Turning from this volume, which is not, the author says, "a story with a purpose," a second suburban book² seems almost too pur-

poseful for the caliber of the characters involved. The title story here portrays one of those captivating, futile, inconsequent little women who marry early, and, after making domestic havoc for a year or so, "turn out better than we expect." "The Measure," one of those somewhat trying "little stories of married life," turns on subtle judgment—or is it subtle jealousy? In "On the Ridge" the eternal feminine puts, so to speak, her eternal foot in it, and thereby miraculously heals a breach incident upon the good fellowship of the sons and heirs of two suburban families. "Mrs. Tremley" is a case of mother-in-law prettily modified by ginger jars, wedgewood, damask and a general insistent delicacy. Nothing from Mrs. Bacon's sprightly pen has been pleasanter reading than this third suburban sketch.³ The five chapter titles—Mamie, May, Mary, Maria, and Mamie's Aunt—outline the book's theme, which is the domestic problem, but give no inkling of the adroit love story between the lines.

It is stimulating to turn from these cosmopolitan types to those rugged folk of rural Pennsylvania who have taken their unique place in our literature.⁴ Whether these Mennonites and their neighbors, with their impossible names, morals, manners, food, speech, etc., are as sordid, crafty, bigoted, shrewd, conceited, and generally ungainly in body and soul as their biographer has made them or not, they are most interesting and amusing. The short stories here collected are, perhaps, more artistic than "His Courtship," but the latter shows excellent workmanship in making a conventional sensational plot, with all its time-honored thrills, a plausible link between the world of culture and darkest Pennsylvania Dutchdom.

The antipodes of these aliens are the delicate types which Mrs. Freeman's untiring pen has again sketched for us.⁵ New Englanders complain that this author caricatures instead of portraying them. It is nearer the truth to say that, while her people are not real, they are

the incarnations of real principles or attributes, as in the case of Jane Weaver stealing and concealing the willow ware in sheer, irrepressible rebellion against the unendurable traditional uniformity in her aunt's household. Barzilla and Cap'n Jonadab, two Cape Cod ex-seafarers, form the focus of a second New England volume.⁷ As a matter of fact, there is nothing typical about this polyglot, non-descript pair, who are a sort of cross between Shorty McCabe and Samantha Allen, the like of which was never seen on land or sea. The stories in which they figure are none the less excellent—full of humor of a not too delicate sort, rich in amusing adventure, and stamped with the general supremacy in brain and brawn of the homespun heroes over their less picturesque associates.

Another half hour with Eben Holden⁸ is a real pleasure, tho his is a character difficult to transcribe without rendering irksome its perfection of sweetness and shrewdness. There is a certain knowing ingenuousness about these near-to-nature characters that grows as irritating as are the execrable marginal decorations with which the publishers have tricked out the slender volume. A second and far less lovable old friend appears here in the person of Susan Clegg,⁹ whose mirth-provoking monologs (which approach at times the wit and wisdom of Mr. Dooley) would be very grateful but for her aggressively hateful personality. A certain amount of human frailty would be in keeping, but not this uncertain amount of inhuman viciousness that waxes with each successive volume.

As for Anderson Crow,¹⁰ his creator attempts to foist him upon us as a lovable, benign, quaint old Grand Army veteran, after having been at some pains to depict him a lying, cowardly, inordinate-ly vain, sneaking old impostor. The volume has enough incident to make a dozen good plots, and not enough cohesion to make one. It is "a rattling good story," and as such bound to sell well, like all the other books of this popular author.

With army life the average reader is not conversant; but it is difficult to believe it the thing of froth and friction represented by romancers. With the child rôle played here by Letitia,¹¹ we are familiar, but neither the environment nor the product in this instance ring true. This forlorn little waif, remaining unspotted by her very worldly world, the reprehensible morals and manners from which she springs, and the problems of post life as seen here, are compounded of paper and printer's ink.

Happily appreciation of *Gotty and the Guv'nor*¹² depends only upon sensibility to human traits; for the scene is foreign and the theme is semi-nautical. The book is a most delightful bit of character sketching of old Leigh fishermen and 'longshoremen as the *dramatis personæ* in a meandering tale of mild adventure, fraught with genuine humor and beguiling interest. The copious illustrations of the volume do violence to the text. They are caricatures without understanding and without art quality. Gotty, who is pictured as a grotesque clown, is as gentle an old salt, as full of dignity and sweetness, as Mr. Peggotty, while the Guv'nor is worthy the alliance that develops between them.

A Lovable Old Master

VITTORIO CARPACCIO, most lovable of Venetian painters, altho comparatively but little known until recently, must now be accounted most fortunate in his biographers: Professor Pompeo Molmenti, who, repeatedly in former publications, has shown his sympathetic liking for Carpaccio, and the late Dr. Gustav Ludwig, who, besides sharing his friend's enthusiasm, possessed a remarkable gift for documentary research. On a fly-leaf of the fine, large, quarto volume containing his translation of their work* Mr. Robert H. Hobart Cust has printed an extract from a letter written several years ago by Burne-Jones to Lady Lewis. "Of all things," he wrote, "do go to the little

chapel of S. Giorgio de Schiavoni, where the Carpaccios are. The tiniest church that ever was, like a very small London drawing-room—but with pictures! ! ! And whenever you see him give him my love.” That is the proper spirit in which to approach this artist; and it is the spirit which animated our authors, their work was a labor of love. Yet they have not limned their hero with indiscriminating adulation.

By their study of his period and his work they establish the fact that Carpaccio was the most truthful chronicler of the times in which he lived. He “had truth in his soul” one critic aptly said of him. He copied the walk and demeanor of his contemporaries, reproduced their costumes with painstaking care, and in all details as well as in the main effect sought to produce an intimately realistic portrayal. As a delineator of contemporary spectacles no other Italian artist except Pinturicchio can be compared with him. While hardly adequate to the expression of dramatic ideas, both understood how to create a faithful reproduction of the show of luxury which enlivened Italian streets and public places, and to preserve for future generations something of the glamor and romance of the large and beauteous life of medieval Italy. From the public displays in the streets and squares Carpaccio introduces us to the interiors of houses and shows us the home life of the Venetians.

Born in the middle of the fifteenth century, Carpaccio preserved in his work much of the naïveté of the Venetian primitives, and again came directly into contact with the movement for amplitude and color which was to culminate in Zorzi of Castelfranco and Titian. He stands between the tradition of the formative period of the Venetian school and that of its golden age. An ingenious craftsman, this painter yet possessed a warm heart and a tender feeling for religious things. His spirit was none the less unworldly because he expressed it in pictures of Venetian men and manners. His sincerity was certain and deep. Professor Molmenti thus summarizes his final estimate of Carpaccio’s achievement:

Carpaccio, with his homely naturalism, emotional restraint and self-possessed narrative of facts heralds the ample compositions of Titian

and the sumptuous decorative effects of Paul Veronese. Yet in the realm of Venetian art Carpaccio uttered words that no one has repeated after him; not even Zorzi di Castelfranco with all his genius so sublime, nor the great masters of the golden age. The painter of S. Ursula alone possessed the restraint and concision of the strong, who need but few words to convey their message.

This is high praise, but that it is deserved a careful examination of this book should convince any sceptic. English readers are fortunate in having put before them Mr. Cust’s skilful and admirable translation of this excellent work. With its eight photogravure plates, 240 half-tone reproductions and many small illustrations in the text, the publisher has dressed it sumptuously.

Darwinism and Evolution

ONE is safe in saying that, to the great majority of intelligent readers nowadays, the terms Darwinism and evolution are synonymous. At best there is, tho not widely prevalent, a vague and disturbing impression that scientific men have made some unimportant and incompressible distinctions in their uses. That an anti-Darwinist may be an uncompromising evolutionist seems to the great public a paradox. And yet it is quite true that Darwinism today is disputed by a large and growing body of scientific students to whom evolution is the fundamental principle of all life. Perhaps the first attack made upon the all-sufficiency of the distinctive doctrine so convincingly brought out by Darwin—natural selection—was by the Lamarckian school, which rose to considerable eminence a dozen or more years ago. The battle was, for a while, a notable one. The Lamarckians, it is true, have been repulsed by numbers, tho they by no means acknowledge defeat; while their whilom opponents, the Darwinists, are now facing the common enemy, those who deny the effectiveness, or even the possibility, both of natural selection (Darwinism) and of the hereditary transmission of the effects of use and disuse on the organism (Lamarckism), as factors in the origin and preservation of species. We have heard so much about the “struggle for existence” during the past forty years, the phrase has permeated literature so widely, that to be told now flatly and

oftentimes intemperately that there is little or nothing to it is like a dash of cold water; it makes us gasp. Perhaps the center of attack on these generally recognized views is as yet Germany, tho there are some in America who have already entered the lists or have thrown down the gauntlet. That the Germans should declare that "Darwinism is dead" does not surprise us greatly—we are already painfully aware of the predominating German characteristics in science, intolerance and conceit. But, that its friends among the laity may not be frightened at the supposed imminent danger of the citadel of Darwinism from this Teutonic invasion, let us remind them that other theories of evolution have been as intemperately urged by the Germans in the past, theories which now scarcely cut any figure at all in the triumphal procession of evolution.

However, nearly all controversies result in some good, and the present one has very clearly demonstrated to most of us that natural selection is not so all powerful in evolution as we were once disposed to believe it was. Darwinism must be modified and amended doubtless—the Lamarckians showed its adherents that if nothing more; but its staunch defenders have lost no faith in it as the guiding principle of evolution.

Very timely and welcome, then, is Kellogg's work on the present status of Darwinism.* Professor Kellogg is a voluminous and facile writer; he is also a serious student of biology, and is thus by both experience and training well fitted for his present task, one involving good judgment and discrimination as well as wide reading. He has presented the arguments fairly from all sides, biased a trifle, perhaps, by his views, as who could help be? He has given in a readable way the present-day arguments for and against Lamarckism; natural and sexual selection; the mutation theory, that is the discontinuous theory of variation, or heterogenesis; the determinative theory, or orthogenesis, that is that variations may and do occur along predetermined lines, whatever be the cause, tele-

ological or not; the theory of environmental selection or orthoplasia, that is the more recent Baldwin-Osborn-Morgan theory, etc. He has also given what to many of us must seem as the lame and impotent substitutes for some or all these theories; and has done all this within a readable-sized book. Some parts, we must confess, seem a little too technical for any but the special student; and the author has been a little too free in the use of terms that few will understand save the trained biologist. He would better have omitted the long German quotations, or have translated them into his own fluent English; and the proof-reading, especially of the quotations, has not always been all that could be desired. Nevertheless the book may be unhesitatingly recommended to the student of biology as well as to the non-professional or even non-biological reader of intelligence. The author is a protagonist of no doctrine, and has added perhaps nothing of note that is new to the discussion. The main thing is that the book gives a full, concise, fair and very readable exposition of the present status of evolution; and as such its appearance is very welcome. It should be widely read within the next few years.

✻

Father and Son. Biographical Recollections. New York: Charles Scribner's Sons. \$1.50.

It is an open secret that this heart-searching biography is the story of Philip and Edmund Gosse in their intimate relation of *Father and Son*, as the book is entitled, tho it might be fitly called *Hierophant and Acolyte*, for it is the religious relation between the two men which gives the book its poignant appeal to a generation which has just freed itself from the more oppressive and tyrannical forms of Puritanism. The father was both an accurate and able naturalist, and at the same time the pastor of a stern little congregation of "Plymouth Brethren," to which gloomy communion the solitary child was admitted when only ten years old. The dramatic reactions between two natures so diverse make a fascinating narrative:

"This book is the record of a struggle between two temperaments, two consciences, and almost two epochs. . . . There came a time when neither spoke the same language

*DARWINISM TO-DAY: A Discussion of Present Scientific Criticism of the Darwinian Selection Theories, Together with a Brief Account of the Principal Other Proposed Auxiliary and Alternative Theories of Species-Forming. By Vernon L. Kellogg. New York: Henry Holt & Co. \$2.00.

as the other, or encompassed the same hopes, or was fortified by the same desires. But it is some consolation to the survivor that neither, to the very last hour, ceased to respect the other or to regard him with a sad indulgence."

Yet it is a bitter history of the disappointment of a rigid religionist—we do not say moralist, as it was faith, not action, which was demanded—in failing to coerce the conscience of the being he loved best. We all know the longing desire to be in complete sympathy with the beloved mate or child, to be one in thought and faith as well as in affection.

become the most conventional of moralists; why do none of them write the biography of their apostacy from bigoted anarchism? If told as sincerely and in such lucent prose as the story of *Father and Son*, it would equal in interest this remarkable book. The characters are sketched in with masterly touches; it does not lack humor, as in the passage where the tiny Plymouth Brother of ten years, when he is informed that he is to have a stepmother, inquires whether 'she has taken up her cross in baptism,' and, upon being answered in the negative, exclaims

BULL PREPARING FOR A CHARGE.

Field Sketch of Pablo Allard Herd, Flathead Reservation, 1900. From "Dan Beard's Animal Book."

When a nature is at once strongly-loving and somewhat tyrannical, the desire becomes an obsession. In all histories of like struggles, the reader is inclined to side with the younger intelligence and its vehement assertion of freedom, but we wish it were possible to hear the father's side of the controversy told as frankly and honestly as the son's. There is a book which remains to be written—the opposite reaction against extreme liberalism. We find instances of the children of agnostics flinging themselves into the arms of the most conservative Church accessible; sons of men who have pushed liberalism to the verge of license often

in horror: "Papa, don't tell me she's a pedobaptist!" His memories of his stepmother seem to be very pleasant ones, of a sensible and loving Englishwoman of a wholesome type, fortunately not rare. His own mother is a more shadowy figure, but a woman of unusual talent and character in thoro sympathy with her Puritan husband. The sorrowful story of the slow alienation of the father and son in the matters of deepest import ends in the violent avowal of a young man's right to think for himself, in religion especially, and in the sharp severance of two souls, who, because of their deep love, could hurt each other sorely.

Dan Beard's Animal Book and Camp-fire Stories. New York: Moffatt, Yard & Co. \$1.60.

Dan Beard's books always stand near to the head in the lists of the popular reading of boys, and this new volume will also undoubtedly hit the mark, tho it is little more than a transcript from his field note-books, hunting stories, personal adventures, chats about his pets, observations on the habits of wild animals, and fragments of science, thrown together without apparent order and "played up" by the most liberal and erratic use of capitals and italics. But it serves its purpose. Any boy opening it anywhere will read on and will pick up unconsciously some zoölogical information. The numerous sketches by the author, some in color, are the most original and valuable feature of the book.

The Red Year. By Louis Tracy. New York: Edward J. Clode. \$1.50.

The Red Year tells the story of the Indian Mutiny, the "red year" of 1857; a history of blood and anguish for Briton and Hindu alike. We are loath to revive the horrible pictures of Nana Sahib's Well and of the burning and looting of bungalows where women and children were butchered with a savagery only comparable to the atrocities of American Indians in our own days of frontier warfare. Mr. Tracy, in making his hero, a dispatch-bearer and even a spy, has hit upon a clever expedient for keeping in touch with the various beleaguered cities; and the action changes swiftly from Meerut to Delhi, to Cawnpore, and to Lucknow. *The Red Year* is really a very fair history of the Sepoy Mutiny, and the new generation may need a fresh presentation of the terrible events so far away from present day conditions; but its value is slight as a novel. It lacks the epic sweep of Mrs. Steele's "On the Face of the Waters," and we look in vain for any understanding of or sympathy with the Indian point of view. With its essential fairness no one can take issue, as the English administration is honest, but it is also extremely unimaginative; in dealing with fanatical and superstitious natives it is often crassly stupid, altho not cruel, except in reprisal, as in the history of the "Well of Death" at Cawnpore. And so from the Government cartridges, greased

with lard and "cow's fat," grew the flame and whirlwind of rebellion which swept thru India during the fatal year of '57. A little imagination on the part of the brave but blind English officers, a little sympathetic comprehension of an alien race, a slight yielding to its prejudices, and the red year of 1857 need not have been. Mr. Tracy takes the British attitude toward the natives. Altho his knowledge of the geography and customs of India leave little to be desired, we do not feel in him one throb of human sympathy with the wretched native people caught in the whirlwind of the mutiny. It would seem that Mr. Tracy must have had a grandmother murdered by the Sepoys, so complete is his partisanship. *The Red Year* is timely, as it is so nearly fifty years since the mutiny, and the present unrest in India has turned the attention of England to the question whether another uprising may be possible or imminent.

A Woman's Journey Through the Philippines. By Florence Kimball Russell. 8vo. Pp. 270. Boston: L. C. Page & Co. \$2.50.

The latest American book on the Philippines is a description by the wife of a Signal Corps officer of our army of her travels in the archipelago seven years ago. She accompanied her husband on the cable ship "Burnside" while it was laying cables to connect the southern part of the Philippines with the central islands and with Luzon at the end of 1900 and beginning of 1901. She has written in a pleasing style a narration of the cable-laying operations (something too much of them) and of the ports she visited during the journey. For one who desires to read simply about Philippine places and people, keeping free from the political discussion or propaganda which are found in most books on those islands, this work may be commended. The author did not travel about the archipelago enough to write a really first class book of travel, and she gathered her information rather carelessly in the places she did visit (being, for example, quite mixt up over the rather well known tale of the Holy Child of Sebú). She has provided copious illustrations and a good index, and the publishers have made the book very attractive in appearance.

The Story of American Painting. By Charles H. Caffin. New York: Frederick A. Stokes Co. \$2.50.

Mr. Caffin's book inevitably recalls to mind Mr. Samuel Isham's "History of American Painting," issued only a few years ago—that work was in every way so much better. Yet for those of slender

ume before us. Within the limits imposed (whether by himself or by his publisher) he has accomplished his task with a good deal of credit, producing a readable account of the evolution of painting in America, from its tentative beginnings in Colonial times to the present day, and illuminating it by summary characteriza-

MOTHER AND CHILD.

By Gari Melchers. From Caffin's "Story of American Painting."

pocket this book has the merit of being much cheaper in price, as well as in quality. While Mr. Caffin's contributions to art criticism contain little that is new or original, he gleans his facts and opinions from authoritative sources and he is in the main a perfectly safe guide. He has gleaned widely and well for the vol-

tions of many of the representative artists in that development. Tho a book on art it cannot be called an "art-book." Paper and type are altogether unsuitable. The good intention of full and complete illustration (there are no less than one hundred and forty-three pictures) is nullified by poor half-tone plates,

still more poorly printed and on both sides of the paper. The printing of description and comment in italic type under each picture is a further distressing detraction.

The Real Australia. By Alfred Buchanan. Pp. vii, 318. Philadelphia: Geo. W. Jacobs & Co. \$1.50.

The chief impression left by Mr. Buchanan's *Real Australia* is the cleverness of the author. The book is undeniably interesting. It is a book that, once begun, will be read to the last page; but when the reader has finished, while he will certainly know a great deal more about Mr. Buchanan, his views of life, and his powers and ability, it is doubtful whether he will have a much better or fuller knowledge than he had before about the real Australia. Much of the book is occupied by very clever generalizations which might apply to any new country, and which certainly would describe Canada just as truly as Victoria or New South Wales. Mr. Buchanan is evidently not favorable to Mr. Chamberlain's idea of binding the Empire together by means of preferential trade. Imperialism in the British Colonies, he holds, is a matter of sentiment. Australians need sentiment to give them nationality, and Mr. Buchanan contends "There is nothing in the history of Australia to awaken sentiment of any sort, unless it be a sentiment of disgust at the manner in which the aborigines were treated, and of shame for the early records of Botany Bay." As for the Imperialist who is an Imperialist only out of self-interest—this variety, Mr. Buchanan asserts, cannot be relied upon.

"So far from being a buttress to Imperialism, he is in reality its chief danger . . . For, undervaluing sentiment as he does, dealing with supposed advantages and disadvantages as he does, he is morally certain to adjust his views to successive changes on the international horizon . . . Manifestly the bonds must be different from those of temporary self-interest if they are to have any holding power."

So little is known of Australia, and so little concerning its affairs appears in the newspapers and periodicals, that this bright, readable little book ought to meet with a hearty welcome. The chapters on the poets, authors and statesmen of the Southern Island Continent are especially

useful; and the descriptions of Sydney and Melbourne may well serve to invest each of these cities with an individuality for readers who never expect to sail the Southern seas.

Stories and Sketches. By Mary Putnam Jacobi. New York: G. P. Putnam's Sons. \$1.50.

The literary remains of those who have been noted in other lines than those of letters are seldom of much value, save to personal friends, but in this volume of the early writings of Dr. Mary Putnam Jacobi the publishers have truly preserved, as their note suggests, "a real contribution to American literature." The book shows that in the making of an eminent physician and a leader of women when such a leader was needed, a writer was lost; but we see this with the same exhilaration, even, with which we recognize in a chance acquaintance, whom we are to meet but once, those parts which would make him a noble friend, did the chances of life allow. These eight essays and tales were written while Mary Putnam was making her courageous and single handed struggle for a medical training in the schools of Paris. Intent as she was on the scientific pursuits that were to be her life work, she could yet write papers of such delicate wit, such incisive expression, such clearness of thought and appreciation of the picturesque as raises them quite above the level of the magazine article for which purpose they served, and makes them as vividly interesting now as at their first printing, thirty or forty years ago. While the personality and the youth of the writer can be pleasantly detected now and again, as in the enthusiasm over some educational theory, the understanding treatment of the women characters, the medical allusions, yet there is no trace of the amateur in the brilliancy of "Some French Leaders," in the perfect charm of "A Study in Still Life," in the fine restraint of "A Sermon at Notre Dame." By a slip of the proofreader, which should be corrected in a later edition, on page 441 Isaiah takes from Elijah's mouth the irony with which he once taunted the priests of Baal.

Daily Notes of a Trip Around the World.

By E. W. Howe. Topeka, Kan.: Crane & Co. 2 vols. \$3.00.

There is no paper coming to our desk that is more invariably read than *The Globe*, of Atchison, Kan. It discusses the things that the people spend most of their time thinking about and doing instead of the things they are supposed to think and do. *The Atchison Globe* is the idea and personality of one man—"Ed." Howe, who twenty-five years ago astonished the English speaking world by "The Story of a Country Town," which has not yet been surpassed as a close study of real people. The sum of Mr. Howe's philosophy, stated in his own words, is:

"The great things in nature and art impress me, but only the incidents of life affect me deeply. I have never stood in awe before a great picture. A funeral impresses me more than a masterpiece of art; a crying child, the unhappiness of people, the ordinary affairs of men—these are the things that make the cold chills run over me, or make my knees weak, as if standing on the brink of a precipice."

With true kindness of heart, rare insight, a dry humor salted with a grain of sarcasm and an infallible common sense, he writes about the ordinary affairs of life. Nothing is too trivial or commonplace to suggest a generalization, nothing too exalted to provoke an irrelevance. Harnessing a horse, putting up preserves, washing the baby, sweeping the kitchen, falling out of love, the Roosevelt children—these and a million like them are the texts for the philosophical preachments of the "Poor Richard" of Kansas. A year ago this winter Mr. Howe took a trip around the world, traveling in Hawaii, Japan, China, the Philippines, Ceylon, India, Egypt, Palestine and Europe. Every day he wrote a few paragraphs for his paper, telling of his travels. These paragraphs, making a continuous history of his trip, are now published in the two volumes before us, and make the most entertaining record of travel we have read in many a year. Mr. Howe never opened a guide-book from the time he left Atchison until he returned. He wrote only of what he personally saw and felt. But after reading the books, one feels as tho one had actually seen the world just as Mr. Howe did. The horrors of sea-sickness,

the beggars of Ceylon, the soap and towels in the hotel bedrooms, the brakemen on the Indian railroads and the insignificance of the Sphinx are given space on the printed page in proportion to the time they took up the traveler's actual attention on the trip. The one conclusion that Mr. Howe keeps reiterating is that traveling at best is a hardship and that the average stay-at-home American is the best-off person in the world—if he only knew it. Doubtless there are other books giving more information about the people whom Mr. Howe has described in this unconventional narrative, but the homely homespun philosophy and the wry wit of the West (there is no humor produced in the East now) crop out on every page. The book is a Kansas classic.

Cairo, Jerusalem and Damascus. Three Chief Cities of the Egyptian Sultans. By D. S. Margoliouth, D.Litt. With illustrations in color by W. S. S. Tyrwhitt, R. B. A. 8vo. Pp. xiii, 473. New York: Dodd, Mead & Co. \$3.50 net.

The title page and the preface tell us that the pictures were the occasion of the text; but for the text the publishers went to one of the most competent Oriental scholars in England, who left the translation of Arabic manuscripts to attach himself for a while to the precinct of art. Here are fifty-eight illustrations in color after Tyrwhitt's sketches from the most famous cities of the near East, the architecture of which goes back to before the Fatimide dynasty down to the Mameluke and the latest Turkish period. We have mosques and minarets and bazars, walls and citadels and cemeteries; we are shown where they say Paul was let down in a basket in Damascus, the Mosque of Omar in Jerusalem, and Hezekiah's Pool; but richest of all are the scenes from Cairo, that fabulous city of story and renown. The pictures are lifelike and will delight others than those who have visited these Moslem wonders. The text has the rare merit of being trustworthy, and full of historical detail and instruction as to that Caliphate life and period of which we usually have only vague impressions, in which we mix up Cairo with Damascus and Bagdad, and probably all drawn from the "Arabian Nights."

Literary Notes

....*The Burlington Magazine*, the well known international journal of art, will be hereafter issued in America by Moffatt, Yard & Co., New York.

....*The Reader*, which has been published at Indianapolis by the Bobbs-Merrill Company, will be united with *Putnam's Monthly*, of New York, with the March issue. This combination of Western hustle with Eastern culture ought to be a success.

....The Rev. Frank Crane is a name known to INDEPENDENT readers. His working theology may be found in a volume entitled *The Religion of Tomorrow* (New York: Duffield & Co.). Old doctrines receive new forms, and incentives to duty are discovered in truths both old and new.

....A salesman will find not only much of interest, but also a large amount of valuable information, in Walter D. Moody's *Men Who Sell Things*. Aside from the technical points gathered in twenty years' experience on the road, there is some good philosophy mixed in. The book is dedicated to "The Commercial Ambassador." (McClurg, Chicago. \$1.00.)

....*The Bible Under Trial*, by Prof. James Orr, a series of miscellaneous philippics against the dominant tendencies in Biblical criticism, appears in a second edition (New York: A. C. Armstrong & Son). Dr. Orr conceives the works of most modern scholars as "assaults upon the Bible," and he has discovered an "attack" even in Dr. Ladd's reverent volume on "The Philosophy of Religion."

....Matters of greater importance and of more general interest than the affairs of a single Episcopal parish in New York City abound in the Rev. Dr. John P. Peters's *Annals of St. Michael's* (G. P. Putnam's Sons), notably the modest recital of the services of the present rector, the author of the volume, to the cause of Semitic studies in America and to Oriental archeological exploration. The book is beautifully printed and illustrated, and is a model of what a history of an important Church should be. Such volumes will some day furnish invaluable material to writers of more general histories, and are a great credit to their compilers and to those who encourage their preparation.

....The latest section of the great English dictionary, edited by Dr. Murray and published by the Clarendon Press, Oxford, covers the ground from Polygenous to Promious, in which are found 5,726 words and compounds. There is, as always, much interesting reading in it, particularly the paragraph, or rather the article, for it would take eight pages in THE INDEPENDENT, on the history of the word Potato, which was originally applied to the sweet potato (Batata), the now common variety being called "bastard potato." A new and popular fruit which goes in this country by the ridiculous name of "grape fruit" has some twenty-five aliases, among them "pampelmouse," "pimple-nose," "pomelo," "shaddock," and "forbidden fruit."

....Mr. John Manson publishes some severe strictures on the Salvation Army, especially for its financial methods as administered in Great Britain, in *The Salvation Army and the Public* (New York: E. P. Dutton & Co.) The demand for a full, public accounting of the Army's receipts and expenditures would seem to be justified, especially since the appeals for public support are so vigorous and persistent.

Pebbles

THERE was an old woman of Nicarag-u-a,
Whose back hair was bit off by a jag-u-ar;
The woman said "Ah!"
The jaguar said "Pah!"
What a false, artificial old hag you are!"

A MAN ate peanuts, nothing else,
And when that man was dead,
"He had tried to beat a shell game,"
Was what the obit. said.
—*Philadelphia Ledger*.

WHEN Benjamin wed Annie, oh!
They both were kindly fated;
It Bennie-fited him, you know,
While she was Annie-mated.
—*Saturday Evening Post*.

AN Atchison woman, who is in her thirties, went to her first big reception the other day. She got fussed, as she expected, and when the lemonade was passed around bit a big piece out of the glass.—*Atchison Globe*.

Don't sleep on your left side, for it causes too great a pressure on the heart.

Don't sleep on your right side, for it interferes with the respiration of that lung.

Don't sleep on your stomach, for that interferes with the respiration of both lungs and makes breathing difficult.

Don't sleep on your back, for this method of getting rest is bad for the nervous system.

Don't sleep sitting in a chair, for your body falls into an unnatural position and you cannot get the necessary relaxation.

Don't sleep standing up, for you may topple over and crack your skull.

Don't sleep.—*Puck*.

A LOCAL financier, who feels a deep interest in the financial flurry which has agitated the country for the past week, and who always asks the *News* for "the latest," about 1 p. m., called up today and the 'phone happened to be answered by the wag of the office.

"What's the latest news from New York?" asked the financier.

"Brooklyn bridge suspended," shouted the jokist.

"Heavens, what else?"

"The subway is in a hole."

"Great Scott, it gets worse, doesn't it? Anything else?"

"The Singer Building has gone up."

"Good heavens!"

He rang off. Thirty minutes later he rang up to inform the jokist that he had "caught on."—*Tampa News*.

The Independent

A Weekly Magazine. Entered at the New York Post Office as Second-Class Mail Matter.

Publisher, Clarence W. Bowen

Owner, The Estate of Henry C. Bowen
130 Fulton Street, New York

TERMS OF SUBSCRIPTION, PAYABLE IN ADVANCE
One Year, \$2.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of *The Independent* are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Issues and the People

THE American voter who expects to cast a ballot next November for a Presidential candidate cannot do a wiser thing than devote a few hours between now and election day to a detailed comparison, point by point, of the remarkable message that President Roosevelt transmitted to Congress on the last day of January, and the remarkable letters representing popular opinion in every quarter of the United States, which are printed in this issue of *THE INDEPENDENT*.

We believe so comprehensive, so interesting, and so profoundly significant an expression of popular opinion has seldom been offered to the public at one time and in one place in our whole national history as is given in these letters. We believe that it will be the verdict of historians a generation from now that Mr. Roosevelt's latest message is the greatest state paper that he has written thus far, if not the greatest that has been laid before the people by any American President since the Civil War.

If it be true that the judgment of our foreign contemporaries usually foreshadows the judgment of our descendants, we are not rash in our prediction. The *London Times*, in its serious and well-balanced comment, says:

"His pluck and persevering courage never have been so strikingly demonstrated as on this occasion. Roosevelt has been the first since Lincoln's day to see that the responsibilities of the United States on the American continent and in the world demand greater earnestness in treatment."

There is probably no source to which an American reader can turn for enlightenment on public issues which is, on the whole, so thoroly misleading as the editorial columns of some leading Eastern newspapers. The most superficial acquaintance with what people are feeling and thinking in the vast region west of the Alleghenies is sufficient to warn the cautious investigator that these journalists either do not know the mind of the American people or they do not choose to let their readers know that they know. Whoever will patiently look thru the letters that we publish today, noting the pointed, spontaneous, obviously independent and highly individual expressions of political opinion in which they abound, and compare them with the editorial utterances of the leading Eastern newspapers for ten days past, will hereafter attach little value to the Eastern organs of privileged interest and reaction, as a reflection of American political intelligence.

If it be true that whom the gods would destroy they first make mad, the comments of the "influential" press upon the President's message may perhaps be accounted for by supernal influence. As examples of merely human errancy they tax credulity. When, for instance, a leading journal remarks, "It is our belief that Mr. Roosevelt has at last gone where the people will not follow," we find it difficult to imagine that the writer and the responsible editor were fully aware where they themselves "were at." However that may be, Mr. Roosevelt and the people have calculated their own latitude and longitude with a nicety never before displayed in government by

and for the people. If any man quite sincerely believes that the American people will not follow where Mr. Roosevelt "has at last gone," he is destined to have an uncomfortable awakening from his delusions.

Astonishing as is such a misinterpretation of the popular mind, it is soberness and urbanity by comparison with the comments upon the style and manner of the message. To characterize this document as abounding in "passion," "excitement" and "intemperance of speech" is to make the childish assumption that the American people will accept such criticism without taking the trouble to read the message for themselves. They will read it. Literally millions will read it. Tens of thousands already have read it, and they have discovered that the characterizations of it by the President's enemies are simply not true. Forceful it indeed is. But the strength is the relentless force of moral earnestness. It is the Miltonic strength before which the apologists for privilege and for wrong can only break forth in the meaningless phrases of anger.

So far from being an "astounding appeal to the hot-headed and the irresponsible," this message is essentially the most serious and earnest appeal that has ever been made by a public man in America to the moral sense of the nation; and the response which the moral sense of the nation has made and will continue to make to it, so far from showing that the people "are ripe for a war of destruction against the elements of the nation's greatness and stability," shows that the American people are still quite competent for the great task of maintaining republican self-government. Never in history has there been so tremendous an array of power bent upon creating an oligarchical society as that which has been organized in the United States since the Civil War

by the men who, aided by state-created privilege, have exploited the virgin resources of the richest continent in the world. At any former time this power would utterly have annihilated the forces of democracy. But, thanks to that system of universal education which has been created here, to freedom of discussion, to untrammelled communication, and to the sturdy independence of the sons of pioneers, there has arisen in this nation

THE TWO LEADING REPUBLICAN CANDIDATES.

a power that is greater—and *that power will rule!*

Governor Hughes's Platform

IF there were persons who expected that Governor Hughes, in the public address which may be called his platform, would give aid and comfort to the reactionaries, they have been disappointed. Of course there was no such expectation on the part of those who knew the man and were familiar with his work since he took public office. The address was

one of broad scope, not only in its statement of fundamental principles, but also in what was said about national questions of the day. Some of these questions, however, are much more important than others, and by his views concerning them the Governor will be judged.

First, it will be noticed that he heartily commended President Roosevelt for "his vigorous opposition to abuses and for the strong impulse he has given to movements for their correction," speaking also of "the great service he has rendered and the fundamental importance of the purposes he has had in view." This disposes of the assertion, widely published, that the Governor has not approved the President's course and has personally been at variance with him. As to the regulation of interstate railroads, the Governor not only expresses his approval of the Rate law, but goes further:

"I believe that the Commission should have the most ample powers for purposes of investigation and supervision, and for making rules and orders, which will enable it to deal to the fullest extent possible, within constitutional limits, with interstate transportation in all its phases."

With respect to the Sherman Anti-Trust law he is fully in agreement with the President, both as to amendments restricting condemnation to combinations that are harmful and in unreasonable restraint of trade, and concerning provision for railway rate agreements. He asks for "explicit definition of what is wrong and adequate punishment of the guilty."

Because he is not in favor of punishing corporations by fines, except for minor offenses, some have asserted that in this he is hostile to the President. Governor Hughes would have the guilty rebater sent to prison. But Mr. Roosevelt also would like to see him punished in that way. We presume he would have preferred the imprisonment of the Standard Oil officer responsible for rebating, to the imposition of that fine of \$29,240,000 by Judge Landis. The Governor was dealing with many questions in a short time. If the recent prosecutions had been his sole topic, he would doubtless have pointed out that certain Senators withdrew the prison penalty

from the old law, under which the rebate indictments were obtained. There is such a penalty in the new law. It is well known that Attorney-General Bonaparte (representing the President in the Department of Justice), preferred that the punishment should be imprisonment. Governor Hughes and the Administration are not at variance on this question, unless it be in the matter of an opinion as to the inclination of trial juries.

There has been misleading comment upon the Governor's remarks about Federal power and State power, due probably to hasty reading of what he said. Governor Hughes did not object to the use of Federal power for the regulation of interstate commerce. There should be, he said, no unnecessary exercise of Federal power, causing impairment of proper local autonomy, but he also said there was danger that serious evils of national scope would go unchecked because of a failure to exercise Federal power. Surely the following words did not place him with the extreme advocates of State rights:

"It cannot be regarded as a policy of unwise centralization that, wherever there is a serious evil demanding governmental correction, which afflicts interstate commerce and hence is beyond the control of the States, the power of Congress should unhesitatingly be exercised."

He vetoed a two-cent fare bill, and he well knows that State railway legislation, as the President says, is "sometimes wise, sometimes ill-judged and extreme, sometimes unjust, and more often ineffective because unconstitutional." But if we assume that he had in mind the Beveridge child labor bill, the bearing of the following passage in his speech is clearly seen:

"It must be remembered that an evil is not the proper subject of Federal cognizance merely because it may exist in many States. All sorts of evils exist in many States which should be corrected by the exercise of local power, and they are not evils of Federal concern altho they may be widespread."

As for the Governor's opinions concerning the purity of elections, publicity for campaign expenses, the preservation of the forests, the development of inland waterways, and legislation for the improvement of labor conditions, they are in accord with those of the most progressive element of his party. His brief reference to our duty with respect to the

Filipinos is wholly admirable. A revision of the tariff, based upon the difference in the cost of production here and abroad as "the fundamental consideration," would make great changes in the present law, and resort to a commission would cause delay. It is to be noted, however, that the Governor (who stands for revision) believes that the protective policy should not be "a cover for exorbitant rates or for obtaining special privileges" which are not for the general good.

When he asks the Republicans of his State to "forget every personal difference" he seeks to end a factional bitterness that should promptly be laid aside, but which may be kept alive by a contest for control of the party machinery. So excellent a candidate should have the support of all the Republicans of New York, and they should work in harmony. If discredited bosses and agents of reactionaries promote his candidacy for sinister purposes of their own, the rank and file should be so united and earnest in his interest that the selfish schemes of such men will have no weight to his disadvantage in New York or elsewhere.

Another Regicide

It is dangerous to go into battle. It is quite as dangerous to wear a crown. The proportion of kings who die a violent death is as great as of those who die in war. Uneasy lies the head that wears a crown. Even presidents of republics belong to the same danger-class.

It is not long since the attempt nearly succeeded to assassinate the King of Spain and his bride. Now the King of Portugal and his elder son and heir to the throne have been killed by a band of assassins who attempted to destroy the whole family at once, but failed to kill the Queen and the younger son, who now succeeds as King of Portugal.

King Carlos had for months been ruling by a purely arbitrary assumption of power, independently of the Cortes. Such was the friction between the too numerous parties that legislation and even the appropriation of money to carry on the government was blocked, and the King dissolved the Cortes, made Franco his Premier, and ruled by royal mandate,

supported by his vigorous Premier, Franco, and the army. Of course, this procedure produced great discontent. An English Parliament decapitated a king who acted no more illegally. But in Portugal there was no Cortes in session, and Premier Franco was very free in the arrest and imprisonment of those who opposed his arbitrary policy, and the King fully supported him, even altho his son, the young Duke of Braganza, who had taken a journey to visit the Portuguese colonies, protested against such lawless rule. He has now perished with his father. It had seemed that the popular hostility would be directed against the Premier, and it is surprising that he has escaped. In a late journey of his thru the provinces his life was regarded as in great danger. But it would look as if it were the attempt of the Republican revolutionists, as in the case of the Servian murders a few years ago, to destroy the whole royal family.

The world will wait anxiously to see what will be the result. For weeks Lisbon has been almost as much walled against authentic public knowledge of what was going on as was Peking during the Boxer insurrection. Premier Franco suppressed all news. He is now real dictator, for the young King is not twenty years old. He has proclaimed what is really drastic martial law, and will banish from the country whoever he thinks is dangerous to his control. He is absolute autocrat, or will be so long as the people can be held in awe by the army. But that kind of rule cannot last indefinitely. The Republican and Socialistic elements are strong, and they are both utterly opposed to a royal régime. The end will have to be a republic, for France is a republic. It must come, and may come soon. There will be no other country to intervene to save a throne, as would be the case in Eastern Europe, and as was the case in the revolutions of 1848. Between France and Portugal a crown would not long remain on a royal head in Spain, which has once tried unsuccessfully to be a republic. The only hope to maintain a royal house is, as in Great Britain, to abdicate the powers of royalty and allow complete rule by the people. But that is a republic, by whatever name it may be called.

Dispossessing a Nation

POLAND was partitioned, after its lamentable fall, between Prussia, Austria and Russia. But the people have remained Poles, clung to their language, cultivated their history and traditions, and so are three thorns in the side of three empires.

In turn the three empires have tried to subdue the racial sentiment of the Poles, but have as often failed. Whether Poles, Jews or Christians such sentiment grows strong by persecution. It is the sun, and not the frosty wind, that loosens the rustic's cloak. But governments seldom learn this fact, and just now Prussia proposes to try the fool's policy.

There has been for some time a commission whose business it is to purchase estates in Prussian Poland and sell them to Germans. The payment is from public money secured by taxes which Poles themselves pay. In schools children are not allowed to use the Polish language, and Polish is forbidden in public meetings. As if this were not foolish and drastic enough a new and absolutely tyrannical proposition has been presented by Chancellor Bülow to the Prussian Parliament, being nothing less than the arbitrary and compulsory purchase of estates owned by Poles, 174,000 acres this year, and transferring them to German-speaking Prussians, thus dispossessing the owners by a lawless law, making them like Melibœus, exiles from their native land, banished to another continent, citizens compulsorily with us or in Canada or Australia, "*toto divisos orbe Britannos*."

This, we say, is a cruelty, a tyranny, unworthy of a decent Christian people. The Prussian Poles have been good citizens. They have paid their taxes; they have served faithfully in the army; they have raised no revolution. They have only demanded and exercised the freedom to use the language of their fathers, and to nourish the silent hope that in the good day coming the dis severed fragments shall be reunited in a new Poland. They have kept their patriotism bright in their hearts, but have been obediently loyal to the nation of which they have been forced to be a part. They could not believe that a civilized State, which has

courts to recognize and protect the rights of personal property, could select them out as having no rights in their inherited acres, and could compel them, against their will, to give up and forsake the homes and graves of their ancestors, and all to put in their place a people who use a different tongue from theirs. Such a law, if enacted, will be a disgrace to the Prussian name.

That is not the way Great Britain deals with Canada. There she allows the French language in schools and in Parliament. So she allows Dutch in South Africa. So we allow full use of Spanish in Porto Rico and the Philippines. That is the way to secure loyalty and contentment; and it is also the best way to supersede a subordinate and supernumerary language. The world is amazed that Prussia knows no better than does Russia how to rule a conquered and incorporated people.

The "Nerve of Missions"

IT would seem a hundred years, and yet is not so much more than a dozen, since our theological world was stirred by the "new theology" of the day, now a forgotten theology, for the present "new theology" is something quite different. Then Andover Seminary was broken up over it, certain professors, now dead or living, arguing for a second probation, and Professor Park standing behind Joseph Cook in declaring that it would destroy the "nerve of missions" to question that the present probation settled the question of eternal life or eternal death.

It is but fifteen years since it was decided at Worcester that the American Board might send missionaries of a liberal faith, and Secretary Alden and Joseph Cook met final defeat; and now we look to the pages of *The Missionary Herald* of February and we find that old question of the "nerve of missions" again considered by seventeen different writers and preachers of distinction in the Congregational communion, under the title "The Foreign Mission Imperative," and not one of them mentions, unless by distant allusion, that motive of saving the heathen from the pains of eternal death which was in those days asserted to be the very life-nerve and imperative of

missions to the heathen. The contrast with those days is surprising. It marks a stage of religious history. We get by it a startling parallax on our intellectual movement.

These seventeen representative men include twelve ministers living in various sections of this country and five foreign missionaries at home on furlough. They were told that it is said we now need a restatement of the aims and motives of foreign missionary enterprise, as the old arguments have become less effective, and they were asked to set forth the present view of missions with its emphasis and imperative. President Mackenzie, of Hartford Theological Seminary, replies that the motive is found in Christ and in the human experience of his power and grace, who came to save the lost and who puts on all men the demand to repent and believe the gospel. President Tucker, of Dartmouth College, who was deep in the old controversy, tells us that certain motives are unchangeable, obedience to Christ's command, the love of man, and the sense of the sinfulness of sin as seen in Christ's sacrifice; and that to our age a fresh obligation comes with the new valuation of hitherto unknown races. Dr. Jefferson, pastor of Broadway Tabernacle, New York, finds the motive now to be that which sent Paul to Macedonia, in the opportunity of doing mighty things for God and humanity. Dr. Gordon, of the Old South Church, Boston, finds the motive in the love of Christ, constraining us "in the eternal love of God as repeated in his Son, Jesus Christ, repeating itself in all the true disciples of Christ." Dr. Mills, of St. Louis, finds it in the supreme value of the gospel, the law of human brotherhood and the command of Christ. This in substance is what all the other ministers at home say. They emphasize especially the compelling power of brotherly love and the command of Christ.

The five missionaries say much the same thing. Mr. Bunker, of South Africa, finds the imperative in the command of Christ, and the motive in grateful loyalty to Christ in establishing the Kingdom of God on earth. Mr. Hinman, of China, finds the essential good of

missions in God's message of love in Jesus Christ, a simple gospel for the whole world. Mr. Partridge, of Turkey, says that salvation "is not so much being saved *from* destruction as *to* construction," and that such character is cultivated thru constant friendship with Christ. Mr. Howland, of Mexico, is impressed with the returns of missions, "not merely the saving of souls and Christian nurture, but anything in the line of education, temperance," etc., that uplifts the people. Dr. De Forest, of Japan, finds the motive in the value of the Kingdom of God, and the call in the Spirit of God that has long worked thru their moral prophets, lawgivers and religious teachers in the ancient nations of the East, and which is calling us to enlarge their service for the Kingdom of God. Not one of these missionaries, and not one of these ministers, tells us that the heathen are going down to Hell unsaved, and we must hasten to deliver them. This may or may not be in the background of what they mean by salvation, but not one says it. It is not the present and prominent motive in their minds or what they present to us.

And yet missions are carried on more earnestly than ever. The "nerve" is not "cut." Other motives are found sufficient, the love of man, the desire to make men better, the grandeur of the coming Kingdom of God, the command of Jesus Christ, loyalty and love to Him who is our Master—these are the weighty motives presented and found effective.

But oh! what a difference from the day, so little while ago, when we were told that such views involved heresy and were destructive.

The Catenary Novel

THE recognition of the force of economic influences on the course of human events has transformed the writing of political history in recent years, but no economic history of literature has yet appeared. In so far as they attempt to account for fashion in books, the historians of literature seem to regard it as due to simultaneous changes of popular taste or to spontaneous outbursts of individual genius. But the effect of material and financial conditions in determining liter-

ary forms is clearly apparent in cases coming under the observation of all. A conspicuous example is the unprecedented demand for and consequent overwhelming production of short stories. This is due to the multiplication of magazines, which in turn results from the increased demand for advertising space. It has been discovered in recent years that it is possible to write advertisements of almost any commodity so they shall be attractive and readable in themselves, and also that this is profitable in many lines where formerly a direct appeal to the consumer was unheard of. The periodicals were able to provide a vehicle for this new advertising because the introduction of wood-pulp paper, rapid presses, typesetting machines and photo-process illustrations enable newspapers and magazines to be produced with astonishing cheapness and facility.

But there is a limit to the amount of advertising which can be "carried" by a certain amount of "reading matter." Interesting and attractive as the advertising matter became, people would not buy a magazine for that alone, and when it formed more than half or two-thirds the bulk of a number the value of the advertising pages themselves decreased. In making sandwiches the ham must not be sliced too thin. That necessitated starting a new magazine, and so we find from three to a dozen or more periodicals issued by the same house, often similar in character and apparently rivals.

The next problem was how to get the necessary minimum of attractive and in-offensive reading matter to fill the space between the front and back sections of advertising. Besides current events and personalities the most available material was short stories, which, in order to appeal to the largest possible number of readers and to antagonize no one, had to be confined to narrow and conventional lines, practically to romances of love and adventure. On account of this sudden demand the market went short on short stories, and prices, even for second or third rate quality, rose to an unprecedentedly high figure. This brought into the field of fiction hundreds of writers whom nature obviously intended for

other occupations. They were most of them better qualified to do hack work, such, for example, as chopping wood or driving cabs.

The magazines which relied mostly on the news-stand sale of single copies instead of on a subscription list could not count on a permanent class of readers, consequently each number had to be complete in itself. Continued stories, which were the leading feature of the old-fashioned magazine, became less important in the new or were entirely omitted. Instead of the announcement on the cover that such a novel "begins in this number," we more commonly saw "no continued stories."

But while the short story is more salable than the novel in periodicals it is less salable in book form. Volumes of disconnected short stories, even by the most popular authors, hardly pay for publishing. The only way for a writer to secure this double sale was to invent something that would read like a short story in the periodical and like a novel in book form. This is the real origin of what might be called the catenary novel, which consists of a chain of episodes or adventures of the same characters. Any one of the series may be read with interest by itself, but together they form a tolerably connected story. This saves the author the trouble of inventing a new set of characters every month, and the constant reader the trouble of getting acquainted with so many new people. Reading a lot of short stories at a sitting is as tiring as attending receptions all day.

On account of the rigidity of the conditions imposed upon it the catenary novel is restricted in style and scope. The long passages descriptive of persons and places, the careful setting of the stage, the gradual introductions and transitions, have to be eliminated. The most important features of the old-fashioned novel, the complicated plot, interactions of a large number of persons and the development of character, are impossible in the new. The style must be simple and the action swift.

Often the catenary novel is, like the star play, confined to the display of a single character, with the aid of as few

minor parts as possible. The two most popular novels of the last five years, "The Virginian," by Owen Wister, and "Mrs. Wiggs of the Cabbage Patch," by Alice Hegan Rice, were of this kind. Kipling's "Soldiers Three," Davis's Van Bibber sketches, Doyle's "Adventures of Sherlock Holmes," Mrs. Deland's stories of Dr. Lavendar and his people in Old Chester, Miss Kelly's East Side school children, O. Henry's Latin American tales, Mrs. Madden's Life of Emmy Lou, are representative of the thousands of serial episodes and incidents of cowboy, suburban, domestic, athletic, adventurous, criminal and society life.

Of course the catenary novel is no new thing. The "Decameron" and "Canterbury Tales" do not belong to this class because they consist of distinct stories in artificial setting, but some of the individual tales of the "Arabian Nights," such as "Sindbad the Sailor," are good examples of it and due to the same cause, for the story-teller on a street corner has to hold his casual audience by the same devices as the writer for news-stand periodicals. "Pickwick Papers" took the catenary form because it was issued in periodical parts and was written from hand to mouth, or, perhaps, we should say from mouth to hand, since Dickens was accustomed to recite his dialog before putting it on paper.

But in spite of the prevalence of catenary fiction on account of the ease with which it can be written and read and its adaptation to present conditions of publication, it is inferior to the standard type of novel not only from an artistic standpoint but also in permanence and even in popularity. It should be noted that altho "The Virginian" and "Mrs. Wiggs" stood for a time at the head of the list of the "best sellers" of the last five years, the six books standing next to them, Parker's "The Right of Way," Churchill's "Coniston" and "Crisis," Thurston's "Masqueraders," Wharton's "House of Mirth," and Ward's "Marriage of William Ashe," all belong to the class of "well-made" novels with plot and scenery and characters all complete. Episodes and characters must be linked together to form a net instead of a mere chain if they are to hold the reader's attention.

Animal Slavery

THESE days of sleet and snow, when we see carriage horses stand shivering before opera houses and restaurants and draft horses staggering along the icy streets and falling with bloody hocks or broken legs, make us long for the speedier coming of the time when inanimate steel and tireless electricity shall take their places. In Paris today there are only 83,458 horses employed, where ten years ago there were 92,028, a reduction of 10 per cent. Probably the displacement of the horse by the machine will be more rapid in the future, until ultimately he will receive an honorable discharge from his 4,000 years of service to man. "De Yankees is queer people," said a negro on the street of a Southern city when the trolley cars were first seen. "Dey come down hyar and set free the nigger, and den dey come down and set free de mule." The abolition of animal slavery is to be effected by the progress of applied science, not by legislation, but legislation should facilitate rather than hinder, and public sentiment will be a strong factor in the cause, especially in its later stages. Already the sight of yoked oxen is somewhat offensive to our unaccustomed eyes, and we are shocked when we see in Europe dogs pulling heavy carts or working on treadmills. Dogs, we think, should lead the leisure life as pets or policemen. The extension of slavery to any of the free creatures, such, for example, as the use of moose for dray work or ostriches for carriages, would be likely to be checked by the S. P. C. A. with the backing of public sentiment. A little girl coming to New York recently from the country cried out: "Oh, look, mamma. at that naughty man. He's making horses pull the trolley car." It will not be many years before we all see thru the eyes of this girl.

Whether we will ever be able to dispense altogether with the aid of the lower animals, nobody can say. So long as we are dependent on cattle and sheep and chickens for their flesh and integument we must keep up the system of animal imprisonment, but that is not so bad as animal slavery, because they lead comparatively easy, happy and healthy lives,

with no prescience of a violent death. Let us then manumit our slaves as soon as we can get along without them. The bees, the silkworms and the bacteria we will retain in our service indefinitely.

On the first trial of Thaw the attempt was made, after the far Western or Southern method, to acquit him on the ground, really, of the so-called "higher law," which is not by any means the higher law of Saint Peter and William H. Seward, which was that it is better to obey God than man, but a very different sort, that which declares that if a man thinks he or his has been injured, he has the right to take the law in his own hands and kill the injurer. Part of the jury were willing to accept that doctrine, and the jury disagreed. For all we see, the likelihood is that this defense might have been repeated over and over again until the prosecution was wearied into giving up the attempt and the murderer would have gone free. But for some reason this was not attempted. In the second trial the defense tried to show that Thaw was and had been from his birth insane, and was therefore innocent of criminal intent. This really satisfied the prosecution. But the defense, the lawyers, and the public knew that acquittal on that line of defense meant imprisonment for life. On that plea he was acquitted and sent to an asylum for the criminally insane. Thaw seemed to have sense enough to know what that defense meant, and to object to it. Perhaps his wife, and possibly his other relatives, who must have given their consent to the plea, were persuaded that it would mean but a temporary imprisonment, and that it would soon be proved that he was no longer insane and that he could be safely freed. If so they were mistaken. The defense seems to have shown successfully that he has been insane from birth, and if so it will always be dangerous for him to be at large. That he should be permanently thus incarcerated fits the common sense of justice, and yet it looks as if both the defense and the prosecution were at one in the desire that he should not be set free. And that defense might serve to annul

his marriage on the ground that he was not mentally competent when married. If the family should attempt to secure this there would be considerable popular sympathy for Evelyn Thaw, whose story, in good part, is generally believed, while the result of the trial satisfies the public, or will if he is kept in confinement, as one who is liable to other homicidal attacks.

The Making of Books

Do you aspire to read all the new books as they come out? If so you will have to read at the rate of twenty-six books a day to keep up with American literature alone. Last year we broke the record: 2,481 more books published in the United States than in 1906; far ahead of any previous year. The total number for 1907 was 9,620, from which may be subtracted 695 new editions, leaving 8,925 really new books appearing in the United States. Of these 6,517 were by American authors or were new editions manufactured in the United States, the others being by English or other foreign authors or consisting of imported editions, bound or in sheets. We are gradually making good our literary declaration of independence, every year producing a larger proportion of the books we read, especially fiction. In quantity if not in quality we are catching up with England, where last year 9,914 books appeared, only 294 ahead of us, whereas in 1906 the English publications outnumbered the American by 1,464. The French in 1907 produced 10,785, of which, however, 2,000 or 3,000 were mere pamphlets. The Italian book production for the same year was 7,040. In the American list Fiction, of course, stands at the head with 1,171 titles. Next to it and rapidly gaining on it is Theology and Religion with 876. The classes following are Law, Physical and Mathematical Science, Poetry and the Drama. Why is it that people will continue to say that religion is a dead issue and that nobody reads poetry in face of the fact that last year in this country the number of new publications in religion was more than 40 per cent. greater than the year before, and the volumes of poetry more than doubled?

An Educated Dog

Could Clever Hans, the trained horse of the Baron von Osten, count and add and spell and read, as his owner believed? And can the clever dog, Roger, whose owner has taught him all these things and more, too, so that he even anticipates the answer to a new question by putting his paw on the right card for a number or on the right letter to spell *Constantinople*, really do all this intelligent mental work which his owner describes in the *Century*? We think not. We must accept the explanation, or something like it, of Mr. Yerkes, instructor in psychology in Harvard University, difficult as it is, that the dog is simply guided by his master's eyes or unconscious movements, and that his sight is keener than ours, even as is his smell. He must see his master's face before he can answer the question. It is not mind reading, nor is it intellect.

An effort is making to enact **Vivisection** a law in this State to control experiments by vivisection.

Our position on the subject is not with the extremists on either side. It needs no argument that great advantages have come to medical science by experiments on animals that have involved suffering. We approve them, because men are more valuable than guinea-pigs or even dogs. On the other hand, to repeat these old experiments simply to show them, and to set schoolboys and schoolgirls cutting up dogs and cats, is both cruel and useless. Such vivisection should be allowed only in the real interests of science and human life and health, and under close scientific control by suitable institutions and the department of health. Animals should, whenever possible, be etherized, and if seriously injured be killed when the experiment is concluded. There should be proper registration of those allowed to use vivisection, as well as of the buildings. Such restrictions will not prevent competent private investigators, such as initiate so large a number of important discoveries, from taking their share in such biologic study, for they can secure easily the endorsement of recognized authorities and institutions. The purpose of law should be to prevent needless cruelty, while not at all discouraging the progress of real science.

Which Is True?

At the convention of the National Liquor Dealers in Louisville, Ky., January 22d, resolutions were past with this preamble:

"Whereas, The people of the various States are being urged by certain organizations to prohibit the manufacture and sale of all alcoholic beverages, which would destroy millions of property and throw out of employment hundreds of thousands of men."

Then follow the resolutions, and we read again:

"That a law merely prohibiting the manufacture and sale of alcoholic beverages, while proving destructive of revenues, does and must inevitably fail to prohibit either the use or the abuse of alcoholic beverages. That prohibitory laws, under which our business is forbidden as a lawful pursuit, only shows as a result an increase in the per capita consumption of wine, beer and whisky."

Well, which? Will it destroy the business and throw liquor-makers and sellers out of employment, or will it increase manufacture and consumption? We cannot harmonize the two statements, and do not believe they cared to tell the real truth. Certainly they are frightened.

The Jewish Race

Are the Jews a race? Both a race and a religion, but chiefly a race, seems to be the view of Dr. Magnes, the young associate rabbi of Temple Emmanuel of this city. When the wealthy Louis Stern, a trustee of Temple Emmanuel, allowed his daughter to marry, not long ago, Baron Leo de Graffenried in St. Patrick's Cathedral, Dr. Magnes preached a sermon which has caused Mr. Stern's resignation as trustee. His text was: "Neither shalt thou make marriage with them. Thy daughter thou shalt not give unto his son, nor his daughter shalt thou take unto thy son." That the sermon was directed against the marriage was indisputable, and it was no relief to declare that Solomon and all the rest freely disobeyed the law up to Ezra's time, which is one of the arguments that Deuteronomy is late. But Dr. Magnes's argument to the liberal members of Temple Emmanuel was not the religious one, but the social, that intermarriage would necessarily disintegrate the Jewish community. He urged "racial preservation," "a national entity," and he argued that it is desirable to "rehabilitate the Hebrews as a nation among nations," and he wanted "the establishment of an ideal that

would be more than a theological abstraction." We can see that it may be a precious hope that a Zionist nation may be established in Palestine, to exist as an archeological specimen, with archaic language and laws after the Mosaic type; but we are not in Jewry, and no anthropology can distinguish Jews from Gentiles. Jews have all sorts of tints, blond and brunet, hair light or dark, noses pointed or hooked, hight dwarf as the refugees from Egypt or tall as the Philistines from the Greek isles. If religion does not keep them distinct there is no racial bar, nothing but a lingering sentiment or tradition. And meanwhile the refusal to intermarry is the one thing that so often puts a social ban upon them. When they give up the old religion, and every binding rite but one, we see no reason why they should not intermarry and intermingle and cease to be a separate "national entity" within the nation, as are the Armenians in Turkey.

The answer of the Commissioners of Corporations to the criticisms of the Standard Oil Company on the action taken against it and the decisions of the courts is a very strong and convincing document. The pamphlet issued by the Standard Oil Company of Indiana, signed by its president, denied the legality and the equity of the conviction. The published rate for shipment of oil from Whiting and Chicago to St. Louis was eighteen cents per hundred pounds, but only six cents was paid, and this was secret. It was not a rebate, simply a less charge. There was no competition, for the secret rate had accomplished its work and made a monopoly. Every waybill was false, made out on the eighteen cent rate, and yet only six cents paid. We see no legal or moral defense which would show the conviction unjust or the fine excessive.

We admire the courage of Sir Oliver Lodge in risking his scientific reputation on his belief in spiritualism and the genuineness of the communications from the other world thru Mrs. Piper. The experiments thru which the genuineness of her mediumistic communications with deceased persons is investigated are much like those which Professor Hyslop con-

ducted in this country, and have to do with knowledge of insignificant facts presumably unknown to the medium; but such psychical investigations must be long continued and abundantly verified before so tremendous a fact as the existence of the soul after death can be scientifically demonstrated.

We have the heartiest sympathy with the spirit which controls the letter sent by Dr. Jefferson and over twenty other clergymen, members of a ministers' club in this city addressed to Senator Hale, expressing the earnest hope that Congress will call a halt in enlarging the Navy. It is not long since President Roosevelt said that all we need is to keep our navy at its present standard, replacing old vessels, but that does not satisfy the present program. Even with this present program we do not equal the extravagance of Germany, which will expend \$100,000,000 a year for ten years on its navy.

It did not occur to us to make any mention of the marriage last week of a rich American girl to a titled foreigner, but such an affair stirs all the toadyism of our sensational press, which gave two or three pages of pictures and "story." All we could have said is that the bride could have made surer of married happiness by marrying an American real nobleman. There are just now several cases before the public of such marriages followed by quarrel and separation, and several other divorces.

One of the silly propositions broached to create talk is that for a tax of 20 per cent. on dowries of rich American girls marrying titled foreigners. Why not make it 100 per cent.? Such a bill as that offered at Albany is purposely confiscatory and is doubtless unconstitutional.

It is agreeable to discover that Persia is getting to be as civilized as the United States. We have it cabled that in Teheran a mob stormed the Governor's palace, overcame the guards, took out a prisoner charged with murder and lynched him.

They who say "How small the world is!" are living in a small world.

INSURANCE

Mutual and Stock Life Insurance

THERE has been much public discussion of life insurance questions during the past three years, dating from the time when Mr. J. W. Alexander, then president of the Equitable Life Assurance Society, under the inspiration of his ambitious lieutenant, Second Vice-President Tarbell, precipitated the issue with Vice-President James Hazen Hyde, owner of five hundred and twenty of the one thousand shares, of the society's capital stock, involving the demand by the former that the stock interests be retired and the company transformed into a mutual. It was not unnatural that young Hyde, the son and successor of the founder and builder of this giant financial institution, was loath to part with so much power and influence; and far-seeing men had little difficulty then in concluding that the struggle which commenced in February, 1905, between the two factions in the company, would be to the death, and that it might shake the structure of American life insurance to its foundation. For the foundation, as well as the superstructure, had been seriously damaged by the abuses which had grown up out of and were inseparable from the excrescences which covered it.

It is not believed among well-informed life underwriters that the demand of one of the Equitable factions that the capital stock of \$100,000 be retired and the company be placed on a purely mutual basis was sincere. It served as an admirable issue in a fight that, it was hoped, would end in ridding the society of young Hyde and the interests of his family. As is well known now, the contest was of the Kilkenny variety, in that it destroyed all the contestants and failed in accomplishing its alleged purpose.

But the issue is a vital one, and, therefore, irrepressible. It has been recently reported — but there is shown to be no truth in it — that a well-known banking house had recently secured the control of the stock of the Equitable Life Assurance Society. This report, together with the recent death of Franklin Butler Lord, senior member of the law firm of Lord, Day & Lord, has again brought up the subject of the mu-

tualization of the Equitable, for Mr. Lord, it will be remembered, began suit in 1905 to prevent the mutualization of the company. The present owner of a majority of the Equitable stock is pledged to the "mutualization" of that company, and will doubtless be held to the redemption of his promises. The question arises: Will the policy-holders of the society be any better off when that event occurs than they are now? The answer is yes, if the mutual management is all that it should be. Why? Because, to begin with, the title to the entire property will then vest in the policy-holders. They can, at will, change their trustees and officers, just as was done some years ago by an important Philadelphia company, and later by one of the large New York mutuals.

It is not argued that abuses of management, resulting in injury to policy-holders' interests, are impossible under the mutual system; but it should be obvious to even an ordinary mind that it is not as difficult for the owners of a property to rid themselves of dishonest or incompetent servants as it is for the same persons, who as mere patrons of a proprietary corporation, to escape the exactions and impositions of that corporation.

Again, insurance, the institution, is a co-operative effort. It is a combination of resources against certain misfortunes incident to human life and its sustenance. It is benevolent rather than commercial in its nature. The many are joined together under a pledge to ameliorate the sufferings of the few. Therefore, there is no natural place for profit to any one. It is an expense to all who seek its protection. Mutuality is plainly apparent. Estimates of pecuniary profits in pure life insurance to survivors are pleasingly plausible, but not true. But there are returns that result in a steady reduction of the cost; and these should be equally distributed among those who bear the burdens.

In conclusion, mathematics proves that an established, going and properly managed life insurance company not only does not need capital, but is worse off thereby to the extent of the dividends paid for its use; to say nothing of the fact that the management is beyond the reach of the policy-holders.

The Steel Corporation

THE effect of the panic upon the iron and steel trade is clearly shown in the Steel Corporation's report for the closing quarter of 1907. Net earnings were larger in October (\$17,052,211) than those of any previous month in the great company's history, but in November they fell to \$10,467,253, and in December they were only \$5,034,531, while unfilled orders on hand at the end of the year were 4,624,553 tons, against 6,425,008 on September 30th. Net earnings for the quarter, \$32,553,995, were less by \$11,000,000 than those of the quarter immediately preceding. Still, it was the Corporation's greatest year, for its net earnings in the twelve months were \$160,984,477, surpassing by \$4,000,000 even the high record of 1906. The reaction from which the company's business has suffered ought to be of short duration. It would have been brief if the immediate and direct causes of it had been clearly seen by the entire public.

Knickerbocker Trust Company

JUSTICE CLARK, on the 1st, gave the depositors' committee of the Knickerbocker Trust Company two weeks more in which to obtain the additional assents which are needed before the company can resume business under the reorganization plan, and it is hoped that on the 15th the temporary receivership will be dissolved. Having referred to the favorable attitude of Superintendent Williams and to the protection afforded by the court, he remarked that "the conclusion that the depositors who hold out are either uninformed as to the situation, or deliberately prefer liquidation to resumption, seems irresistible." Two or three days before this delay of two weeks was granted, W. Butler Duncan, Jr., a member of the depositors' committee, spoke for the committee as follows:

"The depositors' committee is much disappointed that the minority depositors have not taken more prompt advantage of the opportunity given them by Judge Clark to avoid loss and disadvantage of winding up the company thru a receivership. The non-assenting deposi-

tors should realize the gravity of the situation that confronts them. Some of the views entertained as to resumption have been altogether too hopeful, for the deposits still outstanding amount to several millions of dollars. There is no chance of opening the Knickerbocker Trust Company under anything approaching existing conditions as to assents. The responsibility of opening the Knickerbocker Trust Company now rests entirely with the small minority of non-assenting depositors; the time is so limited that prompt action is required or the Trust Company cannot open.

The temporary receivers, who desire to facilitate the reopening of the company, are much pleased at the progress recently made in collecting debts due to the institution. They now have on hand \$8,608,216 in cash. The investment securities have not been sold but have been retained in the expectation that the company will resume business. In the interest of the depositors and of trust company banking in New York, the assents that are needed should not be withheld.

....State Comptroller Glynn has informed R. Ross Appleton, president of the Fourteenth Street Bank, that the bank has been designated a depository for funds and money paid into courts in New York County.

....Comptroller Metz will sell for the City of New York, at 2 p. m. on the 14th, \$50,000,000 of New York City 4½ per cent. tax exempt gold stock and bonds, issued in coupon or registered form. They are legal investments for trust funds. Bids may be sent by mail, and must be accompanied by a deposit of 2 per cent. of the par value. Bidders can obtain information by addressing Comptroller Metz at 280 Broadway.

....Paul M. Warburg, of the banking house of Kuhn, Loeb & Co., delivered an interesting lecture before the students of Columbia University, last week, upon European banking methods and our own. Speaking of present needs here, Mr. Warburg said: "A central clearing house, with power to issue against clearing house certificates notes to be guaranteed by the United States, would, in my judgment, form the best solution for the time being."

VOL. LXIV NEW YORK, THURSDAY, FEBRUARY 13, 1908 No. 3089

Survey of the World

National Politics

Since the adjournment of the Florida Republican convention on the 6th, there have been indications of an organized movement in the South against the nomination of Secretary Taft. In Florida it appears to be also a movement against the leadership of local Federal office-holders. The convention was a very disorderly one. Soon after the beginning of the proceedings there were two conventions in the same hall. Each elected delegates to the national convention. The two bodies were nearly equal in size, and reports differ as to the facts which would establish the regularity of either. One of them elected delegates for Mr. Taft. Three of these delegates are prominent Federal office-holders; the fourth is the State's member of the National Committee. Delegates chosen by the other convention were not instructed, altho the names of Senator Foraker and Governor Hughes were mentioned with approval, and resolutions were adopted condemning the use of Federal patronage in national politics. It is reported that there are to be similar divisions in other Southern States, and that these will be used at Chicago for contests that will tie up the Southern vote for a time and perhaps largely reduce Mr. Taft's strength on the first ballot. Owing to what has been said about the use of Federal patronage for Mr. Taft, the President has published a statement concerning appointments and the political attitude of certain office-holders. The prospect of many Southern contests excites interest in the preferences of the members of the National Committee, as the action of that body at the beginning of the convention is important with respect

to the temporary roll and the election of a Committee on Credentials. First Assistant Postmaster-General Hitchcock will retire from office on the 15th to take part in the promotion of Mr. Taft's candidacy.—The opposition of negro voters in the North to Mr. Taft attracts much attention. It has caused the appointment of agents to work against him in Southern States. Bishop Walters, president of the Afro-American Council, the Rev. William H. Scott, president of the Negro Suffrage League, and others have issued a call for a convention of the negroes of the United States to be held in Philadelphia on April 7th, for the consideration of Presidential candidates. The long circular which they have published is distinctly and emphatically hostile to the present Administration and to Mr. Taft. At a mass meeting of negroes in Brooklyn last week, addressed by negro clergymen and others, there was much bitterness in the attacks upon the Secretary.—It appears to be admitted that Mr. Taft will have all the delegates from Ohio. At the recent meeting of the Ohio Society in New York Senator Foraker spoke at length about the panic, asserting that the chief cause of it had been muck-raking in magazines, in official investigations, in Government suits, and in official documents, while in the midst and over all had been heard the voice of the President, causing distrust and fright. The other leading speaker was Vice-President Archbold, of the Standard Oil Company, who highly commended Mr. Rockefeller and argued in favor of Federal charters for large corporations.—At a meeting of the Methodist Ministers' Association in Cincinnati last week, long resolu-

tions were adopted by unanimous vote (one negro member excepted), commending the recent message of Mr. Roosevelt, "our God-appointed President." As originally proposed, the resolutions expressed great regret "at the lack of sympathy shown to him on the part of certain ones high in the circles of the church which we represent," but after debate these words (pointing, it was admitted, to Chancellor Day), were withdrawn.

Mr. Roosevelt's Reply to Charges

The President's reply to charges in certain newspapers that he was using the Federal offices to promote the candidacy of Secretary Taft was published on the 10th, in the form of a very long letter to William Dudley Foulke, of Indiana, who had written to him on the 5th, directing his attention to these newspapers' assertions. He says at the beginning: "The statement that I have used the offices in an effort to nominate any Presidential candidate is both false and malicious." Taking up the entire list of 1,352 appointments made since Congress adjourned in March last, he shows what his practice has been with respect to the suggestions of Senators and Representatives. Having referred to his trusted advisers in the South, he says:

"At present various efforts are being made to get up bolting delegations from the Southern States, and the meetings at which these so-called delegates are chosen are usually announced as non-officeholders' conventions. As a rule, this means only, so far as it means anything, that they are held under the lead of persons who wish to be put in office, but whose character and capacity are such that they have not been regarded as fit to be appointed under this Administration."

In about 1,000 words he considers charges made by the New York *Evening Post* concerning the appointments of Appraiser Wanamaker and of Ohio postmasters, giving a history of all the cases. These charges, he says, are "untrue in every particular" and are "a good example of the accusations made by those of our opponents whose partisanship renders them especially unscrupulous and untruthful." We have not space to print the evidence which he gives in detail concerning all the appointments which have excited comment. In conclusion,

having spoken of his letter (June 12th, 1902) of warning to officeholders, he says:

"No officer will be permitted to violate the above injunction with my knowledge, no matter for what candidate he may be working; and I may add that the only officers as to whom any question of violation of this injunction has hitherto arisen have been men who are not working for Mr. Taft. Not an appointment has been made that would not have been made if there had been no Presidential contest impending, and in no case has there been a deviation from the course that I would have pursued had none of those who actually are candidates for the nomination been candidates; nor has a single officeholder been removed or threatened with removal, or coerced in any way to secure his support for any Presidential candidate."

Railroad Questions

At the recent annual banquet of the Traffic Club in Chicago, the new laws for the regulation of railways were attacked by Mr. Dillard, commerce counsel for the Harriman lines. Senator Newlands replied sharply in defense of the Hepburn Rate law, pointing out that in the year following the enactment of it there had been an increase of \$260,000,000 in railroad gross earnings and asserting that the market value of the railroad securities had fallen because investors here and abroad had been impressed by "the cry of confiscation, raised by the great railway magnates themselves." An interview with Vice-President W. D. Brown, of the New York Central, relative to the Senator's speech, has been published in Chicago. Mr. Brown is represented as saying that the Hepburn law has been of great value both to the railroads and to the public. On the other hand, President Elliott, of the Northern Pacific, is reported by the press to have said last week that too much power has been given to the Commission, and that the President's recommendation for Federal control of issues of stock is "so rabid as to be alarming." All railroad development work not largely completed, he added, "must stop because of the power given to the Commission under the present Administration."—The Government's suit against the Harriman roads has been begun in Salt Lake City, where the bill in equity has been filed by District-Attorney Booth. —A few months ago the Interstate Commerce Commission asserted that the

Southern Pacific had up to that time been granting rebates in California. An investigation is now to be made by the California Railroad Commission. Rebating is forbidden by law in that State, where the penalty may be either fine or imprisonment.—The new 2 cent railroad fare law of Pennsylvania having been declared unconstitutional by the Supreme Court of the State, the schedule of passenger rates prevailing before it went into effect has been restored on the Pennsylvania road.

Decision Against Labor Boycotts

An important decision relating to labor union boycotts was announced by the United States Supreme Court last week, in the case of Loewe & Co., hat manufacturers, of Danbury, Conn., against Martin Lawlor and 200 other members of the United Hatters' Union, of that city. The American Federation of Labor was also a defendant in the complaint, as the boycott was proclaimed by the Federation, of which the local union is a subordinate organization. It is decided by the unanimous judgment of the court that the boycott in question was an unlawful combination or conspiracy in restraint of trade and commerce among the several States, and that the defendants are liable to triple damages, under section 7 of the Sherman Anti-Trust law. It appears that the boycott was declared thruout the country because Loewe & Co. refused to unionize their factory. The greater part of the firm's trade was outside of Connecticut, a portion of it being in San Francisco. Damages in \$80,000 were sought. The decision of the lower court, which held that the Sherman act was not applicable, is overruled. Suit was begun six years ago.—It is predicted by some that the act of 1907, relating to continuous hours of labor on interstate railroads, will be annulled because it has the defect which was recently found to be fatal in the Employers' Liability act, its provisions covering employees engaged in traffic wholly within a State. The law goes into effect in March next.—A report from the New York Department of Labor shows that on December 31st, owing mainly to the finan-

cial depression, 34.2 per cent. of the 66,120 members of 92 representative labor unions in New York City were idle, against 12.8 per cent. at the end of 1906. Up to the beginning of the panic the high level of wages reached in 1906 had been maintained or slightly raised.

Immigration From Asia

At a meeting in Seattle, on the 6th, the Asiatic Exclusion League addressed a memorial to Congress, demanding immediate legislation for the absolute exclusion of Japanese, Koreans and Chinese, and predicting that the people would "take the law into their own hands" if Congress should not act without delay.—On the 2d, an organization called the Yellow Peril Exclusion League was formed at a meeting of labor leaders in Denver, its avowed purpose being to drive Japanese and Chinese from Colorado. Several of the speakers, one of them a Denver alderman, urged that the demand upon Congress for new exclusion laws should be emphasized by riots.—Seventy Hindu laborers recently discharged by the Southern Pacific Railroad Company were driven from a village near Marysville, Cal., last week, by the white residents. They have made complaint to the British Consul at San Francisco.—The British Columbia Legislature past, on the 6th, an immigration bill excluding all immigrants who cannot read and write English or some European language.—Baron Takahira, the new Japanese Ambassador at Washington, said in London, last week, that he was delighted to return to America:

"I know of no truer friends of Japan than the Americans. Our excellent relations and knowledge of each other will insure an amicable outcome at an early date of the negotiations which are still in progress."

He had "never dreamed of the possibility of war between Japan and the United States." Such a thing was "unthinkable."

The Philippine Islands

Benito Legarda and Pablo Ocampo, the two Commissioners elected by the Assembly and the Commission to represent the islands at Washington, took their seats in the House last week. They

have the right to participate in debate, but cannot vote or be members of committees. Señor Legarda, a Filipino of Spanish descent, has been a member of the Commission at Manila. He was educated in Europe, is an accomplished linguist, possesses a large fortune, and is engaged in extensive commercial undertakings. Señor Ocampo is a Filipino lawyer and patriot who has hitherto, it is said, visited no part of the outside world except Guam, to which island he was deported some years ago by the orders of General Otis. At one time he was the editor of a paper which the Government found it necessary to suppress. These Commissioners have been instructed by the Assembly to ask for removal of our tariff duties on Philippine products (imports of sugar and tobacco to be limited in quantity); and for repeal of the act subjecting traffic with the islands to our coastwise navigation laws next year.—It has been decided by unanimous vote of the eight members of the Army and Navy Joint Board that Manila, and not Olongapo, shall be the permanent naval base in the Philippines. Naval authorities have preferred Olongapo and Subig Bay, but an agreement was reached. Plans for the fortifications to guard the entrance to Manila Bay call for about \$7,000,000. The dry dock "Dewey," which was towed to the Philippines by way of the Suez Canal, will be transferred from Subig Bay to Manila. Four battleships or armored cruisers and four submarines will be assigned to that port.—Senator Stone, of Missouri, has introduced in the Senate a joint resolution authorizing the President to relinquish control of the Philippines in 1913 after having secured from other nations an agreement for the preservation of the neutrality of the islands.

Cuba In the province of Pinar del Rio, the negroes have appointed a committee to visit other parts of the island and urge men of their race to bind themselves by oath to take part in no revolution hereafter. They assert that a large majority of those fighting in Cuban revolutionary armies have been negroes, and that they have thus been exploited by the whites, who have quickly forgotten their

services after winning a victory, excluding them from office.—Parra, Santos and Gonzales, who have been on trial for conspiring, in September last, to overthrow the Government, were found guilty, last week, and sentenced to be imprisoned for three and one-half years. Their counsel had argued that there could have been, in a legal sense, no conspiracy against Cuba or the Cuban Government, because Cuba was not a sovereign State, being under American rule.—Now that the date for terminating the Provisional Government has been fixed, a desire is quite generally expressed in the newspapers that the influence and power of the United States shall continue to be exerted, after that date, for the prevention of revolutions.—President Roosevelt has decided that the contract awarded to Americans six years ago, for paving and sewers in Havana, must be executed, and that the insular Government shall share the cost with the city.

The Unemployed in England

The "army" of the unemployed which marched from Manchester to London, under the leadership of Stewart Gray, is now encamped before Windsor, and has addressed a petition to the King asking that a portion of the royal park be given to them for cultivation. Ramsay MacDonald, in the debate in the House of Commons on the subject, stated that the Central Unemployed Body for London had 17,000 persons registered in 1906 and last year 21,000, and the number was rapidly increasing. He said, according to the figures of the Board of Trade, \$7,500,000 more was paid in wages in 1906 than in 1905, but at the same time the cost of living went up 20 to 25 per cent., so that instead of a period of trade boom benefiting the people, official figures showed that the mass emerged from the boom in a worse condition than when they entered it. This was the problem that they had to face as legislators, not as philanthropists. Mr. Masterson called attention to the failure of relief works to solve the question. When first established by the Government the cost of the work done was 800 per cent. above the cost of ordinary

labor, tho this had been reduced last year to 40 per cent. above the normal value. John Burns said the extent of pauperism had been greatly exaggerated. When it was said that we were a dying race, and our industries were vanishing, and that unemployment was a symptom, he would give a fact of two. He would take 1870, the boom year, and 1906 as a test of decay or progress. In 1870 the death rate was 22, today it was 15. In 1870 our pauperism was 46 per 1,000, it was now 25. In 1870 our able-bodied pauperism was 6.7; today it was only 2. In 1870 wheat was 56s. per quarter; today it was not more than 30s. To take disease, in 1870, where 25 persons died per 1,000 of tuberculosis, 10 died in 1906. Where in 1870 £4 9s. was spent in drink per head, today £3 16s. was spent. Our crime had diminished, and our savings had gone up. In regard to wages, in his own trade, where in 1870, the boom year, the figure was 155, in 1904 it was 190, and the figures for 1906-7 would, he believed, reveal nearly 200. With regard to length of life, again in his own trade, 50 years ago, for the Amalgamated Society of Engineers, with 110,000 members, the average age at death in 1870 was 38, today it was 54½, an enormous increase in that short period. Better still, the average age of death of their old superannuated members in 20 years had risen from 67 to 70 years.

The Fall of Franco

The assassination of the King and Crown Prince of Portugal has brought to an end Franco's dictatorship. It appears that at first the young King Manuel was inclined to retain him as Premier and continue the policy of King Carlos, saying "He was my father's friend and he shall be mine," but later, at the entreaty of his mother, Queen Amelie, and the Dowager Queen Maria Pia, and, it is said, in accordance with the advice of King Edward of England, he accepted Franco's resignation and entrusted Admiral Ferreira do Amaral with the formation of a Cabinet composed of representatives of all the monarchical groups. Franco denies the report that the Queens reproached him with being

responsible for the murder of the King. The ex-Premier hastily departed for Madrid, and thence to Bordeaux, in manifest distress at the disastrous end of his attempt at the forcible regeneration of Portugal, but expressing confidence that the future would justify his actions. No time was lost by the new administration in repealing the more obnoxious of his measures. Three decrees were signed by the new King, restoring the freedom of the press, the immunity of members of Parliament, and the jurisdiction of the ordinary courts over political offenses. The three Republican members of Parliament, whom Franco had arrested, and a hundred other political prisoners, have been released. Many persons suspected of complicity in the assassinations have been arrested, but nothing definite has been divulged as to the extent and motives of the plot. Of the three men shot by the guard when the crowd was fired upon only one is supposed to have been connected with it. He was Manuel Buissa, a teacher in the National College of Lisbon, and a fanatical Republican, having led in his youth a disorderly and criminal life. There was an attempt at a rising at Oporto, but there are no indications of a revolution, altho the Republican leaders believe that the overthrow of the monarchy is inevitable and that Portugal will soon follow the example of Brazil. All the telegrams from Lisbon are reassuring as to the general tranquility of the country, but little dependence is to be placed upon them, owing to the strict censorship exercised over the reports of newspaper correspondents. The fact that neither of the Queens appeared in public at the funeral of King Carlos and Prince Luiz Felipe and that the young King did not follow the custom of the country in walking after the body of his father in the street procession seems to indicate a lack of confidence in the people. The funeral, held on February 8th, was attended by the representatives of several of the royal families of Europe, and a long and elaborate procession escorted the bodies from the Necessidades Palace to the Church of Sao Vicente, where the services were performed according to the Catholic rites by the Patriarch of

Lisbon. Charles Bryan Page, the American Minister to Portugal, was the first diplomat to offer his sympathy to the royal family. A message was sent by President Roosevelt and a resolution past by the Senate. In the Hungarian, German and French Parliaments the Republicans and Socialists opposed the passage of resolutions of respect and sympathy, holding that King Carlos deserved his fate for overriding the constitution of the country.

Trouble on the Persian Frontier

The province of Azerbaijan, the northwestern corner of Persia, is now the center of a disturbance which may result in a serious conflict between Turkey and Russia. Many things indicate that Russia, disappointed at the failure of her policy of expansion in the Far East, is determined to turn her attention to the South in pursuance of the movement which has been dominant since the time of Peter the Great. Any attempts at reaching the open sea in this direction will, of course, bring her into conflict with Turkey, but this time it would be Germany rather than England which would defend the "Sick Man of the East." The recent Anglo-Russian convention practically gives Russia a free hand in Northern Persia, where her commercial interests have for many years been dominant. The invasion of Azerbaijan by Turkish troops gives Russia an opportunity to pose as a protector of Persia, and may also serve as the occasion of a quarrel with Turkey if that be her desire. The Persian representatives of the commission appointed to determine the boundary line report that it is impossible for them to accomplish their task on account of the Turkish occupancy of the disputed territory. The Turkish General, Fazyl Pasha, occupied a position four miles north of Suj Bulak and threatened to bombard it unless Prince Firman Firma, in charge of the Persian forces, immediately evacuated the town. Prince Firma replied that he had not come to make war and immediately withdrew. The town of Suj Bulak is undoubtedly on Persian territory, and is the residence of an Ottoman consul. Russia and Great Britain presented identical notes of pro-

test to the Porte, and the Russian Government has ordered the dispatch of 60,000 troops to the Persian frontier with full war equipment. Plans for the expedition were presented to the Duma, February 7th, and the Committee on National Defense unanimously approved of the appropriation. Mr. Guchkoff, leader of the Octobrist party, said that the majority of the Duma were Russian patriots, and willing to part with their last shirt to defend the fatherland. The representative of the War Office, in applying for the credit, stated that Russia had expended much blood and treasure in Manchuria owing to the initial backwardness in armament. Russian prestige in the Middle East was now also in the balance, and Russia must be prepared to defend it. A committee at the same session approved of an appropriation of \$10,000,000 to place floating batteries along the Baltic coast, which, owing to the weakness of the navy, is defenseless against Germany. In Persia the spirit of patriotism has been revived by the establishment of a national assembly and the successful resistance of the people against the tyranny and corruption of the Court. The Persians regard the encroachment of Russia as still more alarming than the invasion by Turkey. On receipt of the identical notes from Great Britain and Russia of good wishes and friendship toward the National Assembly there was some discussion in that body of the sincerity of these protestations, and an inquiry was made to Mushir-ed-Dowleh, the Foreign Minister, as to why the Cossack guard of the Russian Consulate at Tabriz had been increased from twenty-five to fifty, and why Russian troops have been massed on the frontier. The Foreign Minister refused to reply to the question. On the 6th, the indignation of Parliament became so violent that M. Mornard, the Belgian head of the Customs Service, was dismissed from office as responsible for the Russian invasion. —Another question which has disturbed the relations of Turkey and Russia is the proposed railroad thru the Balkans which Austria wishes to construct thru Novibazar connecting the Austrian line thru Bosnia with the Turkish line at Salonika. Russia has declared that it will not permit this extension because it

would give Austrian and consequently German commercial interests a practical monopoly of Western Turkey from the Danube to the sea. Prince Ourousoff, the Russian Ambassador to Austria Hungary, has been recalled by the Government ostensibly on account of his delicate health, but presumably as a protest against the Austrian invasion of Turkey.

The Release of Kaid Maclean

Exactly seven months after his capture by the bandit Raisuli, Kaid Sir Harry Maclean was turned over to the British *chargé d'affaires* at Tangier. The negotiations for his ransom have of late been carried on by the British Government, but there has been a delay in the execution of the plan agreed upon, because nineteen of his followers whose release Raisuli demanded were imprisoned in Fez, which had declared its adherence to Mulai Hafid, and were no longer under the jurisdiction of Sultan Abd-el-Aziz. By a special order, however, the prisoners were sent to Tangier, where Raisuli himself appeared with Maclean and three domestics under the protection of the representative of the British Government. He received \$100,000 as a ransom, and a guaranteed protection for himself and family. Sir Harry is reported to be in good health, but somewhat weaker and older than before his capture. After a brief rest he will go to Rabat to resume his services as colonel of the bodyguard of Sultan Abd-el-Aziz. —The French troops under General d'Amade have repelled repeated fiery attacks of the Arabs and driven them back in the direction of Settat, with few losses. In reply to the appeal made by Sultan Abd-el-Aziz for German protection against the French occupancy of Moroccan territory, the German Foreign Ministry declares, first, that the treatment of Moroccan questions must be clearly within the terms of Algeciras Convention; second, that the followers of Abd-el-Aziz have violated this act, and consequently the Sultan must direct the appeal to all the signatories of the act and not to Germany alone. Germany has agreed to have the amount of the indemnities for damage done during the bombardment of Casablanca decided by

an international commission, as was done in the case of the bombardment of Alexandria. Germany at first insisted that the estimation of her claim should be made by a German commission, but will now agree with the French plan. The debates in the Chamber of Deputies on the Moroccan question continue; one party led by M. Jaurés, the Socialist leader, opposing any interference in Moroccan affairs, and the other, under M. Delcassé, proposing to crush out all opposition by the capture of both capitals. M. Pichon, Minister of Foreign Affairs, adheres to a middle course, declaring for the

"defense of France's legitimate rights and the execution of the European mandate of loyalty toward the Sultan, but no intervention in the interior and no expedition either to Fez or Morocco City. If Abd-el-Aziz falls we will treat with his successor in the name of Europe, but we cannot admit the internationalization of Morocco."

Japan and China

The Government budget bills past the Japanese Diet after a heated debate of five hours. The desired increase of taxation on saké, sugar, alcohol and fur was carried by a majority of 84; that on kerosene by 24. —The failure of China to establish a customs agreement with Russia has been a source of vexation to Japan since her goods entering Manchuria from the south were taxed, while commerce from Siberia was free. It is not reported that this cause of contention between the two Powers has been removed thru the establishment by China of custom houses along the western and eastern frontiers of Manchuria. —The Chinese customs officials seized a Japanese steamer landing arms on Chinese territory, near Macao, presumably for the use of the revolutionists. The vacillation of the Chinese Government is indicated by the order recently issued against the wearing of foreign dress and insisting upon adherence to the established Chinese costume, and by the instructions issued to the schools of the empire making the study of the Chinese classics compulsory in every curriculum, and prohibiting students from reading any books or periodicals antagonistic to the Manchu dynasty.

Poems

BY MUTSUHITO
EMPEROR OF JAPAN

TRANSLATED BY ARTHUR LLOYD.

1. *Utsuwa ni wa
Shitagai nagara,
Iwao wo mo
Tosu wa mizu no
Chikara narikeri.*

Water, so soft that it will take the shape
Of goblet, bowl, or cup, to suit the taste
Of every hand that pours it; yet, withal,
Mighty to percolate the close-grained Rock
That makes the frame-work of the Eternal Hills.

2. *Hitori tatsu
Mi to narishi ko wo
Osanashi to
Omou ya oya no
Kokoro naru ran.*

Such is a father's heart, that tho his son
Grow to man's years and learn to stand alone:
Yet in his eyes, he still remains a boy.

3. *Yori sowamu
Hima wa naku to mo,
Fuzakaye uo
Ne ni wa chiri wo
Suedzu mo aranan.*

No time have I to turn me to my desk,
And, hand in lap, to take my ease and read;
Yet is my table-top kept free of dust.

4. *Yasuku shite
Nashi e gataki wa
Yo no naka no
Hito no hito taru
Okonai ni shite.*

How smooth it seems,
The way that man, as man should daily tread;
But the actual walking on 't—aye, there's the rub!

5. *Amatari ni
Kubomishi noki no
Ishi mite mo
Kataki waza tote
Omoi sute me ya?*

See, how the tiny raindrops from the eaves
Hollow the stones beneath, with constant drip,
Then why should we abandon well-formed plans,
Simply, forsooth, because we find them hard?

6. *Omou koto
Omou ga mama ni
Nareri tote
Mi wo tsutsushiman
Koto wo wasuru na.*

When all things go as thou wouldst have them go,
And Fortune smiles upon thee, then beware,
Lest happy days make thee forget thyself.

7. *Shidzugaya no*
Nokiba ni takaku
Tsumi ageshi
Nii-wara shiroku
Shimo furi ni keri.

The farmer's house new thatched, with clean rice straw
 Heaped thick, defies the cold; but envious frosts
 Have covered all the eaves with glistening rime.

BY BARON TAKASAI]

COURT POET OF JAPAN

1. *Shirasaya wo*
Harai mo ayezu
Kimo wo madzu
Samukarashimuru,
Aki no shimo kana.

Draw but the sword from its white wooden sheath,
 And, straight, cold thrills course gladly thru the frame
 Of him who draws and flashes it aloft.
 Ah! Autumn-frosted* blade of old Japan.

2. *Naka-naka ni*
Kaze ni sumawanu
Nai yo take no
Yowaki wa tsuyoki
Kokoro narikeri.

The weak bamboo, no strength it has to stand
 And wrestle with the onslaughts of the wind,
 But pliant bows its head before the gale.
 Its very pliancy doth show its strength.

3. *Nishi higashi*
Hedataru kuni wo
Irehimo no
Onaji kokoro ni
Masubi katamenu.

A lover's knot, binding the earliest East
 With its far distant sister in the West.†

**Aki no shimo*, "the Autumn frost," is a poetical expression for the Japanese sword, which is as sharp and as fragile as the ice on an autumn morning.

†This poem was composed on the subject of the Anglo-Japanese alliance at the request of the Crown Prince.

The Church I Am Looking For

BY ONE WHO IS SEEKING A CHURCH HOME

FOR some time past I have been, largely by force of circumstances, a church tramp. I have gone from place to place seeking religious nourishment. I have not taken it, however, without paying for it. My Sunday contributions have amounted, in the aggregate, to as much as a person in my circumstances may be expected to pay for the support of religious institutions. Nor have I been unwilling to work. On the contrary, I have had the greatest desire to work in the vineyard of the Lord; but, again and again, when I have picked up a shovel or a hoe and started to cultivate the field, the superintendent of that particular field has set me to building fences. But fence building is not in my line, especially when the object of the fence is not to keep out the neighbor's cattle, but to keep out the neighbor himself.

After a long series of disappointments in seeking a permanent situation, I feel moved to state some of the difficulties I have encountered. I do not say that these difficulties exist for everybody else; I simply say that they exist for me, and I do not think they are difficulties wholly of my own creation.

I am not hard to suit in the matter of religion. While not flexible in matters of conscience, I am flexible and tolerant in matters of taste. The essential thing in religion for me is its fundamental, universal elements. Do not ask me to define them. A man with lungs does not need a definition of air; he needs the air itself. It is religion which satisfies the religious nature. I am seeking sources of religious inspiration and opportunities for religious effort.

One of the chief difficulties I have had to encounter has been that my idea of the purpose and office of a church seems to be fundamentally different from that of a vast number of Christians, both Catholic and Protestant. They seem to look upon the church as a great insurance corporation, whose object is to insure its members against loss by fire or mutilation or actual loss of life in the next world. The

rivalry among such churches is like the rivalry among other insurance companies, to show which can report the largest amount of business, which can insure at the cheapest rate. I do not call this religion; it is simply a form of investment on a policy which is to mature after death. I am not looking for a church to save me from the imaginary terrors of the next life, and to assure me of a comfortable mansion in another world. That precious heritage, the hope of immortality, must not be clouded and debased by this form of commercialism. I am glad to note that, in spite of the fact that this old view of the office of a church is prevalent and persistent, there is a nobler and better view of the soul-saving function of religion, and it is this view which I have in mind when I seek, as I do now, to extend and enrich my religious fellowship.

It might seem from the last paragraph that my attitude toward the churches was mainly critical. It is not; it is rather appreciative. I would rather tell what I like about the churches, and what draws me to them, than to speak of the things I do not like. Any church and any religion which awakens reverence, trust, aspiration, gratitude toward God and the sense of brotherhood toward man, stirs in me a sense of affinity and sympathy.

I find this affinity awakened in the Roman Catholic Church. I am stirred to admiration and reverence in its grand old cathedrals, in its rich music. Tho I cannot worship any human being as God, I am touched by its adoration of Mary. It is easy for me when I stand before the Sistine Madonna to fall on my knees. The beautiful and tender conception of motherhood appeals to me with peculiar power.

So also I find much that is beautiful in the liturgies of the Greek Church and in the Episcopal Church. The Presbyterian Church is dignified, ethical, and impressive. The Methodists are warm and emotional. The Baptists have made a great contribution to the cause of re-

ligious liberty, and I find their main religious symbol suggestive and dramatic. The Congregationalists are unprelatical, and their simple worship is not less genuine that it is not spectacular. The Unitarians attract me by their love of liberty and their willingness to let the verification of religion rest wholly upon spiritual elements. The silent prayer of the Quakers in contrast to effusive ritualism seems to remind one that God is a spirit and must be worshiped in spirit and in truth.

Tho not reared in the tradition of Judaism, its spiritual monotheism and the utterances of the prophets of Reformed Judaism today kindle me as do the writings of Isaiah, Hosea and Malachi, glowing with godlike aspiration and ethical fervor.

The church I would like to find would be one which would contain all that is best in all churches and religions. But that which is best for me may not be best for everybody else. Universal religion cannot be wholly embodied and expressed by any one church or any one set of forms and symbols. What course is left, therefore, to a man who wants to enrich his life by drawing from varied springs and fountains? *Not finding any church in which they are all united, he must affiliate with all the churches in which they are distributed.*

But here I meet with two formidable difficulties. First, in joining a church I am expected, and in most churches required, to subscribe to its whole doctrinal system. I would like to select part of the menu, but I am told that unless I partake of the whole bill of fare I cannot sit at the table. Thus I would like to join the Catholic Church, but I am told that I must believe in the infallibility of the Pope, and must accept as authoritative the astounding deliverances of Pius IX. If I turn to Protestant Churches, the doors of some are closed to membership unless I believe in the infallibility of the Bible. I do not know which is harder to accept, the infallibility of a book or the infallibility of a Pope. I would like to join the Presbyterian Church; but I cannot accept the Westminster catechism in its entirety, either the Longer or the Shorter Catechism, any more than the Heidelberg Catechism or the Thirty-nine Articles of

the Episcopal Church. Not because I believe less, but because I believe something infinitely greater. Why should I be asked to believe in the exceptional incarnation of Jesus Christ when I believe that all life is a manifestation of the Incarnate Word? Why should I be asked to believe in a score of miracles worked in Judea two thousand years ago, or by the Roman Catholic Saints, when the whole universe is a perpetual and unsolved miracle, a manifestation of the life of God?

I am told that in the Episcopal Church it is not necessary for a layman to accept the Thirty-nine Articles, and that in the Presbyterian Church it is not necessary to formally subscribe to the creeds; it is only necessary for the clergymen. Yet in the Episcopal Church the creeds are constantly recited, and my silence proclaims my dissent; and I do not like, either, to have two standards of belief in a church—one for the clergy and another for the layman.

The Baptist Church has fortunately no creed but the New Testament, but will the Baptist Church let me interpret the New Testament in the light of modern biblical criticism? I do not find that immersion is made a condition of communion in the New Testament. I have been immersed by water, but my wife has not; she has been baptized by fire and by the spirit. Is there a Baptist Church which considers that sufficient? Or when we go to church together is the communion cup to be given to me and denied to her?

Another formidable difficulty I encounter is that a man who joins one church is not expected to join, and in some cases would be disfellowshipped if he did join, another church. I should like to be a Catholic-Episcopalian-Quaker, worshiping in the Catholic Church one Sunday, in the Quaker meeting-house next, and in the Episcopal Church the next. I should like to be a Baptist Jew, and a Methodist Presbyterian, but I am told that fellowship with one of these denominations excludes fellowship with another. Have I been misinformed? I know that in commercial, scientific, and educational matters it is not so. I am insured in five different life insurance companies, and I pay my premiums and draw my dividends in them all. I belong to

several different scientific societies and to a dozen charitable societies. I do not find that membership in one excludes membership in another. But, so far as I know, the Unitarian Church, and possibly a few exceptional Congregational Churches, are the only ones in which a man could be in full fellowship as a minister while belonging to two or three other religious denominations; and I do not know in how many churches this liberty would be accorded to a layman.

The difficulties I have described are not fanciful; they are real; they are serious.

In one church in which I applied for membership some years ago I was asked to make some verbal statement of my belief indicative of my religious convictions. I replied by using the following declaration. It is not scriptural nor apostolic, but it is somewhat ecclesiastical:

"I believe in God the Father Almighty, maker of Heaven and Earth, and in Jesus Christ His Son, our brother, who was conceived of the Holy Ghost, born of Holy Mary, suffered under Pontius Pilate, was crucified, dead and buried. He rose from the dead, ascended into Heaven, from whence he ever cometh to judge the quick and the dead. I believe in the holy catholic church, the communion of saints, the resurrection of the spirit and the life everlasting."

There is another declaration which I like better. It is simpler; it is older; it is the bridge of faith which unites the old dispensation and the new. It is the answer from the Hebrew commandment which Jesus Christ made when a young man came to him to ask the way to Eternal Life:

Thou shalt love thy God with all thy mind, and with all thy soul, and with all thy strength, and thy neighbor as thyself. This do and thou shalt live.

How many churches in Christendom will admit me to membership on my acceptance as an ideal of life of this declaration of Jesus Christ?

The Church that I am longing for is not only the Church of God, but the Church of Man. I seek a church which shall reveal to me my relations to man, as well as my relations to God. I feel the force of the great ethical imperatives; I feel the pressure of humanity, its needs, its sorrows, its tragedies, its sins, its victories, its ideals.

No church can do for me all that it ought unless it somehow enriches my sense of human brotherhood. But when I go to most Protestant churches, the effect is not to enlarge my sense of brotherhood, but to contract it. Why is it that I can form larger and richer human relations outside of the Church than I can within it? I can understand why certain churches should be organized around certain aspects of truth which differentiate them from others; but why should they be organized on class distinctions which turn into mockery the words of Jesus, "The poor ye have always with you"? I have a dreadful sense of oppression when I go into some Protestant churches. I do not complain of any lack of personal attention; hospitality may even be effusive, but I miss a sense of companionship with all sorts and conditions of men. In the rich churches I miss the poor; in the poor churches I miss the rich. One would think that in the Church of the Good Shepherd, the Church of the Humble Carpenter, there might be one place in all the world where all social distinctions would be eliminated! But the Roman Catholic Church and the Greek Church are the only conspicuous examples in Christendom of churches in which social distinctions do not dominate in the hour of worship. In them the rich and the poor, the high and the low, may worship together. Yet neither of these churches is taking the lead in the great social and ethical movements which are necessary for the regeneration and the development of modern society.

I am looking for the Human Catholic Church, a church in which there is neither Greek, nor Jew, nor barbarian, but all are one in brotherhood. I am looking for a church which, with an ancient root, is bearing some fruit in our own day, a church which shows its love for God in its enthusiasm for humanity, a church that is progressive, active, humane, modern, inclusive, preaching the gospel for the hour, addressing the social conscience of our time. I am looking for the Church of the Good Samaritan and the Prodigal Son; the Church of the Lord's Prayer and the Golden Rule. Where shall I find it?

American Foreign Politics

BY ANDRÉ TARDIEU

[The author of the following article is the Foreign Editor of the leading daily of Paris, *Le Temps*, which is also one of the great newspapers of the European Continent. He comes to the United States to deliver the annual series of French lectures before the Cercle Français of Harvard University. M. Tardieu's subject will be the "Foreign Affairs of France." In the meanwhile, it has occurred to us that it might be interesting to our readers to have M. Tardieu's opinions on the foreign affairs of our own country, which he gives in a charming fashion in the pages which follow. We may add, by way of biography, that M. André Tardieu occupies in the French diplomatic service the rank of Secretary of Embassy. In 1895 he passed brilliantly one of the most difficult university examinations in France, standing first in a competitive examination for admission to the Superior Normal School, where are prepared the future professors of the various French universities. But M. Tardieu did not take up his studies at this famous institution, preferring diplomacy to the teacher's career. In less than two years from that date he became attaché at the French embassy in Berlin, when the aged Marquis of Noailles represented France at that capital, and when the American ambassador was Andrew D. White, whose agreeable personality M. Tardieu remembers with much pleasure. At the German court he met many distinguished men and the knowledge gained from these acquaintances has been of great use to him in his more recent work on *Le Temps*. On his return to Paris from Berlin M. Tardieu became the secretary of M. Hanotaux, then Minister of Foreign Affairs, and now member of the French Academy; and when M. Delcasse took over the French Foreign Office, M. Tardieu was attached to his cabinet. Next he became the private secretary of the late M. Waldeck-Rousseau when that distinguished statesman was Prime Minister of France. In 1902 M. Tardieu formed part of the suite which accompanied President Loubet to Russia. In 1904 he joined the staff of *Le Temps*, where his brilliant work, based on semi-official information, immediately attracted attention throughout Europe. During the very critical crisis of 1905-6 his articles in his paper concerning Moroccan affairs exerted a wide influence, and his large book on "The Conference of Algeciras" is the most authoritative work on that subject. M. Tardieu is, furthermore, the author of other political works and a contributor to the *Revue des Deux Mondes*. M. Tardieu's lectures will close at Cambridge on the 21st, when he will visit New York and Washington, where he expects to meet the President, and he will sail for France on March 5th.—EDITOR.]

IT is within only a relatively short number of years that the foreign policy of the United States has interested Europe in general and France in particular. This is probably mainly due to the fact that it is but recently that the great American republic has really begun to participate in what we in Europe call foreign affairs. The long period during which the Monroe Doctrine, in its more negative form, was little else than a platonic assertion, America was in a state of what may be called diplomatic inaction. It is, in fact, only since the Spanish-American War that the United States may be said, to employ an expressive German term, to have entered "big politics."

There are many ways of carrying on big politics, and President Roosevelt has more than once given his conception thereof as regards his own country. "The best way to preserve peace," he has said, "is to let the world see that war doesn't frighten us. We are a great nation, and

we must play a grand part. We have no choice in the matter; we can decide only whether we shall play this part well or badly. Our mission is one of peace, but not a dishonorable peace." Phrases like these I find scattered throughout the speeches and messages of your Chief Magistrate. It is perfectly clear that President Roosevelt considers that the United States must have a policy of expansion, a policy which has, in fact, been in progress for the past ten years. It has been real, material expansion, as in Cuba, the Philippines and in Panama; or it has been rather a sort of moral expansion, as in the purely American affairs of South and Central America, or as seen in the rôle played by the United States at the Morocco Conference.

A Frenchman is in a rather delicate position when he touches upon the part taken by America at the Algeciras Conference, for he might be charged with partiality if he says, what is perfectly true, that the rôle assumed there by the

United States was favorable to France. Whether you consider only the attitude of Mr. Henry White at Algeciras, or the instructions sent him by Mr. Elihu Root from Washington, or the expressed intentions of President Roosevelt, it appears that in nearly every instance American action was a categorical approval of the French contention. I have heard it said that Mr. Roosevelt has been blamed in some quarters for the position he took in this Moroccan imbroglio. But I think this criticism most unjust. The truth is, it was not because the proposals of M. Rouvier and M. Bourgeois came from France that American diplomacy approved them; it was because they were moderate, conciliatory and fair. When are published the official dispatches of that period, it will be seen that, at bottom, the American course at Algeciras remained faithful to its traditional spirit of reserve, which is always observed in circumstances of this kind, and that its acts on this occasion were governed by general interests. I have taken as an example of American foreign policy in Europe this Moroccan affair, but I could have cited several other somewhat similar instances. It seems to me that the conduct of the United States in these problems of general outside concern might be summed up in these words: We do not intervene for personal reasons, but simply to let the world see that we consider it our duty to express our opinion on the general merits of the case. This is a perfectly natural course for a great and independent nation to take.

At this moment the foreign policy of the United States is concerned in a more immediate matter. I refer to what we call in Europe the Japanese-American conflict. It must be considered under two aspects—the causes and the outward manifestations which these causes have produced. As regards the main cause of the trouble—Japanese immigration into the United States—one can but approve most unreservedly the oft-repeated declaration of President Roosevelt that a civilized nation must respect every foreigner within its borders, whatever may chance to be the color of his skin. The vexations and outrages committed at San Francisco have made an unfavorable im-

pression on the European press. But this is a very complicated question, and many of those who talk and write about it know next to nothing about what they are talking and writing. But, little by little, it is becoming clear on our side of the Atlantic that the United States is brought face to face with an economic danger, which, while it should not be roughly handled, must, nevertheless, be firmly but amicably conjured away.

If you go to the bottom of things, it is no more absurd or reprehensible to try to protect manual labor than to protect manufactures. It is, however, more difficult, for here you have to do with human beings instead of mere merchandise. But it does not more offend the principles of free trade. Consequently, there is nothing extraordinary in Americans, who protect their industries, in wishing also to protect their laboring classes. This difference opens up a field for negotiation and for negotiation of a most delicate nature, it is true, but out of which should come an amicable solution. In March, of last year, a temporary expedient was found, which has had a calming effect. But something better can probably be discovered, and, I feel sure, will be discovered. It only needs to be searched for, and it will be found.

Now a word about the outward manifestations of these causes. The most sensational of these is the sending to the Pacific of the fleet of Admiral Evans. Opinion both in Europe and in the United States differs as regards the motive of this move. I think this arises from the fact that there was some hesitation in announcing it in the first place. That such a cruise was to be made was at first denied, then rather timidly admitted, and finally officially confirmed. Under the circumstances this was, perhaps, not the best method to pursue. It would have been better to state at the very beginning what the President said a few months later in two successive speeches at St. Louis and at Cairo, viz., that the United States having coasts on two oceans has the right—I would even say the duty—to have ships on both. I know that the answer to this has been that to send a fleet to the Pacific at this moment looks like a provocation to Japan. I have heard this declared with

deep conviction in some quarters, but, oddly enough, not by any Japanese. The Japanese have their faults, like everybody else. But they have one remarkable good quality. They speak seriously when serious things are concerned. They know that a great nation worthy of that name must be ready for anything and everything; that every war should be foreseen, even the one the least desired; I might even say, especially that one. Precautionary measures of a military or naval nature should not be looked upon as a provocation to war, for each country has the right to prepare for possible future dangers. In 1875, when Germany pretended to have the right to check France in her military reorganization, which was progressing more rapidly than had been expected, Russia and England agreed to send their views in the matter to Berlin. Up to the present time the United States has been practically unprotected on its western shores. They have waited a long time before putting an end to this paradoxical situation. This is the only wonder in it.

The only justifiable criticism which can be addressed to the American Republic apropos of her new foreign policy, which is, I may add, the only policy, to my mind, which she can follow, is the criticism that her military organization is far from what it should be. It is not indiscreet on the part of a foreigner to express this opinion in an American periodical, because the head of the nation has often made this same remark. As far as the fleet itself is concerned this cruise to the Pacific is an excellent exercise. But the lack in the United States of sufficient arsenals, docks and shops would cause this formidable fleet to lose one-half of its value in case of war. Again, this demonstration of the possibility of sending a fleet from one ocean to the other is of very little practical value, for in case of actual hostilities these two oceans are too wide apart. The truth is—and I venture to say that this is the opinion held by the President—America must build a second fleet.

I have nothing to say about the army except what everybody knows. Mr. Roosevelt, Mr. Root and Mr. Taft have made some excellent reforms in this arm of America's military establishment. But

they have not created a real land force in keeping with the position of the United States; and such a force is a crying need of the American Republic, it seems to me and to other European friends and observers of the United States. It is true that your geographical position is a powerful protection, but it is not an absolutely safe protection. Let us suppose a war were to break out with Japan. Without a great modern army the United States is at the mercy of a naval battle. If you win that battle, all will be well.

M. ANDRE TARDIEU.

But if you lose it, you have lost everything. Such being the fact, the conclusion is evident. A great nation, rich in population, money and patriotism, cannot accept such a handicap.

I said at the beginning of this article that one could still remember the time when the foreign policy of the United States did not interest France. But that day has long gone by, for now no questions arouse greater attention in my country than these American problems. I think I may go further and state that many Frenchmen study these subjects for the purpose of really drawing lessons therefrom. To one examining the situation at a great distance, as I am forced

to do, it may be that I make some mistakes. But I may add that my curiosity to get at the truth is only equaled by a

deep feeling of sympathy for the nation which I am now going to study, for a brief moment, alas! more closely at hand.

PARIS, FRANCE.

The Demand for More Battleships

BY LUCIA AMES MEAD

[No woman in the United States has taken a more active part in the Peace movement than Mrs. Mead, who, with her husband, Edwin D. Mead, has done such splendid service in this as in most other progressive causes. She has written and lectured much on peace and is now president of the Massachusetts Woman's Suffrage Association. Our readers will notice that she takes a diametrically opposite view of the big navy question from that of the Foreign Editor of the *Paris Temps*, published in this issue.—EDITOR.]

LAST April, President Roosevelt wrote to the National Peace Congress in New York: "We are no longer enlarging our navy. We are simply keeping up its strength, for the addition of one battleship a year barely enables us to make good the units that become obsolete." Since then, the adoption at The Hague of the Porter proposition and the prohibition of the bombardment of unfortified towns, the order and peace secured in Central America, Japan's friendly and helpful attitude in the matter of emigration—such things as these and the assurance at The Hague that a Court of Nations is to be established and that three-quarters of the powers believe in the protection of private property at sea in time of war, have relieved the nations still further of need of reliance on guns and gunboats to settle questions of fact and of right and wrong. Yet, despite this, in December, President Roosevelt asks for four new battleships this year, with cruisers, docks, etc., costing altogether over \$60,000,000, in addition to the appalling budget of last year. If Congress is to take this from the people's taxes, it must give the reason why and declare some new danger unknown last April.

Washington's war budget, with a sea-coast half our present one, was \$1,000,000. Since his day our population has increased twenty times and our war budget 220 times, not counting the President's new demands. This increase is

chiefly for the navy and in very recent years. So far as Europe and South America are concerned, it has no excuse. Since the war of 1812, we have fought a European power only six months. The Mexican and Spanish wars lasted, all told, two and a half years, and were wars which we began and in which no foreign foe came upon our soil. Our unguarded Canadian frontier is our assurance that we no longer dread England. France was always our friend. The Kaiser has tactfully made friends with our nation, which contains so many of his former subjects. We have no more need to dread Germany than she to dread us.

"Were it not for the Philippines we could cut down our navy one-half," said a high naval officer recently. Here lies the only danger point—not that any nation will try to take the Philippines unless we madden that nation with suspicion and insults, but that so long as we hold them we shall parade a boastful fleet as ready for a "fight" as for a "frolic," and shall sink fabulous sums and compel famine-ridden, peace-loving China to create a rival fleet, and Japan to put into armaments the revenues needed for internal development and purchase of our machinery.

Secretary Taft has unqualifiedly promised "ultimate independence and complete self-government" to the islands. Their commercial welfare we are opposing, and tho their political development might—and might not—be greater did we main-

tain sovereignty over them a generation longer, that continuance will endanger peace between us and Asia. The welfare of many hundreds of millions is at stake. Let us be free to lower our navy one-half, and all the navies of the world would look toward reduction.

Two ways are open to us—the securing of treaties of arbitration of sufficient scope, or the getting the nations to pledge the neutralization of the Philippines as soon as we grant independence—just as Switzerland, Belgium and Italy, and, lately, Honduras, have been neutralized. Then we could withdraw sovereignty without “scuttling” and with honor. Foreign interests would have to be properly safeguarded, and fraternal help might be offered when paternal authority was withdrawn. The Pacific would then be free from jealous, rival fleets, and one of the danger spots of the world would be eliminated from the international problem.

Not only will neutralization pay a large part in future history, but organized ostracism as a penalty will be largely substituted for rival navies, in so far as these are not replaced by a proper international police. If one-tenth of the sums squandered on short-lived battleships were spent on efforts toward world organization and on peace budgets, administered

as concerns ourselves by a commission appointed by the President, we could have an international exchange of visits and courtesies and lectureships which would gradually substitute sanity for hysteria, friendship for suspicion, and prosperity for panic. A great navy bears no more relation to our “dignity” than do fire engines or lighthouses. It is not to be gauged by population. China has ten times the population of France, but she does not need ten times her navy. The sole gauge of a navy’s strength must be national danger, and we have no danger that we cannot defend ourselves against with a small navy, if we simply accept and employ those rational measures here briefly referred to, which the best international thought now approves; and if we assume toward all peoples an attitude of friendliness, respect and trust, the only attitude worthy of our great republic, instead of an attitude of self-assertion, bluster and parade. When we once let our common sense and common Christianity have their proper sway, we shall quickly see an end of “big navy” crazes and the promising beginning of a state of things in which we shall not, as now, be spending two-thirds of our total national revenue in caring for past and possible future wars.

BOSTON, MASS.

Cupid's Birthday

BY LA TOUCHE HANCOCK

'Tis Cupid's birthday! Yet I hesitate
To tempt my fortune even on this date.
What shall I send her—bracelets, or a ring
As precious as the ransom of a king?
A pair of gloves, some jewels, or a muff?
Ah, no! of baubles such as these she'll have enough.
I'll send her what she may appreciate,
I'll send my love—and boldly challenge fate!

The Strait of Magellan

BY BARNUM BROWN

[The author writes of this region from his personal observation as a member of the recent expedition sent out by the American Museum of Natural History for the geological exploration of Patagonia.—EDITOR.]

PROBABLY no part of the long journey undertaken by the American fleet is fraught with such grave possibilities as the interesting historical section that it is now traversing.

"Pataghom!" exclaimed Magellan's men when they landed in the Bay of St. Julian in 1520 and saw large clumsy footprints in the sands. Later some of the Indians who had made these tracks visited the vessels, and they are described by Antonio Pigafetta, narrator of the expedition, as giants with voices like bulls. Magellan and his men spent the winter in St. Julian Bay, from April till October, when they sailed southward. On October 21st, celebrated as the feast of St. Ursula, 1520, they discovered the

cape which marks the entrance to the Strait, and in honor of the occasion named it Cape Virgins. On November 27th they had passed entirely through the Strait and entered the Pacific Ocean, a truly memorable voyage and one that bespeaks well the daring character of that early *voyageur*. To preserve this territory for Spain, Sarmiento in 1585 left a colony of 400 men and fifteen women at a place later called Port Famine. After two fearful winters they were decimated to fifteen men and three women when they were rescued by Sir Thomas Cavendish.

Since the voyage of the indefatigable Magellan the greater part of the channel has been pretty accurately charted. Four

TOWN. ANCHORAGE OF SHIPPING IN ROADSTEAD.

great merchant companies, the Pacific Steam Navigation Company, the Grace Line, the Lamport & Holt, and the German Kosmos, carry on a large trade with the west coast of South America. Each company sends several fine steamships thru the Strait each year. Besides merchantmen, the Argentine and Chilean war vessels frequently pass thru these waters; but sailing vessels invariably prefer the uncertain winds and longer route around the Horn to the shorter and more dangerous passage thru the Strait. No regular accredited pilot can be secured for the Strait, consequently every captain must guide his own vessel.

The Strait is about 400 miles long and varies from two to thirty miles in width. On the Atlantic side the waters are shoal with low, abrupt bordering shores, but west of Punta Arenas they deepen; the passage is tortuous, and the shores are rugged and very picturesque. Near Dungeness (Cape Virgins) there is an accumulation of beach stones called shingle which continually shift under the constantly changing currents of the

Strait. At the first narrows the water is dangerously shoal, ranging from $7\frac{1}{2}$ to 40 fathoms. It was in this portion of the channel that one of the Grace Line Steamers, the "Cuzco," was lost a few years ago. The vessel was returning from the west coast loaded with a valuable cargo of nitrate, and the captain mistook the reflection of the moonlight on the shingle for calm water, running his vessel aground on the Tierra del Fuego side.

The first glimpse of Patagonia, approaching this country from the Atlantic side, is that of a low, abrupt cliff which rises gradually toward the north. Passing Cape Virgins we enter the Straits of Magellan and at last behold the pampas, a level, treeless plain covered with brown, dead-looking grass; a ranch house is seen here and there on the Patagonian side, but nothing else to break the monotony of endless plain. On the more rugged Tierra del Fuego side, the low-lying coastal plain rises rapidly to timber-covered foothills. A strong wind blows from the west, and we button more tightly our heavy over-

coats, altho it is January and midsummer. Thru the second narrows and we pass the small island of Sta. Marta and Sta. Magdalena. Hovering over the latter are myriads of cormorants and penguins. Near to the island is seen to be bare of grass and covered with thou-

mer and fall, westerly winds prevail, sweeping down thru the Straits with terrific force. Winds blowing at velocity of fifty miles per hour are of common occurrence, and frequently the sea is so rough that the shipping cannot be seen from shore. There is no port, simply an

USHUAIA, SOUTH COAST OF TIERRA DEL FUEGO.
Argentine battleship in foreground.

sands of penguin nests, spaced in rows with mathematical-like accuracy.

Passing the big estancia and freezing plant at Punta Delgado we sight Punta Arenas, and after six hours' steaming against wind and tide from Cape Virgins, anchor in the roadstead a half mile from the town.

Punta Arenas is the most Southern city in the world, situated on the northern shore, nearly half way thru the Strait of Magellan. It is a small town of about 10,000 inhabitants, mostly Spanish-speaking people, with a predominating German and Italian merchant class. There are in the town less than two dozen Yankees, as they call all Americans. It is the natural emporium of Patagonia, thru which most of the goods imported and exported pass. Situated in latitude 53 degrees south, it is as far south of the Equator as the south shore of Hudson Bay is north. During nine months in the year, spring, sum-

mer and fall, westerly winds prevail, sweeping down thru the Straits with terrific force. Winds blowing at velocity of fifty miles per hour are of common occurrence, and frequently the sea is so rough that the shipping cannot be seen from shore. There is no port, simply an

open roadstead, but fortunately the anchorage is good. The town is well laid out on ground that slopes to the ocean, giving excellent drainage, but it is only within the last two or three years that the authorities have taken advantage of its possibilities, grading the streets and laying sidewalks. Quite recently the town has been lighted by electricity and it is now connected with Buenos Aires by telegraph, where formerly it took nearly one month to communicate with the outside world. The buildings immediately arrest the attention of the Northern traveler. Many of the dwellings are covered on the outside with corrugated sheet iron, and this material is universally used for roofing in place of shingles. The surrounding country has been unusually prosperous and several residents of Punta Arenas have amassed comfortable fortunes in the last few years. Several fine residences have been erected since the ac-

companying photograph was taken. In most of these the owners have satisfied the Chilano's inordinate love of stucco and ornate effects.

Southern Patagonia is not an agricultural country. The Patagonian pampas are an epitome of recent wonderful geological changes. The whole southern end of South America has undergone several alternating periods of elevation and depression; at one time above and at another time below the ocean. The country is now rising, and the greater part of its surface is covered with shingle or beach stones that were left by the receding ocean as the country was elevated. The pampas are covered with tussocky bunch grass. It is a good

ern Andes are practically untouched. On account of the treeless nature of the pampas, coal is of first importance in developing the country, but so far only one vein has been discovered—a poor quality of lignite that is mined on Las Minas River, three miles from Punta Arenas, and sells in the town at twelve dollars per ton. Gold was discovered in the beach sands at Cape Virgins a few years ago, and later was found in considerable quantities in Las Minas River, near Punta Arenas, where the Loreto Gold Mining Company operates. Gold was also discovered on Tierra del Fuego and the Southern Islands. This is all placer gold, brought up by the action of the sea from submerged mountain areas.

grazing country and especially adapted to sheep.

Altho settlements were established along the Straits so long ago the interior country long remained a *terra incognita*. Punta Arenas was established as a penal settlement, and the opening of the first large sheep farms dates back not more than twenty-five years. The greater part of the country is still unsettled.

The mineral resources of the South-

Within the last two years not less than six large gold dredges have been shipped to Punta Arenas by the Grace steamers alone.

Since the days of Magellan Patagonia has been a name with which to conjure up scenes of strange animals and giant people. On the main land there are two distinct tribes of Indians: the Auracians in the North, and the Tehuelches in the South. The latter are the far-famed giants, and altho not as large as

they have at times been represented, are people of magnificent physical development. The men average about five feet eleven inches in height and the women slightly under that, altho one often sees men who are from six to six and a half feet in height. They are finely proportioned, with a slight tendency to obesity among the old people. The name Patagones, meaning clumsy foot, was a misnomer, for these people really have small feet and small hands for their size. They do, however, wear a very clumsy boot made out of guanaco skin.

Formerly they were a numerous tribe and ranged over Southern Patagonia, spending part of the winters along the Strait of Magellan. But the white men have settled most of the territory along the ocean, and they have been forced inland so that at present they are distributed along the rivers Gallagos, Coy and Santa Cruz farther north. They migrate from one part of the country to another following the herds of guanacos, which are small species of camel, about the size of a deer. The flesh of the guanaco furnishes the Indians with meat, and the skins are used for clothing and tents. Beautiful skin mantles are made of young guanaco skins, and these are used for clothing and sold to travelers. These Indians are purely carnivorous. They have never known the use of vegetables, and fruits are not highly esteemed by them.

Lieutenant Musters, and Coan, an early missionary, in their writings state that there were several thousands of the Tehuelches. There have probably never been more than five thousand of these people, and at present there are not more than five hundred left. They are slowly on the decrease, for they are not a prolific people. Rarely are there more than two or three children, and frequently there are no children in a family.

To the west of Punta Arenas the scenery in the Strait becomes wilder and much more picturesque. Beyond Cape Froward the Strait cuts thru the backbone of the continent and in reality vessels pass thru a valley in a great mountain chain. Rock, ice, snow, wind and water are constantly warring with one another, and few are the travelers who pass Cape Pillar without witnessing some of their quarrels. Nowhere in the

world can the barometer drop more suddenly and the gale follow more swiftly than in these western stretches of the Strait.

There is a mysterious grandeur in these shores where mountains rise one above another with wooded valleys between. In the channels to the southward magnificent glaciers extend down the mountain side to the water's edge and the channels are so tortuous that strait ahead there seems no possible way

TEHUELCHÉ INDIAN.
One of the Patagonian giants.

of finding an opening. In the distance magnificent Sarmiento, the highest peak in the Tierra del Fuego, lifts its glacier-covered head among the clouds, a monument to the force that formed these mighty earth folds. From Cape Froward west the Strait is deep and fewer soundings are necessary for passing vessels, but gales are frequent. Cape Pillar marks the western boundary of the Strait and the entrance to the calmer Pacific.

The Philippines Assembly

BY DAVID J. DOHERTY, M.D.

WHEN, on October 16th, 1907, Mr. Taft rose to deliver his noble opening address to the Assembly and looked down upon the ranks of delegates and the vast audience grouped about them, a glow of satisfaction must have filled his frame, for a long step forward had been taken in the road of progress and a new people was to be dedicated to freedom and self-government.

The delegates of the Philippines Assembly number eighty, and they were elected on July 30th by a total vote of 98,251 out of a total registration of 104,966. Opinions differ as to the possible electorate of the Islands, guesses ranging from 2 to 3½ per cent. of the population, or from 120,000 to 280,000. The registration for the recent November local elections was nearly double that for the July election. The election protests numbered fourteen, the most important being based on disputes as to the meaning of the law with regard to eligibility, residence, etc. The election was unique in respect to tranquillity and freedom from actual crime or attempts to circumvent the law.

In political complexion the Assembly stands as follows: Affiliated to the Nationalist party, 48; to the Progressist party, 15, and to neither party, 17. The latter are all, with possibly one exception, Nationalists. In point of age, it may be said that at first sight the Assembly seems entirely composed of quite young men, for youthful appearance is characteristic of the Filipino race. As a matter of fact, only ten are between twenty-five and thirty years, while the rest are over thirty, and a fair sprinkling are over forty.

As to occupation, there are 46 lawyers, 23 farmers, 4 physicians, 2 journalists, 1 druggist, 2 teachers, 1 merchant and 1 clergyman. In his work on "*La Supériorité des Angles-Saxons*," Desmoulin presents a comparative table of the occupations of representatives in the English House of Commons and the

French Chamber of Deputies, and he deduces the conclusion that a predominance of producers over the professional classes is a cause, or at least a concomitant, of material prosperity. Without discussing the value of his argument, it may be said that a profession like that of law, which is the very priesthood of justice, ought to be a desirable element in a body dealing with law and human rights.

From the standpoint of race, the Assembly may be set down as truly Filipino. The population of the Archipelago is, like that of the United States, much mixt. For the purpose of classification, a Mestizo may be considered to be a native whose father or mother was a non-Filipino, and a pure Filipino may be considered to be a native whose father and mother were natives of pure or mixt Filipino blood. In other words, the third generation should be considered as pure. Viewed thus, the Assembly contains seven Mestizos and seventy-three Filipinos. Of the latter, the majority are, in a strictly ethnographic sense, unmixt in any degree. It is also worth adding that only thirteen took part in civil or military office (above the rank of captain) in the Filipino revolutionary war.

The first two months of the session have been occupied in the work of organization. Without much wire-pulling, Sergio Osmena, former Governor of Cebu, was elected Speaker. He completed his twenty-ninth year on September 9th, 1907, and is in all respects a prudent and competent man. Twenty-four committees have been organized, the chief ones, Ways and Means, Banks and Corporations, Railroads and Franchises, and Metropolitan Relations (i. e., with the United States), being presided over respectively by Manuel Gueson, Alberto Barretto, Rafael Palma and Filipe Azoncillo—who are all well-known Nationalists. The rules of the American House of Representatives have been temporarily adopted. The language

used is Spanish, and none other would, at this time, be practicable.

The most important and critical step was the election of two resident Commissioners to Washington. The act of Congress (July 1st, 1902) authorizing the Assembly is somewhat obscure on this and a few other important points. If the two resident Commissioners were to be elected by the Commission and the Assembly (which are the two branches of the Philippines Legislature) in joint session, it would mean the election of two Nationalists. If separately by each branch, there was danger of failure to elect. It was, therefore, agreed that each branch should present a candidate unobjectionable to the other, and each should vote separately for both.

The election resulted in the choice of Benito Legarda, a member of the Civil Commission and a Progressist, and Pablo Ocampo, a Nationalist, not a member of either house. In making this prudent agreement, the Nationalists no doubt saw that they would thus create a vacancy in the Commission, which would, in ordinary fair play, be filled by a Nationalist.

Up to the Christmas recess, 55 bills or *proyectos de ley* have been presented, which may be roughly classified as follows:

Commercial.—To petition Congress to permit parts of rice, sugar, ice and wood-working machinery to enter the islands at the same rate of customs duties as whole machines; to admit agricultural machinery free; to create co-operative credit clubs on the Raiffeisen plan; to regulate the liability of employers.

Educational.—To appropriate 1,000,000 pesos from insular funds for the erection of schools in the *barrios* (villages); to make school attendance obligatory in towns; to teach the native language in the village schools; to supervise private schools; to teach manual arts and industries in the schools; to provide a national library.

Miscellaneous.—To provide assembly and other buildings; to abolish the death penalty; to permit Chinese coolie immigration under certain restrictions; to regulate public health; to permit each municipality to create and maintain a "commons" or public grounds; to make

October 16th a legal holiday; to create the office of municipal *fiscal* (or prosecuting attorney); to remit under conditions loans previously made by the Commission to certain provinces; to cancel forced tax sales in certain conditions; to petition Congress to extend the jurisdiction of the Legislature over the Moro Province, which is now governed by a special board appointed by the Commission.

About half of the proposed measures are in the nature of amendments to existing laws and give a clue as to the causes of dissatisfaction among the people. Those which affect the municipal code would exempt from current tax property that was unproductive during the previous year; permit the use of narrow-tired vehicles on farms and unmade roads without payment of the present tax; regulate distribution of municipal funds; permit the local mayor, instead of provincial officials, to appoint certain minor employees, etc. The amendments proposed to the civil and other codes would change the age of majority (for marriage, inheritance, etc.) from twenty-three to twenty-one years; prevent increase of penalty on appeal to superior courts; enable district courts to act for land registration; permit justices of the peace in certain emergencies to issue writs of *habeas corpus*; regulate the appointment and salaries of justices of the peace and abolish their fees; provide for a defendant appearing without an attorney; more clearly define the libel law; restore the Spanish penal code, which made adultery and sexual crimes private and not public offenses, etc. The amendments to the electoral law would exclude clergymen from the Assembly and provincial election offices; prohibit sale of liquor near election booths; make persons convicted of gambling and cockfighting ineligible to office, etc. There are also measures proposing the suspension of the recent law as to weights and measures for five years, and the extension of the time for issuing gratuitous titles to land.

It may be stated that Archbishop Harty wrote a letter to the Assembly against a return to the Spanish law as to adultery, and that the bill regulating employers' liability (which closely fol-

lows the Spanish law) is criticised by a prominent lawyer as confiscatory. The machinery of the Assembly is well devised to prevent hasty legislation, and all measures receive methodic consideration. No bill so far proposed bears any mark of "freak" legislation, and most of them are sensible and constructive. The first measure to become a law was that providing for the village schools. There is no friction between the upper and

lower houses, and this is due to the patriotic conservatism and good sense of the Nationalists and to the admirable tact and sympathetic management of Governor-General Smith. A prejudiced man, looking down upon the Filipinos as an "inferior" colored race, might easily have caused an *impasse* and might have caused a revolution on the part of this unarmed, but justice-loving, easily manageable and aspiring people.

MANILA, P. I.

George Meredith and the World's Advance

BY G. W. HARRIS

[The fact that Mr. George Meredith, the Nestor of English writers, and since the death of Lord Tennyson in 1892, President of the British Society of Authors, celebrated the eightieth anniversary of his birth yesterday (February 12) gives an added interest of timeliness to this appraisal of his work and summing up of his teaching by Mr. Harris.—EDITOR.]

IN his rapid survey of a half-century's intellectual activity, contributed to the fiftieth anniversary number of *The Atlantic Monthly*, Prof. Charles Eliot Norton, commenting on the "slowness of effect of new truths upon the sentiment of men," said that, while the theory of evolution "holds sway in every field of science, and with such attractive force as to draw most of the vigorous and capable intellectual life of the time into these fields in pursuit of knowledge or of wealth, it still seems to affect but little the higher spiritual life of the mass of men. It has indeed been of incalculable benefit in loosening the bonds of superstition from the minds of men, but at the same time it has indirectly exerted a powerful influence, tending, thru the rapid and intoxicating advance of control of the great forces of nature and of the boundless sources of natural wealth, to the subordination of spiritual to material interests." When Professor Norton penned those words he must have forgotten, temporarily, the lifework of the foremost of his remaining contemporaries in England, who reaches his eightieth year on the twelfth day of February; for none

has wrought more valiantly thruout the last fifty years than Mr. George Meredith to embody the application of Darwin's doctrine in a creative literature dealing with the spiritual life, and none has waged a more relentless or a more glorious warfare against "the subordination of spiritual to material interests."

Mr. Meredith has lived long enough to see his works become classic—not in form, for their form, like their content, is largely of his own invention—but classic they are by reason of their power. Appraising his writings in the light of De Quincey's famous classification, no English author of the nineteenth century has surpassed his contribution to the literature of power. None has taken a firmer grip on the life of his time. Equally eminent as novelist, poet, philosopher and reformer, he has exerted a larger influence than any other on the work of the novelists, poets, essayists, younger than himself, scores of whom have been glad to recognize that influence and to acknowledge his supremacy. Altho the wonderful body of literature he has created has not yet gained the popularity it surely is destined some day to command,

the number of his readers is growing steadily larger; and the significant fact for us to note today is that, by reason of the larger audience reached by his own message and by those who have lighted their torches at his beacon fire, this man's new truths are actually beginning to "affect the higher spiritual life of the mass of men." The leaven of his teaching is at work.

George Meredith was born in the English county of Hampshire, on February 12th, 1828. His Welsh father and Irish mother both died in his early childhood, leaving the boy to be educated as a ward in chancery, under a guardian with whom he never had any real friendship, and who early sent him to a Moravian school at Neuwied in Germany. Foredoomed to loneliness of spirit, the lad at school laid the foundations of a remarkable classic learning, caught a great love for music, which has lasted all his life, and nurtured budding sympathies that later grew to phenomenal breadth until they came to include all human and intellectual endeavor. Recalled to England at fifteen he began studying law, but soon found this not to his taste. On reaching his majority he abandoned London and the law for the English countryside, literature and journalism. Burdened with a load of debts not of his own making, the outlook must have been anything but encouraging, but George Meredith was of the conquering temperament; he made stanch friends among the poets, novelists, thinkers of the day, and inspired by romance—"breathing confidently the air of power and poetry"—in the hand-to-hand struggle with poverty he conquered. By arduous drudgeries he won freedom from debt and builded on the hard rocks of fact the foundations of his gospel of frugal self-support. But, stony and difficult as his life was, there were no "spiritually arid tracts" in his daily existence, which he never permitted to deteriorate to the doleful. His experience only proved his conviction that "there is nothing which the body suffers which the soul may not profit by."

That experience had its depths and bitternesses in other than merely material misfortunes. Early mated with the brilliant and witty Mrs. Nicholls, the widow-

ed young daughter of Thomas Love Peacock, the satirical novelist, the young genius that was Meredith knew for a brief period the delights of wedded bliss in an ideal comradeship of heart and mind. But the happiness was turned to deepest sorrow and suffering, for the wonderful fifty poems called "Modern Love," and forming the heart-breaking tragedy of a mismated husband and wife, were forged in the fires of his own ordeal. Thus he wrote at the end of it all:

Thus piteously Love closed what he begat:
The union of this ever-diverse pair!

These two were rapid falcons in a snare,
Condemned to do the flitting of the bat.
Lovers beneath the singing sky of May,

They wandered once; clear as the dew on
flowers:

But they fed not on the advancing hours:
Their hearts held cravings for the buried day.
Then each applied to each that fatal knife,
Deep questioning, which probes to endless
dole.

Ah, what a dusty answer gets the soul
When hot for certainties in this our life!—
In tragic hints here see what evermore

Moves dark as yonder midnight ocean's
force,

Thundering like ramping hosts of warrior
horse,

To throw that faint thin line upon the shore!

Mr. Meredith's first volume of poems was issued in 1851; his latest in 1901. In the course of the intervening half century he published six other books of verse, four brilliant novelets, two or three critical essays distinguished for penetrating and illuminative thought, that gorgeous Orientalized allegory of human endeavor, "The Shaving of Shagpat," which stands in a class by itself, and a baker's dozen of novels which constitute for people who read with brains as well as eyes the most delectable feast ever spread by any English novelist. In these novels he has created more than one thousand characters*—people that live and move and have a being as real for the reader as any personages of history; "citizens to match the noblest in the world of man's creation," said the late William Ernest Henley, "they are of the aristocracy of the imagination, the peers in their own right of the society of romance." And, while the

*Mr. Elmer James Bailey, in his book on "The Novels of George Meredith," lists the astonishing total of 1,247 separate characters endowed with the breath of life by Mr. Meredith—including the personifications in "The Shaving of Shagpat," but not counting any characters in the poems.

development of character is always his chief concern, and his appeal is to "the conscience residing in thoughtfulness," he nevertheless has had fascinating stories to tell. It is time to protest against the depreciation of his novels as novels. Even readers who "read for the story alone" find his stories enthralling, and any man who will compel his understanding thru the first fifty pages of any one of Mr. Meredith's novels will never fall asleep over the rest of it. "The Adventures of Harry Richmond" alone is sufficient to prove him dowered above his contemporaries with the art of narrative.

It was no less because of the newness of his message than because of the novelty of the style in which it was imparted that book after book of his was met with an outcry of censure and disapproval. "Ideas," he says, "new-born and naked original ideas, are acceptable at no time to the humanity they visit to help to uplift it from the state of the beast."

At first much bruised in spirit by this unremitting abuse, he gradually ceased to mind it greatly and wrote to please himself. This has made some of his later work hard to read. For Mr. Meredith is a pioneer of thought. Possessed of a swift, darting intellect, a wonderful alertness of mind, a really marvelous insight; equipped with colossal learning and the daring of an explorer in "the nebulous border-lands of knowledge," and being as impatient of the obvious or the commonplace as he is intolerant of shams and sentimentality, he does not stop to consider how fast the minds of other men can fly. His pages fairly bristle with metaphor, and he carries compression and the omission of unessentials to the

extreme. Yet the charge of obscurity, as in the case of Browning, eternally harped on by the critics, has been bruited too far. As regards most of his work, that accusation is, in fact, a mere bugaboo to scare timid readers. The key to the novels and poems which are difficult is to be found in his simpler writings.

Because of the very mass of work accomplished by this intellectual giant we are in danger of losing sight of his steadiness of purpose. Until one has

studied several of his volumes one cannot see the wood for the trees. But the study brings its golden reward. For his purpose is steadfast and single-minded. Great as is his art in poem and story, he is primarily and pre-eminently and persistently a teacher. The Truth is ever his quest.

—O sir, the truth, the truth, is't in the skies,

Or in the grass, or in this heart of ours?

The soul life is for him the only life. In "The Tragic Comedians" he makes Alvan

say: "It is the soul that does things in life; the rest is vapor." The development of the human soul is his constant study and his only theme,

How from flesh unto spirit man grows,
Even here on the sod under sun.

Everything that goes to make up that development interests him. No contributory fact, incident, happening, minute relationship, is too insignificant for his notice. Hence the appearance of diffuseness in his matter and hence the charge of whimsicality, which is a malappraisal of his great and multiform mental activity. His writings are "glossaries on his reading of life," and, to quote Mrs. Henderson again: "He is a psychologist, tho embodying his psychology

GEORGE MEREDITH.

in poetic and not in scientific form; a poet's mind is penetrating caverns and recesses of thought, and the pathway behind it is aflame."

Concerning his novels Mr. Meredith once wrote to an appreciative critic:

I think that all right use of life and the one secret of life is to pave the ways for the firmer footing of those who succeed us; and as to my works I know them faulty, think them of worth only where they point and aid to that end. Close knowledge of our fellows, discernment of the laws of existence, these lead to great civilization. I have supposed that the novel exposing and illustrating the history of man may help us to such sustaining roadside gifts.

Even in as early a work as "The Ordeal of Richard Feverel," which was published in 1859—the very year that Darwin's "Origin of Species" issued from the press—Mr. Meredith recognizes and insists that the making of a human soul is the climax of the processes of the world:

"Nature is not all dust, but a living portion of the spheres. In aspiration it is our error to despise her, forgetting that thru Nature only can we ascend,"

was one of the aphorisms put into the mouth of the master of Raynham Abbey, head of the Feverel family, but readers of his later books soon find that this is of the essence of Mr. Meredith's own thinking. The intellectual atmosphere of that time seems to have been surcharged with intimations of the Evolutionary process. The scientific work of Darwin and Wallace served to supply the concrete setting and the name. Mr. Meredith was one of the first thinkers to embrace wholeheartedly the new faith. But Darwinism was only the basis of the working hypothesis he formulated for himself, and in which he deals not alone with the development of man—thru flesh to mind, thru mind to soul—but also with the whole Cosmic procession.

His philosophy and religion are writ large across the page of the novels, which also abound in poetic qualities; but his gospel is epitomized in the poems, and these have been described, in one aspect, as "the novels themselves in distillation."

It was said at the outset that his writings are seldom classic in form, yet he has done beautiful and noteworthy work in some of the classic forms. As a sonneteer he occupies an eminence unique for virility and audacity. He has made

the sonnet in English a new thing. It may not always be imbued with sweetness and light in his hands; it is seldom delicate; but it is always packed with power, always concentrated, often explosive. He forges his sonnets on an anvil of iron and they ring with sledgehammer blows. A fine example, and one that sounds a warning note of his teaching, is the sonnet on "The World's Advance":

Judge mildly the tasked world; and disincline
To brand it, for it bears a heavy pack.

You have perchance observed the inebriate's
track

At night when he has quitted the inn-sign:
He plays diversions on the homeward line,
Still that way bent albeit his legs are slack:
A hedge may take him, but he turns not back,
Nor turns this burdened world, of curving
spine.

"Spiral," the memorable Lady terms

Our mind's ascent: our world's advance presents

That figure on a flat, the way of worms.

Cherish the promise of its good intents,
And warn it, not one instinct to efface
Ere Reason ripens for the vacant place.

Reason, intellect, the ability to think about his own thought, is the chief endowment of man—is the crowning achievement of his rise from the brute and his mark of differentiation from all other animals, is the first step in the soul's ascent. Perhaps the most significant aspect of this teacher's practical attitude to life—certainly the one on which he is repeatedly most insistent—is his firm belief in intellect as a reconciling influence between man and man, no less than between man and nature. And in his view the chief hope for the future lies in making more of it. The World's Advance is to be procured by thoughtful and loving service.

That he has found this teaching in the book of Nature, in which he has read deeply and with loving eyes, makes his attitude toward Nature of greater significance in the advancement of thought than that of any other English poet since Wordsworth. Nature, in Mr. Meredith's conception, is no series of isolated phenomena, but is intimately related, in all her manifestations, to the human soul. "Earth" is the word he employs to express the gist of this concept and to include it all. Earth is the Ali-Mother, whose spirit dwells within us, animating our love and even our rebellions against her. To understand this word as he under-

stands it, and to feel toward Earth as he does, is to be "heir to the new inheritance conferred by his poetry upon human life and thought." Thus in "Earth's Secret" he sings:

Not solitarily in fields we find

Earth's secret open, tho one page is there;
Her plainest, such as children spell, and share
With bird and beast; raised letters for the
blind.

Not where the troubled passions toss the mind,
In turbid cities, can the key be bare.

It hangs for those who hither thither fare,
Close interthreading nature with our kind.
They, hearing History speak, of what men
were,

And have become, are wise. The gain is
great

In vision and solidity; it lives.

Yet at a thought of life apart from her,

Solidity and vision lose their state,
For Earth, that gives the milk, the spirit gives.

Nature is only one phase of this all-embracing view of Earth, which begins on a lower level than Nature. The very dust under foot is Earth, for Earth forms indeed "the foundation and the crown of life."

For he who the reckoning sums
Finds nought in his hand save Earth.
Of Earth are we, stripped or crowned.

And the whole range of human nature is included. Thus in the sonnet "Appreciation" he says:

Earth was not Earth before her sons appeared,
Nor beauty beauty ere young Love was born.

Mother Earth is our one visible friend,
our initiator into life, our only authentic
priestess:

She can lead us, only she,
Unto God's footstool, whither she reaches.

His attitude to Nature is best exemplified in brief, perhaps, best explained and justified, in the lyric called "Outer and Inner." The poet walks into the woods on a sultry August afternoon, tells us what he sees there and draws for us its lesson on our human life:

Along my path is bugloss blue,
The star with fruit in moss;
The foxgloves drop from throat to top
A daily lesser bell.
The blackest shadow, muse of dew,
Has orange skeins across;
And keenly red is one thin thread
That flashing seems to swell.

My world I note ere fancy comes,
Minutest hushed observe:
What busy bits of motioned wits
Thru antlered mosswork strive.
But now so low the stillness hums,
My springs of seeing swerve,
For half a wink to thrill and think
The woods with nymphs alive.

I neighbor the invisible
So close that my consent
Is only asked for spirits masked
To leap from trees and flowers,
And this because with them I dwell
In thought, while calmly bent
To read the lines dear Earth designs
Shall speak her life on ours.

Accept, she says; it is not hard
In woods; but she in towns
Repeats, accept; and have we wept,
And have we quailed with fears,
Or shrunk with horrors, sure reward
We have whom knowledge crowns;
Who see in mould the rose unfold,
The soul thru blood and tears.

Such poems as "Hard Weather," "The South-Wester," "The Thrush in February," "A Night of Frost in May" and "The Lark Ascending"—that exquisitely perfect embodiment of the Joy of Earth, title by which a whole section of his verse is called—all vibrate with this wonderful new music.

To one thus crowned with knowledge of her ways what can Earth teach but love, what can Nature inculcate but service to one's fellow men? Hear the sturdy clarion note of the sonnet, "My Theme":

I say but that this love of Earth reveals
A soul beside our own to quicken, quell,
Irradiate, and thru ruinous floods uplift.

And read "The Thrush in February":

Love born of knowledge, love that gains
Vitality as Earth it mates,
The meaning of the Pleasures, Pains,
The Life, the Death, illuminates.

For love we Earth, then serve we all;
Her mystic secret then is ours:
We fall, or view our treasures fall,
Unclouded, as beholds her flowers

Earth, from a night of frosty wreck,
Enrobed in morning's mounted fire,
When lowly, with a broken neck,
The crocus lays her cheek to mire.

Yes, Death as well as Life, will be revealed to him whom love of Earth inspires; for what is Death but a part of Life? Counseling a positive attitude toward life and the joy of life, making happiness a duty, this poet "looks calmly upon Death and along the road to Death, and shows that to the last step flowers still spring on either side." To work! Be up and doing! Waste not the day in dreams or idle speculation on "The Question Whither?"

When we have thrown off this old suit,
So much in need of mending,
To sink among the naked mute,
Is that, think you, our ending?

We follow many, more we lead,
And you who sadly turf us,
Believe not that all living seed
Must flower above the surface.

Sensation is a gracious gift,
But were it cramped to station,
The prayer to have it cast adrift
Would spout from all sensation.
Enough if we have winked to sun,
Have sped the plow a season;
There is a soul for labor done,
Endureth fixed as reason.

Then let our trust be firm in Good,
Tho we be of the fasting;
Our questions are a mortal brood,
Our work is everlasting.
We children of Beneficence
Are in its being sharers;
And Whither vainer sounds than Whence,
For word with such wayfarers.

One other lesson, only glimpsed in this poem, Earth has for us which must not be overlooked. Valuable as they are, the individual must not exalt too much his sensations. To attain to the Joy of Earth, which leads him to understand and delight in her beauty, he must appreciate the meaning of his own existence—that he is only one man among many. And this earth of ours also is only one among millions of worlds. In the infinite, starry universe there is a revelation of the same spirit, the same order, that animates our earth. From "Meditation Under Stars" the poet finds that

. . . Space is given for breath of thought
Beyond our bounds when musing: more
When to that musing love is brought,
And love is asked of love's wherefore.
'Tis Earth's, her gift; else have we nought:
Her gift, her secret, here our tie.
And not with her and yonder sky?
Bethink you: were it Earth alone
Breeds love, would not her region be
The sole delight and throne
Of generous Deity?

And further in the same poem this lesson is developed:

So may we read, and little find them cold:
Not frosty lamps illumining dead space,
Not distant aliens, not senseless Powers.
The fire is in them whereof we are born;
The music of their motion may be ours.
Spirit shall deem them beckoning Earth and
voiced

Sisterly to her, in her beams rejoiced.
Of love the grand impulsion, we behold
The love that lends her grace
Among the starry fold.

He who conceives thus of himself and of the stars above him, sees Earth with new eyes:

Then at new flood of customary morn,
Look at her thru her showers,
Her mists, her streaming gold,
A wonder edges the familiar face:
She wears no more that robe of printed hours;
Half strange seems Earth, and sweeter than
her flowers.

In the final analysis the object of all human endeavor must be to "identify itself with the Divine purpose, to be more and more a conscious vehicle for the expression of that reason which is the will of God." And while he seldom names the name of God, Mr. Meredith urges the habit of prayer—communion with the Divine Spirit in us and over us—as a genuine expression of a man's belief in the living Spirit of the Universe; he sets forth the psychological basis of morality, and finds the rational sanction for faith in the fact that faith is the sublimation of reason.

Thus all too crudely may be blocked out the salient features of the teaching of this sage and seer. Great poets are the beacon bearers of the ages. And such an one is George Meredith—that rare phenomenon, a poet who is also an original thinker—a man with a message, who has demonstrated by his life and his work the great practical efficiency of persistent idealism; who has learned to live, like his Mother Earth, not for himself, but for his kind; who has thus rendered faithful service for the furtherance of the world's advance, and whose thought and love expressed in service have contributed to the civilizing process. His words will be a lamp unto the feet of generations yet to be, for as he learned from his February Thrush:

Full lasting is the song, tho he,
The singer, passes: lasting too,
For souls not lent in usury,
The rapture of the forward view.

NEW YORK CITY.

Il Bel Canto

BY LUISA TETRAZZINI

[It is doubtful if any operatic singer heretofore visiting New York ever leaped into such popular favor as has been achieved "at one bound" by Mme. Luisa Tetrazzini, at present the bright particular star in Mr. Hammerstein's galaxy at the Manhattan Opera House. Certain it is that many years have passed since any other prima donna unknown to this public has been welcomed with such frenzied demonstrations of approval and delight. This is not the place for a critical estimate of Madame Tetrazzini's art; suffice it to say that she has been singing with great success in the opera houses of Europe and South America for the last ten years (and one season in San Francisco). Her voice is a pure soprano of unusual beauty, with a range extending to one note higher than the topmost note achieved by Adelina Patti. She is an exponent of the Italian "Bel Canto"—"The Perfect Art of Song." And because she is the newest comer she is the most remarkable of all the queens of florid song in the short memory of the opera-loving part of our cosmopolitan population. It is the wonderful liquid purity of her highest notes, the perfection of her bird-like fluting, that transports her auditors to the seventh heaven of sensuous joy. The following article is the substance of an interview which Madame Tetrazzini kindly gave to a representative of THE INDEPENDENT.—EDITOR.]

YOU ask me about *Bel Canto*? It is not easy to give a definition. With us in Italy the word *canto* means so many things. It means song, of course, but also it means all music—instrumental music as well as vocal music. It means sometimes a section or part of a poem. It is used as a technical term to designate the melody in a piece of concerted music. And then, besides a song, any song, *canto* means the singer's art. That is *bel canto*—(*bel* means beautiful or perfect)—beautiful song, song that is good to sing because of its beauty. The art of *bel canto* is the art, as your American ladies would say, of "perfectly lovely," "perfectly beautiful" singing. It is rather the art of beautifully perfect singing; singing that is beautiful, that has the perfection of beauty, and then an added beauty of faultlessness in the way it is done.

This term is an old one. It has been used in Italy for many generations, several hundred years. The highest art of singing was so called because in Italy

everybody sings without making a profession of it. I suppose *bel canto* was so named because the song had much melody, because it had feeling—what we call soul or heart—in the melody. And this art of singing beautiful melody with feeling is a very different thing from the modern art of declamation in music. It is not declamation; it is song. Everybody recognizes it at once. You do not have to tell anybody who has a musical ear that he is listening to *bel canto*. He knows it the minute he hears it.

The earliest signs of *bel canto*, of the kind of song and singing that has come to be so designated, were found in Italian music, away back in the time of the great master of church music, Palestrina. And from Italian music it spread to Vienna, to France and other countries. Many composers besides Italians have written *bel canto*. This kind of melodious music, in which the beautiful melody is pre-eminent—it is the music in fact—is the most popular and the best loved of all the kinds of music ever writ-

ten. And it is easy enough to see why it should be. In it the public is able to judge of the singing—that is, the public which has a musical ear. Any one who can hear musical sounds correctly can tell at once whether the singing is good or not. And who can doubt that the knowledge that what he is listening to is good and beautiful increases his enjoyment in listening to it?

Among the earlier Italian composers Donizetti is the greatest master of *bel canto*. He wrote more operas than any other containing fine examples of this kind of song for the soprano part. And next to Donizetti I should place Bellini. Then comes Mozart, who wrote to Italian texts, you know, and whose *bel canto* parts are among the most beautiful ever written. Among the modern composers, of course, Verdi stands first in *bel canto*. But there are fine and beautiful examples of this sort of music in Flotow's "Martha," in Gounod's "Faust" and "Romeo and Juliet," in Thomas's "Hamlet." Massenet is the only French composer now living who writes in this style; some of his soprano parts are exquisitely beautiful in melody—are real *bel canto*.

Personally, of all the operas in which I sing, I like "Lucia" and "Puritani" the best; these because they enable the singer to give to the public the best that is in her—all the artistry of which she is capable. Lucia and Elvira I consider my best parts, and I enjoy singing them best of all for this reason, that they enable me to do my very best, to give the people who listen to me the best work I can do, my most beautiful singing of the most exquisite melodies.

"Traviata" and "Dinorah" are my next best favorites among all the operas, for each of them contains a most beautiful and artistic part for the soprano. I am fond of singing in both these works, and I have sung in them many times. I have sung in "Dinorah" for weeks at a time.

I said the public can understand *bel canto*, can judge of the singing for itself, and therefore enjoys it more than any

other kind of music. I have had abundant proof of the popularity of this style of singing. In Italy, in France, in Spain, in Russia, in England, in Brazil, Argentina and Paraguay, in Cuba and Mexico, in San Francisco (where I sang sixty-five times, four years ago), and now in New York, I have found it equally popular.

In South America? Yes, I have had much success in South America, espe-

MME. TETRAZZINI.

cially in Buenos Aires and Rio, where the people are as fond of good singing as anywhere in the world. In those cities the opera is very popular. Buenos Aires is a cosmopolitan city. It reminds one more of Paris than any other place. There the people like French music more than anything else, but Italian opera is very popular, too. All the artists are Italians and all the operas are sung in Italian. A full quarter of the city's popu-

lation is Italian. In Rio everything operatic is Italian.

Now, as to the outlook for *bel canto*—the promise for the future of the art—I do not know what young singers may be coming up. *Bel canto* cannot be taught. The colorature voice is the gift of Heaven. But *bel canto* must remain. If it appears to have been lost at any time it must be revived; for the singer must sing. The people who love music and the opera will never be satisfied with anything else in place of *bel canto*. Wagner and the new "lyric drama" cannot super-

sede it. I would not be misunderstood in saying this, for these newer things have beauty of their own, too. I enjoy Wagner's earlier, more melodious works greatly — "Lohengrin," "Tannhäuser," "Tristan" and "Meistersinger"—and I have sung parts of some of them in concert. There is room for all. And so I say the art of singing we call *bel canto* cannot be superseded or dropped into oblivion as long as humanity loves song. That the public likes it as much as ever is shown right here in New York by the reception it has given me.

NEW YORK CITY.

Ode to Love

BY ELIZABETH WORTHINGTON SMITH

O LOVE, they say thou art more fair to sight
Than stars that thru the gloom of midnight
glow!

That they that view thee, lost in the delight,
Sweet thing, forget the sun, the flowers that
blow,—

To watch the mysteries
Of thy far-shining eyes,
The nimbus of soft hair that crowns thy brow,
The curves most exquisite
Of thy light form!—thy beauty, the despair
Of all created things that vaunt them fair!

O Love, they say that thou art measureless
As in linked eons, the eternity!
Thy being infinite what soul may guess?

Let man add sky to sky and sea to sea,
So high he should not soar,
So deep in ocean hoar
Descend, to prove thee! When young stars
shook free

Each lambent, floating tress,
Thou wert! yet smilest radiant on high,
While eyeless ages, groping mute, go by.

O Love, they say that thou art excellent!
Here is no good, unless of thee it is.
Lapped in the Eden of a sweet content
Are they that feel thy presence, taste thy
bliss!

Light of supernal ray
Fills the enchanted way,
The bow where Joy and Promise meet and kiss,
Clear in the sky is bent!
Nor know they if on earth, or sphered above,
They dwell, that know the perfectness of
Love.

O Love, by lovers sought nor always found,
Yet may a stranger come on thee by chance,
By stream reclined, thy slender zone unbound,
Listening the murmur with soft half-veiled
glance;

Or throned on loaded wain
Around a jocund train,
'Neath rustic brim disguised; or in the dance,
With nodding roses crowned.
All may not learn thy tongue,—yet youngest
child
Babbles thy speech from breast of mother mild.

O Love that called, did I not haste to thee,
Drawn by the gracious vision all divine?
Angel of sorrow hast thou been to me!
As a gay child before a festal shrine,
I gathered garlands sweet,
I danced with gladsome feet,
And sang thy hymns, as drunk with magic
wine,
And laughed in simple glee.
Lo, on thine altar stands pale Grief alone!
And 'mid the withered leaves I kneel and
moan.

O Love, art thou true angel? Thou hast cast
A spell upon mine eyes that dims the sky;
Yet saw I late two lovers that went past,
As tho to heaven that beckoned they drew
nigh!

Guiltless,—and all in vain,—
Bear I the piteous pain,
Suspense that slays, in ceaseless constancy!
Yet death I fain would taste
For thee, nor would I alien live, unblest;
O Love, relent, and grant thy pilgrim rest!

WASHINGTON, D. C.

Literature

The American Nation

The American Nation,* now complete in twenty-six volumes of text, with a volume of general index, is the most important piece of co-operative historical writing yet produced in the United States. When the American Historical Association refused, some eight years ago, to undertake a work of this character, Professor Hart, who had led among its advocates, assumed the task himself. To aid in the work he enlisted twenty-three scholars, most of whom have remained loyal to the end. His volumes have appeared promptly and according to specifications. Their general average and coherence has been higher than could reasonably have been expected; only one or two have failed in worthiness; several have definitely extended the bounds of our knowledge of facts and organization; a few have touched the highest level that American historical scholarship has reached. We have read thru the volumes as they have appeared, reviewing them in groups from time to time, and ever more conscious of their uniformity in high performance.

Our last notice of the series ended with Mr. Hosmer's two volumes on the Civil War. With the title "Reconstruction: Political and Economic," Professor Dunning follows, covering the years 1865-1877, and touching a level not reached by any of his predecessors since it was marked by Professor Turner in his "Rise of the New West." We have long been waiting for Mr. Dunning to give us a history of reconstruction. For years he has been directing his students into the careers of the different States of the old South. We still await a greater book on the subject, but we accept this as an earnest of what is to come. Writing in his usual caustic and incisive style, seeing the shams and tergiversations of the arrogant Republican majorities whose leader "would shed tears at the bare

thought of refusing to freedom rights of which they had no comprehension, but would filibuster to the end of the session to prevent the restoration to the Southern whites of rights which were essential to their whole conception of life," Professor Dunning has produced the only brief history of the period that commands respect. His work invites and need not fear comparison with the last three volumes of Mr. Rhodes's dispassionate and enlightened history. Within their respective spheres both have established records to last for many years. And with their last pages both have touched the frontier post which has until now separated historical judgment from journalistic guess.

With Professor Dunning's volume the charted sea of American history is finally covered, and his successors in the series are obliged to organize and classify the facts of present day history, with no safe guide before them. We are fully convinced of this as we read Professor Sparks's contribution on "National Development," in which the two administrations after 1877 are described. The volume starts better than it finishes. The opening chapter, which treats the Centennial as a landmark in economic development and artistic progress, is at once startling and convincing, while the four descriptive chapters that follow are well conceived. We have seen no better summing up of the United States at the turning point between its first and second centuries. But in the chapters of narrative Mr. Sparks, to our mind, misses the point. They read like magazine articles on current problems, with almost no connecting thread. Their treatment of the currency question is too simple to be enlightening. They show little first-hand knowledge of that revolution in transportation facilities which brought about a new epoch in the early eighties. And we find no insistence upon the fact that the disappearance of the frontier within the years of this volume is the real key to the history of the period. Indeed, a

*THE AMERICAN NATION. Edited by Albert Bushnell Hart. Vols. xxii-xxvii. New York: Harper & Brothers. \$2.00 each.

map showing the Indian frontier is notable because of its remarkable and numerous inaccuracies. The book is useful, chiefly, as giving a point for departure for the next writer.

With the modesty of a sure scholarship, Professor Dewey remarks as he approaches the years 1885-1897 that as yet "the historian can only conjecture; he cannot hope to pronounce final judgment." As we follow his treatment of his years and their problems we are impressed not only by the truth of his introductory apology, but by the clear-headed sanity with which he has analyzed and described. When perspective shall have been corrected by distance the historian will still find in this volume much to commend in its calm statement of current facts. Yet here, as in the last volume, but little has been made of the results following upon the disappearance of the territorial frontier. We note in this connection that the author has not only misquoted, but misused, a statement of President Harrison, in his message of 1890, that "another belt of States stretched from the Atlantic to the Pacific." The remark, quite permissible in 1890, is misleading when used in reference to 1889, when Idaho and Wyoming were still outside the Union, and an unbroken belt of Territories still separated the East and the West. But we doubt whether a better book on these years could now be written.

The last narrative volume brings the series, as Mr. Latané, its author, has himself remarked, down to "day before yesterday." It covers the years of Spanish war, insular problems, Asiatic diplomacy, and corporate integration, under the general title of "America as a World Power." Dealing as it does largely with diplomatic affairs whose details have been made public at an unusually early date, many of its chapters have a definiteness unusual in current history. But the author would himself be the last man to claim for his book anything more than an intelligent survey of recent facts. With his volume the year 1907 is reached. Volume twenty-six, which follows from the pen of Professor Hart, deals at once with prophecy and retrospect. We are not certain what the Editor has tried to do with his "American Ideals His-

torically Traced." He has not added another to the class of works invented and filled by De Tocqueville and Bryce. Indeed, his volume of essays, some of them interesting and suggestive, upon "Territorial Concepts," "The Man Who Leads," "I Want to Know," and the like, is of doubtful value in a great historical work. It is, after all, the chief function of the historian to describe the past, leaving the lessons of history to the professional moralist.

But with this volume, and the index, the series closes, and our judgment remains that Mr. Hart has done one of the really great works in history in outlining and directing the studies of his twenty-three co-laborers. His own greatest contribution to the work was the pamphlet circular, never seen by the public, in which he instructed the contributors upon the nature and possibilities of co-operative writing, and stated the platform to which he has triumphantly adhered.

De Morgan's New Novel

THE most interesting phenomenon in recent fiction is the recrudescence of the old-fashioned novel of the Dickens and Thackeray type thru the single-handed efforts of William De Morgan. The books that sell best and which therefore the publishers assume are the only kind the public will read are the exact opposite of this; Zenda stories or chains of detective stunts or new Arabian Nights, written in short, jerky sentences, modeled after telegraphic journalese, oratorical according to Demosthenes's definition, for they consist of "action, action, action." It is regarded as especially necessary that the author keep out of sight. He is encouraged to exploit his individuality in the "literary departments" of newspapers and magazines, but the style of his book must be kept rigidly objective and impersonal. The author must go ahead in a straight line, like an express train, never looking back at what happened before, never looking around to see what other people are doing, never allowing the reader to guess what is going to happen next.

Now comes Mr. De Morgan, and, paying no attention to these supposed de-

mands of popular taste, publishes a long, leisurely and garrulous novel, showing naïve confidence in the reader's sustained interest in the pettiest incidents in the lives of a lot of very ordinary individuals. He does not seem to be aware of the custom prevailing among the patrons of our free libraries of selecting a book according to the number of quotation marks seen on a page. Instead, therefore, of coming as near to the drama form as possible he steers away from it, throwing whole pages of dialog into indirect discourse involved with Bits of portraiture, so that one actually has to pay attention to what he is reading to tell whether it is one of the characters who is talking, or the author in his own person, or merely the thoughts of all these people about each other getting set on paper without having been spoken. Sometimes, indeed, the reader gets so confused by this that he feels that he himself is telling the story, or rather thinking over, in a fireside mood, some interesting people he has known, running his mind back and forth over the tapestry of time in order to pick out the threads of their lives. Of course this is pleasant, but no self-respecting author would allow a reader to usurp his place in this way.

When "Joseph Vance" appeared in 1906 people remembered the old saying that every man had one good story in him, and so did not wonder that an active life of sixty-seven years should have provided this abundant and well digested material. He would not do it again; at least not without working another twenty years. But Mr. De Morgan keeps up the pace as well as his youngest competitors, with no sign of exhaustion—"Alice-for-Short" in 1907 and *Somehow Good** in 1908—instead of waiting till he was one hundred and seven years old for his third volume, as was expected. He must work faster than he used to when novel writing was his avocation, or else he has a barrel.

We incline to the latter hypothesis, for he still gives good measure, and the latest of the three is as carefully and lovingly worked over as the first. There is the same genial, quizzical, confidential tone,

the same love for all humanity, not idealized humanity, not Humanity in the abstract, but for the particular human beings whom he—and we—have met. This spirit of benevolence and toleration, as well as the faith expressed in the Tennysonian title of his latest, prevents us from classing De Morgan's books with the humanitarian fiction of the day, which is chiefly characterized by vituperative pessimism and written by men too young to have evolved so sane and mellow a philosophy of life from their own experience.

Somehow Good is a novel of amnesia; so was "Alice-for-Short" for that matter, as also three other novels of the past year. Alternating personality is the latest gift of psychology to romance. It enables the hero, as in this case, to lead a double life without necessarily involving any moral duplicity. Mr. De Morgan has, however, been obliged to utilize a lady with a past, which contrasts with its final goal. That somehow good does thus come out of evil in real life is a proof of the divine forgiveness of nature.

The book is not one to be swallowed at a gulp like most novels of the day. It is to be leisurely sipped, so as to enjoy the flavor. Every paragraph has its charm, and after reading it one wants to read it aloud to those few friends who share one's own good taste in literature. Most of the books that are written nowadays are quite impossible to read aloud, either because of their style or because we are not interested in any of the pages except the last, which tells how the whole thing came out. But in De Morgan's novels every page is as interesting as the last, and would be read with pleasure even if torn out of the book and caught fluttering down the street.

A Prophet in Babylon. By W. J. Dawson. New York: Fleming H. Revell Company. \$1.50.

Dr. Dawson in his novel, *A Prophet in Babylon*, seems to be suffering from religious, if not moral, megalomania. He has the temperament of the popular evangelist in its extremest form. If a church is not filled with an enthusiastic crowd of excited men and women he assumes that it has failed in its mission. His hero, a clergyman of New York, is

*SOMEHOW GOOD. By William De Morgan. New York: Henry Holt & Co. \$1.50.

driven from his church, primarily because his congregations have fallen off thru the removal of many members to the suburbs. We do not know why that state of affairs should be called "failure." Churches, like homes, have been necessarily abandoned in downtown districts as their people moved elsewhere, but it did not mean that the suburban members had suddenly been blotted out of existence, nor that the Church of Christ had failed. Other counts of Dr. Dawson's indictment of the Church are more serious. It would seem that Dr. Dawson finds the Church in America lacking in spirituality and in philanthropy as well as in size. He dreams of a vast organization, purer than the old, a "League of Service," "The union of all who love in the service of all who suffer," which is precisely what the great invisible church of all good men has always been. Why another organization should be added to the already overorganized society of today we cannot see. Does Dr. Dawson dream that enrolling his very disagreeable deacons in a new society will suddenly transform them into angels of sweet reasonableness? No member of any Church will deny the faults which Dr. Dawson points out with a bitterness born, perhaps, of some sharp experience. But he fails to discriminate between the diverse missions of country and city churches. To any one who knows the value of the Church to a small and isolated community, how the social and intellectual life of the little town centers about it, how it is often the one avenue for the aspiration and moral uplift of sequestered souls, how its spire is the symbol of the best and noblest thought and life, and who can reckon the combined sum of the little towns in the aggregate more than that of the cities, to such a one *A Prophet in Babylon* will fail of serious appeal. It is true that in the city there are many avenues of interest, social and intellectual, and the Church need not attempt to do the same work it does in the country, as a rule, acceptably and thoroughly. The city church only adds to the burdens of its members when it tries to be their club and their college. The mission of keeping alight the fire of the altar is enough. That may require prophets of a new order, but not, of necessity, new

pulpits or a new church in which to preach. It has been the boast of Christianity that it is flexible and adaptable to new conditions; it need not cease to be so; and the contention that the reformer "can do nothing within the church," is disproved by history and contrary to present day experience. The fault of the book is overstatement.

"In six months the League had enrolled close upon two hundred thousand members." It had brought to justice many criminals in high places; it had established a "House of Joy" and numerous brotherhoods and sisterhoods of service; its leader had become the inspired social Prophet of Babylon.

"Five thousand joined us on the first night—at this rate, by the end of the year we shall have a million."

The methods used for this propaganda are evangelistic, sensational and meretricious. And we cannot think Dr. Dawson's novel a serious contribution to the solution of the question.

Days Off. By Henry Van Dyke. New York: Charles Scribner's Sons. \$1.50.

In this Dr. Van Dyke has completed his trilogy of the open air and joys afield with the rod of "Fisherman's Luck" swung over the shoulder and the murmur of "Little Rivers" ahead. Why does the gentle art of angling so appeal to clergymen? Is it that it takes them into the sequestered haunts of heron and hermit thrush far from musty books and crusty deacons, elders and vestrymen? And because it pleases their kindly hearts to know their sport doesn't hurt the fishes—much? In any case, Dr. Van Dyke lures the reader into delightful journeyings in his *Days Off*, and makes him long for a vacation. "Between the Lupin and the Laurel," as well as in the hot August noons, along the Passadumkeag River and the Kowahshiscook, named with that "wild generosity of alphabetical expenditure," characteristic of the State of Maine. The leisurely, reminiscent style of *Days Off* is well suited to the theme of these pleasant excursions, and Dr. Van Dyke is the most persuasive of guides into the forest wilderness. It is a good book to read in preparation of the still-unsettled plans for one's next summer vacation, or the rare days off a busy man snatches from the spring calendar.

Literary Notes

....Paul Elder & Co. have added *101 Desserts* to their series of recipe books. (50 cents.)

....A majority interest in the Suburban Press, publishers of *Suburban Life*, has been purchased by the S. S. McClure Company.

....*Who's Who*, the original English edition, is now out for 1908, the sixteenth year of its issue. It contains over 2,000 pages and ten times as many biographies of living persons in England and other countries. (Macmillan, \$2.50.)

....The effect of many books written as warnings against vice is spoiled by hysterical exaggeration and fantastic physiology. In *Heredity and Morals*, now in its second edition, we have a work without these defects, which can be recommended to all, except those who hold that innocence must be protected by ignorance. Dr. James F. Scott discusses fully and frankly the true use of the sexual instinct and points out, in a convincing way, the dangers of its abuse. It is a subject where a physician of good principles and high ideals can talk more effectively than a preacher. Adolescents of both sexes would be safer with such a book within their reach. (E. B. Treat Co., New York. \$2.00).

....There is no lack of enthusiasm in the Rev. John Urquhart's *New Biblical Guide, or Recent Discoveries, and the Bible* (New York: Gospel Publishing House. 8 vols.). The author is a strenuous defender of everything that is antiquated in views pertaining to Scripture. To him the Higher Criticism is "infidel at heart, and Christian only in appearance and name." He has little difficulty in fixing the date of the deluge. He contends that "divine authority, and consequently infallible accuracy, pertains alike to all Scripture," and that "the inspiration of Scripture is independent of the spiritual and mental state of the writer or reader," and thus he makes the imprecatory Psalms equally inspired with the Lord's Prayer. It will require more than eight volumes to convince many modern folks of such doctrine.

....The third volume of Prof. Charles Foster Kent's *Students' Old Testament, Israel's Laws and Legal Precedents* (New York: Chas. Scribner's Sons. \$2.75), classifies the entire legislation of the Old Testament under five general heads, (1) personal and family laws; (2) criminal laws, comprising injuries to persons, property, and society; (3) humane laws, emphasizing the duty of kindness to animals and men; (4) religious laws, defining obligations to God; and (5) ceremonial laws, containing minute directions regarding worship and the ritual. The laws within each section are further arranged in their chronological order, so that the history and development of each Israelitish law and institution can be readily followed from their earliest to their latest stages. The arrangement, together with the introduction and notes, is of great assistance in the systematic and comparative study of the legislation which forms a large and important element of the Old Testament literature. The volume evi-

dences great pains in preparation, covers a field in which materials for study are not abundant, and should prove one of the most useful issues of the excellent series to which it belongs.

Pebbles

PROCRASTINATION is the W. T. Jerome of time.—*Life*.

DID you take your girl's mother to the game with you?

No—we left her at home. What is home without a mother?—*Yale Record*.

FARMER RAGWEED—Has Bill learned anything tew college?

Mrs. Ragweed—No; an' wuss'n that, he's forgot what he uster know! Says he can't eat pie without a fork.—*Chicago News*.

HERE'S satire for you. Three hundred unemployed attended services at Trinity Church in Boston Sunday, making the plea that the rector deliver a sermon applicable to their needs. He not only refused to do it, but after the sermon had a collection taken up for FOREIGN MISSIONS.—*Atchison Globe*.

A CARNEGIE FUND HERO.

WITHOUT any solicitation from Mr. John Burroughs and entirely of our own volition we call the attention of the Carnegie Hero Fund to the following remarkable example of personal bravery, and recommend that one of its medals be sent forthwith to West Park, N. Y. The feat calling for and amply justifying such award is recorded in the current issue of THE INDEPENDENT in an article entitled "Seeing Straight," devoted to a discussion of Nature Faking. The following modest description of this truly thrilling episode is from the pen of Mr. Burroughs himself:

"I did something the other day with a wild animal that I had never done before or seen done, tho I had heard of it: I carried a live skunk by the tail, and there was nothing doing, as the boys say. I did not have to bury my clothes. I knew from observation that the skunk could not use its battery with effect without throwing its tail over its back; therefore, for once at least, I had the courage of my convictions and verified the fact."

No superlatives are necessary to bring the valor of this deed home to the reader familiar with the peculiar personality of the American skunk. The simple words of the modest human actor in the drama are more impressive than any conceivable combination of adjectives. With no apparent excess of self esteem he tells how he walked unconcernedly about the lawn, directly over the slumbering catastrophe in his hand, which may not unappropriately be likened to a dynamite bomb or an active volcano. For anything he knew the next moment might seal his fate, and yet there was no sign of a waver or a flinch. One may be curious as to how Mr. Burroughs first secured what may, perhaps, be appropriately called his stranglehold on the enemy, but no one can doubt that it was obtained by honorable means and in strict accord with the rules of scientific natural history.—*The Globe*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Spirit of Japan

THE poems by the Emperor of Japan and the Court Poet which we publish in this issue have a double interest. They are good representatives of a unique form of art, as curious and, perhaps, as instructive to us as Japanese painting; they are also of importance for what they reveal of the inner feeling of the people whose motives and intentions are now exciting the curiosity of the world. The poet in Japan is not "an idle singer of an empty day." It is expected of a leader of men that he should excel in poetry as in other things, just as a Viking chief, who could not give rhythmical expression to his grief or passion, was held to be lacking in one of the elements of greatness. It is, therefore, regarded as natural that General Nogi should have written some of the greatest poems of the language while engaged in the siege of Port Arthur, and that his Imperial Highness should encourage his soldiers in Manchuria and arouse the spirit of his people at home by his poetry.

Some of these appeared in THE INDEPENDENT during the war and were after-

ward published in Tokyo by their translator, Mr. Arthur Lloyd, of the Imperial University of Japan.

The translation and interpretation of Japanese poetry is especially difficult because of its extreme compactness of structure and simplicity of wording. Their ideal of art is to convey the intent by the simplest possible means; a few brush strokes make a picture and a single simile a poem. Their poetry and painting are, therefore, more like our music in throwing upon those who look or listen the burden of interpreting and making them of value to themselves. They do not tell a story; they serve merely as stimuli to the imagination. In form the poetry of Japan is as rigid and conventional as its life and manners. These poems we have here are all in the *uta* or classic stanza of thirty-one syllables arranged 5-7-5-7-7. In translating into English these necessarily have to be expanded, which destroys their effectiveness and yet does not convey the full meaning suggested to the Japanese mind by their traditional symbols. Some further hints as to their meaning may therefore be welcomed by the reader, tho as we have said, one who attempts to expand and elucidate the message of a Japanese poem does so at his own risk, for the author may repudiate and any other reader may contest his interpretation.

In the first poem the picture which the Emperor expects to flash before the reader's eyes is that rock-bound coast. In the perpetual conflict between the waves and the rocks, which shall finally conquer? Of the two elements the water conforms, the stone resists; the one is yielding and courteous but persistent, the other arrogant and stubborn. Yet shall the waters pierce the ageless rock, such is its power. Can anything better represent the aim and method of the Japanese who are now engaged in "percolating" Manchuria and Korea and with great difficulty are prevented from percolating America? In the fifth stanza much the same simile is used with a slightly different implication—the pertinacity with which Japan carries out a plan, as, for example, when checkmated in 1895 by

the three European Powers and driven from Korea only to return in greater force ten years later. In his third stanza Baron Takasaki uses the pliant bamboo waving in the wind as the emblem of Japan. It bends, but it returns. Its apparent weakness is its real strength.

The Emperor's poems are spoken to his people as a father to his children; the father who still would guide his growing son. But Japan has come to manhood so swiftly since its release from the swaddling clothes of feudalism that it is no wonder if elder nations are inclined to regard it as a child. The Japanese, since 1868, the Era of Enlightenment, have thatched their old farmhouse with "clean rice straw," sufficient to defend it against the darts of winter. Whether the ice which bristles along the eaves refers to Japan's armament must be left to the intuition of the reader. For the rest, the Emperor in the same paternal spirit warns his people that it is difficult to walk in the strait and narrow path of duty, that they must keep the desk-top clean for work at any time and that they must not forget their future duties in the enjoyment of peace and prosperity. Baron Takasaki, as becomes a laureate, celebrates the alliance with England which means so much for his country and expresses the warlike enthusiasm of Japan by its ancient symbol, the samurai sword. In how far these poems have special reference to pending questions and forthcoming events we have no means of determining, but they have in any case a timely interest as the expression of the spirit of modern Japan in its highest aspirations and deepest resolutions.

The Negroes and Secretary Taft

WE strongly advise our negro friends to be a little slow in swearing that they will never, never vote for Secretary Taft if he should be nominated for President. They had a big meeting in Brooklyn last week, at which they demanded, in the name of ten thousand negro voters of Kings County, that Taft be not nominated. There was present as a speaker Brigadier-General Andrew C. Burt, who commanded for ten years the Twenty-

fifth Infantry of colored soldiers, from which regiment President Roosevelt dismissed three companies "without honor" for their asserted part in the "shooting up" of Brownsville, and he made a strong defense of the record and bravery of the negro soldiers. It is all right that such a meeting should be held in support of Governor Hughes, whose nomination would deserve their heartiest support, but to demand "the nomination of some other candidate than Secretary Taft for President" is a matter of quite different wisdom or justice.

Have our negro friends forgotten how warmly they praised the action of Secretary Taft in holding up President Roosevelt's initial order disbanding those soldiers, and could they not gather from that what his own views might be? Supposing that he should be nominated, and should then necessarily retire from the Cabinet, and should then be free to let the whole story of his position and action be known, and it should then appear that he opposed to the end the dismissal of those soldiers, and that, when the President insisted, as he had the authority to do, Mr. Taft had to choose between submitting in silence or resigning from the Cabinet, where would our over-hasty colored friends stand then?

It would have been a flight from duty for Mr. Taft to resign, for let our negro friends remember that he had a tremendous and immediately insistent racial problem on hand, the dealing of justice to the ten millions of colored men in the Philippine Islands, and lifting them to the position and rights of free men, possessing the ballot, which they never had before; and even yet did not know how to use, and giving them self-government, the possession of a Legislature with the power of making laws. In this country ten million colored men have not a representative in Congress, and scarce one in the State Legislatures of forty-six States, while ten millions in the Philippines fill the lower house and almost half of the upper house of their Legislature with members of their own race, and act everywhere as governors of provinces, mayors of cities and judges of courts; and the man who has had the privilege of doing this and of creating the free school system of the Islands—was he to resign

and run away from that task, a task for racial justice and equality, because he did not, and could not, agree with the President on the matter of the dismissal of two or three hundred men? So long as he felt it his duty to remain in the Cabinet, it was not his privilege to criticise the action taken, and it was his duty to carry out the orders of his superior and hold his peace.

Now we do not say that all this was so, that Mr. Taft was opposed to the end to the dismissal of those soldiers. He has not told us, and we have no private source of information. We have not thought it decent to ask him. But it looks so, and it may be so; and if this should prove to be the fact, and be so made known after Mr. Taft leaves the Cabinet, it will put these negro critics who declare they will never vote for Taft in a very awkward position as having done a serious injustice to one who had been their friend and who has done more for racial justice than any other man living. We advise them simply to hold their peace and wait for information. If they prefer Hughes or Cannon or Knox or Foraker as the candidate, let them say so, but let them not make threats in advance of knowledge. They would probably far prefer Taft to any candidate whom Vardaman and Tillman and Hoke Smith and Jeff Davis and the States they represent will vote for.

As to Archbishop Brent

SOMEBODY made a damaging comparison between the little done in Brazil for the elevation of the negroes there, and the success of their elevation here during the forty years since emancipation, whereupon Archbishop Brent, of New Orleans, makes what the Catholic journal of Philadelphia calls "a splendid reply," but what we should rather call extraordinary. He declares that emancipation and education have been to the injury of the American negro. He says:

"We all know that millions of dollars have been expended by the Government to educate and protect the negro. Millions of dollars were sent down to the South in the years immediately after the war, and are still being sent by Northern Protestant churches and societies for the education of the negroes. They have had for forty years or more the same

advantages and protection politically and legally accorded to the white man. . . . Are they a better race physically, mentally, morally and spiritually? Have education, freedom and book knowledge given the negro what he really needs?

"Now, after forty years, we face the truth. On all sides we see nothing but unrest and discontent among the negroes. As a race they are still untrained and undeveloped children. They are, as a rule, ignorant, naturally jealous, with unbridled passions and superstitions. Education—mere book knowledge, without true, deep religion and piety—has developed all the worst passions in the negro breast; and there is scarcely a day that we do not read of some awful crimes being committed, such as were unheard of before the war.

"Fanatical sentimentalists and unscrupulous politicians did in the South just what men of the same ilk, and women, too, styling themselves missionaries, are now seeking to do in the Spanish American countries.

"Millions of American dollars were not sent to Brazil to help educate the mass of illiterates, as was the case in the South, when hordes of missionaries flocked down upon us, backed by the subsidies of the Northern churches, to educate and Christianize the negro. Have they destroyed or have they built up?"

It is evident that Archbishop Brent does not believe in the benefits of education; it has done more hurt than good, even when accompanied with Protestant religious instruction. We may leave him this unfaith, but here is a statement that needs attention. He was sent to Porto Rico as bishop of the Catholic Church there, and he says he heard many stories against the morality of priests there. He adds:

"Not a missionary went down there that did not charge the picture with deeper gloom than those who had preceded him. The most careful investigation and constant vigilance on my part brought to light a couple of men who did not live up to their priestly obligations. I summarily deprived them of their charges, suspending them from all priestly functions. It was not long before they took unto themselves wives to console them, and then they preached the pure gospel according to the tenets of the denomination which offered the biggest salary." . . .

We commend this statement for investigation. Doubtless Archbishop Brent would give the names of those two suspended priests. And here is his concluding statement, which we commend to missionary societies:

"It is with regret that I repeat what the actual Governor of Porto Rico said a few months ago, that the greatest harm done to Porto Rico is inflicted by the missionaries. Perhaps the same is true, proportionately to their numbers, of the missionaries that go to

Brazil. Not a few contributors to missionary funds of different Protestant denominations express to me their regret at having done so, and their determination, after seeing the bad use these funds were put to in Porto Rico, not to give another cent for the same purpose. It is my honest and deliberate opinion that calumnies such as Bishop Kinsolving is now spreading in the United States against Brazil have the one sole purpose of increasing the contributions for the support of missionaries who seem to leave their country for their country's good."

The Undeserving Poor

DURING the recent holidays lengthy accounts of charities dispensed by the various benevolent societies of the great cities appeared in many of the daily papers and magazines. Statements were rendered in some instances, as a firm might cast up the cost of so many cattle sheltered and fed at so much per head, and occasionally pictures of the needy were inserted to add dramatic interest to the vainglorious report. Thus, the heart of the rich good citizen was rejoiced as he read; first, because he was morally thankful not to be himself of the indigent class; second, because he could enter into the general sense of philanthropic ease peculiar to his kind at having participated at a respectful distance and thru proper channels in relieving the distress of his other kind. For the rich good citizen of this class is the new era pharisee, peculiar to our times, a pharisee belonging to the church, the mission board and to the Stock Exchange, who has developed a "social compunction" that does him credit all over this country, and sometimes over Asia and Africa.

But we pass over the curious lack of delicacy in the refined upper classes which permits the proclamation of their alms upon bulletin boards. And we omit what might be said about the degrading effects of such publicity upon the sensibilities of the poor, who are most poor in that they are not in a position to preserve or cultivate sensibility. And we call attention to the more significant fact that in nearly every instance the claim is made by these merely public-spirited dispensers of charity that help was extended only to "the deserving poor." Now we know who the "deserving poor" are. They are the 800 laborers who marched up to the City Hall in St. Louis the other day and

begged the Mayor, not for bread, but for work. They are all famished and homeless children, all sober and industrious men and women who are out of employment or who have burdens too heavy to be borne. And no one begrudges them the aid they receive, doubly hard to accept under the humiliating methods of modern charity. But if they deserve help, why call it charity? To receive what one deserves is but simple justice and should be proclaimed under that name, especially if it is to be published in the newspapers. A man who deserves is not a mendicant and should not be advertised as one, even to add luster to the name of benevolence.

Meanwhile, there are the undeserving poor. We know who they are also—dissolute men and jade women, creatures maimed of their will power, lost from the good angels, morally insane, with dead eyes and emotions founded upon terror and remorse, the truly desolate, who have slipped below God's mercy only because they are reckoned beyond the pale of man's compassion. So those who have charge of the funds of the rich, good citizen designed for benevolent purposes make a stern virtue of excluding these waste souls, and so they practise the ignoble economies of the truly righteous.

But, after all, what is *charity*? And exactly who were meant in that forecast of the poor, whom we should have *always* with us? There is little chance of disposing of the dissolute man by getting him a "job," and even less hope of restoring the jade women to right relations to society. But because they are not to be helped upon the common financial basis of so much per head, it is particularly wrong to cast them out. Something is being done for them, very much, it may be, but not enough to create the right sentiment, or charity officials would not point with pride to methods by which they are excluded to the greater benefit of the deserving poor.

The question of *how* the undeserving poor are to be cared for is not yet solved, but the time will come when millions will be spent, not in charity for them, but in scientific efforts to restore them, as we spend millions now upon waterways, dams and education. And even now there are individuals here and there who are making wonderful experiments along

this line. For example, there is a rich man in a Southern city who makes the undeserving poor his peculiar care. His name is not to be found in the annals of any benevolent society. It never appears in vainglorious accounts of Christmas charities. And he is so naïvely human that he has never been idealized by his nearest friend, but for more than twenty years he has been personally and very privately engaged, not merely in rescue work, but in the exercise of a cheerful whimsical patience with those who never can be rescued. His love is never strained to the long-suffering point, and he has a spiritual optimism that is amazing without smacking in the least of tar-baby piety. When asked upon a certain occasion why he continued to bear with the utterly hopeless case of a young man who was rescued only to fall again and again, he replied: "Because no one else will."

"But you do not hope to reclaim him?"

"Well, not immediately; not within the next fifty years, anyhow," he answered cheerfully, like a man who has laid hold of the long end of eternal hope.

His methods in dealing with what he calls a fresh sinner—that is, one who has just fallen upon his tender mercy, are unique, and he regards them as scientific from the heavenly point of view. He insists upon a full catalog of the victim's transgressions. No one knows the moral thumbscrew method by which he usually obtains this, with a genial polite waiving of the lies told between, but it is known that he manages to get them all to the last farthing of a transgression. He claims that this is done on the theory that a physician first administers an emetic in case of poisoning. Then if the patient is an utterly lost and abandoned woman, he frequently takes her home with him, where she is given the guest chamber and treated by the family as the welcome guest, whose presence there is in no way remarkable. For our scientist claims that it is the loss of the sacred home consciousness in such women which casts them so far down, and his purpose is to restore the same by his own fireside, which is particularly attractive in that he has a wife and many young children. Nothing is said to the forlorn one to remind her of her shame; she is simply

left to "get well," as the scientist expresses it. And it is astonishing how many of them do "get well." His boast is that he has married his girls happily all over the country, for he is an enthusiastic believer in wedlock. Upon a recent visit to a distant city he remarked to the editor: "I married one of my girls off in this town; couple doing well; moving in the best society. Good as the rest, too, now. But it's a secret; if society knew it would abolish her." He winked in conclusion, at the expense of society.

He cannot make a speech, but he is an eloquent splutterer, and altho his manner to ministers is wittily deferential, he has been known to ruin a preacher's meeting and make the victims of his burning incoherence look like rows of paper dolls blown before the breath of a living man disciple.

Naturally such a man cannot reach so many of the poor as a whole benevolent organization, the existence of which is the excuse offered by many for not doing their own personal duty by the poor, but if every individual who subscribes to charity would do his own particular duty to even the undeserving poor, we should have the millenium before the next day at breakfast time.

The Leading Candidates

WE made mention last week of the extraordinary unanimity with which our correspondents had expressed their enthusiastic approval of President Roosevelt's policies. The *Chicago Tribune* has now received about six thousand replies to questions as to the issues and candidates before the people, and has found the same unanimity. This is not so strange in the latter case, for that journal may be supposed to find its clientèle mainly in the North Central States, while our circulation is widely distributed over the country, and not least in these Eastern States, where there is great difference of view, if we were to judge from the leading journals. But there is very little difference of view among the people. They take no stock in the "Roosevelt" panic. In this city the *Times*, *Sun* and *Evening Post*, not to speak of the sensational morning journals, are strongly in opposition, and

the *Tribune* is coolly loyal. But they do not represent the people; they represent their owners.

And it is equally remarkable that the larger portion of the Democrats are as emphatic in their approval of the President's policies as are the Republicans. Indeed, it is not easy to see how the platforms of the two parties can differ, except as one will say *protection*, while the other will say *revenue*, and both agree for about the same revision of the tariff. But the tariff is not now the issue. The issue is the Governmental control of corporate activities in interstate traffic; and these all agree, except the few who declare that it is the President who created the panic. As to issues we seem to have come to a period of harmony, tho not an "era of good feeling," like that at the time of President Monroe.

What, then, does this mean as to the selection of Presidential candidates? It means that the Republicans are sure to nominate a man who will claim to represent Mr. Roosevelt's policies. That is settled. It means that the Democrats will do the same. But it also means that those who oppose those policies will work underhand and seek the nomination of a candidate who will be in favor of the policies and laws, but against their execution. They will seek a "safe" man, a "conservative" man, a man with a less "erratic" and "sensational" temper and tongue than the present incumbent of the office. They will then compare the records of candidates, the temper of their language on these subjects. The Democrats will divide between a man like Mr. Bryan, whom the advanced wing will follow, while the conservatives will ask for a man like Judge Gray, who will draw off the conservatives from the Republican ranks. Equally the Republicans will divide between a candidate who is positively pledged to the present policy of control, and one whose support of it will be lukewarm and ineffective. Who shall it be?

President Roosevelt believes that Mr. Taft would carry on his work, and wishes his nomination. We see no reason why a President should be forbidden to take an active interest in the selection of his successor, so long as he

does not employ Latin-American methods of ensuring his selection and election. The fact that the President's choice is for Taft will be a strong influence in his favor. The people believe in Roosevelt, and will believe in the man he believes in. In his speeches Mr. Taft has made his position perfectly clear and positive. There is no discount there. This is of essential importance. Then two other things may be added, experience and character. His character is not simply beyond flaw, but from the beginning of his student life he has been noted for his high sense of honor, his avoidance of anything low or questionable. His experience has been beyond that of any other candidate in just those fields of service which will occupy our next President. He is a consummate lawyer, often spoken of for Chief Justice of the Supreme Court, and has had that long judicial experience which gives weight and judgment. As Secretary of War he has conducted in an admirable manner the development of our colonial possessions. He has been Colonial Secretary more than Secretary of War, and next to the internal question of control of corporations the control of our colonies in by far the most important business of our National Government. We desperately need a wise and strong man like Mr. Taft to see to it that the same sort of men who would monopolize our means of production and traffic do not exploit our colonial possessions to the injury and oppression of their inhabitants. We want a man who, like Taft, has shown his sympathy with the people, and has no patience with the racial antagonism which endangers our relation with them. It is a tremendous advantage which Mr. Taft has, that he has developed self-government in the Philippines, prosperity and good will in Porto Rico, has been benevolently disposed to the people of Cuba, and has ensured the success of the Isthmian Canal and of the little American territory thru which it passes. We do not mean in this at all to minimize the pre-eminent work of the President, but in all these matters, by his management and by his presence, he has done a marvelous service, which certifies what he would do as President. It

is for these reasons that the people trust him.

Only one other candidate do we need just now to compare with him. Other candidates have their merits, but the one other who seems likely to contest with Mr. Taft for the nomination is Governor Hughes. And this is at first surprising. He has very lately come up into public notice, just as Mr. Cleveland was really a new man when, as Governor of New York, he was chosen President of the United States. Mr. Hughes was known as a lawyer of most admirable training and a man of supreme integrity when he was chosen to conduct to marked success one of the most difficult and important investigations that great public and financial interests have ever undergone. The ripping up of the secret insurance scandals, resulting in the removal of the principal officers, the correction of abuses and the enactment of needed laws was his work; and it logically followed that he should be nominated and chosen Governor of the Empire State. As Governor his record has been beyond all criticism. He has pressed and secured needed legislation and reforms against the will of the political ring. He has been servant of nobody but the people, and he is not at all loved by the bosses. For that reason the people honor and trust him. He has simply attended to his business as Governor, has not meddled with outside matters, not even national matters, and has not sought the interfering aid of the President. They say he is cold; perhaps he lacks the politician's bonhomie, which helps Taft as it so much helped James G. Blaine, but we have never heard this mentioned as a peculiar merit of George Washington. The people need him as Governor a second term to carry out the reforms which one term cannot complete; but that is the kind of man wanted also in the President's chair. He was elected Governor because the people, but not the party bosses, wanted him, and the bosses would be glad to get rid of him here, just as they were anxious to shelve Mr. Roosevelt by making him Vice-President. Governor Hughes has been a public character scarce two years, and his views on national policies have only just now been made known. He endorses the President and his measures, not effusively, for that is not his way, but positively. He is a

man to be trusted, who is not swerved by intrigue or opposition, but stands four-square to the winds that blow. If he has not experience in national affairs he has the ability to master their exigencies, the honesty, courage, intelligence and persistence to make his administration fruitful for good. It is to his advantage that he has antagonized nobody but the local politicians, while Mr. Taft is already finding the negroes against him and a section of the labor men, while he has the possibly compensating advantage that so far as the Catholic vote can fluctuate it is particularly well disposed to him for saving the churches in the Philippines from confiscation.

Which candidate do we support? Either will please us immensely. We could be happy with either were t'other away. And there are others if both these fail to win the prize.

Work for Our Ex-Presidents

SENATOR MCCREARY and Representative Bartholdt have introduced into the Senate and House simultaneously a bill providing that the President, by and with the advice and consent of the Senate, shall appoint, for a term of eight years, four persons as representatives of the United States at future General International Conferences, and that all the former Presidents of the United States shall be ex-officio for life representatives of the United States at such conferences. A salary of \$10,000 a year is provided for all the international representatives, including the ex-Presidents.

This bill is the longest step yet taken in any official assembly for speeding the wheels of progress in international affairs. It should meet with hearty and unanimous approval in and out of Congress.

Our international interests have been rapidly increasing in importance until now they are paramount. Heretofore there has been no assurance that the spasmodic international conferences would recur and become an integral part of the world's political machinery. That is now a certainty. Proper representation of the United States at such conferences is an imperative duty of the very highest grade. Such representation is impossi-

ble unless some of the members of the delegation have used the interval between conferences to study thoroly and scientifically the maturing questions likely to demand and find solution at the approaching conference.

The men who are fit for this are all absorbed in other duties at present, and those whose customary labors best equip them for such service are debarred by law from acting in this capacity.

The Constitution forbids members of Congress to hold two offices at once, and when the first Pan-American Conference occurred, both John G. Carlisle, then Speaker of the House, and Mr. Edmunds, the recognized legal light of the Senate, advised against the appointment of members of Congress as delegates, tho the President desired to appoint a Senator and a Representative.

Furthermore, familiarity with the language employed in such conferences, and among the leading delegates in their private intercourse, is absolutely indispensable to exercising the greatest possible influence at such conferences. The prime duty of our representatives is to exercise a controlling influence in such assemblies in favor of the right ideas. Our isolation and vast population has prevented our feeling heretofore any urgent need of foreign languages. Even our best men speak, as a rule, only English. The Chief Justice of the United States was recently rejected as an international arbitrator because his knowledge of French was regarded as too meager. On the other hand, all Europeans live within a few hours of people speaking five of the great languages of the Western world—English, French, German, Spanish, Italian. It is as if all these languages were customarily employed on the Atlantic seaboard of our country. Consequently all second or even third rate Europeans know several languages.

Our permanent representatives possessing the requisite abilities, some of whom would certainly have had experience in Congress, and others as Chief Executive, freed from other duties, and enabled to devote themselves exclusively to studying the laws of nations as they are and as they ought to be, would become masters during the interval between the successive sessions, not only of the questions to come before the confer-

ences, but of the languages to be employed.

The provision that former Presidents shall be international representatives commends itself especially to our judgment. Indeed we have heretofore pointed out in our columns that a seat in these international assemblies is the proper place for our ex-Presidents. Heretofore almost without exception they have disappeared from political life upon the expiration of their terms, and have either become inactive or engrossed in some limited occupation which others could perform as well or better. On the other hand, few men could render such splendid service as they in these international assemblies. Much greater ability would be necessary for rendering equal service, owing to the respect shown in such assemblies for persons of high position. Our ex-Presidents would be accorded a consideration in such assemblies that our other delegates would have to win by display of extraordinary ability and force of character. Given their own native ability and the additional advantage of their being known and highly respected abroad, even before they begin to act in international conferences, and their usefulness in such assemblies would be guaranteed.

The motion comes at our opportune moment. A Republican majority controls both Houses of Congress and the Presidency. A Democrat is the only living ex-President. The motion is made in the Senate by a Democrat, in the House by a Republican. There is no chance to make it appear a party measure. The passage of the bill now will do more than any other one thing could do to awake the whole world to the determination of our nation to utilize international conferences and arbitration to the limit of their possibilities.

Indians as Wards

WE feed infants. We began our training of the Indian in the same way, by supplying him with rations. We have given that up, for we find that it is better to work for a living than to be fed from a bottle—at least for “grown-ups.” But a modification of the system is now in practice, the wisdom of which the Indian Office doubts.

The system is simply this: When an Indian allottee dies his allotment passes to his heirs, who have the privilege, under a law enacted in 1902, of selling it, thru the Department, and retaining the money for themselves. The Department, of course, takes the means which will procure the largest possible return from every such sale and then puts the money in bank to the credit of each Indian heir and allows the heir to draw it out on his own checks, countersigned by the local agent or superintendent, at the rate of *ten dollars a month*. If the heir wishes to buy a team, or a wagon, or a set of harness, or build an addition to his house, or otherwise improve his own condition by the expenditure of a little more money than ten dollars a month, he applies to the agent or superintendent, who looks into the bargain which he proposes to make, satisfies himself that the articles to be purchased are worth the price charged, or that the improvement of the real property would be to the distinct advantage of the owner, and reports accordingly to the Office. In such a case the Office authorizes the expenditure of whatever amount may be necessary—it may run up into thousands of dollars, if the money in bank will permit such a draft upon it, or it may be only forty, fifty, or one hundred dollars.

The Indians who have been receiving ten dollars a month in this way have got so that they look upon what the Government is doing to protect them against fraud as being, in a certain sense, a license to take advantage of any trader or other white man with whom they come into contact by getting things on credit and then falling back on the Government's system for conserving Indian individual funds. Besides the sales of inherited land there are sales of timber from Indians' allotments, and other things of that sort, which bring lump sums to the Indians which they would spend with recklessness unless some sort of a curb were put upon them.

The question, therefore, comes down very largely to this: whether the moral disadvantage to the Indian of encouraging in him a sense that the Government is behind him in any sharp practice he may indulge in, does not more than

counterbalance the material good which he derives from the Government's conservation of his resources. It may be that we are keeping the Indian in a fool's paradise as long as we treat him entirely differently from the way we treat any equally ignorant foreigner who comes to our shores. Our idea seems to be that every human being learns more from experience than he can ever learn from precept, and that after he has had his fling and has expended the fortune carefully scraped together by somebody else for him, or coming into his hands by some happy accident, he is not too good to get down on the ground and dig his own salvation out of the earth. When a man ceases to be able-bodied, or when nature has placed upon him some terrible handicap either mental or physical, at the outset of his career, we have a sentimental regard for him which takes the form of charity. But, with the man who has a strong right arm and can turn his physical forces to money-making account if he will, we simply say: "If he will not earn his bread he may go without it." We do not believe that the American Indian has been helped one step up the ladder by the sort of pampering and pauperizing influences by which he has been surrounded under our mistaken philanthropy.

The Boycott Unlawful

Last week's decision of the Supreme Court, outlawing the labor union boycott, is not at variance with other decisions under the Sherman act. That statute, as the court says, makes no distinction between classes. There have been unsuccessful attempts to exempt farmers and laborers from its provisions. State laws of the same kind excepting these classes have been pronounced unconstitutional because of such exception. One of the earliest decisions under the national law was against a stevedores' union in New Orleans which had restrained commerce by its action. The complaint in the present case related to boycotting of an extreme type. Because certain manufacturers in Connecticut refused to discharge non-union employees, their products were boycotted thruout the country. Retail merchants who persisted in

buying and selling these products were boycotted. This was done even on the Pacific Coast. The complainants did not seek an injunction, but asked for damages under section 7 of the statute. By unanimous vote the court holds that they are entitled to the triple damages which that section allows, and it is evident now that suits of the same kind can be prosecuted successfully by scores of other manufacturers who have been and still are boycotted by the same agencies. Is the decision, as some say, "a severe blow to organized labor?" We do not think so. It is a blow to unjust practices which are condemned by a great majority of the American people. Such boycotting as the court decides against is not less objectionable than the practices on account of which the Standard Oil Company has been prosecuted, than the combination which was outlawed in the Northern Securities railway case, or the Ice Trust oppression and extortion for which several prominent and wealthy business men of Toledo were sent to jail last week. Resort to such methods has excited prejudice against the better aims and purposes of labor organization. The unions will gain something by giving up such boycotts. It is the purpose of the American people to prevent a misuse of the power of combination.

We do not know how much injury has been done by the report from Washington, published in the *New York Tribune*, to the effect that when damages were assessed for the losses of Americans by the Boxer rebellion, the missionaries and their wives made enormous claims for wardrobes and diamonds amounting to millions; for certainly no intelligent person would believe it. We have seen the list of claims for sixty-eight persons of one society, and the average is \$131.58, which is a pretty small sum for clothing, head-wear and foot-wear for men and women in North China, with its cold winters and warm summers. This includes all jewelry. The principal missions claims were for churches, hospitals, school buildings and residences, and they were not extravagant.

One of our contributors this week wants to know where he can find a church which is not a future life insurance company, but which is the Church of the Good Samaritan and the Golden Rule and will not keep him building fences. He has been unlucky in that he has not been able to find such a church. There are thousands of them in the country, which equally hold the rich and the poor, which love God and serve the world. They are numerous in the towns, if not cities, in the suburbs of our great cities, and in various denominations. And there are not a few such in the cities themselves, which use no creeds for exclusion, do not pander to the rich, have much less to say about eternal death than does the Bible, and give much labor to social service.

In a late address Mr. Watchorn, Commissioner of Immigration, said it was ridiculous that this city should maintain a college to educate lawyers and other brain workers, and hesitate to teach boys the trades of the common people. That looks sound, and yet he said the opposition comes from the trades themselves, members of which are not willing their own children should be taught their own business. It is cheaper to train boys for such self-support than to leave them idle, to become criminals and be supported in prison.

Nobody will be displeased to have the House approve the bill past by the Senate giving to Major-General O. O. Howard, retired, the rank of Lieutenant-General for the rest of his life. He is the solitary survivor of the great galaxy of commanders in the Civil War. Grant, Sherman, Sheridan, McClellan, Meade, Hooker, Thomas, have gone over to the majority, and long may General Howard survive to wear his empty sleeve.

The House Naval Committee would reduce the number of new battleships to be built from four to two. The result would be that the United States would fall from the second rank to the third, as Germany would pass us. We see no reason why that need worry us; third is strong enough.

The Taxation of Life Insurance

THE theory of taxation has had a wide modern development. From 1785, when a man in England paid six pounds and seventeen shillings, plus twopence for the receipt stamp, as an annual tax for the privilege of keeping one four-wheel carriage, until our own day, when taxes ranging from 1 per cent. to more than 3½ per cent. on the annual premiums paid by policy-holders are levied in the several States, the tax collector has been abroad and engaged in the making of tax collections. Taxation, of course, tends toward the limitation if not the extinction of the thing taxed. A man who pays a tax for keeping a coach will thus, generally speaking, struggle along with one of these rather than two in view of the tax. The taxation of undesirable things or of things the use of which the State legitimately desires to restrict is logical. Something may easily be said also in favor of the taxation of luxuries, but when the principle of taxation is applied to things that ought to have every encouragement from the State the time is ripe for commercial reformation. Reference to this subject at the present time has been suggested by the reading of the recently published report of John M. Taylor, president of the Connecticut Mutual Life Insurance Company, of Hartford. This tax on providence and the laudable desire to make a post-mortem provision for a man's dependents comes home to Mr. Taylor in the daily conduct of his company's business. He speaks about it with full knowledge and from the heart. According to the figures presented by him it appears that forty-two life companies during the year 1906 returned to their policy-holders in dividends \$39,726,372.01, and that these same companies were taxed 26.22 per cent. of the total amount of such dividends returned, or \$10,149,816.83. That is to say during 1906 the insuring public paid \$10,149,816.83 for the privilege of providing by means of insurance for wife, children and other beneficiaries, more than the insur-

ance carried would have cost had life insurance been exempt from tax as it should have been. Mr. Taylor says: "When every man realizes that the cost of protection of himself, his estate, or his family, is thus increased by virtue of this tax, and that it is out of all proportion to the equities or necessities of the case, there will come such a demand for its modification on right lines as will be heard—must be heard and heeded by the law-makers. Every man who pays this tax should see to it that the truth be brought home to his legislative representative, and also the responsibility for action which goes with it. Total exemption from this tax, either on the theoretical or practical grounds, under present conditions, is not feasible; and therefore all wisely-directed effort for relief must be toward its modification." THE INDEPENDENT believes that if total exemption is not possible under existing conditions as stated above a substantial modification of the 1906 tax on life insurance ought speedily to be brought about.

The Fleming Report

THE voluminous report of Mathew C. Fleming, special commissioner, covering his investigations of the New York State Insurance Department, has been sent to Governor Hughes, who caused the publication of the report on February 3d. The report criticised Insurance Commissioner Kelsey for his failure to effect several reforms and for his inaction in various matters in which the Mutual Life Insurance Company was concerned. President Charles A. Peabody, of the Mutual Life, has written a letter to the Governor, in which he takes exception to several of Mr. Fleming's findings, and concludes his letter by saying:

"With the controversy as now pending whether Mr. Kelsey should be retained in office this company has no concern; but in view of the injustice that has been done to it in the course of the controversy I feel impelled to protest against the use which has been made of insinuation and with no specific charge against the company."

Supervision of Corporations

It is noticeable that the arguments of President Roosevelt for the supervision of great corporations by the national Government have recently—and since the publication of the special message of the 31st ult.—been approved by several representatives of very prominent corporate interests. Judge E. H. Gary, chairman of the board of the United States Steel Corporation, says:

"I believe large corporations should be subject to investigation and control by Government authority. Knowledge and publicity of the affairs of great corporations are the only corrective and the only protection against imposition and fraud. This will cover not only the question of overcapitalization, but also the subsequent conduct of the corporations. If in some way the capitalization of a corporation could be considered and determined by Government inspection before the company is incorporated, the rights of all who are interested would be protected."

These views of the chairman of the world's greatest industrial corporation, who is also a director of several railroad companies, are substantially in accord with those of Mr. Roosevelt. An equally interesting and significant statement was made on the 7th inst. in the course of a lecture at Columbia University on corporations in modern business, by George W. Perkins, who is a partner of J. Pierpont Morgan, a director of several railroad companies and banks, and chairman of the finance committee of the United States Steel Corporation:

"If the managers of the giant corporations feel themselves to be semi-public servants and desire to be so considered, they must, of course, welcome supervision by the public, exercised thru its chosen representatives, who compose the Government. Those who ask the public to invest money in an enterprise are in honor bound to give the public at stated intervals evidence that the business in question is ably and honestly conducted, and they should be not only willing but glad that some authority, properly constituted by our Government, should say to stockholders and the public from time to time that the management's reports and methods of business are correct. . . . There is scarcely a corporation manager of today who is alive to his responsibilities, to the future growth of the country and to the enormous opportunities before us for foreign trade, who would not welcome this kind of

supervision, could he but feel that it would come from the national Government, acting thru an intelligent and fair-minded official.

. . . . In the larger business affairs, State lines have been obliterated. For business purposes, the United States Government is a corporation with fifty subsidiary companies, and the sooner this is realized, the sooner we can get the right kind of supervision of semi-public enterprises and in this way give the public the publicity and the protection to which it is entitled in the conduct of business by corporations. In no other way can the public be protected from evils in corporation management."

This is in harmony with the recommendations of the recent report of Commissioner Herbert Knox Smith, who asks for such supervision and publicity as will direct public opinion against a misuse of the power resulting from combination, and not against the power itself. It is the enlightened corporation policy of the future.

. . . .The Middlesex Banking Company of Middletown, Conn., of which Robert N. Jackson is president, will prepay on demand, with interest to date of payment, the debentures of series D67 and D73, due March 1st.

. . . .Information regarding bonds of gas and electric companies will be furnished by the banking house of A. H. Bickmore & Co., of New York, whose circulars will be sent free to the subscribers of THE INDEPENDENT.

. . . .Spencer Trask & Co.'s useful little book of statistical tables for the year 1908, containing 84 pages of information concerning railroad and industrial companies, their securities, etc., has been published. Subscribers to THE INDEPENDENT may obtain copies free upon application.

. . . .Since the end of October there has been a sharp decline in our output of pig iron. October's total (the greatest ever known for one month) was 2,336,972 tons; in November only 1,828,125 tons were made; in December the output fell to 1,234,279, and January's product was only 1,045,525. Last year's output was 25,781,361, against 25,307,191 in 1906.

VOL. LXIV NEW YORK, THURSDAY, FEBRUARY 20, 1908

No. 3090

Survey of the World

National Politics

At the Democratic convention in Wisconsin, all of the State's delegates to the national convention were instructed to vote for Mr. Bryan, and resolutions were adopted saying that "the appalling abuses disclosed in recent messages of the President are direct results of the long-continued reign of the Republican party in national affairs." There are indications that Pennsylvania's delegates will support Judge Gray, and efforts in behalf of Governor Johnson have been made in several States. Mr. Bryan, however, still holds his place at the head of the list of Democratic candidates.—The Florida Republican convention continues to be a prominent subject of discussion. On the one hand, the assertion is made that votes were cast against Mr. Taft by persons who were not delegates and who had gained admission upon forged credentials; on the other it is held that a considerable majority of the lawfully chosen delegates opposed Mr. Taft. This is the assertion of J. D. Wetmore, of New York, who was in Florida as a representative of the Hughes League. It has repeatedly been asserted in the daily press that Senator W. Murray Crane, of Massachusetts, is acting as manager of the forces that oppose Mr. Taft in the South and elsewhere, and that his attitude was determined in part by Mr. Taft's rejection of his good offices for a settlement of the controversy in Ohio by a compromise involving the re-election of Mr. Foraker to the Senate. Since the decided victory of Mr. Taft at the primaries in Ohio, friends of Mr. Foraker have intimated that there may be a movement for a new

party in that State, and for an independent convention. Mr. Foraker himself says that the call was of such a character that his friends refused to participate, and that for this reason no opposition to Mr. Taft was shown. Some of Mr. Taft's friends laugh at this explanation. Six bishops of the African Methodist Church, attending a meeting in Washington last week, were interviewed by the press. All of them oppose the nomination of Mr. Taft and are for Mr. Foraker. Reports from many parts of the country, however, show that Mr. Taft is the leading candidate, and he appears to be losing none of his strength.—Following the publication of the President's letter to Mr. Foulke, concerning the alleged misuse of Federal patronage, Mr. Foraker spoke in the Senate, alleging that for a time the President had refused to appoint Charles H. Bryson postmaster at Athens, O., the latter having in the public press opposed Mr. Taft in Ohio and expressed the opinion that he could not be elected. A statement promptly made in the House by Mr. Douglass, who represents Mr. Bryson's district, gave the affair another aspect. It appears that Bryson was appointed and is now postmaster, altho he withdrew none of his expressed opinions about Mr. Taft's candidacy. Postmaster-General Meyer says he was directed by the President to withhold the nomination pending an investigation as to charges that Mr. Bryson (a friend of Mr. Foraker) was guilty of corruption and had violently opposed the Administration's policies; that investigation showed that the charges were not true, and that thereupon the President directed that the appointment be made.

Relations With Japan

The State Department has given to the press a translation of an interview with Count Hayashi, the Japanese Minister for Foreign Affairs, concerning the restriction of Japanese emigration to this country. It understood that the interview was forwarded to Washington by Ambassador O'Brien as a correct statement of the views and purposes of the Japanese Government. Count Hayashi says:

"It has been discovered that some Japanese laborers have gone to the United States pretending that they are students. Not only is this embarrassing to the American Government, but those so-called students are breakers of our own laws. Even without any representation from the American Government it is our duty to enforce restrictions upon them. We have therefore decided to investigate the personal standing of those who desire to go to America as students and to require two sureties for them. While this system may be extremely embarrassing to real students, all legal restrictions are alike in the fact that one dishonest person embarrasses many honest people. . . . Various investigations are pending since, on account of previous statistics, the American Government doubts the effectiveness of the restrictions imposed by our own authorities. The negotiation has not yet been concluded, and the Foreign Office is not in a position to publish the details. I may, however, make a definite statement as Minister for Foreign Affairs, that the rumor circulated by the press to the effect that there is an important question pending between the United States and Japan is unfounded, it being a fabrication originated in a section of the United States.

"Should the migration of Japanese laborers from Hawaii to the mainland of the United States be not prevented entirely, the Minister for Foreign Affairs will not hesitate in prohibiting Japanese emigration to Hawaii. As for Mexico, Minister Arakawa reports that it is not a land favorable to emigrants, European countries having already abandoned that country as hopeless. Those who desire to send our emigrants to such a country may therefore be regarded as assisting the emigrants in entering the United States thru the frontiers. The Foreign Office intends to prohibit emigration to Mexico."

—Notice has been given by the Canadian Government that it will veto the recent act of the British Columbia Legislature, which imposes an educational test designed to exclude Japanese, and the Japanese Government has been informed that the rights of Japanese coming to British Columbia will be fully protected. On the 13th, before this warning was published, 170 Japanese immigrants who failed to meet the educational test of the

new law were detained in quarantine at Vancouver. Attorneys representing the Dominion Government at that port were instructed to secure the admission of these immigrants by resort to habeas corpus proceedings.—Baron Takahira, the new Japanese Ambassador to this country, arrived at New York on Sunday last. Speaking of the cruise of the battleship fleet, he said he regarded it as purely an American affair, "a naval maneuver on a great scale":

"It must be considered among the necessities of a great country like the United States to ascertain from time to time the working capacity of its ships and the good discipline of its men. The United States will certainly learn a great deal by so long a cruise of so great a fleet. If there is any demonstration it must be the demonstration to the world of the power of the United States to send out at any moment a sufficient force in support of the legitimate causes that are always at the bottom of American diplomacy. It is impossible, in my opinion, for any man of ordinary sanity to think of war between the United States and Japan, in face of the sincere friendship that actually exists between them. It would be a crime against civilization, a crime against humanity, and a crime against the well-being of all mankind. Such a war, if ever fought, would be the most inhuman event in the world's history. Our people, at least, do not think of the possibility of such an unfortunate event."

—Congressman Richmond Pearson Hobson continues to assert that war with Japan is inevitable. In a public address on the 12th, in Ohio, he remarked that the Japanese people had been "educated to hate Americans" and were "only awaiting their Government's signal" to begin the war.

Rebating Under the New Law

The Southern Pacific Railroad Company is to be prosecuted by the Government for rebating, and the suit will be brought under the new law, which permits imprisonment as a penalty. It will also be prosecuted by the California authorities. The Federal prosecution will be based upon the evidence obtained in October last by Commissioner Lane. Since his investigation was made an association of shippers in California who have received no rebates has procured additional evidence. According to dispatches from San Francisco, Mr. Benjamin, Assistant Attorney-General of California, says that proof of rebating by the company in more than 4,000 cases has

been procured and will be laid before the Railroad Commission of the State by Attorney-General Webb and counsel representing the association of shippers. Commissioner Lane showed that the unlawful discrimination had been practised up to the date of his inquiry; Mr. Benjamin says the practice has been continued since that date, and that the evidence (in the company's books, the rebate checks paid, etc.) is complete. The Government has evidence concerning payments to 108 firms, corporations or persons, some of which relate to interstate traffic. It is pointed out that the highest statutory penalty in California is \$20,000 for each offense.—The officers of many railroads recently asked the Interstate Commerce Commission to suspend the operation of the new law (in effect on March 4th next) requiring that no employee handling train orders by telegraph or telephone shall be on duty more than nine hours out of twenty-four, in offices open day and night, or more than thirteen hours in offices closed at night. More than 3,000 messages protesting against such suspension were received from members of the railway telegraphers' union. The Commission decides that it has no authority to suspend or defer the operation of the statute, except in particular cases and after good cause has been shown. It adds that good cause is not shown by the mere allegation that the number of train orders handled at certain stations is small, and that the additional operators needed cannot be obtained for the rate of wages now paid.—In their annual report the New York State Board of Tax Commissioners say that \$21,500,000 of the special franchise tax due from public service corporations in the City of New York, under the law of 1900, is still unpaid.

Organized Labor Owing to the Supreme Court's boycott decision and other recent rulings of the courts, there are some indications of a movement for independent political action by organized labor. A resolution asking the American Federation to call a convention for the consideration of this question has been reported by the executive committee of the Central Federated Union in New York and will be the

special order of business at a meeting to be held on March 1st. President Gompers appeals to all the unions for contributions to be used in carrying up the Bucks Stove Company case from the District of Columbia court to the Supreme Court, and in other proceedings, saying he has employed Alton B. Parker (Democratic Presidential candidate in 1904) to represent their interests.—In New Orleans, last week, seventy-two members of the Dock and Cotton Council (which is composed of thirteen river front unions) were indicted by a Federal grand jury for violation of the Sherman Anti-Trust law. It is alleged that the Council compelled the Coal Wheelers' Union to refrain from coaling the steamship "Habil" until her owners agreed to employ only union stevedores and longshoremen. For this reason the steamship was delayed for several weeks. This indictment closely resembles one against the same class of workmen in New Orleans, which was the accusation in one of the first trials under the Sherman act.—The same grand jury has also indicted fifty-three master plumbers and dealers in plumbers' supplies (all being members of the Master Plumbers' Association) for combining to prevent, by threats of a boycott, the sale of plumbers' supplies by a New Orleans manufacturing company to a firm in Texas.—In New York, ex-President McCormick, of Typographical Union No. 6, and two organizers of this union, have been ordered to pay fines of \$250 each and to go to jail for twenty days, by Supreme Court Justice Bischoff, for contempt of court in disobeying an injunction granted by Justice Blanchard restraining them and the members of the union from intimidating or unlawfully interfering with non-union printers during the strike (beginning in 1906) against the Typothetæ, or organization of employing printers, for a closed shop and eight hours. This action was taken upon the report of a referee. The sentenced men assert that the acts of intimidation were committed by members of the union without their knowledge.—By direction of the President, a company of infantry was ordered on the 13th to go from Fort Gibson to Fairbanks, in Alaska, about five days' journey, and to preserve order there. Word had come from

the Federal Court in Alaska that the union miners were threatening violence and preparing to attack Russian non-union men whom the mine-owners had employed. The United States Marshal, who had sworn in 250 deputies, was directed to arrest lawbreakers and any who should molest the Russians. Fairbanks has a population of about 8,000. For some months the union (Western Federation) has been in controversy with the mine-owners there.

Philippine Islands Reports from Washington indicate that no action will be taken upon the Philippine tariff bill at the present session. — After a series of exciting debates, the Philippine Assembly has unseated Dominador Gomez by a vote of 40 to 35. The election (in one of the Manila districts) was declared void. Gomez was formerly president of the Nationalist party and also of the insular labor organization. He has been an anti-American agitator. — At Washington, the House Committee on Insular Affairs has reported in favor of paying \$403,030 in settlement of the claims of the Catholic Church on account of the occupation of church property by the American army in 1898 and thereafter. Churches, parish houses, school buildings, seminaries, etc., were occupied by the troops, who used them for barracks, hospitals and prisons. Several thousand Spanish soldiers were confined in the cathedral at Manila, and a part of the property elsewhere was occupied for nearly two years. The original claim was for \$2,442,963. An army board awarded \$363,030, saying that \$40,000 might be added for the loss of ornaments, images, vestments, etc. This award (carrying no interest), has been accepted by the committee. Secretary Taft and the chairman of the army board, Lieutenant-Colonel Hull, recently assured the committee that \$500,000 would not be too much.

Various Topics The President's urgent recommendation that provision be made for the construction of four battleships has not prevailed in the House Committee on Naval Affairs, which, by a vote of 13 to 5, has reduced the number to two.

Three Democrats voted with two Republicans in support of the President's recommendation. — In Portland, Ore., ex-United States District Attorney John H. Hall has been convicted of conspiracy with a land and lumber company to violate the land laws. Three men indicted with him (one of them a State Senator) pleaded guilty and testified for the Government. Mr. Heney conducted the prosecution, and will represent the Government in other important land fraud cases to be tried in Oregon in April. — In several public addresses, last week, Secretary Taft defended the policies of the Administration, "to the renewed support of which," he said, the President's recent special message had "heartened the great body of the people as by a bugle call." Mr. Roosevelt, "instead of going around with a chip on his shoulder, had done more for peace than any king or emperor." There was not yet enough regulation of the railroads. They must be controlled thru the Interstate Commerce Commission, or we must go to Government ownership, which, in his opinion, would endanger the republic. "We have enough concentrated power at Washington now."

Cuba Utterances of the press and of representatives of business interests indicate an appreciation of the tranquillity and prosperity enjoyed under American rule for nearly two years, together with apprehension as to the future under Cuban rule. One prominent journal, speaking of the proposed Cuban army, expresses a decided preference for a garrison of American soldiers. The Agrarian League asks Governor Magoon to reassure investors by providing that the insular Government shall indemnify all persons for damages to private property due to political revolutions. The commission which framed the new electoral law rejected provisions for plural voting and for giving the franchise to foreigners at municipal elections after five years' residence. Two of the Cuban commissioners, with the three Americans, voted for both, and seven Cubans were in opposition. Under the first of these propositions, the power to cast more than one vote was given to each elector having certain specified educa-

tional, financial or official qualifications. Similar qualifications were required for foreigners, in addition to the five years' residence.

The Paris Motor Race

Six automobiles started from New York City on the morning of February 12th in a race across the American continent and Asia to Paris. Of the competing cars, three are French, one Italian, one German and one American. The German entry is a Protos car manned by officers of the army, and even if their machine does not win the knowledge these men will gain of the countries thru which they pass will be of value to their service. This car is the most elaborately equipped with typical German carefulness and ingenuity against all possible contingencies, and as the officers will undoubtedly be decorated in case of victory they have an additional incentive over their rivals. The cars struck wretched roads in Central New York, with mud to their axles. On one occasion a six-horse team was required to extricate the stalled contestants. Sixteen miles were covered in four hours. The route of the race lies from New York to Buffalo, Chicago, Cheyenne and San Francisco, where the cars will take boat for Valdez, and go down the Yukon Valley, ending at Nome. Here they will cross Bering Strait on the ice, and will endeavor to make their way across a trackless and unsurveyed country to the line of the Trans-Siberian Railway. The remainder of the course will be easier, ending at Paris, after passing thru Moscow and Berlin. A seventh machine, which refused to conform to the rules of the contest, started independently by way of Philadelphia, and expects to be in at the finish. A curious feature of the race is that the American end is handled by the *New York Times*, and altho much popular interest has been excited, the other New York papers have declared a boycott on news of the race, hardly a notice appearing in rival columns. As we go to press the leading cars have reached Buffalo, the American entry, a Thomas, in first place, with the French De Dion, the Italian Zust, the German Protos, the French motor Bloc, and the French Naudin following in the order named.

Portugal After the Crime

Altho it is impossible to get any accurate knowledge of the state of public feeling in Portugal, yet it is apparent that there is a considerable degree of sympathy with the assassins of King Carlos. To be sure the Cathedral, where the bodies of the King and Crown Prince were lying in state, was visited by so many people that a dangerous crush ensued in spite of the efforts of the police to keep back the crowd, but whether the people were inspired by sympathy or curiosity cannot be said. On the other hand no public demonstration was permitted at the burial of the three regicides who were killed by the police, but large numbers went to the cemetery afterward and laid flowers on their graves. Their photographs find ready sale on the streets and subscriptions have been raised for their families amounting to many thousands of dollars. The children of Buica, who shot the King, are well provided for. The pistol he used in the crime was a prize he had recently won in a shooting match in competition with King Carlos. The Republican papers criticise the violence of the police in their treatment of their prisoners, and demand the criminal prosecution of the King's equerry who sabred one of the assassins. It appears that the Government has decided not to rescind at present all the repressive decrees of the Franco regime. King Manuel has pardoned the sailors imprisoned for mutiny in April, 1906, as well as other convicts, expressing his wish to initiate his reign by an act of amnesty.

The war against the House of Lords will be begun by the passage thru the House of Commons for the second time of the two Scottish Land bills, which were thrown out by the Lords at the end of the last session. These will be rushed thru in three days without change, the first time in the history that a bill has been resubmitted thru the House of Lords within the life of a single Parliament. Sir Henry Campbell-Bannerman, in announcing the plan, said that the bills were rejected by the House of Lords because they were received only twenty-four hours before the prorogation, and there was no time to consider

them properly, but by passing them again in the early days of the session this would be obviated. Mr. Balfour denounced the methods pursued by the members of the Government against the Lords, and accused them of treating the interests of Scotland as pawns in a political game.—The Suffragettes have renewed their demonstrations on a more extensive scale than ever before. During the week more than sixty ladies have been sent to jail for forty days for attempting to enter the Houses of Parliament or even for starting for Westminster in a procession to carry a petition. Plans are being made to keep up the agitation until the jails are too full to hold more ladies. Miss Christabel Pankhurst replies to the accusations that the Suffragettes do not realize that they are making themselves ridiculous by the following statement:

"Of course, we are ridiculous. But what can we do? The movement would be ignored for another half century unless we compelled attention somehow. We must be either criminal or silly. Men under like circumstances would be criminal. We prefer to be silly."

In India two brigades of troops under Major-General Sir James Willcocks have been sent to the Bazar Valley, on the northwestern frontier, to punish the Zakkakhels, a powerful tribe of Afridis, who have been raiding villages in that territory.

An Austrian Railroad Thru Turkey

The announcement made by Baron von Aehrenthal, the Austrian-Hungarian Minister of Foreign Affairs, in his address to the delegations from the Austrian and Hungarian Parliaments, that Turkey had been asked to concede a railroad franchise across the Province of Novibazar created a sensation thruout Europe, for it was recognized as opening the way for similar demands upon Turkey by other Powers, which might ultimately lead to disintegration of the Ottoman Empire. It appears that the route had already been surveyed by Austrian engineers with the approval of the Sultan, and all plans made so that the railroad could be constructed in a very short time after the work is commenced. The Austro-Hungarian Railroad running to the Adriatic has a branch line

extending from Serajevo to the Bosnian frontier on the Uvac River. This is only 120 miles distant from the Turkish railroad connecting Salonika with Mitrovitza, and the completion of this section would give a complete route from Vienna to the Ægean Sea, with only one frontier to cross. It is explained by the Austrian official press that the new railroad would not only be a benefit to the commerce of Austria-Hungary and all Europe, but would also promote the prosperity of the people of Novibazar and attach them "all the more firmly to the Empire of the House of Osman." For authority for the construction of the line reference is made to the Austrian-Turkish Convention of April, 1879, based upon article 25 of the Treaty of Berlin. It is estimated that the new railroad will require \$730,000 a year to cover running expenses and the sinking fund. The capital is supplied from Germany. Servia, thru which the present railroad runs, decidedly opposes the construction of the new line, and Russia regards the action of Austria in secretly negotiating a concession from the Porte as a violation of the agreement negotiated between Emperor Nicholas and Emperor Francis Joseph at Münzsteg in the fall of 1903, according to which the two Powers were to act together in all matters concerning their relations with Turkey. A report is in circulation, altho without any official confirmation, that Russia, in compensation for the Austrian concession, will demand the right to construct a railroad from Raduievatz, in Servia, on the Danube, to Antivari or Dulcigno, seaports of Montenegro, on the Adriatic. The Greek railroads have hitherto not gone to the Turkish frontier, but if the new line is constructed thru Novibazar they will be joined with it at Larissa, bringing Athens into railroad connection with other European capitals.

The Balkans and the Baltic

The international complications centering about Turkey have been increased by the withdrawal of Germany from the concert of the Powers in regard to the maintenance of order in Macedonia. Baron Marschall von Bieberstein, the German Ambassador at Constantinople, announced at the last meeting of the

diplomatic representatives that Germany had decided instead of signing the joint note of the Porte demanding judicial reforms, to agree to the Turkish proposal that the foreign gendarmerie in Macedonia should be placed under the control of Turkey. This, together with Austria's action in obtaining a special railroad concession from Turkey, practically breaks up the Münzsteg program by which Russia and Austria-Hungary had charge of the maintenance of order in Macedonian provinces by an international police force under the command of an Italian officer. It is expected that Russia and Great Britain will now unite upon a plan of reform, which will be urged upon the Sultan with the backing probably of France and Italy. But if Germany and Austria withhold their approval the recommendations of the other Powers are not likely to have much weight. The friends of Macedonia in England are urging Sir Edward Grey, Secretary for Foreign Affairs, to take active and if necessary independent part in the restoration of order in Macedonia.—The Balkan question is also a disturbing factor in European politics. It is suspected by England that Germany is endeavoring to make the Baltic a closed sea by agreement with the littoral Powers, altho this is officially denied by the German Foreign Secretary. Russia is seeking to fortify the Aland Islands, which defend the mouth of the Gulf of Bothnia. The islands were ceded by Sweden together with the rest of Finland to Russia in 1809, and Russia was prohibited from fortifying them at the close of the Crimean War. Russia now holds, however, that this provision of the Treaty of Paris no longer applies since Norway and Sweden are separated. Sweden regards the project of establishing a naval station on the islands as a distinct threat, because they are within twenty-five miles of the Swedish coast and within three hours' sail of the Swedish capital. Russian troops and torpedo boats have been stationed on the Aland Islands for more than a year.—The independence and territorial integrity of Norway are guaranteed by the treaty recently signed and just made public between France, Great Britain, Germany, Russia and Norway. According to this treaty, Norway shall not alienate any part of her territory and the signatories agree

to act in concert in defense of Norway in case she should be menaced by any Power. The treaty is to last for ten years but will remain in force for a second decade, if it is not nullified within two years of the expiration of the period.

Russia and Finland

There is reason to fear that the repressive and reactionary policy of the Russian Government is to be extended to Finland in spite of the comparatively liberal treatment which that country has of late received. Governor-General Nicholas N. Gerhard has been removed from office apparently because of his defense of the rights of Finland. He has been in office since November, 1905, and has conformed to the requirements of the Finnish Constitution in transmitting his communications to the Emperor thru the Finnish Office at St. Petersburg, instead of directly to the Russian Minister of the Interior. In his place, General von Boeckman has been appointed. He was Governor-General of Courland during the Baltic riots, and now commands the Twenty-second Division. He was aid to Count Bobrikoff, whose tyrannical rule in Finland caused his assassination. A large body of Cossacks has been despatched to Finland in order to prevent any violent opposition to the measures which the Emperor proposes to carry out. It is reported that plans have been adopted for the division of Finland by annexing to Russia proper the district of Viborg. In the Duma it was stated that Finland is preparing for armed resistance, and had imported a large quantity of arms and ammunition, including a battery of quick-firing guns.—Prof. Paul Milyoukov met with the most hostile reception from the members of the Duma on his return from New York, where he had gone to deliver an address on the conditions of Russia before the Civic Forum. The reactionary leader, Mr. Purishkevich, was so violent and insulting in his epithets that he applied to Milyoukov that he was excluded from the Duma for fifteen sessions. Whenever Professor Milyoukov rose to speak the Conservatives and Octobrists left the chamber as a sign of their contempt, thus forcing an adjournment for lack of a quorum.

American Impressions

BY ANNE COBDEN-SANDERSON

[The members of the British Cabinet have of late found it impossible to make speeches in public without being interrupted by the question, "Why did you send the daughters of Richard Cobden to prison?" a very embarrassing query to members of a party purporting to carry out his principles. Mrs. Cobden-Sanderson was one of the leaders of the group of "Suffragettes" who were arrested for attempting to invade the sacred precincts of the House of Commons. She has just returned from a lecture tour of the United States in the interests of the suffrage movement. The medallion at the head of this page was modeled by Mowbray Clarke during Mrs. Cobden-Sanderson's recent stay in this city. She considers it the best likeness of her that has been made.—EDITOR.]

WE have passed out of the harbor of New York, and I have looked for the last time on the great buildings which crown the Island City and harbor. Higher than the towers of San Geniniano or the churches of Assisi, away into the sky they rise. Emblem of woman's industry is the highest tower of all, emblem of her future is her own statue, for it stands for Liberty.

Now we are passing Staten Island, and I look for and see the white sheet, hung up in our friends' garden, as a parting farewell. Kind friends and good Samaritans, who received into their gates the

outcast Russian patriot whom the Levites of New York refused to entertain!

Now away into the east steams our great ship, and I recall to mind that nearly seventy-eight years ago my father, Richard Cobden, crossed this same ocean and paid his first visit to America. In those days the voyage lasted more than five weeks. But it brought him to the land of promise, that great country "on the soil of which," he exclaimed, "I fondly hope will be realized some of those dreams of human exaltation, if not of perfection, with which I love to console myself."

I, in a little more than five days, shall be back in England, and the three months spent in this great new world will then be as a memory or a dream. While the reality is still with me I will try to put into words some of the thoughts which have been in me, and some of the impressions I have received, speaking on behalf of women and pleading on behalf of their enfranchisement. Now that I am away I can, perhaps, see more clearly than when I was there, for no longer is the wood hidden by the trees.

I now see the greatness of the country, with the vastness of its problems, the unabashed and known corruption, the luxury, the poverty, the restless industry of the people, the striving for material bigness and prosperity, the absence of all mystery, the absence of all hypocrisy, the reckless courage, the universal timidity, and dominant everywhere, the hopeful spirit of youth.

At the head of all stands the wealthy woman, crowned as queen. Clothed in purple and fine linen, leisure and luxury are hers. But she stands aloof from politics. She is too rich!

At the bottom of all is the immigrant woman. Driven from her country and her home by cruel economic conditions, she comes to America there to fall a prey to the same all-devouring capitalism, and she, the most helpless of all the workers and the least protected, works the longest hours and receives the lowest pay. She, too, stands aloof from politics. She is too poor!

Between these two women comes the great army of women workers, whom the public schools, the high schools and colleges educate and turn out each year in thousands. Teachers, who carry on the education of the country in all its branches, librarians, stenographers and others I see you all in every city; neat and trim in appearance, with clear, undaunted eye fixed steadily on the business in hand, devoted to your work, self-respecting and independent, personal attainment and success solely in view, you ask for no help or privilege of sex, only "the wages of going on."

To this great army of working women, aloof, not either by poverty or by wealth, but by man's exclusion, from the one great industry which conditions all, the

building of the State, the making of its laws, comes today the message of woman's enfranchisement.

This is the message. Have courage! Take hands! Be no longer lonely units! Make yourselves part of human progress! Be one with humanity, and see with it the vision of a nobler future!

In your land of hurry and business there is no present place for the seer or prophet. Solitude and leisure are unknown. Kaleidoscopic you move in crowds. But when the time is ripe from your masses, perhaps, will come the great seers, the interpreters who will lead you to the knowledge and the realization of your ideals. Have courage!

Liberty already is yours, and liberty which opens your ports to the poor and oppressed of other lands cannot long refuse to its own women the equality and freedom of citizenship, and with this citizenship the power to help build up the greatest nation the world has ever known. A nation not founded on the rights of individual man, as proclaimed in the eighteenth century, but founded on the rights and duties of humanity as will be proclaimed in all the centuries to come.

Even now girls in the colleges, in order to help in social service, are beginning to ask for their emancipation. They study economics and sociology, and later, in some settlement of a big city, they study life itself. They see the poverty and suffering of the people, the evil conditions of their lives, their unsanitary and crowded "homes," the suffering of the children, the corruption of the city's government, and they feel they must no longer remain spectators and students merely of results.

And women of the highest capacities, now engaged in social service, seeing beyond the present far into the future, they also are ready to take their part today in the political as well as in the social work of the nation. Such women are Miss Jane Addams in Chicago, and Miss Lillian Wald in New York, and such women enfranchised would, as citizens, have power to co-operate in the direction of the future of their cities and country.

And women whose care is for learning, and the culture which comes of knowledge, they, too, are helping for-

ward the cause. Miss Thomas, of Bryn-Mawr College, sees that the political enfranchisement of her students will bring good to the nation, and a larger and fuller life to women. Have courage!

It is only from the enemies of democracy, from women of the wealthy and idle classes, the spenders and not the earners, that opposition comes. Such women fear for themselves the loss of prestige, which, they imagine, the capacity in woman to help to right herself would deprive them of. But this prestige of helplessness, if it sets off the women of the wealthy classes in the eyes of the wealthy, is not prestige for the poor or any help to women who have to face life for themselves, or to women who would set right the world set wrong by men.

In the Old World prestige, dependence and charity have been at work for centuries, and today the world is what it is, the abode of poverty, misery and prostitution. No, it is only thru her emancipation that woman can develop and the race progress.

In the past Lucretia Mott, Lucy Stone, Mrs. Beecher Hooker, Mrs. Elizabeth Cady Stanton, Susan B. Anthony, have kindled and carried the torch of women's freedom and enlightenment. Today, of that great time, Mrs. Julia Ward Howe alone survives. From her extended hand who will today take the torch and with it lead on? I have said that in due time the leaders would emerge or be born. But it may be that the time of such leadership is past; that the torch is extinguished in the light of today, and that the spirit of the great Republic is itself in the van.

"Make no more giants, God!
But elevate the race."

Seventy-eight years ago the visitor to America found slavery hanging like a blight over the land. Today the visitor finds other forms of slavery. On the cotton plantations of the fever-ridden swamps of the Mississippi the laborer is kept in semi-slavery. In the West Virginia and Pennsylvania mining towns men work in misery and filth, and are killed and maimed by unprotected machinery, and a money-influenced and dependent judiciary refuses compensation. In the cotton mills of the South infant

life is tortured; in the glass factories of Pennsylvania and New Jersey child labor is bought and sold. These are your problems, O Republic today! Over human life and happiness triumphs the power of money.

"Make no more giants, God!
But elevate the race."

My thoughts now turn to my last day spent in New York.

Under the open sky, in the cold, clear air of a January morning, I stood in Madison Square, and asked the great Republic of America to grant to women freedom to work out their own and their country's salvation. For behind and above the mere granting of the power of the ballot lies a greater moral movement, the freedom and true fellowship of humanity.

Later in the day I stood in the gallery of the Stock Exchange. From the far-off labor of the world, the cotton swamps, the mine, the misery and the filth, the "profit" came up for sale. And amid the hurly-burly, as wild beasts, the price was shrieked, and fortunes made and lost. There were gathered and "at work" the giants of today!

"Make no more giants, God!
But elevate the race."

At night I stood with a friend in Union Square watching the blazing of the latest great fire in New York. Far above the reach of the engines the flames leapt on high, and on to the roof had clambered the inmates. A man standing in the crowd said to me: "Two or three firemen will lose their lives tonight. They always do when there is a big fire in New York. They grow so reckless and careless of their lives." The blazing structure became to me a funeral pyre! Tears came to my eyes as I thought of these men's devotion to duty, their indifference to personal safety, and my heart went out in sympathy to the wife and mother who accepts her share of the burthen of sacrifice.

Make no more giants, God!

In the papers next morning I read that the inmates of the house had been saved from the burning roof but three firemen were missing.

The great ship speeds on her course.

Tomorrow we reach Ireland, a land of the oppressed and rebellious.

Brave daughters of rebellion, by your enfranchisement will you gain the power to build in your own country the homes which today you must cross the wide ocean to find.

Have courage!

All men are born equal, the eighteenth

century proclaimed. All men and women shall be equal in freedom and common fellowship is the message of the twentieth century.

"Make no more giants, God!
But elevate the race."

ON BOARD THE "LUSITANIA."

Joseph O'Brien, Irishman

BY JAMES H. WILLIAMS

[Since Mr. Williams' last "yarn" in THE INDEPENDENT he has returned to New York and is now engaged in the land-lubberly occupation of editing a magazine for the Sailors' Union. All Mr. Williams' yarns are true.—EDITOR.]

WHEN we came down to the waterfront that cold winter's morning under convoy of a boisterous horde of loud and truculent boarding-house "runners," who ever hovered with aggravating persistency about our serried flanks and harried the laggards along with foul-mouthed epithets, base oburgations frequently interspersed with a perfect storm of kicks, cuffs, threats and blows bestowed with brutal impunity and reckless indiscriminatio on whomsoever they might fall, I thought that as a spectacular exhibition of sheer, wanton brutality and a fair sample of the Great American Crimping System in practical operation, our treatment was about the limit.

So we hurried mutely along, like a terrified herd of stampeded steers, a straggling score of unfortunate send-offs, unkempt, unwashed, unshorn and unknown, each bearing his own share of secret sorrow, worldly possessions and personal abuse in stolid silence.

When we reached the tender the ship was lying abreast the ballast wharf, "riding short," with her topsails loosed, "blue peter" fluttering nimbly at the fore and the inevitable tug boat lying impatiently alongside with steam up in readiness to tow us to sea.

As soon as we had tumbled over the side and stowed our varied assortment of personal dunnage below, we were promptly and vociferously ordered by our

bellicose and much be-booted bo'sun, Tom Bellows, to "lay aft to muster!"

In response to these boisterous summons we shambled meekly to the quarter deck and lined up along the weather rail.

As soon as we had been officially reviewed and critically surveyed by our heretocome bull drivers, the assembled afterguards, we were carefully counted, like a herd of steers and gruffly ordered to "go forrard, 'n' turn-to, get out ther hawser 'n' man ther win'lass!"

When we started down the river with the tug panting hoarsely at the end of our long, fourteen-inch warp, the wind blew keenly from the north'ard, the mud-colored river ice hung in heavy pendent masses from our chain bolts and bobstays, the hoar frost clustered in fantastic sprays of gleaming white crystals along the twisted strands of our tautened shrouds, and the heavy masses of gray, somber clouds, rolling sullenly overhead, told ominously of coming snow.

About four o'clock in the afternoon, having got things, alow and aloft, worked out into something like proper shape for handling, we were mustered in the waist again to go thru the ancient and time-honored ceremony of "picking watches" for the voyage.

This venerable custom, as old as the history of the maritime ventures, is extremely simple *per se*. It merely consists in lining the crew along one side of the deck, and then allowing the first and second mate to chose one man each

for their respective watches, and thus continuing until all have been chosen or drawn; each mate depending, of course, on his own individual judgment to secure the best men for his watch. Just for all the world like a crowd of boys choosing scrub teams for a scratch game of ball.

But in this memorable instance we were destined to witness an astounding and unparalleled departure from this immemorial practice. Our chief mate, Mister Jonas Swindel, had lately been sent out from Liverpool, as a "company's man," to join the ship. A somewhat protracted and painfully enforced experience with this gentleman and his methods fully confirmed our first impression that he was a *swindle* by nature as well as by name. But that will appear.

When we had all lined up on the quarter-deck, our second mate, Mister Clews—a very active and capable officer of the practical school, by the way—stepped to the cabin door and reported to his superior: "Crew is aft, sir!" After a period of seemingly unnecessary delay, which, I surmise, Mister Swindel indulged in as being one of his special prerogatives, our mate *par excellence* stepped from his room carrying the shipping articles tightly rolled in his right hand. He was a long, lean, lanky-looking gantline, with a sallow complexion, a bristling mustache which stuck to his upper lip like a bunch of "bag o' wrinkle" tacked onto an outrigger, with the thrumbs sticking out in all directions. He had a weak, characterless, unsettled countenance, and his obvious efforts to coax it into assuming an austere, commanding expression were extremely ludicrous, to say the least.

To complete the physical peculiarities of this quarter-deck paragon, he had a shambling, uncertain gait, like a day old calf, which he was forever trying to develop into a plausible imitation of the Liverpool swagger and the Western Ocean roll, but never with success.

Mister Swindel waddled up and down the line of assembled men twice or thrice, perhaps, with an air of ungainly dignity, regarding us individually and collectively from a pair of pale blue eyes that stared wide open and bulged outward like a blessed pair of hawse-pipe plugs.

At length, seemingly satisfied that he

had made a hit, Mister Swindel took up a position at the after end of the line, unrolled the articles with official deliberation, and, after clearing his throat a few times, he raised his harsh, cackling, dissatisfied voice and said: "Now men, I will read all your names from the articles just as they have been entered—in rotation. Each man will respond to his name by answering 'here, sir,' and leaving the line he will step across to the mizzen hatch coaming and take his place in the watch to which he has been assigned. The first man called will be in the port watch, of course; the second in the starboard watch, and so on alternately throughout the list. Now do you understand?" he demanded, sweeping his glance with a frigid glare along the straggling line.

He was answered by a series of affirmative grunts from the bewildered crew and a defiant snort of open indignation from his whilom colleague, Mister Clews. "This is altogether irregular, unwarranted and unreasonable, sir," the second mate blared out indignantly, unable to restrain himself. "I never heard of such a proceeding. You're goin' to spoil the whole crew; for, as you're goin' on now, you're bound to get a majority of the sailors in one watch and a majority of the deck swabs in the other. I tell you, sir," roared the irate second officer, before he subsided, "If I get too many hoodlums in *my* watch I'll pass some of 'em up to you for combing out and take down some of your A. B.'s by way of exchange. I ain't goin' to do your dirty work for you, not by a long chalk!"

"I think sir," said Mister Swindel, in his most conciliatory tone, when Mister Clews had relapsed into silence, "that it is the first duty of a second officer to know his place and abide by the orders of his superior."

"Yes, sir," retorted Mister Clews warmly, "and it is a chief officer's first duty to know his business, and abide by the dictates of established custom. You're tryin' to upset the whole Maritime Code and make us all learn our trade over again."

Mister Swindel ventured no reply to this outspoken piece of "back slack," the energetic second mate being obviously more than a match for him at any point of the compass.

So he adopted the only sensible course open to him under the circumstances, short of deliberately yielding to the second mate's protest; he resumed his place at the end of the line and proceeded to read off our names as tho apparently determined to carry out his original program at all hazards.

Early in the process I discovered to my intense delight that I had been read into the starboard watch. Everything went along smoothly until Mister Swindel called out "Joseph O'Brien," when we were all astonished to see a huge negro quietly disengage himself from the line and start across to the second mate's row.

"Here, you black sweep," snarled Mister Swindel, stepping forward angrily and extending a restraining arm to stay the negro's process athwartships, "is your name *Joseph O'Brien*?"

"Yas, sah," answered the big black, demurely showing his gleaming ivories; "yas, sah; I'se de on'y Irishman in de ship."

The subdued murmur of suppressed merriment which resounded around the quarter-deck was promptly responded to by an unrestrained uproar of sincere hilarity which echoed from the narrow bridge, where our good skipper, Captain Vane, unnoticed by Mister Swindel, had been quietly pacing forward and back directly over the mizzen hatch, an interesting spectator of all that had taken place within the last half hour.

Mister Swindel's countenance drooped amazingly when he found that his novel proceedings had been a subject of autocratic review, but he went thru the rest of his self-imposed and highly ridiculous rigmarole with the best grace possible, and then the starboard watch was sent below until four bells.

But from that day forward Joseph O'Brien became a marked man; a subject of abject and unrepining servitude, upon which Mister Swindel delighted to pour out the vials of his unbridled and unrestrained wrath, and for whose discomfort and personal degradation all the devilish cunning of a narrow, subtle mind were ever and unceasingly at work.

About midnight the storm which had been threatening for the previous forty-eight hours burst upon us with all the

wild fury of a Northern blizzard. It struck in first from nor'-northeast, with a driving mist of swirling snow. But it gradually backed around to nor'-nor'-west, where it stuck and settled down to good steady business, accompanied with all its seasonable concomitants of blinding snow, clinging ice, freezing spray and sweeping seas. The "Godiva" was an able, well-found ship, but, with a new and untried crew, most of whom were obviously untrained, Captain Vane did not deem it prudent to run her before the storm, altho the wind was fair and might have afforded us a splendid offing before it blew out. So we shortened her down early in the encounter and lay to, taking the weather as it came until morning.

That night Joe O'Brien distinguished himself beyond all praise, and showed himself a typical deep-water shell-back from backbone to breakfast time. The general verdict, both fore and aft, was that "he was a brick," an unstinted estimate which even Captain Vane himself heartily endorsed. But little moles have little eyes, and Mister Swindel's stunted nature refused to appreciate the tremendous nature which dwelt within the black pelt of that mighty negro as all the rest of us did.

In the person of the dusky, unassuming, hard-working, fearless giant, he recognized only the innocent cause of his own ridicule when picking watches.

We ran out of the storm next day and squared away with every inch of canvas set toward fine weather and the glorious brimming trades. And right here it was we were treated to an exhibition of O'Brien's manly caliber and wonderful presence of mind that made many of us feel as cheap as wet swabs in his presence. Among our cargo was a certain consignment of 500 casks of lubricating oil. This consignment had arrived late and was rather indifferently stowed in consequence, and in the hurry of departure was entirely forgotten.

But the storm which we had encountered the first night out had loosened things up below decks and the 500 casks of oil, wrenched clear of their defective blocking, had lost their original alignment and threatened to take charge.

As soon as we got into fine weather,

therefore, the starboard watch was sent below to shore up the bulging tiers of casks and block them off anew. The casks were piled in tiers on their bilges, in the after 'tween decks, with their chimbs pointing athwartships and their bellies fore and aft. The forward tier extended flush to the after part of the mizzen hatch coaming, and forward of that there was only a narrow standing space on the 'tween deck hatch covers, beyond which the remainder of the cargo was packed like a solid wall from deck to deck and jamb up against the iron stanchions.

We set to work as carefully as possible to collect all the props and wedges which had worked adrift, so that we might use them to block off the casks afresh and then further secure them with shores set against the deck beams. In wiggling one of the props, however, to disengage its end from under the bilge of a bottom cask, somebody set the whole outside tier in motion, and instantly, with a low ominous rumble, the whole weight of the 500 barrels started slowly, but irresistibly, forward toward the clear space where we all stood in the hatchway.

Instantly there was a panic and we all started, fighting, swearing, tearing and grappling for the narrow iron ladder leading to the main deck and open air, up which but one man could climb at a time. All, did I say? No, no, not all, for from out the depths of the cavernous hatchway, among the startled tiers of rumbling casks behind us, arose Joe O'Brien's stentorian voice, rising loud and clear and decisive above the babel of cowardly hubbub around the ladder, where every one was holding every one else back in the desperate hope of saving himself, and no one making headway.

"Doan' run 'way dar, yo' wuthless no 'count land lubbers! Whar yo' gwine ter run? 'F yew tries ter git eout, der bar'ls sho' come down 'n' kill all han's! Come back yer', yo' lazy swine, 'n' help me hol' on 'till some han's git sho's roun' de bar'ls! Calls yo'se'f sailors, hey? I calls yo' swabs!"

These gentle objurgations were not uttered in a pleading or reassuring tone, but with the authoritative tone of one who really commands by divine right and who *must* be obeyed. And looking

sheepishly astern we saw that Joe O'Brien had coolly interposed his mighty frame between us and death, and that while we had been struggling panic-stricken for the exit, which none of us could hope to attain, he had stood calmly and heroically at the post of duty, with his herculean shoulder planted snugly against the bulging center of the forward tier, and by exerting all his mighty strength had actually held the moving avalanche of casks in check and averted an awful catastrophe.

So we ran back, shamed out of countenance by Joe's heroism, and while some of us braced our shoulders beside his against the center barrel, the rest sought diligently for shores and stays with which to block off the tumbling tiers of rolling barrels.

So we were saved from an awful crush and went on our way rejoicing.

Going down the Trades we found time to get acquainted with Joe O'Brien and learned to appreciate his stalwart worth. He was the mightiest man I ever knew. He was full three feet across the shoulders and he stood over six feet high. But his girth was so great and his form so massive that his hight was not apparent. But if you stood alongside of him you found that he was a giant, and felt your own littleness. Going down the Trades Joe was the life of the whole ship. He was a marvelous story-teller, and he would sit on the forecastle head in the "dog watches" and spin yarns that would fairly make our hairs stand on end, and meanwhile his big guffaws would resound thruout the ship, laughing at his own jokes.

Joe hailed from Cameron County, Kentucky, and he was a relic of slavery days. But he was proud of his parents and loyal to his country. And I wish to say in passing, there are no better or braver-hearted citizens in our country today than the sturdy negroes of the Southern States. They would fight until everything turned blue for the glory of the striped banner we all believe in; and the man who is ashamed to march and bivouac with them don't know his country, or his country's people.

Physically speaking O'Brien was the most magnificent specimen I ever saw. Whenever he stripped off for a bath all

hands, including the old man, turned out to look at him.

He was certainly a grand array of special humanity; framed like a giant, muscled like an ox, a perfect type of Hercules in ebony.

An enterprising bunch of sporting men at Liverpool tried to induce him to enter the prize ring. But the big, good-natured stupid was too kind-hearted to fight.

"What I wanner fight fer?" he argued when pressed on the subject. "De book say God He make man in He own image, an' I ain' got no right ter poun' God's image all ter pieces, has I?"

But altho he declined to fight, Joe could certainly wrestle at catch holds. In fact I think if he had made wrestling his leading specialty he would have been an easy champion.

Often in the dog watches I used to struggle with him, just to learn his grips and holds, tho I stood about as much chance of throwing him as I did of capsizing the Rock of Gibraltar. But my body was black and blue from the awful turns he gave me.

Captain Vane carried his family with him. As a rule petticoats are not appreciated on shipboard.

But Mrs. Vane was a rare exception. She didn't try to run the ship, nor invent studding sail booms and she never enticed the old man to chase us aloft just to see how much we looked like monkeys.

They had a beautiful little daughter about five years old. A happy, darling little somebody, and to know her was to love her. Her name was Bessy Rose, but on account of her red, rosy cheeks, her sandy frouse-fold and cheery disposition the "boys" dubbed her "Rosy."

Between Rosy and Joseph O'Brien there existed a species of mutual admiration and cheerful comradeship which no one could rub out, much less define.

Little Rosy would come to the fore-castle door and get some one to help her over the "stop water." "I wanner see Joe," she would lisp, with childish eagerness, and make straight for her chum's bunk.

But sometimes she would get the watches mixt and come forward when Joe was at work somewhere between the

chain locker and the truck. In that case she would plead, oh, so pitifully, to be elevated into Joe's bunk, and there she would scatter the contents of his ditty box all over the blanket and fall asleep in the midst of them.

If Joe happened to come below and find her asleep in his pew, he would stand and gaze at her with a degree of admiration that amounted to worship and tip-toe quietly away so as not to disturb her.

The day that Mr. Swindel altered the course and forgot to correct it, as we neared the corner, little Rosy was playing around the poop.

She was down on the lee side and Henderson and I were working on top of the after-house.

The wind was from the westward and blowing strong and free, and the old ship was surging along at a twelve knot gait when suddenly the spanker vang tautened by the raising of the gaff as we mounted a swell, and the little girl got tangled in the coil of the fall, which raised her over the rail, and with a startled little scream she disappeared under the counter and splashed into the sea.

Instantly O'Brien let go the wheel and sprang to the taffrail.

"Get back there, you black sweep," yelled Mister Swindel, "and secure that wheel!"

"Damn de wheel, save de babby!" thundered Joe, as he breached the taffrail and went square-rigged over the stern.

Henderson and I cut away two life bouys just as Captain Vane rushed from the chart-room and glanced with an ashen countenance astern.

The little girl was still afloat. Her skirts had blossomed out and sustained her for the time, and Joe was striking out for her with the vim of a tiger shark.

The old man grabbed the wheel and rolled it hard down. "Weather main braces!" he thundered, excitedly. "Back the main-yards, ease away the head-sheets and light up the clews of the fore-sail! For God's sake, be quick!"

The boys forward had not seen the accident and were naturally startled by such a sudden flow of excited orders. But I ran forward with the awful tidings "Man overboard!"

I shouted thru the open fore-castle: "Oh, come out quick, boys, Rosy is over-board!"

And they came out quick. Never have I seen men respond to an urgent call with finer alacrity, for any man aboard would have died for Rosy.

By this time the crew had been combed out, and fairly trained to their duty. So they manned the clew garnets and braces with a vim and vigor that was astonishing, and the sparks fairly blazed from the burning block scores as the great yards crashed against the back-stays with a rush that threatened to bring our rigging down. Meanwhile some of us had been busy clearing away one of the quarter boats so that we were ready to launch it by the time the ship came head to wind.

But a big ship cannot be checked quickly when under full sail, no matter how lively her crew, so I suppose we were fully two miles from Joe and the baby before we got her head around.

So we dropped the boat and pulled away, our sixteen foot oars bending like withes and groaning against the oaken tholes beneath the strain of our eager strokes.

Never in my life did I lay back on an oar with such generous good-will as I did that day.

Mister Clews, our stately second mate, sat in the stern-sheets, steering with one hand and helping on the stroke oar with the other. "Give way, men," he urged excitedly; "for God's sake, give way." And give way we did, and that with right good will, but whether it was for God's sake or Rosy's life don't matter.

When we reached them Joe had the little girl encircled with one of the life bouys and was treading water beside her. We took the child into the boat and Joe hobbled in as nimbly as a schoolboy vaulting a four foot fence.

Then we tossed oars as a signal of triumph and heard three ringing cheers from the ship in response.

The old man had tacked ship while we were away and was standing back against his course to pick us up. So we were soon alongside and hoisted in.

As the gunwale of our boat mounted to the ship's rail Mrs. Vane stood with eager, streaming eyes at the gangway, ready to grab little Bessy Rose.

Captain Vane stood there, too, and as we scrambled out of the boat he reached out and grasped O'Brien's dusky palm and wrenched it most cordially.

"God bless you, Joe," the old man exclaimed fervently. "Stay in this ship and I'll make you as good a man in the company as I am. Go forward and get a dry shift. I'll send the steward to you presently."

Going across the Indian Ocean Mister Swindel kept up his brutal, unruly, hazing tactics in O'Brien's favor until we were all astonished at the big negro's patience.

"Why don't you lick him, Joe?" we all inquired. "You could pound seven bells out of him with one hand lashed behind your back."

"Yas, Ah know Ah kin lick him," answered the big giant, "but what's de use o' dat? He's de mate, ain' he, and Ah's gotter min' he orders, ain' I? Ef he shob me roun' some Ah doan' min' dat, long's he doan' hit me. Ah hopes ter Gawd he doan' hit me, cause Ah doan' 'low no man ter hit me, no matter if he am white, 'n' 'f he hit me I 'fraid I break he neck."

After that we all knew that Joe was conscious of his strength and that he had no reason to fear the mate. But we all expected something to happen before the end of the passage, and happen it did, but not until we reached Sand Heads, at the mouth of the Hoogly River.

We arrived at Sand Heads in the early morning, just as the sun rose across the shoulder of Sanger Island, and saw the pilot brig bearing down to meet us.

We backed our yards to get the pilot on board and then squared away again for Diamond Harbor.

We had belayed our braces and were hauling away on the fore-sheet to the strains of that good old fore-sheet chanty:

"Haul away the bowlin',
The packet ship's a-rolling';
Away, haul away,
Haul away, Joe!

Haul away together,
We'll either break or bend her;
Away, haul away,
Haul away, Joe!

Oh, haul away, my bully boys,
We're sure to make her render;
Away, haul away,
Haul away, Joe!

Oh, once I had an Irish girl,
And she was fat and lazy;
Away, haul away,
Haul away, Joe!

And now I've got a Yankee girl,
She almost sets me crazy;
Away, haul away,
Haul away, Joe!"

O'Brien stood beforehand, near the bollards, dragging away like a hoisting horse at the big bight of wet coiyar, and singing meanwhile with a voice like a Trojan, when Captain Vane suddenly ordered the starboard watch to the cro' jack braces.

Joe belonged to the starboard watch, so, of course, he dropped his hold and started to lay aft with his fellows.

Then Mister Swindel saw a chance to distinguish himself. He had been in uncommon bad humor all the morning, inspired, no doubt, by our near approach to land. He had been busybodying about the deck as eager as a hound with two tails in search of trouble, and he found it.

When Joe dropped his hold on the sheet, the mate leaped forward and struck him a stinging blow in the face with his flat hand, "Get back there, you damned black sweep," he shouted, "and attend to your duty! I'm on to some of your moves!"

The big negro seemed to be surprised rather than hurt. He turned slowly around and looked with astonishment at his tormentor.

Then the inward hatred, born of four long months of constant and unwarranted oppression and unmerited abuse, seemed to leap into his sluggish mind. His eyes blazed like live coals; his teeth gleamed like ivory rows between his parted lips, and for the nonce he flung all his sacred notions of bounden duty to the winds and became what nature made him, a veritable, ungovernable savage—a mad African giant.

He sprang at the mate with all the fury and prowess of an infuriated brute.

"Mister Swinnel," he roared, as he grasped the terrified chief by the middle with a grip like the clutch of iron clamps and raised him on high overhead with

as much ease, apparently, as he used to toss little Bessy Rose in the air—"Mister Swinnel, Ah got one more move you'se ain' got onter!" For one awful moment he held the struggling mate aloft and then slammed him with frightful violence to the deck, where he remained writhing and groaning, and gasping like a stricken ox beside the main hatch coaming. It was awful to look at!

As the chief mate lay gasping beside the iron hatch coaming, Mister Clews, our able second mate, walked over and stood looking down at him with infinite scorn in his gaze. "There you are," he cried exultantly; "that's what you get for trying to fool with *my* watch."

Shortly afterward we saw the big twin screw Hoogly propeller "Dalhousie" coming out between the heads to greet us and tow us up the river to Calcutta, or, rather, to Budge-Budge, seventeen miles further down, where our cargo was to be discharged. We were to go to Calcutta afterward to load.

The big monster soon ran down to us, with a deafening salute from her strenuous siren, past our mail on board in a can buoy and took us in tow on two big steel wire hawsers, shackled at each end to 24-inch coiyar springs, the regulation towing outfit on the Hoogly.

We threaded our way cautiously across the treacherous quicksands at the James and Mary's, the confluence of the Hoogly with the mighty Ganges, where, should the ship's keel so much as kiss the bottom, she would be sucked down, down, down forever, to only God knows where.

But everything went smoothly and we past safely up the turbulent river without any alarming accident.

It was now in the hurricane season, and the port regulations require every ship arriving to strip; that is, to send down their topgallant, royal and skysail yards, unbend their sails, unreeve their running rigging and send in their jib-booms.

We reached Budge-Budge about four o'clock in the afternoon and dropped anchor abreast the pontoons.

Shortly afterward the mud pilot came off with a horde of vociferous coolies in a mooring lighter, and we hove up and warped into our berth between the iron can buoys.

We had unbent all our sails and unrove our running gear coming up the river, but did not get time to strike our spars.

By the time we got our mooring chains crossed, and shackled and set up, it was dark, so the striking of our branches was necessarily deferred until next morning.

Early next day we started to work with earnest desperation to send down our yards and strike in our flying jib-boom. Our haste was accelerated to a high degree by a telegraphic announcement from Bombay notifying all seamen along the river front that a cyclone had gathered in Diamond Harbor and was traveling up the Hoogly at a fearful rate, driving a big "boar" or tidal wave in its advance.

So we worked like Trojans in hopes of getting our spars down and secured before the tempest arrived. We had gotten our main and mizzen upper yards landed and secured, and were at work on the fore.

As I have stated the "Godiva" was a large, heavy ship, and her fore and main topgallant yards were sizeable spars, weighing, perhaps, three tons each. They were altogether too heavy to be trusted on a single gantline, or yard rope, so we got up a couple of heavy twin blocks to the masthead and rigged a purchase for lowering them down.

O'Brien and I, and a couple more seamen, were sent up to rig up the gear and sling the yard. As soon as we got the yard unparrelled and slung "acockbill," we all descended to the deck except Joe, who remained in the cross trees to see things clear when the big stick was lowered.

When we started to slack away we found that our tackle fall was too short, so we bent onto the end a four-inch line which had outlived its usefulness, but was considered, like everything else on shipboard, good enough for the occasion.

Just after the knot which joined the old rope to the new slipped around the barrel of the capstan, the old, decayed rope sundered with a resounding snarl, and the rest of the tackle fall, suddenly released from its strain shot upward and went dangling among the shrouds.

There were at least a dozen of us standing directly below to receive the

hanging spar, and had it descended by the run as it started some of us must have been fearfully maimed or killed, and the deck, of course, would have been stove.

We all jumped away from the foot of the mast in mortal terror, but suddenly the descent of the swinging spar was checked, and Joe O'Brien's big voice thundered from the cross trees: "I got 'er, boys, but Ah can't hol' on long, so hurry up!"

Two men sprang into the shrouds with strands of rope and wracked off the running parts of the tackle, making it temporarily secure. And at the same moment the cyclone struck.

From down the river came the awful roar of howling wind and thundering water.

Around the bend in the river, just below where we lay, came the terrible "boar," the monstrous tidal wave of the Hoogly. Tearing onward with an indescribable roar, towering high above the river banks, inundating both shores, its bristling "mane" curving forward like the crest of Niagara, it swept toward us with terrific fury, strewing disaster and destruction in its path.

And overhead the darkness was simply appalling, and the frequent flashes of flaming green lightning and the deafening reverberations which followed, each flash and seemed to tear the universe asunder, were more appalling still.

Just as the big, black cloud hung directly overhead it burst with unspeakable violence. First there came a blinding, lurid flash of lightning, followed instantly by a terrific crash of thunder; the ship surged and swayed in her moorings as though she had been stricken by a broadside of artillery and every man Jack on board was knocked prostrate by the shock.

Then came the roaring tempest in full blast. A mighty rush of mad atmosphere that nothing could withstand. It seemed to blow the breath from our bodies; the odor of brimstone was as strong in the air as tho a barrel of it had been burning on deck; orders could no more be heard than the chirping of a sparrow; we had to crawl along the deck on our hands and knees, groping and clutching whatever we could find to hang on

by, for in that mighty outburst a man would blow away like a whisp of straw.

It would be altogether inadequate to the case to say *it rained*. The cloud just seemed to settle around our mastheads, and the contents were caught by the wind and hurled in livid, blinding sheets into our faces.

And then came the immense tidal wave threatening destruction to all things in its path.

All ships are moored bow and stern on the Hoogly with chain cables. The mooring chains are shackled, by native divers, to stationary "holdfasts" under water. These "holdfasts" are secured by heavy leading chains attached to mushroom anchors deeply planted ashore, and are held clear of the bottom by big iron buoys.

The chains are always extended crosswise of each other, fore and aft, and then set taut on the windlass, thus holding the ship in a practically immovable position while she is being discharged.

But when that big tidal wave swept beneath us and raised the ship bodily about twenty feet in the air, it became necessary to release our forward chains on the windlass to allow her to rise, for otherwise the chains would part under the tremendous strain and the ship would be destroyed. So we struggled forward to the windlass room, threw off the riding pawls, opened the controllers and released the compressors just in time as the big wave swept under our stern. As the big ship mounted upward, like a cork in a flurry, the big anchor chains flew thru blazing hawse-pipes with a tremendous rush, the clattering wildcats spun like buzz-saws, and the sparks fairly streamed from beneath the restraining clutch of the friction bands. Three times our stately ship rose and fell in that awful onrush of gathered waters. But she hung to her moorings, and in half an hour the storm had past; the blazing sun came out astern, and the clouds of miasmic steam arose like a dense fog above the drenched and reeking jungle.

So we manned the capstan bars and hove our moorings taut again to the inspiring strains of "Rio Grande."

During the confusion and excitement occasioned by the storm we had forgotten all about our dusky shipmate,

O'Brien. But when we got our chains hove taut we returned to our former task of sending down the fore-topgallant yard. Then looking aloft we were astonished to see Joe's form still seated in the cross-trees, his back braced against the mast-head and his big hands still clutching the lowering tackle fall. "Come down, O'Brien!" sang out Mister Clews, in amazement. "What are you sitting up there for?" But there was no response. The big figure still sat silent and motionless, with legs extended across the arms of the crosstrees and hands clutching the manila rope.

"There's something wrong with him," said Mister Clews. "Jump up there, a couple o' you, and see what the trouble is."

Henderson and I ran aloft to investigate, and, oh, horrors! Joseph O'Brien was dead. He had been struck by lightning while clinging to the fall, and above his head the royal mast was split and splintered from truck downward to the cap. His hands had been frightfully burned and lacerated by his desperate clinging to the rope, and the last moment of his life must have been a period of supreme agony.

When the broken fall swayed upward he had somehow contrived to catch the flying bight of rope below the crosstrees, and bringing it upward had secured a half turn around the outrigger, and then lying back with all his immense strength he had arrested the fall of that great pitch pine yard and undoubtedly saved a number of limbs and lives and a certain amount of valuable property as well.

We communicated the awful tidings to the deck, and more hands were sent up to help us get the body down.

We lowered Joe's remains in a cargo netting and stretched them on the main hatch to prepare them for burial.

We buried Joseph O'Brien at Budge-Budge in a grave dug by his shipmates and consecrated to the purpose by the Rev. Mr. Macgreagor, the kind-hearted old Scotch clergyman who presided over the spiritual welfare of the parish.

Never was mortal man laid away with more heartfelt sorrow and abiding respect by his fellows.

The day of the funeral there was not

a dry eye on the ship. Even the redoubtable Mister Swindel seemed to be deeply affected by the sad event, and he hobbled out on deck with two game legs, his head in a bandage and one arm in a sling, and stood decorously, with chastened face and uncovered head.

We could not find a coffin in India large enough to hold Joe's body, so the old man ordered the carpenter to make one, and a splendid job he made of it, too. The old man went to Calcutta and bought eight silver handles and a silver plate with which to decorate the casket. Mrs. Vane, with the assistance of our sweet little sailors' missionary, Miss Primrose, brought armfuls of beautiful flowers and decorated the coffin and its surroundings with those little touches of taste and tenderness which only motherly feeling and sisterly love can bestow.

When all things were ready we brought the heavy casket out of the room in the half deck, where it had been prepared, and set it on an improvised bier which we had rigged on the quarter-deck. And there for two hours Joseph O'Brien's body lay in state. The colors were draped and lowered to half mast, and all work on the ship suspended for the day, just as tho a great king had died. And a king he was in deed and in fact, a king

by divine right, not born to the purple, but superior to his fellows in every attribute of noble manhood; a man whose noble life and heroic death had sanctified him in the hearts of all his shipmates.

While Mr. Macgreagor read the solemn and impressive funeral service, we all stood around with bared heads and heavy hearts, listening in reverent silence to the immortal ritual for the dead. Then four of us shouldered the heavy casket, draped in the American and British colors, and bore it to the gangway and lowered it reverently over the side into a waiting dinghey. Then we formed in solemn procession on the roadway and bore our dead shipmate's body to its final resting place.

And above his lonely grave we planted a great teakwood cross, extending three and one-half feet above ground. And at the top of the shaft was carved, with rare skill and ingenuity, a beautiful wreath, a shower of sprays radiating from a central star, and below it a foul anchor and a broken rope. And across the arms in heavy relief arose this quaint, but well-meant inscription:

"JOSEPH O'BRIEN,
IRISHMAN."

NEW YORK CITY.

The Measure of Man

BY BLISS CARMAN

HE who espouses perfection
Must follow the threefold plan
Of soul and mind and body,
To compass the stature of man.

For deep in the primal substance
With power and purpose and poise,—
An order under the chaos,
A music beneath the noise,—

The urge of a secret patience
Throbbed into rhythm and form,
Till instinct attained to vision
And the sentient clay grew warm.

For sense was a smouldering fire,
And spirit, a breath of air
Blowing out of the darkness,
Fostering reason's flare.

By loving, learning, and doing,
Being must pass and climb
To goodness, to truth, to beauty,
Thru energy, space, and time;

Out of the infinite essence,
For the eternal employ,
Fashioning, freeing, and kindling.
Symmetry, wisdom, and joy.

Wherefore the triune dominion,—
Religion, science, and art,—
We may not disrupt nor divide,
Setting its kingdoms apart,

But ever with glowing ardor
After the ancient plan,
Build the love and the rapture
Into the life of man.

BOSTON, MASS.

What Is the National Banking System?

BY CHARLES H. TREAT

TREASURER OF THE UNITED STATES

THE great interest thruout the United States in everthing pertaining to currency reform, seems to make this an opportune time to bring before the people some phases of the early history that resulted in the establishment of our National Banking System—a system not yet forty-five years old, but in successful operation, with nearly seven thousand national banks, with a capital, approximately, of from eight to nine hundred million dollars, and deposits of thirteen hundred millions; a system that has given cheap money, sound money, and unbounded credit at home and abroad, with a lower rate of interest on its securities than is borne by any other nation on earth.

This unique and wonderful banking system was born in the stress of war, amid the most serious financial conditions, not only threatening the physical disruption of the Republic, but annihilating its financial credit and circulating medium. It is due to Mr. Chase, who, in March, 1861, was summoned by President Lincoln from the State of Ohio, to become Secretary of the Treasury. It was he who formulated the plan for strengthening and extending the credit of the National Government by the establishment of a national currency which

should ultimately supplant all State bank issues.

It was a gigantic conception and required rare courage and a high order of ability to secure its enactment into law and make it a practical success. There then existed what was known as the New

England banking system, whereby the State banks provided for the payment or redemption of their notes under an arrangement which was instituted and large developed by the Suffolk Bank, of Boston. The State banks of New England kept their accounts largely with the Suffolk Bank, which bank agreed to redeem the notes of such banks as kept with it, on deposit, a balance sufficient to justify the responsibility the work entailed.

The State banks were generally small, with a capital from \$50,000 upwards. They were permitted to issue currency on a basis of about four

to one of the amount of reserve they held on hand in coin. These banks were the property of individuals, and were incorporated under State laws for the purpose of making money by issuing their notes, payable on demand. So the aim of all State banks was to prevent a rapid accumulation of their notes at the redemption center of Boston or anywhere else.

I shall never forget the nightly discus-

Copyright, 1907, by Harris & Ewing, Washington, D. C.

CHARLES H. TREAT,
Treasurer of the United States.

sions regarding Secretary Chase's remarkable Message to Congress in December, 1861. He made the announcement that the Government should take possession of the circulating currency of the country, which meant, ultimately, the annihilation of the State Bank system. The plan startled the country. The masterful mind of Secretary Chase, his courage of his convictions and his intense loyalty to the cause of the Union were all tested to the utmost, before, combined, they accomplished the birth of this system—one of the most astounding and revolutionary measures in finance that had ever been brought before the American people. Nothing but the tremendous exigencies of war, demanding the fortifying of the national credit from every standpoint, would have enabled Secretary Chase and his coterie of friends finally to secure the establishment of a national banking system such as was embodied in the Act of February 25th, 1863.

At the beginning of the Civil War there were 1,600 State banks, with a circulation of \$202,000,000, of which \$50,000,000 existed in the seceding States. The greatest difficulty to the holders of State bank notes was that they were almost helpless, in the case of a failed bank, to secure any proper division of its assets. Millions of money were lost by the people of the United States, thru holding State bank issues; so that they were naturally appealed to by a system of absolute national protection. This was an important factor in influencing a demand on Congress for the necessary legislation. But influential bankers, under the State bank system, were doing a successful business and had become rich. Their banks recorded historic names and they not only held aloof from co-operating with Secretary Chase but used their immense influence in Congress to prevent the successful introduction of a national system of banking. Therefore the fierce struggle when Secretary Chase found himself confronted with the tremendous problem of restoring the credit of the United States and giving the country a sound, safe currency that should inspire confidence, develop trade and be a strong fortification for the nation where-by it could provide the sinews of war.

The State banks were offered every facility for merging into national banks,

but many of them stood out, some because of prejudice, some because they wanted absolute control of their bank affairs. In order that this confusion of currency might be broken up, after two years of discussion Congress past a law (March 3d, 1865,) taxing all State banks ten per cent., annually, on the amount of notes used for circulation and paid out by them. This was the culmination to the pretensions of State bank currency.

It is an assertion so frequently made that its falsity has attained the semblance of truth, that the national banking system was conceived and established by Secretary Chase simply to sell Government bonds. But his voluminous reports, dealing with the entire question, are a complete and direct refutation of the statement. One who will read them cannot but be convinced that his first concern was to have a safe, sound and uniform currency that should circulate at par in all sections of the country. He clearly foresaw that when peace should return and bless the land, the supply of United States notes must progressively diminish and that they could not be re-issued, because there would be no condition making their disbursement longer necessary, when the Government had ceased to be a buyer of war supplies and had no longer to provide for the army pay-roll. His supreme effort was to secure the maintainance of United States notes, the permanence and progressive increase of the circulation as the needs of the country demanded more currency. Therefore he suggested that such currency should be supplied to authorized individuals on deposit of coin or pledge of securities, or in some other way. He advocated non-interference with the independent treasury, and that all receipts of the Government, other than customs, should be deposited in the national banks, so they could be used as agents for payments and distributors of revenue stamps.

He justified the establishment of such national banks, first, as an auxiliary to the power to borrow money; second, as an agency to collect and disburse taxes; third, as an exercise of the power to regulate commerce and the value of coin. He had the gratification of seeing his plan, altho somewhat modified, incorporated into law. But the vote was very close. In the Senate it was 23 to 21. In

the House it was 76 to 64. Under this Act the organization of national banks began, in different parts of the country; mainly in Pennsylvania, Indiana and Ohio. Only fourteen banks were organized in the New England States during the first nine months; 134 banks were organized thruout the entire country.

Fortunately for the system and the country, at this juncture Hon. Hugh McCulloch, of Indiana, was selected by Secretary Chase as Comptroller of the Currency. He was particularly fitted for the difficult and important task. The Act of February 25th, 1863, was defective in that it allowed the Comptroller to furnish national currency to any State banks authorized by State law, upon their delivering the required security. Mr. McCulloch saw at once what confusion it would make and earnestly advised that this be amended so that the Government might have absolute control of the currency of the country, and that no State bank be permitted to secure it in competition with national banks. He was one of the most distinguished financiers of his day. His experience and executive ability were recognized. He secured the necessary amendments to the National Banking law and put his department in such shape as to win the enthusiastic approval of the entire country, as was evident in the indorsement he received when called to the high post of Secretary of the Treasury, where he served from March, 1865, to March, 1869, and to which he was afterward recalled by President Arthur, in October, 1884.

There was still, however, much prejudice excited against national banks, by the continued assertion that they were a money-monopoly and created a permanent tax on the country thru its bond basis. A popular cry was again made for their abolition; that to save the interest on its bonds the entire bonded debt of the Government be paid in greenbacks. This issue was fought out in the Presidential campaign of 1868, which resulted in the election of General Grant. He took a strong stand against further inflation of the currency of the United States by Government notes and this was the turning point which led to the resumption of specie payment, when otherwise the country would have been put back a decade. From that moment measures tended

toward legislation for specie payments. Inflation of the currency had been largely enhanced thru the organization of more national banks, and over-speculation and over-trading met their Waterloo in the panic of 1873. After this violent liquidation was over, an Act for the resumption of specie payments was past in 1875, naming January 1st, 1879, as the date on which all United States Government notes were redeemable at their face value in coin at the Subtreasury in New York, in sums not less than \$50. It was afterwards extended so as to include all Subtreasuries. Hon. Hugh McCulloch, then Secretary of the Treasury, was able, thru the large revenues of the Government, to pay off \$11,256,678 of United States notes during the first six months. The retirement of these notes caused the opponents of the measure to cry out that such a speedy contraction of the currency was dangerous to the business of the country, and, by a vote in Congress, further retirement of United States notes was discontinued. The amount of these notes now outstanding is \$346,681,016, for the redemption of which there is held \$150,000,000 gold coin and bullion.

I can well remember the discussions among financiers before 1900, whether it were possible that the credit of this Government could be so improved that the interest on its loans would be equal to or less than that which prevailed with the British Government. The idea was thought to be almost illusory. But there was a greater financial triumph in store which in its culmination was one of the most remarkable achievements of modern times. The Act of March 14th, 1900, authorized the conversion of 3 per cent., 4 per cent. and 5 per cent. bonds into 2 per cent. consols, of which there have been issued to date \$595,942,350. This Act was viewed with great apprehension on the part of many distinguished Government officials as well as eminent financiers, lest the Government would not be able to sell at par a bond bearing a rate of interest so low as two per cent.

It astonished the financial world that these bonds sold in large quantities at a premium.

The financial world was astounded to think that, within a period of thirty-five years after the closing of the war, with the colossal debt of \$2,756,431,571.43,

this Government could so easily and at such a premium succeed in placing a loan at such a marvelously low rate of interest.

It should not be forgotten, however, that but for the national banking system and the co-operation of the banks, such magnificent results would have been unattainable. The generous support of the national banks entitles them to receive not only the approval of the country, but the benefits that their existence and co-operation have been to all the people. It is a matter of record that when the Government was paying seven and three-tenths per cent. interest for its loans, individual accommodation from banks and money-lenders was generally on a minimum basis of eight per cent. and upwards; and it is an indisputable fact that as rapidly as the Government placed its loans at a lower rate of interest, so did the interest charge decline correspondingly on all commercial and real estate transactions. Thus it must be admitted, altho it is not often recognized, that the national bank has been of incalculable benefit to all kinds of borrowers in reducing the rate of interest on loans, and also in saving a heavy annual interest charge to the people. In 1864 the annual interest charge of the Government amounted to \$53,685,421.69, while today it is but \$24,590,944.10. The burden of debt is measured largely by the interest account, and this enormous reduction of interest enables the United States Government to place its securities on more favorable terms than any other nation, and all within its own resources.

A striking instance is in the minds of the people now, when Secretary Cortelyou sold United State two per cent. Panama bonds at 104, while New York City six per cents., three times the rate of interest, sold at 104 and a fraction.

This shows the far-reaching minds of Secretary Chase and his coadjutors in predicting that national banks would indeed be a great auxiliary to the nation's credit.

It is deplorable that the prejudice against the national banking system has survived so long. Instead of being a menace to the country's prosperity, it has proved one of the most potent factors of business stability. The solvency of a circulating currency is one of the most im-

portant attributes of national prosperity. Born in the stress of war, bitterly denounced, persistently opposed by the friends of State banks, the national system has more than met the expectations of its well-wishers and confounded the shortsightedness and narrowmindedness of its opponents. It is, with all its minor defects, a system of banking that, taken all in all, is more applicable to the needs of this country, more satisfactory to the plain people and the business man of affairs, than any system in vogue in any other country. While the system of Great Britain may be well for its people, it is not so adaptable to conditions here, nor is that of France or Germany, as compared to the satisfying manner in which the national banking system responds to the needs of the business interests. Such being the case, it is high time that the unreasoning opposition to the extension and perfection of this national bank system should cease, and that, as it is our only source of increase of paper currency, a broad-minded policy should be pursued that will develop it to a higher state of perfection.

It is readily admitted that the profits on note circulation, that used to seem so essential for the prosperity of a bank, are no longer regarded of prime importance. The increasing wealth of the country has swollen the savings of money to such a degree that deposits are regarded by national banks as an element of more profit than circulation, as the 2 per cent. bonds now hardly net more than $1\frac{1}{4}$ per cent. after deducting reserve and paying the Government tax.

The air seems permeated with financial discussions relative to changes in our currency system. Many bankers criticise the limited privileges accorded to the banks in the severe competition with State banks and trust companies, and are even caustic in their comments upon the failure of the system to respond to the growing requirements of various kinds of business, and the special need of help in moving crops, in staying incipient panics and in trying times of commercial depression.

The demerits of the national banking system are frankly admitted. One of them is lack of flexibility, or what is popularly called elasticity.

WASHINGTON, D. C.

The Parliamentary Session in Westminster

BY JUSTIN McCARTHY

SOME encouraging news has been received with regard to the condition of Sir Henry Campbell-Bannerman's health. The Prime Minister has lately been staying as an invalid in the South of France and the accounts received in England had for several weeks been growing more and more discouraging. Even yet the news which we receive does not do more than convey the good hope that he may be able to return to England before the opening of the coming session of Parliament. I believe that the illness from which he suffers is one which not only makes him liable to severe and often recurring pains, but is one which might make overwork or any sudden excitement a danger to his very life. The question, therefore, which has arisen is whether it will be possible for him to return to his duties as leader of the House of Commons. The duties of a Prime Minister who is also leader of the House of Commons are incessant and to any one of delicate physical frame positively exhausting. His work is always pursuing him, follows him into his domestic life; he can hardly be said to have any peaceful moments except during the scanty stretch of time which he can allow to himself for mere sleep and we can all well understand that during seasons of political excitement even that sleep is not likely to be always undisturbed. There is indeed one arrangement by which Sir Henry Campbell-Bannerman might be relieved of his most pressing and persistent work and might yet hold his position as Prime Minister, and that is the arrangement which many of his friends, supporters and official colleagues now think he ought to be prevailed upon to accept. The Prime Minister may, of course, be a member of the House of Lords and the idea is that Sir Henry should be raised to the peerage and still retain his present official place.

King Edward, it is well known, is quite willing to confer a peerage on the Prime Minister, who would thus be completely relieved of the incessant work, the prolonged sittings, the frequent divisions and the exciting struggles which are familiar to the representative chamber. The House of Lords is, on the other hand, one of the quietest, dullest, not to say sleepest, political assemblies known to any constitutional country; its sittings are almost always very short; it does not always hold its sittings, short or long, on every one of the six days of its working life-time during each session. The question, therefore, naturally arises as to whether a man of Sir Henry Campbell-Bannerman's vigorous intellect and intense interest in all great political questions could settle down to be nominally rather than really at the head of his Ministry and to be shut out altogether from any part in that thrilling political life to which he had devoted himself with so much energy and with so much success.

Of course, every such consideration must give way to the supreme necessity for his recovering his health and prolonging his life, but every one who knows much of our political and parliamentary conditions must grieve over the fate which threatens the Prime Minister with such an alternative. Then again there is the very important question to be considered—the question who is to be Sir Henry's successor in the House of Commons, if he should consent to accept a seat in the House of Lords? The general impression is that Mr. Asquith is the man most likely to be chosen for that succession and thus to become leader of the House of Commons. Mr. Asquith has undoubtedly won during recent years a remarkable success. He was always known since he entered the House of Commons as one of its most brilliant debaters just as he had been known during his career at the bar as one of the most

HERBERT GLADSTONE.

eloquent, most ready, and most persuasive advocates. But since he became Chancellor of the Exchequer he has unquestionably given evidence of a capacity for the management of the empire's financial affairs which the country had never before supposed that he possessed. But it has to be said, however, that in the present Cabinet there are some marked divisions of opinion on certain great political questions. The Ministry is, of course, all made up of Liberal statesmen, but then there are some who are advanced Liberals, in fact, Radicals, and there are others who in old-fashioned days would have been called Whigs and some of whom are now commonly described as sharing the views of Lord Rosebery on many political subjects. I do not know that Mr. Asquith could be fairly classified either as a Whig in the old sense or as a sympathizer with Lord Rosebery in the new sense, but I believe it may be taken for granted that he has not yet shown himself as an advanced Radical. Mr. Asquith is, however, by far too able and too thoughtful a man to dedicate his

political services absolutely to any mere section of the Liberal party, and I think it may be taken for granted that if he should become leader of the House of Commons he will use his great abilities in the interests of genuine Liberalism, but not in those of any peculiar section of the Liberal party.

We hear many rumors just now, and indeed have been hearing such rumors for some time back, about the inclination of Herbert Gladstone to withdraw from political life altogether. The impression seems to be that since the death of his illustrious father he has lost much of his interest in political work and especially in the routine duties of ministerial office and that he would be glad to lead a life of retirement and devote himself to the studies and the tastes which are more congenial with his temperament. I can quite understand that Mr. Gladstone might be weary of the unrelaxing routine work which belongs to a ministerial office and might prefer to be merely a private member of the House of Commons, enjoying the picturesque and exciting struggles, taking part in the debates when he felt impelled to speak, but not compelled to devote his whole lifetime to the Westminster region. If there be any truth in the rumors which have been floating about so much of late we are sure to find some confirmation of it or to hear some authoritative repudiation of the reports by the time these words of mine are in print. I must say that I think the whole country would hear with a sincere and common regret that a man so gifted, so open-minded, so thoroughly devoted to genuine political advancement was about to withdraw at this early period of his life from the great battlefield of the House of Commons.

During the later part of the last session much impression was made by the continued absence of two men who had both been conspicuous in their different ways during several previous years. These two men were John Dillon and Herbert Paul. In the case of each of these men the cause of absence called up the deep sympathy of the House of Commons and the outer public. John Dillon had lost his most loved and loving wife, his dearest companion, who shared his

political faith, his sympathies, and his cultured tastes and had been taken by a sudden illness from him and from their six children. The absence of Herbert Paul was due to a sudden breakdown in his health which rendered it impossible for him to leave his invalid chamber, and so far as I know does not yet allow him to return to the work of his life. Herbert Paul had been recently becoming one of the most distinguished figures in parliamentary debate. He had already won for himself a brilliant reputation as an author and a journalist; he wrote in a style which sparkled with wit and humor while below the surface of all his writings his readers found the intellect of the thinker and the acquirements of the scholar. His parliamentary career had been interrupted at one critical period because he was a resolute and conscientious opponent of the policy which led to the South African war, and in those wild days of Mafeking excitement his steady adherence to his own principles rendered his re-election hopeless when the existence of that Parliament came to an end. He was, however, returned again to Parliament at a later period and became the representative of the constituency which had always returned Mr. Henry Labouchere before that master of wit and humor had made up his mind to withdraw altogether from parliamentary life and even from residence in England. The House soon found that in the person of Mr. Paul there had come a very fitting successor to Mr. Labouchere in wit and humor, for Mr. Paul now began to make known to the public through the medium of parliamentary debate those characteristics of wit and humor which his friends had always known him to possess. Mr. Paul was not, however, merely or especially a debater endowed with wit and humor, for he was very earnest in his political views and devoted, practically as well as theoretically, to every political and social cause which he advocated. His great and varied abilities were therefore soon recognized in the House of Commons and his friends were looking forward with confidence to the likelihood or even the certainty of his becoming at the first available opportunity a member of the Liberal Government. Then followed the sudden illness which

has withdrawn him altogether during several months from public life, from literary work of any kind, and even from the companionship of his most intimate friends. During some thirty years at least I have been one of those friends and was for a long time a colleague of his in journalism as well as in the House of Commons. I need hardly say how sincere is my hope that Herbert Paul may soon be fully restored to his health, to his wife and son and daughter, and to his literary and political career.

We have some new poets coming up lately in England, and one of the latest arrivals seems to me to have especial promise. I am not now thinking of the mere makers of verse who are multitudinous at all times, but of men and women who can give genuine evidence that they belong to the inspired order of the poet. One of these to whom my attention has been especially directed of late is Dr. P. Habberton Lulham, a medical practitioner by profession and a man of remarkably varied and extensive knowledge. Dr. Lulham is still a young man, and his first poetic volume—the first at least of his works which I have ever seen—was a volume called “Devices and Desires,” which was published by Messrs.

JOHN DILLON.

Brimley, Johnson & Ince, Ltd., and it passed very quickly into a third edition. The poetic work of his, however, in which I am just now especially interested is a small, slender volume bearing the name of "On the Downs." The volume, altho printed, is not yet published, and it has been my good fortune to obtain a copy of it while it is yet waiting to find a publisher. It will be easily understood that there is not usually a rush among publishers to obtain the privilege of bringing out volumes of poems, and even some of the most gifted poets have found it necessary to guarantee the publisher of their early works against any pecuniary loss upon the sale of the volumes. Some poets have indeed made fortunes by their verses, but these have been men or women whose special inspiration gave them the power to touch the hearts and the minds of the whole reading public, while other poets of equal genius have found only a limited number who could understand and appreciate them and have never really become popular in the ordinary sense of the word. I cannot venture to prophesy whether "On the Downs" will prove a profitable issue to the author or the publisher, but I can venture to say that so far as my judgment goes it is a volume of most delightful verse and is the work of a genuine poet. It is a study of nature as she shows herself along the Sussex Downs, a study of beautiful scenery with all its varieties of tint and color, and with also the illumination of thought and fancy, of memory, hope and imagination, which the study of such a landscape can bring up in the poetic mind and compel the owner of that mind to put his emotions into congenial verse. One of the charms of this volume is that it brings back in

living color and reality to those who have ever looked on them, the scenes it pictures while at the same time it must make those who have never looked upon those Downs feel as if they were an actual memory. I hope my American readers may soon have an opportunity of studying "On the Downs."

"Lisbon and Cintra, with some account of other cities and historical sites in Portugal. Written by A. C. Inchbold. Illustrated by Stanley Inchbold," is the name of the new volume of the series of books about places, illustrated in color, just published by Messrs Chatto & Windus. The text of these books is as interesting as the illustrations are beautiful, and gives the past history of the countries which the pictures illustrate, as well as an account of these countries at the present day. They would be delightful books to take with one if one were going to the places they describe. This volume gives a wonderful idea of the beauty of Portugal, both of its climate and its scenery. Unfortunately, I have never yet been to Portugal, altho I have been all thru Spain, and must be content, for the present at least, with seeing it in these illustrations. Very beautiful it must be, to judge from some of the pictures. "The Portugese Riviera," "Fishing Boats on the Tagus," "The Estrella Gardens," "The Garden of the Quinta do Relogio," show the beauty of coloring and atmosphere. The views of the cities and towns, too, are very fine, and of the churches and other buildings, many of them Moorish and most of them Eastern in effect. Portugal seems to have a character of its own—unlike that of any other country—and that is admirably given in this volume.

LONDON, ENGLAND.

Lincoln: A Retrospect

BY HARRY H. KEMP

Now that the winds of Peace have blown away
The battle smoke which long obscured the day,
Now that all wrath is as a tale of old
And human flesh is minted into gold
No longer, and the straggling thunders cease
And all the land is wrapt in busy peace—
There towers in our sight this man, of worth
Above the selfish kings that ruled the earth.
He did not yearn for hopeless things, nor sigh
For purple kingdoms verging on the sky,
Nor long for irised landscapes shimmering
fair

In a blown bubble of inconstant air,
But with great vision of the years to be
He shaped a mighty nation's destiny
And gave all man can give—his life he gave—
To weld the broken state and free the slave.

Gave resolution to the ruler's pen;
The books he coned beside the open fire
Made strong the brain which battles could not
tire;

The law courts with forensic shift and strife
The ax the gaunt youth swung in dale and glen
Prepared him for that tragedy, his life.

He never held his ways from men apart,
Yet kept a sanctuary in his heart
Whence flowed a stream of love and hope, to
bless,

Pure as a clear spring in a wilderness.
He trusted God—bearing the weight of war—
As olden captains trusted in a star.
And yet he was not all the stolid oak:
Full well could he the foeman's smile provoke
With homely proverb or a timely joke.

Calm and serene unto the end he past
And bravely met his martyrdom at last. . . .
They crossed his thin, worn hands upon his
breast.

God gave the country peace and Lincoln rest!

LAWRENCE, KAN.

Men We Are Watching

BY A WASHINGTON JOURNALIST

SENATOR NELSON WILMARTH ALDRICH.

THE bank crisis, with its October and November unpleasantness generally in financial affairs, brought to a focus the long delayed Congressional action in the line of currency legislation; and currency legislation of course means Aldrich.

All legislation, for that matter, means Senator Aldrich, of Rhode Island, but a focus on currency legislation means a special focus on Aldrich, particularly when the Aldrich bill presents itself, after many threats and promises. It turned an unusual amount of watching toward him, not particularly to his liking, for Aldrich is not a man who cares to be watched. Indeed there is little about him to instigate it. He is irrefragably a gentleman, quiet, unobtrusive, always courteous, never friendly toward

the world at large. He blows no trumpets, carries no transparencies and is so little transparent, personally, that no one is more difficult by searching to find out. There is no finding Aldrich out except when he takes a notion to stand up for a moment in the Senate, and in his timid, deferential way make a few indifferent remarks at some vital moment. The stranger seldom thinks it worth his while even to hark, but those who know, know that when he has finished the Czar has spoken and said all that it is necessary to say on the subject. The thing will surely transpire as he has gently predicted. They might as well vote at once and have it over with.

A new reporter went to Senator Aldrich the other day in his committee room and politely asked for an interview on the currency question. Most politely the

Senator replied: "My dear young man, when you have been here a little longer you will know that I am never interviewed on any subject whatever. Good day."

Nelson Wilmarth Aldrich is not, strictly speaking, a Senator—not, speaking in the old, sacred, classical way. He is a business man, *facile princeps*. He is a man of ideas—far-reaching, keen and shrewd—but not a man of words. He has a peculiar way of planting those ideas in good, etymological ground and sitting innocently by watching the crop turned out, as tho it was something altogether new to him, but something he rather approved of, on the whole.

He has been dubbed a dictator, but that he is not. It is too harsh a term, for Aldrich is the acme of gentleness. He has been Senator close to a quarter of a century, with four years' training in the House before, and is chairman of the Committee on Finance. He is really almost as much the whole thing at one end of the Capitol as Cannon is at the other. A couple of weeks ago the photographer caught Aldrich and Cannon coming down the steps of the Capitol together. As he handed out the finished print he remarked, "There's the whole of Congress for you, on a single plate."

Not Clay, Calhoun or Benton, Douglas or Fessenden, not even Webster, with his gigantic brain and matchless eloquence, ever possessed the power over the United States Senate which, for twenty years, has rested with Nelson W. Aldrich. He is no lawyer, and, *sub rosa*, he is not much of a scholar. There are those who say that "because he doesn't talk much is because he can't." But they are wrong. They have forgotten occasions which required him when he has risen to them, grappled the greatest legislators in the House and the Senate, and won out every time. They have already forgotten how he tangled even Spooner, some two years back, and made him admit the last thing in the world which he wanted to admit, at that moment. Aldrich can speak when he wants to, but he rarely wants to. He prefers listening and acting, just as he prefers the reports of the Fall River cotton mills to classic literature, and a device for

SENATOR ALDRICH AND SPEAKER CANNON
COMING FROM THE CAPITOL.

"The whole of Congress in a single photograph."

cheapening the production of prints to theories of canals on Mars. He seldom argues or attempts to convince or persuade. He leaves that for others who agree with him. He is satisfied to dominate. He thinks, moves, acts, speaks, with the nervous alertness of the busy business man. Nothing more; always erect, always with the self-reliant grace of one who understands himself. He never strikes me as one mentally or physically burdened by his responsibilities. His hair is white, so is his heavy mustache, and his broad, high forehead is bald, but they do not carry a sense of age. His keen, dark eyes move quickly, without waiting for his head to turn. They see everything without an apparent effort.

The social side of Senator Aldrich is always a surprise to those who know him first in public life. To know him intimately is to join, instinctively, with a circle of friends who are untiring in expressions of admiration, and the secret of his hold on the Senate is not wholly the dynamic force of inherent leadership in him. It is immeasurably strengthened, at least, by his invariable courtesy, apparent consideration and disinclination to offend.

THE CHIEF OF THE UNITED STATES
FOREST SERVICE.

It is not overtaxing sentiment to say that the most valuable man to the United States today—and one of still greater value to the United States of tomorrow—is one who only now, and as the result

GIFFORD PINCHOT,
Chief of the United States Forest Service.

of years of herculean industry applied to one specific end, thru torrents of abuse and floods of ridicule, is finally forcing the world to watch him. It is Gifford Pinchot, Chief of the Forest Service and practical ruler today of the national forest lands. Pinchot was born in Simsbury, Conn., some forty-three years ago, to a fortune which relieved him of the necessity of work; but to the good luck of the nation he was also born with something more than a hobby and less than a mania—almost born with it—which had developed by his college days till they called him “mad on trees.” In a masterful, methodical and scientific way he has been mad on trees ever since. His life has been one of study and investiga-

tion, at home and abroad, thru books and schools and nature, culminating in what he has accomplished—almost a miracle already—since nine years ago when he succeeded in forcing on public attention a glimmering sense of the ruin which the madness of private greed was working, thru the wanton and unscientific destruction of our forests and the salvation which method would eventually mean, if applied to national forestry.

His energy, determination and intelligence brought about the National Forest Commission in 1896, to investigate and report upon a national forest policy, the creation of a Division of Forestry in 1898, and his appointment at the head of it. Later on he was given a little wider

“JOE” BLACKBURN,
Civil Governor of the Canal Zone.

scope when his department was made the Bureau of Forestry. Today the entire forest interests of the United States, formerly divided between the Department of the Interior and the Department of Agriculture, have been consolidated under the administration of the Forestry Service, of which Pinchot is chief. Nine years ago he had eleven assistants and an appropriation of \$28,500. Today he has 1,400 assistants and an appropriation of \$3,100,000. The territory immediately under his control is four times the size of New England, and the whole vast machinery—one of the best examples of economical, effective, scientific work in the entire administration—is of his own construction.

Pinchot's life sounds like a fairy tale of accomplished impossibilities. Thru it all he has been one of the best combated reformers who ever undertook a tremendous work for public good; but he smiled as he remarked:

"It really does not trouble me, all this criticism, for it indicates that at least people are thinking, and they cannot think long on these lines without being converts." He always smiles and he never looks the much battered reformer. He simply impresses one as a man endowed to an unusual degree in quality and quantity with most attractive manly attributes. He is tall, slender, nervously active, athletically self-reliant. He has a fine forehead capped with a shock of brown hair going gray. His eyes are quick and clear. His face is full of earnestness and energy. He is an inherent sportsman, democratic to the soles of his boots; and it is worth getting up to the seventh floor of the Forestry Building just to shake hands with him. It is worth working your way slowly down again to observe the sense of happy energy which pervades every nook and corner. There is not another department like it in the world. Every one is rushing at full speed, but doing it as if it were the very joy of life—which is just the impression Pinchot gives you of himself. When you come from a chat with him you feel as if—mentally and physically—you had been rejuvenating in the woods.

The work which Gifford Pinchot is doing thru the Forest Service is something

which ought to be much better known. But Congress and the people are gradually coming to a realizing sense of its vast importance, and another generation will better appreciate the real value to the nation of the founder and chief of the Forest Service.

THE CIVIL GOVERNOR OF THE CANAL ZONE.

For two or three weeks Governor Blackburn has been back in Washington "restoring confidence" in the Panama Canal work, which showed some slight premonitory signs of weakening owing to certain changes recently advocated and material increase in the estimated cost entailed.

"Governor Blackburn" is hard to assimilate. Senator Blackburn is easier, but "Dear old Joe Blackburn" is the one and only that leaps from the heart and into it with all who really know him.

When he was appointed Civil Governor of the Canal Zone every one knew that it would be governed. He is a Democrat to the tips of his toes, but a Republican President never made a better appointment; and when the Administration barometer indicated that previous to asking the increased appropriation covering canal expenditures it would be well to check an inclination to ask questions by "restoring confidence" it could not have done a wiser thing than suggest to Governor Blackburn the advisability of his taking a brief vacation and recuperating among his old friends in the House and the Senate. It has been simply a "vacation." Nothing else. Any one interested will tell you so. But, parenthetically, Joe Blackburn is an ideal restorer of confidence, especially up at the Capitol, where every one loves him, respects him—comes pretty near worshiping him.

It has been one of the sights of the session to see him come onto the floor of either House. It is not that he ever put out the first effort to popularize himself. That wouldn't be Blackburn. Mentally and physically he stands upon his own two feet as squarely and firmly as the eternal hills. His close-cropped white hair, his big, bald crown, his heavy white moustache, his clear, keen, blue eyes, his deep, strong voice and square, defiant jaw are excellent interpreters for the work

done in the spacious thinking chamber which rests with superb self-reliance on his broad, square shoulders.

Growing old? Joe Blackburn growing old? Not today. True he had graduated from college and at the bar and was practicing law when the Civil War broke out, and he fought thru the whole four years of it and then went back to law before he went to the House, then to the Senate, then to the Isthmian Canal Commission. But Blackburn is not the kind of a man who grows old. Feel the warm grip of his strong, firm hand. See the cordial greeting glisten in his clear eyes—quick and keen as the eyes of a boy. Note the flush which leaps to his firm cheeks when your love and admiration slip out, in involuntary words. Oh, no. Blackburn is not growing old.

He did not attempt to govern the zone from Washington. His ideas of a public trust took him right down there to live. In no time he knew all about everything—or where to find out—and held both reins and whip. And yet they all love him down there, just as they do everywhere—all who are white and intend to toe the line—for his deep, broad grasp of things is always controlled by common sense and guided by patriotic consideration. Every one trusts him because he is

four-square, upright and downright. Every one loves him because each angle and corner is padded and cushioned with his inherent and invariable Kentucky courtesy. But Blackburn is a fighter from his feet up. I have always felt that the last man in the world I should care to encounter, if I was on the wrong side of the line, would be that same dear old Joe Blackburn. He was one of the strongest, most forceful as well as one of the most graceful speakers in the Senate. I don't believe he is afraid of anything. He is just the man to restore confidence in anything in which he has confidence. That is about all which is necessary.

I met him on the street the other day. It was a cold, raw, rainy day. He had no umbrella. I urged him to take mine. He laughed and said: "It is so long since I carried one that I should not know how to hold it." We chatted for a moment of the tropics and his new home there. "I like it!" he said, vigorously. "The summer is not so hot as the summer here in Washington. And the winter? Well, Heaven knows the winter is better than this. It strikes me as rather ideal down in Panama, with no trouble unless you make it and no need of making it. While I can be useful on the Isthmus I am thoroly satisfied with the tropics."

WASHINGTON, D. C.

Night Song by the Sea

BY CLINTON SCOLLARD

WIND and rain are at the pane,
Shrilling, drumming without cease;
And the breakers' loud refrain
Gives the shuddering heart no peace.
Lord of all the things that be,
Pity thou the souls at sea!

Snugly roofed with warmth and glow,
And encompassed soft by sleep,
Little we land-dwellers know
Of the terrors of the deep.
Lord, in thy sweet charity,
Pity thou the souls at sea!

On the smiling face of morn
Sure are we to gaze again;
What of those poor waifs forlorn
Furrowing the untracked main?
Lord, in their dire need of Thee,
Pity thou the souls at sea!

Altho riven be the rail,
Snapped the shroud and rent the mast,
May they into harbor sail,
All their perils over-past!
Lord, in Thy compassion, be
Pilot to the souls at sea!

ASBURY PARK, N. J.

The Schurz Memoirs

THE first two volumes of Carl Schurz's memoirs* carry the narrative down to the conclusion of the Chancellorsville campaign in May, 1863. Much of the text has already appeared in print in the pages of a popular magazine, and a large audience has thus been won for the work.

A singularly full and worthy life was that of Schurz. He seems always to have been busy, and he bore a conspicuous and efficient part in many of the great movements of his day. He was born in 1829 in a village near Cologne. He was but nineteen when the revolution of 1848 broke out, but he eagerly and fearlessly espoused the cause of the liberals. With the downfall of the revolution he escaped to England, coming to America in 1852. He mastered the English language in a surprisingly short time, and at once enlisted in the anti-slavery campaign. He was one of the Wisconsin delegates to the Chicago convention which nominated Lincoln. The new President appointed him Minister to Spain, where he remained until the beginning of 1862. Lincoln then appointed him a Brigadier-General, and he served thruout the remainder of the war. His first service was with Fremont in the Shenandoah Valley, then with Pope at Manassas, where he won high praise for the skillful handling of his troops in that disastrous engagement. At Chancellorsville his troops formed a part of General O. O. Howard's Eleventh Corps, which was surprised and routed by Stonewall Jackson in one of the most brilliant attacks of the war. The second volume closes with a severe and exhaustive criticism of Howard for his unpreparedness in this battle, and with a spirited defense of the German troops against the storm of censure which was visited upon them at the time.

A more interesting and instructive narrative of a man's life has not appeared in years. The style is clear and precise, full

of color and graphic illustration. An unusual fulness of detail is given, and yet there is little or nothing that is trivial. No matter how minutely he describes an incident or a train of reflections, he is rarely or never wearisome. His hairbreadth escapes in Germany, his part in the rescue of his beloved teacher, Professor Kinkel, his first impressions of New York City and of America, his experiences during the anti-slavery campaign, are all told with a simplicity, a directness and a charm that holds the attention without flagging. Most interesting, too, is his account of the shifting attitudes of the European courts and peoples regarding the Civil War, while his personal memories of Lincoln and of the other men of authority in and about Washington, and his relation of the troublous problems of the day recreate for us the life and atmosphere of that tremendous time. The succeeding volumes will be awaited with eagerness by a large part of the reading public.

Insistent Social Problems

THESE three volumes,* typical of the stream of books upon social questions which pour from our publishing houses, contribute to the discussion which is going forward in every American community upon Trusts, railroads, State regulation, trade unions, Socialism.

Dr. Shaw's work is judicial and dignified, tuned for presentation to academic audiences, but yet quite radical in tone and spacious in outlook. The Chancellor of the Syracuse University has made himself a foremost champion of the Standard Oil Company and its confederates, with the result that public antagonism has roused his temper, and his style has become furious. Dr. Shaw glows with the mild radiance of an incandescent lamp, Dr. Day with the lurid glare of a lava

*THE RAID ON PROSPERITY. By Dr. James R. Day. New York: D. Appleton & Co. \$1.50.

THE OUTLOOK FOR THE AVERAGE MAN. By Dr. Albert Shaw. New York: The Macmillan Company. \$1.25.

ENTERPRISE AND THE PRODUCTIVE PROCESS. By Frederick B. Hawley, B. A. New York: G. P. Putnam's Sons. \$1.50.

*THE REMINISCENCES OF CARL SCHURZ. Illustrated with portraits and original drawings. Vols. I and II. New York: The McClure Co. \$6.00.

stream. Mr. Hawley's theoretic investigation appeals only to the trained economist or strenuous student. It is an endeavor to exalt the industrial captain, the enterpriser, as he prefers to call him, instead of keeping the French word "entrepreneur," or Marshall's lugubrious translation, "the undertaker," to his rightful dignity in the economic hierarchy. The writer somewhat appalls the general reader by introducing new terms as well as a new analysis, resurrecting, for example, the long-buried "wages fund," which he endeavors to vitalize with a new meaning, and christening afresh as "commodity wages" what we have been accustomed to call "real wages."

Approaching their subjects as they do, from different viewpoints, it is interesting to discover that upon certain fundamentals these three writers agree. That the Trusts cannot and should not be destroyed, that competition in many of our staple industries has gone to its long home, they unanimously assert. Therefore by implication they condemn the present national effort at "Trust busting" by the enforcement of the Interstate Commerce act and the Sherman Anti-Trust law. But, agreeing upon the futility of any effort to re-establish the eighteenth century, they differ as to an alternative policy. Dr. Shaw, with gentle optimism and a benignity which suggests an elderly sage advising his grandchildren, is quite sure that our problems will be wisely solved thru increasing social regulation, the reduction of the speculative element in business, the cautious extension of public ownership. Dr. Day throws thunderbolts, Jovelike, at the legislatures and executives who dare to interpose their puny power between Trust rulers and the execution of Trust plans. His wrath against President Roosevelt, combined with his veneration for the Bigness of industrial enterprises, makes him somewhat inconsistent. At one place he rails at the usurpation of functions by an executive officer and calls loudly for adherence to the Constitution and the restitution of legislative powers to legislatures. In another place, however, he berates the legislatures with equal vigor for their anti-Trust laws, apparently forgetting his previous ascription of wisdom to them. Again, he would destroy the hor-

rifying control of the judiciary by the President which he discloses, by the surprising expedient of making the Federal judiciary elective, altho the legislators, who are elective, satisfy him no better than the President, who also, he should remember, is the people's choice.

It must be admitted that some legislative efforts to disintegrate "combinations in restraint of trade" show an ignorance of economic tendencies, a fondness for quack remedies, calculated to rouse the ire of thoughtful publicists. But Dr. Day must produce a substitute policy more consistent with economic progress and actual conditions if he is to command the respect we would fain give to all college presidents. Simply to say "Trust magnates are great men, who are wielding great powers because business today requires great capital, and you little men, you mass of pigmies, should reverence them, in place of attacking them," is plainly insufficient.

Mr. Hawley falls, tho not so deep, into the same error. The public instinctively recognizes that when Mr. E. H. Harri-man says in court that his business is not to manage railroads, but to finance them, he is expressing a half-formed public sentiment that, after all, the Wall Street manipulators no more conduct our enterprises than the robber on the Rhine who issued from his castle to levy tribute upon passing vessels, conducted the commerce of his region. This comparison of railroad and Trust controllers to robber barons smacks so much of demagoguery that we should not dare to use it had not Dr. Shaw set us the example—tho, let us hasten to say, his comparison is with the railroad rulers of a generation immediately past.

Both the editor and the economist, tho not the infuriated chancellor, propose to ward off Socialism by adopting Socialist measures. This is a favorite device today, a revival of the old remedy of "cutting a bite with a hair of the dog that bit him." It must be very amusing to practical Socialists to hear statesmen and writers protest their horror of Socialism and in the next breath demand State regulation of this and the other industry and government ownership of railroads, forests, arid lands, unappropriated minerals, and reclaimed swamps.

A Memorial to President Harper

HERE are two stately volumes,* dedicated to the memory of the late President Harper, and written by his pupils and other friends, and all the articles are fresh, scholarly studies of serious matters connected with Semitic or Old Testament learning, the very field to which President Harper gave his own attention, and in which he taught so many students. This is an admirable kind of monument which now it is usual to give to a distinguished scholar. It also provides the vehicle for the publication of important investigations for which there are not too many pages open.

Such a collection of papers could not have been made twenty years ago. The lists of writers for these two volumes includes a goodly number of the accredited American scholars in Semitics. They are Professor Arnold, of Andover; Barton, of Bryn Mawr; Briggs, Brown, Fagnani and Bewer, of Union Seminary; Jastrow and Clay, of the University of Pennsylvania; Professor Davis, of Princeton; Gottheil and Prince, of Columbia; Haupt and Johnston, of Johns Hopkins; Macdonald and Paton, of Hartford Seminary, Margolis, of Cincinnati; Mitchell, of Boston University; Moore and Toy, of Harvard; Porter and Torrey, of Yale; Price and J. M. P. Smith, of the University of Chicago; Schmidt, of Cornell; H. P. Smith, of Meadville, and Dr. Ward, of THE INDEPENDENT. Three others, Professor Kent, of Yale; Professor McCurdy, of Toronto, and Professor Breasted, of Chicago, were prevented by sickness or absence from supplying their papers in time for publication on the anniversary of President Harper's death.

It is impossible here to give an account of twenty-six heavy and elaborate papers which have taxed the fonts of the University Press, but the reader has the right to know what is the character of these studies. Thus Professor Briggs gives a translation, with notes, of Isaiah 40-62, and divides these chapters into two poems, one in trimeters and the

other in pentameters. Prof. George F. Moore discusses the origin of the pronunciation *Jehovah*; Professor Davis seems to argue that the Persian words in Daniel do not forbid the prophet being its author; Messrs. Clay, Prince, Johnston, Ward, Price, Barton and Jastrow present papers dealing with Babylonian language or art, and of these that by Professor Barton, perhaps, deserves especial mention for its study of the origin of some cuneiform signs. The articles on Old Testament criticism are particularly elaborate; that by Professor Haupt on the text of Esther occupying ninety stiff pages; that by Professor Paton on the same book fifty-two pages, while Professor Torrey takes but fifty pages for the textual criticism of Chronicles, Ezra and Nehemiah. There is some fine study in Dr. Margolis's short article on the Anonymous Greek version of Habakkuk.

There is a fascination about such articles as these, which are not epitomes of old knowledge, but knowledge in the making. Take such an article as that by Dr. Clay. He has in hand the tablets in the Museum of the University of Pennsylvania brought from Nippur. A number of them are the business records of a banking family in the last half of the fifth century B. C. They are in cuneiform writing, but they are bilingual, for there are on them dockets for filing scratched in Aramaic, very brief, but containing proper names. These Dr. Clay copies and studies, and they tell him how the Babylonians pronounced the names of certain gods, which we never could guess from the cuneiform writing. Thus we now learn that the famous old god, "Bel," was really called *Ellil*; and it is of no little interest to see that the business language of Southern Babylonia was precisely the same as that which we have lately found spoken at the same time in Egypt.

We must conclude with a word on Prof. Francis Brown's introductory appreciation of President Harper's work for Oriental scholarship. It only incidentally describes his greatest work, that of the organization of the University of Chicago, but it fairly and somewhat critically tells of his wonderful genius in ac-

*OLD TESTAMENT AND SEMITIC STUDIES. In Memory of William Rainey Harper. Edited by Robert Francis Harper, Francis Brown, George Foot Moore. Two volumes, 8vo. Pp. xxiv, 400; 438. Chicago: The University of Chicago Press. \$10.00.

quiring languages, his passion for Hebrew and for teaching it, how he has done more for its study than any other man among us, and what was the scope and drift of his text books and exegetical works and his editorial labors. He was a great man and deserves this magnificent monument from his pupils and associates, worthily edited by his brother.

✧

The Road. By Jack London. New York: The Macmillan Co. \$1.50.

We have had many literary tramps since Josiah Flynt, to whom this book is dedicated, set the fashion, so there is no great novelty in the revelation which Jack London gives of his experiences on *The Road*, and in spite of his frankness he does not give the impression of sincerity and strict accuracy. He is too smooth a story-teller to be altogether plausible and he takes such manifest delight in his skill and success as a liar when he was beating his way across the continent that we involuntarily wonder at what date he abandoned the habit. There are photographs to back up the text but when and how were they taken? But it really does not matter how literal he has been in telling of his adventures, the book is interesting and, we have no doubt, gives a very truthful picture of the life and even the views of the hobo, just as "The People of the Abyss" made a clearer impression of the life of the submerged tenth in London than Booth's volumes of carefully collected statistics.

✧

Little Dinners With the Sphinx. By Richard Le Gallienne. New York: Moffat, Yard Co. \$1.25.

Mr. Le Gallienne is again dining with the Sphinx. He does not tell us what he has been doing during the four years since those other "little dinners" with his lady of the opals, which he celebrated in "Prose Fancies." It is, perhaps, too rude a question to ask a poet where he had been or whether he had dined at all in the interregnum. Is it fancy—another prose fancy—or has there been a perceptible loss in esprit since the old time? The fresh sparkle seems to have effervesced, or is it only that the poet's hair is growing gray? By the way, he gives a very pretty reason for that: "Two winters ago I played snowball with a little

child I love. She managed to hit me here on my temple, and it hasn't melted yet." If the report of the resumed dinners is a bit disappointing, two of the short stories which comprise the rest of the volume, make us amends. "The Death of the Poet," albeit gruesome enough, for in it Mr. Le Gallienne describes his own end, has the imaginative power, and "The Little Joys of Margaret" is an exquisite idyl of old-maidenhood. Mr. Le Gallienne's hand has not lost its dexterity as long as he can fashion tales like these, and if his gift of philandering has a little failed it may be replaced by a more masculine and robust genius and both he and his readers may be the richer.

✧

Under the Southern Cross. By Elizabeth Robins. New York: Frederick A. Stokes Company. \$1.50.

Miss Robins is not easy to classify. In one season we have "The Convent," a well-argued plea for the suffragettes, and this slight romance of tropical travel, in which the girl escapes with difficulty from a Peruvian suitor who makes furious love in four languages. The story is somewhat overdressed with decorative margins on every page and several colored plates and other pictures.

✧

The Great Secret. By E. Phillips Oppenheim. Boston: Little, Brown & Co. \$1.50.

Mr. Oppenheim tells another of his clever stories of international plots and secret service agents who are quite ready to become assassins at the word of their respective governments. *The Great Secret* deals with the intrigues of France and Germany against England, and the knowledge of the plot is a fatal one to any Englishman who obtains it. Given this plot, dangerous to know, and a young Englishman by the propitious name of Courage, and Mr. Oppenheim's skill as a concoctor of exciting situations, the reader is sure of sitting up past his usual bedtime in order to finish the book.

✧

Arethusa. By F. Marion Crawford. New York: The Macmillan Company. \$1.50.

The scene of this story is laid in Constantinople during the early Christian

centuries. Zoë, the nobleman's daughter, became, thru political misfortune, Arethusa, the slave girl. Her love affair with the merchant prince, Carlo Zeno, is as chaste as it is naïve. A thrilling element in the story is an insurrection excited by Arethusa, and led by Zeno. Mr. Crawford always writes with the serene assurance of a master, and this book is one of his best.

Literary Notes

.... "All right according to Hoyle" has been a familiar saying for a century and a half. A new and up-to-date edition of *Hoyle's Games* is brought out by the McClure Co.

.... Dr. Homer J. Webster has made a thoro study of *William Henry Harrison's Administration of Indiana Territory*, from 1800 to 1812, utilizing a wide range of rare and unpublished material. [Published by the Indiana Historical Society, Indianapolis.]

.... *The Missions of California*, by Jesse S. Hildrup, gives an interesting account of the early settlement of the Southwest. The book contains thirty-five striking illustrations from photographs, of the Missions and their surroundings. (Chicago: A. C. McClurg & Co.)

.... Mr. Charles Welsh has picked out a tenth of the 1,500 characters in Dickens's novels and arranged them in alphabetical order in a small volume entitled *Character Portraits from Dickens*. Beginning with Benjamin Allen and ending with Mr. Wopole's Great Aunt, it includes all our old friends and impresses us anew with the power of the novelist to visualize his people and make even their clothing significant. Each quotation is accompanied by a brief history of the character described and references to the chapters in which he appears. [Small, Maynard & Co., Boston.]

.... A volume of sermons full of instruction and inspiration for all classes of citizens who would promote the higher life of America is Rev. Charles E. Jefferson's *The New Crusade* (New York: Thomas Y. Crowell & Co. \$1.50.) Moral intensity, spiritual insight, soundness of judgment, and passion of utterance unite to make the discourses effective. The title sermon was delivered at the anniversary of the Congregational Home Missionary Society in Des Moines in 1904. INDEPENDENT readers will be especially interested in a noble utterance in behalf of International Peace preached the Sunday preceding the National Peace Congress in New York last April.

.... Professor Jülicher of Marburg, one of the most distinguished New Testament scholars, has contributed to the *Religionsgeschichtliche Volksbücher* an essay on *Paulus und Jesus* (New York: Imported by G. E. Stechert & Co., 13 cents), in which he comes to the defense of Paul as against the charge of Professor Wrede that the Apostle did not hand down the true Galilean Gospel, but that it changed for the worse in his hands. Pro-

fessor Jülicher makes a good case for his contention that Professor Wrede took a one-sided view of Paul, and considered his rabbinic theology to the exclusion of his warm and vital piety and his genuinely Christian spirit. The question whether Paul understood the gospel rightly is as old as Paul himself, and this latest phase of the debate is very interesting.

.... The most ingenious rime in *Songs of Many Days* (Richard G. Badger, Boston) by Florence Evelyn Pratt (Mrs. Clarence Herbert Youngs) is on the first page, a valentine poem:

"Amid the pleading, pining sheets
One struck a stronger keynote.
'I do not talk to you of sweets
And love—you are the queen o't.'"

While there is a humorous and a tender spirit in the verses which are in the accepted spelling, we take special interest in such a dialect poem as "Kerrekted" in which the school ma'am from Injun Bay tried to correct her suitor's grammar till he got "riled" and declares his independence and ends it:

"I ask ye free an' final, Be ye goin' ter marry me?"
An' Mary Ann sez tremblin', yet anxious like,
'I be.'"

Pebbles

JACK AND ROSE AGAIN.

ALAS! Alack! Some kiss her back,
And some for her mouth do sigh;
But the modern Jack will take a smack
Whene'er 'tis on the sly.

WILLIE'S WISH.

I WISH that Luther Burbank,
Who gives old Nature points,
Would just get up a gobbler
All made of second joints.

—Harper's Weekly.

IKEY (to his lawyer)—Und he said he vould make him t'ree pair of pants und he made none. Vat can you do?

Lawyer—We'll get you the money all right. They're breaches of promise.—*Harvard Lampoon*.

THE WAY IT'S SAID.

"THESE are the bridal rooms," announced the bell-boy to the blushing young couple.

"Oh, what a sweet suite!" exclaimed the bride.

"I don't know anything about that," said the bell-boy, "but the head clerk says he hopes the suit suits."—*Brooklyn Life*.

WHAT is the difference between (1) a gardener, (2) a billiard player, (3) a gentleman, and (4) a sexton?

Answer—The first minds his peas; the second minds his cues; the third minds his p's and q's; the fourth minds his keys and pews. —*The Catholic Fortnightly Review*.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Love, and the Weather of Love

WE know what love is. It is the copyright of life upon the heavens and the earth. It is the nature of Eternity. It is the circle-sum of the universe, and the stars are the decimal points of love.

It is the May of the year, the pollen-bearer and the Eden-maker upon the hills and in the valleys. And the first, fairest flowers that bloom beneath barren branches are the Adams and Eves of love in the forest. And all bursting buds are the little green prophets of love, and every rose belongs to its bridal wreath. All nesting birds sing its marriage vows, and the moon is the pallid seal that night sets age after age upon all the tender faces of love. And nothing is or ever shall be that love has not made, and shall not make again.

And here is the mystery of love. It makes a special dispensation of seasons to men. It is the springtime romance of all involuntary life, but for every man the calendar varies. And the wisest one cannot declare the law of the spring and summer and winter of love in the least of us. For who knows the climate of the human heart? Who can forecast the

weather of love? A word passes over it like hoar frost, and a glance from warm eyes will change the bleakest day into shining summer time. For the light and warmth of love belong to a secret solar system, to another Heaven. It may fill an attic with cheer where one candle burns, and leave the white palace glistening in the noon day, dark and cold within.

And while we may not forecast the weather of love, once it begins, the indications are as plain as they are in any other sky. That new, vague expectation which transfigures the face of youth, like the look in young believers' eyes when first they kneel and watch for oracles, is a sign that the heart within has become a world, that the light has been divided from the darkness and that it is the evening and morning of the first day; and the doggerel conversation of young people, so unintelligible to the elders, is the signal sound of the spring wind of love, that clears and clouds their skies by turns.

And the weather of love differs between men and women so much that the course of true love never can run smooth. For women the fairest weather of love is always inland, and calm like still mornings above green valleys, misty, uncertain of sun or rain like the April of their faces. But for men, it is fiercer and stronger, like good sea weather that lifts the waves into tides for the distant shores of love.

But for many, love is simply a bad weather of the heart from beginning to end, like a day that dawns darkly and ends in a tempest. In them it is a scourge, a devastating wind that leaves a pestilence of sorrows behind. And for some the weather of love is like that of the tropics, brilliant and uncertain, and in others it belongs to the Arctic regions. These are naturally refrigerated men and women who spend a lifetime looking for love under North Pole conditions and who die at last of their own low temperature. And others there are who have no atmosphere of the heart, and therefore no weather of love, pale souls in whom personality has become a shadow, whose lips lie dead, and whose eyes pinch the world as they go past.

Some people enjoy more and suffer

more from the weather of love than others, but the poets have most of it. And, however practical we may become, we shall always have those tender vagaries of the mind which come from the weather of love. For we are ourselves the very children of the weather of love.

A Traitorous Soldiery

ONE of the most interesting of the stories with regard to the human body that have become common property in recent years is that which concerns the white blood corpuscles. Professor Metchnikoff, the distinguished Russian biological investigator, whose work in recent years, because the Russian Government did not appreciate original work done at its universities, has been accomplished at the Pasteur Institute at Paris, proclaimed some twenty years ago his theory of phagocytosis. According to this the white blood cells are capable of devouring, or at least, to drop the figure for the moment, absorbing, into their substance and digesting many foreign particles that exist in the human body and that would do harm. For instance, if particles of carbon in fine division are introduced beneath the skin in some portion of the body, the white blood cells will soon be found carrying them off and disposing of them in various ways, so as to keep them from being a constant source of irritation in their original location. If microbes are introduced beneath the skin the same indefatigable scavengers and sanitary police come in large numbers to the point where they are, englobe them and, if possible, digest them.

This process Metchnikoff called by the picturesque name of phagocytosis, or cell-eating, meaning that the cells devoured various enemies of the body. Not infrequently these enemies proved fatal to the white cells, which so bravely attacked them. Ordinarily, in spite of this tendency for the white cells to be killed in the process, whenever an irritant substance is introduced beneath the skin, white cells come in large numbers, and even lay down their lives for the preservation of the body from the invader. Pus is, after all, mainly composed of white blood cells and the liquefied substance of these cells when they break

down. An abscess is, indeed, only a collection of dead white cells which have laid down their lives in the defense of the body. The abscess wall, which our forefathers in medicine thought so much of because they knew that it protected the body from the poisons in pus, is nothing more than a host of leucocytes that arrange themselves in serried ranks, shoulder to shoulder, as it were, to protect the body against its enemies. The picture thus drawn seems too romantic to be true, but in this case truth is stranger than fiction, and only the actual facts of science are told in the story.

Almost needless to say much has been made of the white cells and their wonderful powers by the pathologists and the therapists, and a special effort has been made to increase their powers as far as possible. When a disease is fatal, it is known that the fatal termination comes because the white blood cells have lost their power to combat the microbial enemies that are in the body. Some of these enemies, indeed, the white cells seem to be afraid of; at least they will not approach them. The diseases in which this is true are almost invariably fatal. A typical case of this kind is tetanus. The tetanus germ seems to secrete some substance which keeps the white cells from approaching them. Ordinarily the substances that are absorbed into the body from microbes act as so many warnings to the white cells, and draw large numbers of them, many more than would ordinarily be the case, to the affected part. Just the opposite is true in tetanus, and so the disease is almost invariably fatal. No wonder, then, that the pathologists and medical biologists should labor to make the white cells even more powerful against the enemies of the body, since this seems to be nature's own effective way of curing disease. When we say *cure* in this case, we mean what is ordinarily signified by the word *cure*—that is, conquest of the disease. Drugs cure only in the sense of palliating symptoms.

Alas! it seems that there is another side to the picture. This has been suspected for some time, and has been confirmed by many of Metchnikoff's researches for many years. White cells are a faithful soldiery in our defense,

but they have the fault of soldiers in the body politic generally. Apparently they have learned their own power, and have come to realize that they are more important in their own way than the other classes of cells in the body. As a consequence they have been found to attack these, not occasionally, but as a rule. They do not do this when the body is in its prime of health, but they do it very seriously as health and strength decline. Just as the soldiers of Rome were faithful servants of the Republic, but became the tyrannic rulers of the Empire, so the white cells within our bodies serve faithfully until we reach our prime, and then as our forces decline they attack other important cells of the body, and so hasten the inevitable decay which is coming on.

They have been observed gnawing at the large ganglion cells in the brain and in the spinal cord—these important rulers of provinces on whom the motion and sensation and nutrition of various parts depend. The white cells have been observed, gathered round liver cells, absorbing some of their nutrition, hampering them in their work, and occasionally more than suspected of devouring outlying portions of them. The same thing is true in practically all the important tissues of the body. The soldiery that were so active in youth like to settle down for themselves after a while, and so it seems not unlikely that they become a sort of adventitious connective tissue confined to one part and hampering the work of cells in their neighborhood. The processes by which old age advances may be best marked by this tendency to overgrowth of connective tissue within the body. Life is an equilibrium of the vital forces of the various kinds of cells. Cancer is an insurrection of the aristocracy of the body—the epithelial cells, prompted by what untoward agent we know not. Sarcoma, another malignant disease fatal in its course, is a like insurrection of the connective tissue cells of the body—the proletariat, as it were. Both of these processes are equally fatal to the individual, as usually are such insurrections in the body politic.

We may now add to the figure and realize that militarism in the body has its disadvantages as well as it has in states.

The soldiers overstep the bounds placed for them, and the consequence is interference with important vital processes that lead to decay and death. Everywhere in life there seem to be compensations. The beautiful story of the leucocytes which so bravely lay down their lives for us must now be tempered in the telling by the declaration that after a while these brave soldiers lose their sense of duty, become selfish, and destroy the human republic which they so nobly defended before. The terms sound entirely too much like fiction, yet they are representatives of literal truth, and our full knowledge of the white cells and their wonderful purpose in life shows that action and reaction are equal, and that all good things even carry certain disadvantages with them, and that everywhere in life the watchword is compensation.

The Peril of Great Britain

ONE cannot look over the world and see the unrest in so many various regions without a serious fear that there are stormy times ahead for the British Empire; and the center of it is the most important of her conquered colonies, India.

There is no immediate or prospective danger in Canada, Australia or New Zealand. Great Britain has learned her lesson well, and will never repeat her blunder which gave independence to the United States. She will allow her colonies of British blood and will to rule themselves. They will be practically as independent as if they were separate nations, and this allows them sentimental connection with the mother country.

But it is different, far different, with India, and in a measure with South Africa. In both countries the natives outnumber overwhelmingly their British rulers. That makes no difference so long as they remain ignorant and therefore weak. But in India, as in Russia, education is rapidly advancing, and knowledge is power. Every evidence shows a general discontent, at least among the Hindus, with the British rule. The trust of the British is in the long antipathy between the sixty million Mohammedans and the nearly two hundred million Hindus. It was the cruel Mohammedan conquest that created that antipathy, but

there are signs that old enemies may unite now against their common conqueror. While it is not true that the bulk of Hindus are violently opposed to the English to the limit of revolution, yet extremists are not few, and there is hostility of a milder sort with nearly all the rest; and it is a matter of experience that the movement is always in the radical direction.

And all this is the fruit of education. Education teaches discontent. Every missionary school in India, as in Turkey, is necessarily a fomentor of discontent, and every Government school as well. That is what education is for. As soon as a people get education they want to better themselves and govern themselves. The English literature taught in every school is an engine of liberty. It must be that Hindus will be restive under foreign rule. Why should Europe rule Asia?

But does not Great Britain rule India well? Doubtless better than she was ever ruled in her history before. There is less oppression, and we do not believe there are heavier taxes or more famines. The tax in India is but a third of what the Japanese have to pay. The famines, bad as they are, are not as bad as they are in China today, or as they used to be, if we can trust the old literature of India. Great Britain has supplied a magnificent system of highways and railroads. She is creating extensive systems of irrigation and planting forests which supply resources for the crowded population. The courts in India are admirable, and the poor get justice. Then why do the people complain?

It is not difficult to tell. It is not the British Government in India; it is the British people themselves. They rule the people fairly well, but they do not treat them well. The individual "Britisher" meets the individual native with a kick or a stick. The Englishman in India looks down on the native as an inferior, to be treated with insolence or contempt. Insolence breeds hatred. The parallel is the way the negro is treated in our Southern States. The Hindu, whoever he is, is a "nigger," no better than a slave. The one word which would have made India lovingly loyal is the easy—the very difficult word, *sympathy*. It is the same thing that is giving us all our

trouble in the Philippines or in Porto Rico or Cuba.

Now, can England change this hostile attitude? We might almost hope so if the Liberal party could remain in power in Parliament for a good series of years; for that party, which represents the conscience rather than the dominion of Great Britain, has shown a desire to satisfy in a measure the legitimate aspirations of India by enlarging her measure of self-government, which is the only permanent condition, in India as well as in Canada, for the persistence of Greater Britain. But just now it looks as if the days of the Liberal Government were few. The last elections have gone against it. Not only so, but there is likely to be before long a new alignment of parties, with the Socialists and a big segment of the labor vote on one side, and all the more sober elements of both the present parties against them. That would blot out the Liberals as a party, and they would be absorbed in the Conservative party, by whatever name it might be called. In such a division we believe that for a generation this conservative party, which will include all who represent the present rulers of India, will be in the majority, and their policy will control, to the endangerment of British rule. For the time will come when India will not longer endure rule without full representation. Without both liberty and sympathy the days of Great Britain in India are numbered, and no huge army can prevent it. At present Lord Kitchener can quell any uprising, but he feels it now necessary to have his army almost on a war footing. Not a native, not even a Mohammedan, is allowed in the artillery, and every officer must keep himself within quick call in case of emergency.

And the conditions in South Africa, especially in Natal, are no better. The Zulus are a magnificent race of negroes, are getting education, and are demanding their rights. There are ten blacks to one white. They are not decreasing in numbers. They have real wrongs, and have the right to be angry. A commission has declared that these wrongs are serious. The remedy, the old remedy, seems so easy and is so hard—*sympathy*. Can no white man learn it, except by becoming a missionary? Or is the common white man immune from Christianity?

Currency Legislation

OUR national currency system is defective, but it cannot be reconstructed this year. This must be admitted. A Presidential campaign is at hand. Thus far, in the current session of Congress, but little earnest attention has been paid to legislation. Many of the speeches have been partisan harangues. This is the usual course in a session immediately preceding a national election. Deliberate consideration of such a measure as Mr. Fowler's new currency bill could not reasonably have been expected. Nothing can be done at present with a proposition for a central bank. But it was thought that a bill for emergency issues of bank notes could be past.

The volume of our bond-secured note currency is inelastic. It does not expand or contract in response to the demands of trade. Every autumn, when the crops are moved, there is need of more currency than is available. The effect is financial stringency that is sometimes dangerous. On this account Congress had been urged for years before the recent panic to provide for safe and automatic expansion and contraction. It failed to do so. Last October, fright caused panic, a hasty withdrawal of bank deposits and a locking-up or hoarding of currency. By various devices some addition to the circulation was made, but with much delay and difficulty. If the bill proposed by the Bankers' Association (for emergency issues of banknotes) had then been a law, it would not have prevented the panic, but it would have made the stringency much less severe and would have hastened recovery.

It is admitted that nothing more than the passage of a bill providing for emergency issues is feasible at the present time. Such is the purpose of the Aldrich bill, now pending in the Senate. It differs fundamentally from the bill of the Bankers' Association. That bill provided that in time of stress and extraordinary demand a national bank should be permitted to issue additional currency, heavily taxed, to the extent of 40 per cent. of its bond-secured currency outstanding, with a further amount equal to 12½ per cent. of its capital, under a still heavier tax, and all upon the security of a 25 per cent. cash reserve and the bank's assets,

the expectation being that the tax would compel retirement of these emergency notes as soon as the extraordinary demand should cease. This would have been asset currency, safe, quickly issued and easily retired, in response to trade conditions. The safeguards were ample with respect to the character of the issuing bank and the supervisory power given to the Federal authorities.

The Aldrich bill permits an emergency issue of \$500,000,000, not upon asset and reserve security, but upon the security of State, county, municipal and railroad bonds, which the banks must first buy or borrow. During the last few years attention has frequently been directed to the emergency issue rules of the Imperial Bank of Germany. Mr. Aldrich said in his elaborate speech:

"The plan for additional notes which the committee recommend [in the Aldrich bill] for your adoption is substantially the plan of the Imperial Bank of Germany, with a change of class of securities required and a change in the rate of taxation."

But the two plans are fundamentally different, as he himself showed when he explained that against the German emergency notes "specie must be held to the amount of one-third, and good bills of exchange against the remaining two-thirds." This is asset currency, the good bills of exchange being commercial paper or trade bills soon to mature, while the bonds required by his bill are long-term obligations which may be called mortgages. The Bankers' Association bill was in accord with the German plan.

There are serious objections to the Aldrich bill. It would require banks to use their funds for the purchase of bonds at a time when their funds are needed for other purposes. It would tend to tie up these funds in long-term securities, would tend to create a fictitious market for municipal bonds, would stimulate the issue of such bonds, and would discriminate in favor of banks which carry such securities or are situated where these are easily accessible. It is admitted by prominent New York bankers that this discrimination would be in favor of the East. If we are ever to reform the present system we should not promote a continued use of it by adding State, county, municipal and railroad bonds to the Government bonds which are now the basis

of our issues. Opinions differ as to whether there would be danger of inflation under the Aldrich bill. Probably the effect of the measure in this respect could be ascertained only by practice.

If the German Bank is to be followed—and its emergency plan has worked very well—our legislation should be for asset currency rather than for notes resting upon bonds. It will be difficult in either case to determine, except by experience, what the tax ought to be. There is another plan, suggested by what was done after the beginning of the recent panic by clearing-house associations, and it is a plan which deserves very careful consideration. Besides, it points toward that central bank of banks which will probably be established in the future. We are speaking now only of emergencies, of times of great stress. Clearing house loan certificates could be utilized as security for emergency issues of national currency. Incorporation of clearing-house associations would be required, and it would be necessary to empower the Treasury to enter into relations with them. Additional banknotes issued upon the certificates as collateral to the extent of 50 or even 75 per cent. of their face value would be amply secured and there would be no question about the prompt retirement of them when no longer needed.

There should be a thoro and scientific reconstruction of our currency system, and a commission should be appointed to consider the whole matter. Legislation now for imparting elasticity by emergency issues must be grafted upon the system as it stands, but it should be in the direction of reform. It ought not to be of such a character that it will tend to prevent reform and to perpetuate existing defects.

The Breed of Horses and the Breed of Men

NEVER was there a thinner, more vulgar pretense offered to a not gullible public than that which the New York Jockey Club presents when it asks that, in order to improve the breed of horses, gambling be allowed on its race-tracks. The Constitution of the State forbids all forms of gambling and requires that the Legis-

lature affix penalties. This the Legislature has pretended to do by declaring the bet forfeited if certain memoranda are made; otherwise any bet can be safely made if within the grounds of the racing association, with no penalty whatever; outside of the grounds the crime is punishable. All the profit is for the racing association, except a small tax for the support of agricultural fairs, just as in some States the saloon licenses go to support the public school. Thus the attempt is made to bribe a righteous institution to support a criminal one. The present law in this State is intended to be an evasion of the Constitution, unfortunately not the only such instance in American legislation.

To improve the breed of horses is a good thing. So it is to improve the breed of cows or sheep or swine or hens; but these do not require to be helped by gambling. There is much done to improve the breed of horses without gambling. The best Percherons are imported for breeding draft horses; trotting horses are improved and the record cut down from the time when "Lady Suffolk," who would now be slow, was queen of the turf. There can be racing without gambling at county fairs and State fairs as of old, and men will still be eager to raise the best horses for service in war and peace. There are cock fights, but we do not need to legalize gambling at cocking mains in order to breed choice fowl.

The meanest thing about this pretense for improving the breed of horses is that it makes the breed of horses more important than the breed of men. A good man is more than a good horse. Now, it is a matter of record that the gambling at race-tracks is responsible for from a quarter to a half of the crimes for which we send men to prison. More defalcations come from gambling at horse-races than from any other cause. The injury to the breed of men does not concern the magnates of the paddock, but they are greatly concerned at the sad loss to the animal world if we were not able to reduce by a second the speed per mile of a galloping horse. And these are the men who are careful to conduct the races in such a way as to put a penalty of weight on the horse that has the best

speed record, so as to even up the gambling chances at the post.

New York is the business and the sporting center of the country. New York's laws for the protection of gambling are a peril to the breed of men the whole country over. Other States have to fight against its influence. New Hampshire had to rise up as one man to breast the inroad of the gamblers who came down from New York to corrupt her sons. New Jersey has had the same fight to make and has also forbidden the gambling race-track. Governor Hughes asks the Legislature to make the law conform to the spirit of the Constitution, and the moral sense of the people ought to compel their representatives to do what they refused to do a year ago and repeal a bad law.

The March to the Sea

THAT very delicate and expensive mechanism known as the European balance of power has been suddenly thrown out of adjustment, and a dozen chancelleries are in a state of worriment until it can be restored to its normal condition of unstable equilibrium. This time it is Baron von Aehrenthal, the Austro-Hungarian Minister of Foreign Affairs, who has precipitated the crisis, altho the suspicious minds of England and Russia blame Kaiser Wilhelm for it, as they do for every sinister event in the three continents. The proposal which Baron von Aehrenthal presented to the joint delegations of the Austrian and Hungarian Parliaments on January 29th was, on the face of it, most innocent and laudable. It was simply to supply a missing link of about seventy miles in the railroad chain connecting Austria with the Ægean Sea. Her railroad thru Bosnia to the Adriatic has a branch line from Serajevo to the Turkish frontier. Stretching up toward this point, but not quite reaching it, is the Turkish railroad from Salonika to Mitrovitza. Between these two termini lies the Turkish province of Novibazar, across which it is proposed to run the railroad. This would give a thru and direct line from Vienna, or even from Berlin, to Salonika, and make of the latter an Austrian, if not a German, commercial port. A branch

line will be run to Larissa, connecting with the Greek railroad there, and relieving Greece from her humiliating insularity. At least that is supposed to have been the object of King George in his recent visit to Vienna.

The announcement was not made until all the arrangements had been completed. The franchise for the railroad had already been granted by Turkey, the route had been secretly surveyed by Austrian engineers, capital secured from Germany, and the construction work will be begun within a month if nothing prevents.

Can it be prevented? is the question now being discussed in several European capitals. Servia protests because she has now a monopoly of railroads to the sea, and the proposed line would utilize her route from Uskub to Salonika. Russia is indignant at what she calls the treachery of Austria in violating their agreement that neither of them should seek concessions from the Porte without consulting the other. Austria defends her action by pleading a mandate from the Powers in the Treaty of Berlin, and protesting that so far from endeavoring to acquire territory her desire is to unite Constantinople more closely with the most distant of the provinces.

The concert of the Powers concerning Turkey has received another blow this week in the refusal of Germany to join with the other nations in urging on the Sultan effective measures for the restoration of order in Macedonia. The present arrangement by which Russia and Austria-Hungary jointly police these distressed provinces has proved a failure, and the people continue to be preyed upon by Greek, Servian and Bulgarian bands, not to mention the Turkish troops. But even this insufficient protection is likely to be withdrawn now that Baron von Bieberstein, the German Ambassador at Constantinople, has declared that Turkey is right in desiring to have control of the police force of Macedonia.

The question at the bottom of all this is whether three ambitious nations can be kept from the sea. Turkey in Europe has been reduced to a mere strip, 300 miles long and only 50 miles wide at one point, but it still fences off Germany, Austria-

Hungary and Russia from the Mediterranean. The leaders of the Pan-Germanic movement dazzle the eyes of the people with a vision of a greater Germany with Rotterdam and Amsterdam as seaports on the north and Trieste and Salonika on the south. Since the Kaiser announced his determination to grasp the trident he has created a navy but has nowhere to put it. In 1888 the expenditure of Germany for naval purposes was \$12,500,000. In 1908 it will be \$90,000,000. It has been only two years since England launched the "Dreadnought," the largest of battleships. Germany will now build four "Dreadnoughts" a year and England is pledged to double Germany's rate of construction whatever it be.

A German engineer is putting thru, with unprecedented rapidity, the railroad from Damascus to Mecca. By September next pilgrims will be transported by rail to Medina and then will have only the distance of Mohammed's hejira to traverse by caravan. This line will probably be connected with the Bagdad and Aleppo railroad which Germany is anxious to build as part of a line connecting Constantinople with the Persian Gulf, opening up the valleys of the Tigris and Euphrates and restoring them to cultivation by irrigation.

If these two projects should be carried thru Great Britain's precious line of communication with India would be cut in two places, the Red Sea and the Persian Gulf. The Turkish army is drilled by German officers, and Germany instead of Great Britain poses as the defender of the integrity of the Ottoman Empire. Twice Russia had Constantinople in her grasp when she was choked off by Great Britain. Now Russia and Great Britain are allied against Germany. Once Turkish and British troops fought side by side against Russia in Crimea, but seldom has a country so completely repudiated its policy and frankly acknowledged its blunder. "We put our money on the wrong horse," said the sporting Minister to the House of Commons. Now Great Britain relinquishes to Russia the northern half of Persia with its newly established parliamentary government, and views with satisfaction the massing of 60,000 Russian troops on the Turkish frontier. For half a century the world shuddered at the

thought of the armageddon which would come when Russia and Great Britain met in Central Asia. They have met and clasped hands.

The Decay of Nations

EX-PREMIER ARTHUR BALFOUR has set Englishmen discussing the question whether the time must come when Great Britain shall have culminated and shall then decay, as did Greece and Rome, and before them Egypt and Babylonia, and after them Portugal and Spain. He thinks not. There are influences of education and culture which seem perennial, and there are no barbarous races that can overrun the civilized countries as was the case with some other nations that have fallen. Even should there be an irruption from the East again, such as was once stayed at the gates of Vienna, the high mechanics of modern war would drive it back.

Are we quite so certain? In those days both sides fought with weapons not wholly dissimilar and unequal. Perhaps they will not be unequal in the possible future invasion from the swarming East. For we have learned that fifty years is long enough for an Eastern Empire to learn all of war that the Christian West can teach. What Japan has learned China is learning fast. And yet future wars will be fought mostly on the sea, and sea-fights hardly devastate and destroy a country.

But this is not the really serious consideration for either Great Britain or the United States, which is a country just as much in danger of internal decay, if not of external invasion, as is Great Britain. For it is not really the foreign foe but the enemy at home which a nation has to fear.

There is but one danger which such a strong nation as ours need fear, and that is the loss among its people of the courage and the joy of the endurance of toil or suffering for a worthy achievement. If men and women become weak and flabby and self-indulgent there is no further hope for them. That is why rich families fade away. In the third or fourth generation self-indulgence without task of toil weakens the mind as well as the will, and they are not worth preserv-

ing. Such may be the prevailing feeling of a people, the rich and the poor, and then Rome has no strength to resist the Goth—then Constantinople falls to the Turk.

This means that a nation's permanence depends on the moral character of its people. It is not its civilization, not its manufactures, not its education that will save it, but only its moral fiber. And moral fiber means the capacity of self-sacrifice, of mighty delight in enduring suffering and toil for a worthy end, the capacity to endure hardness as a good soldier, to endure a cross for the joy set before one, as did One of old. For love of Nippon the Japanese soldiers were ready to die. The man who, for love of wife and children, will not grudge his hard work is already a defense of his country. Music, the drama, the arts of beauty, the sports and games, have their place, but it is a secondary one, and wo to the land that puts them first.

But there is no present danger. We are a hard-working people, and, as a whole, we are willing to pay in toil the price of all the good we ask. But we are not quite convinced of the result to character which would follow if that end should be reached which we have set forth as a sociological desideratum, when two or three or four hours at most per day will be all the labor necessary for comfort, and the remainder of the day and night shall be given to pleasure and rest. We fear for the character thus enervated. And just so we fear for the future of our nation and our race if the birth-rate shall continue to decrease. Already in France it looms a danger which gives alarm to statesmen. In this country and in the more advanced and luxurious countries of Europe the number of those who decline marriage increases and the number of children to the family grows smaller and smaller. This means that possible parents are unwilling to sacrifice their own ease, too selfish to be willing to take up the burden of supplying the State with citizens, or even of filling their own places in the next generation. They say that half the children born fail to live to man's and woman's estate. That means that in order that the population may simply not dwindle all should marry and each family should have an average of four children. Then

that the population might increase it would be necessary that somewhat more than half of the children should survive to marry. There is no greater visible danger to the civilized world than that its civilization should weaken the family instinct by developing a selfish love of ease, discouraging or delaying marriage and reducing parenthood; and this especially in those families that are best able to replenish the world with worthy children. To one who looks backward to the ancestral families, and, forward to the drift of self-indulgence and luxury, this is the most ominous danger of our proud, modern civilization.

**Arbitration
Treaties** Probably there is no other nation on the face of the earth that has so much difficulty in making a treaty as has the United States. In most other countries the Executive can make a treaty, and can even do it secretly. There can be nothing secret about a treaty in which the United States is a party. First, our Executive, which has no final power, must negotiate, draw up, such a treaty as it would like with another Executive which has the power to conclude it. Then it must go to ninety-two men chosen from forty-six States, and of those two-thirds must approve it. That is a pretty difficult proposition to meet. Some years ago we sent a representative to Europe to negotiate a sheaf of commercial treaties with European countries. Our Executive approved them and gave foreign chancelleries reason to believe they would be confirmed by our Senate. But they were held up; not one was confirmed. Later than that President McKinley and Secretary Hay negotiated certain treaties of arbitration with England and other nations; but again our Senate was recalcitrant. There was a majority, but not quite two-thirds, for them. We have got a bad name as a treaty-making power. Now President Roosevelt and Secretary Root, following the recommendation of The Hague Conference and the example of England, France and other countries, have negotiated fresh arbitration treaties with the leading nations of Europe, and we need to besiege our Senate that it will at last do the decent thing and approve.

Judge Gray as Candidate

The advantages of Judge George Gray as a Democratic candidate are not small. The Democratic Committee of Lackawanna County, Pennsylvania, has unanimously presented his name. A single county might not mean much, but that is a county of mine workers, and Judge Gray was the arbitrator of their differences with the operators. He was chairman of the Anthracite Strike Commission, and is praised in the resolutions adopted as the man who "has reconciled capital and labor in the bitterest industrial war of modern times." That claim could be made a tremendous influence in favor of Judge Gray in an election. It will be forgotten that it was President Roosevelt who appointed Judge Gray to that position, but it will not be forgotten that one or two judicial decisions by Mr. Taft when Federal judge were not pleasing to labor union men, even tho the decision was undoubtedly in obedience to law. The State organization in Pennsylvania is not in favor of Mr. Bryan, and it is quite likely that in the convention Pennsylvania will go solid for Judge Gray, for the counties probably favor him. It may be too late to organize an effective opposition to Mr. Bryan, for he yet has the party of the country. Under him it would go to probable defeat, while Judge Gray might stand a fair chance of election. In those States that under legal forms suppress the votes of citizens it makes no difference who or what candidate might be presented, but in the doubtful States a supposedly conservative candidate like Judge Gray might draw off, in these panicky times, enough independent votes to elect him.

Prophets can prophesy, and for that purpose, from old Judean times, they did not need to be priests. Accordingly, under the relaxed rule of the last General Convention, certain Episcopal clergymen are arranging pulpit exchanges with certain other non-Episcopal preachers who may or may not be clergymen in the strictest ecclesiastical sense. These non-Episcopal preachers—one of them is the pastor of the Old South Congregational Church in Boston—preach, for

preaching is but a prophetic function, but the priestly part of the service is performed by one ordained by the bishop. Doubtless these courtesies will become more frequent, for Christians like to recognize each other, in spite of all the polychrome miters of Fond du Lac and the indignation of the handful of clergy and laity who met in this city last week to protest and to urge "Anglo-Roman union."

We are pleased to see in *The Christian Advocate* a communication from the Methodist missionary to the Philippine Islands, Dr. Homer C. Stuntz, showing that there is no evident reason for complaint in the award of \$363,000 damages to the Catholic Church authorities in the Philippines for rent and damage in the use of ecclesiastical buildings by the army during our occupation. The claim made was for \$2,500,000, and the "Army Board on Church Claims" spent three years in careful estimates and reduced the claim to \$363,000, and Dr. Stuntz declares that our Government has been "patient and fair."

In these times when so many men in our cities have been thrown out of employment, and when it is the slack season for farm-work, our municipal or State governments ought carefully to consider what public works can be properly provided for which shall give employment to honest men who are willing to do manual work at a living wage. Some special improvements ought to be assigned to just such a period of business depression rather than to a time when work is calling for men.

At last, after nearly four years—for such is the law's delay, the captain of the "General Slocum," which was burned in this harbor with the loss of nearly a thousand excursionists, has been finally convicted for criminal negligence. The conviction is just, but why are not the men behind this captain just as guilty? It would seem as if one man were made the scape-goat for others.

The New Policy Forms for Delivery in 1908

IN February, 1906, a conference of Governors, Attorneys-General and Insurance Commissioners of the various States and Territories was held in Chicago to consider the life insurance situation in the United States and to take steps looking toward uniform and remedial legislation thruout this country. As a result various bills were recommended, of which the first was entitled: "An act establishing standard forms of policies which *may* be issued by life insurance companies, and providing further that, if such forms are not used, certain standard provisions shall be included in all policies and certain prohibited provisions omitted, which bill further provides that all policies, before being issued, must be submitted to the Insurance Commissioner."

During the current year (1907) the States of Colorado, Illinois, Massachusetts, Michigan, Minnesota, New Jersey, North Dakota and Tennessee have past legislation following in the main the lines laid down by the committee, and, as a result, no policy may be delivered in these States after the end of the year 1907 unless it fulfills the requirements of the new laws. The New York standard policies, which are the only forms that may be delivered in the State of New York by a New York company, do not fulfill these requirements, and, as a result, new policy forms have been prepared for delivery in the above States. The new forms are an improvement on the New York standard forms, and the position of affairs at present is that a New York company must deliver in the above States better-drawn contracts than they are allowed to deliver in their home State. This condition of affairs will last until the Insurance Commissioner of the State standardizes policy forms which are acceptable to the above States.

The chief differences between the new forms and the present standard forms are as follows;

1. The policy must recite that it shall constitute the entire contract between the parties, and that it shall be incontestable after two years from its date except for non-payment of premiums; that all statements made by the insured shall, in the absence of fraud, be deemed representations and not warranties; and that no such statement shall void the policy unless it is contained in a written application and a copy of such application be endorsed upon or attached to the policy when issued.

The second provision is recited in the New York standard policy; the others form part of the insurance law, but are not so recited.

2. The loan values and the net values of the paid-up insurance or extended insurance granted in case of default in payment of premium must involve a surrender charge, *i. e.*, a deduction from the net reserve of the policy, of not more than \$25 per thousand of insurance, thus diminishing the limit of the surrender charge allowable under the New York law, which is 20 per centum of the reserve, or \$25 per thousand of insurance, whichever is the greater.

3. A reinstatement provision, which is more liberal than that in the standard policy, as the policy, unless surrendered for cash, may be reinstated within three years from date of any default in payment of premiums, while the New York policy confines the guarantee of reinstatement to the case of the first three years of the continued insurance that may be granted after three full years' premiums have been paid.

The most important of the prohibitions is, perhaps, that relating to the custom of dating policies back, as the other provisions that are prohibited are not to be found in the policies of any liberal-minded company.

It is to be hoped that the New York standard policies will soon be modified, so that the citizens of this State will no longer be discriminated against under their own laws.

FINANCIAL

New York's Bond Sale

LAST Friday's sale of \$50,000,000 of 4½ per cent. bonds was the largest ever made by the city of New York, and the results were very encouraging to all who are watching the signs of recovery from panic conditions. On September 10th, five weeks before the beginning of the panic, the city sold \$40,000,000 at an average of 102.063; the average for last week's sale will be about 104. There were 1,168 bids on Friday, against 886 in September, and the offers amounted to \$271,246,620, against \$205,000,000 five months ago. Capital seeking first-class investments is free again and available in large quantities. Bankers now predict an improving market for bonds, and railroad companies that must soon borrow or refund foresee less difficulty than was expected. Comptroller Metz even thinks of selling 4 per cent. bonds for the city next autumn at par and better. The bonds offered on Friday (which will be awarded at about 104) were quoted in the market on Saturday as high as 107.

One great syndicate (composed of J. P. Morgan & Co., the First National Bank, the National City Bank, and Harvey Fisk & Sons) submitted a bid for the entire \$50,000,000, offering 103.377 for the \$47,000,000 of fifty-year bonds and 100.377 for the \$3,000,000 whose term is ten years. It is understood that the Comptroller had been assured of the support of these powerful financial forces, and they are entitled to credit and thanks from the public for their sustaining action. It is probable that the syndicate will get no bonds (except, perhaps, a part of the short-term issue) because of the number of offers at slightly higher rates; but we notice that the Morgan house bid for \$1,250,000, and Harvey Fisk & Sons for about \$2,000,000, in behalf of customers, at varying rates, some of which will be successful. The bids above \$5,000,000 were as follows: Morgan syndicate, \$50,000,000; J. & W. Seligman & Co., \$13,500,000; Kuhn, Loeb & Co., \$12,530,000; Wilmerding, Morgan & Co., \$6,010,000; Lazard Freres, \$6,000,000; William A. Read & Co., \$5,500,000; William Salomon & Co., \$5,245,000; Speyer & Co., \$5,050,000. There were three small bids at 106, the highest figures, one of these being that

of H. W. Wilson for a bond of \$100. Offers were received from all parts of the country and from Europe. M. L. Turner, of Oklahoma, asked for \$400,000 at 102.5. A considerable part of the issue will go to Chicago, the First National Bank there taking \$1,200,000 (104.25 to 105), and the Merchants' Loan and Trust Company bidding for \$3,000,000 at prices ranging up to 104.521. The Russell Sage estate may get a small part of its \$3,000,000 bid. Substantially all of the large insurance companies, banks, trust companies and banking houses were in the list. The effect of the whole affair upon the financial and industrial situation cannot fail to be reassuring and uplifting.

... Henry A. Schenck, comptroller, was last week elected president of the Bowery Savings Bank of this city, the largest savings bank in the United States. Mr. Schenck was born in Yonkers in 1856 and educated in the public schools of Brooklyn, and after a good business experience with mercantile and banking houses became comptroller of the Bowery Savings Bank in 1898. Last December he was elected second vice-president. Mr. Schenck's eldest brother, Frederick B. Schenck, is president of the Liberty National Bank, and another brother, Edwin S. Schenck, is president of the Citizens Central National Bank. The other new officers elected were as follows: William M. Spackman, first vice-president; William A. Nash, second vice-president; William E. Knox, comptroller, and Joseph G. Liddle, secretary. Mr. Nash is president of the Corn Exchange Bank, and Mr. Knox, the new comptroller, has been connected with the Bowery Savings Bank for twenty-three years as accountant and more recently as secretary. Isaac P. Mailler continues as assistant secretary. The Bowery Savings Bank has 150,000 depositors, a surplus of seven and a half million dollars and total assets of more than \$100,000,000.

... Harvey Fisk & Sons offer to investors \$5,000,000 of the 6 per cent. secured gold notes of The Hudson Companies at 98½ and interest. The Hudson Companies is the corporation formed to build and equip the extensive new tunnel and subway system of the Hudson and Manhattan Railroad Company.

The Independent

VOL. LXIV NEW YORK, THURSDAY, FEBRUARY 27, 1908

No. 3091

Survey of the World

Mr. Roosevelt's Letter on Railroad Wages

At the beginning of last week there were reports in the daily press that a general reduction of wages was soon to be made by the railroad companies. Notices to that effect, it was asserted in dispatches from Chicago, had been received by the officers of several railway labor unions. On Tuesday evening, President Roosevelt was in conference with Chairman Knapp, of the Interstate Commerce Commission, and Charles P. Neill, Commissioner of Labor. On Wednesday he sent the following letter to the Commission and caused it to be published:

"I am informed that a number of railroad companies have served notice of a proposed reduction of wages on their employees. One of them, the Louisville & Nashville, in announcing the reduction, states that 'the drastic laws inimical to the interests of the railroads that have been enacted in the last year or two by Congress and the State Legislatures' are largely or chiefly responsible for the conditions requiring the reduction. Under such circumstances it is possible that the public soon may be confronted with serious industrial disputes. The law provides that in such case either party may demand the services of your chairman and of the Commissioner of Labor as a board of mediation and conciliation.

"These reductions in wages may be warranted or they may not. As to this, the public, which is a vitally interested party, can form no judgment without a more complete knowledge of the essential facts and real merits of the case than it now has or than it can possibly obtain from the special pleadings certain to be put forth by each side in case the dispute should bring about serious interruption to traffic.

"If the reduction in wages is due to natural causes, the loss of business being such that the burden should be, and is, equitably distributed between capitalist and wage worker, the public should know it. If it is caused by legislation, the public and Congress should know it. If it is caused by misconduct in financial or other operations of any railroad,

then everybody should know it, especially if the excuse of unfriendly legislation is advanced as a method of covering up past business misconduct by the railroad managers, or as a justification for failure to treat fairly the wage-earning employees of the company.

"An industrial conflict between a railroad corporation and its employees offers peculiar opportunities to any small number of evil-disposed persons to destroy life and property and foment public disorder. Of course, if life, property and public order are endangered, prompt and drastic measures for their protection become the first plain duty. All other issues then become subordinate to the preservation of the public peace, and the real merits of the original controversy are necessarily lost from view. This vital consideration should be kept ever in mind by all law-abiding and far-sighted members of labor organizations.

"It is sincerely to be hoped, therefore, that any wage controversy that may arise between the railroads and their employees may find a peaceful solution thru the methods of conciliation and arbitration already provided by Congress, which have proved so effective in the last year. To this end the Commission should be in a position to have available for any board of conciliation or arbitration relevant data pertaining to such carriers as may become involved in industrial disputes. Should conciliation fail to effect a settlement and arbitration be rejected, accurate information should be available to develop a properly informed public opinion.

"I therefore ask you to make such investigation, both of your records and by any other means at your command, as will enable you to furnish data concerning such conditions obtaining on the Louisville & Nashville and any other roads as may relate, directly or indirectly, to the real merits of the possibly impending controversy."

Commissioner Neill started for Chicago that night to make inquiries.

Present Rates to Be Maintained

It soon appeared that there had been no concerted movement for a reduction. Prominent officers of the Illinois Central, Atchison, Wabash and other companies said that reductions had

not been considered by their corporations. Notices which had been issued by the Chicago Great Western's receivers proved to be for a readjustment of time schedules and not for a reduction. The Seaboard Air Line receivers on the 20th ordered a reduction of salaries exceeding \$3,000, but any reduction affecting the ordinary employees was opposed by Judge Pritchard, who had appointed the receivers. President Smith, of the Louisville & Nashville, published a long statement, pointing to increases of wages in recent years, and to recent decrease of both gross and net revenue, and predicting that the reduction ordered for March 1st on his road would be accepted peacefully by the employees. Mr. Harriman remarked that "anything like this letter, which continues to stir up strife and animosity, is certain to be harmful. We can't do anything until we are able to do some financing." President Gompers, of the Federation of Labor, saw in the letter evidence that Mr. Roosevelt's sympathies were with the working people. The wages of railroad men, he added, could not stand a reduction. During the week committees representing all the railway workers' unions had been in session in several States. John Morey, a prominent member of the committee sitting in New York, said on the 23d:

"We are now satisfied that there will be no reduction. As a result of conferences with railroad officers we can now announce that the Vanderbilt and New Haven lines will continue the present wages. We are promised a continuation of them on the Harriman and the Hill lines. President Underwood promises that wages on the Erie shall not be cut. I believe that Mr. Roosevelt's letter was timely and has had a good effect."

National Politics Governor Hughes went to Chicago on the 22d and made a long address in the Auditorium before members of the Union League and their invited guests. For the first time since he became a Presidential candidate he was speaking beyond the boundaries of his own State on national questions. A part of what he said was in substance a repetition of his recent address in New York. The tone of his remarks was distinctly optimistic:

"The country is morally sound. Its standards of business were never higher. In this

land of industry, with unexampled opportunities for production and exchange, with an area and a population enjoying advantages of distribution free from artificial barriers of intercourse such as the world has never seen, the men of business inevitably represent the intelligence and moral sentiment of the people. They do not constitute a caste. They come from every walk in life; from the farm, the college, the counting room and the shop. They represent every element in the population, native and foreign born, of every degree of advantage and disadvantage in origin and environment. Every stimulus to ambition, every precept of morality, every counsel of experience, every success and every disaster, every lesson of the past and the multiform warnings of a world where truth and justice alone win lasting victories, have helped to shape their standards and to determine their aims. And making all allowance for the extremes of avarice and artifice, for the unwholesome spectacles of exploitation and infidelity to trust, without blinking any evil or glossing over any wrong, the fact remains that the business men of the country are for the most part honest men, representing fairly the moral standards of the people. And never more than to-day have they, taken as a whole, earnestly desired that abuses shall be stopped, that an end shall be put to corrupt dealings and unfair practices, that gambling shall not parade in business livery, and that American industry and trade shall have free scope for development and extension along the lines of honorable rivalry and with justice to stockholders, to employees and to the people at large."

Our people, he said, did not desire socialism even as an experiment. They did not propose to pass thru a dreadful "quarter of an hour" of revolutionary changes to satisfy themselves of those imperfections of human nature which make impossible the permanent construction of society in accordance with socialistic theory. Concerning railroads he said:

"It must be taken to be a settled policy that there shall be complete, effective and just supervision of our railroads. I do not believe in arbitrary action with regard to these important concerns either by Congress or by State Legislatures or by commissions. The railroads are not the enemies, but the servants of the people. To secure proper service they must be subject to regulation. It must be taken as firmly established that the evils of rebating and of unjust discrimination will not be tolerated and that adequate and impartial service upon reasonable terms will be insisted upon. There must be machinery thru which public obligations as defined by law may be enforced. This can best be obtained thru an administrative board, such as the Interstate Commerce Commission."

It was also essential that there should be efficient supervision of the issue of securities, to avoid the evils of inflation and

overcapitalization. Speaking of penalties, he said:

"The justification of a penalty must be found in either its punitive or its deterrent effect. In their punitive aspect penalties cannot be justified unless their incidence is just. In their deterrent aspect they cannot be justified unless they make unlikely a repetition of the offence. Fines upon corporations, particularly upon large corporations with monopolistic powers, are just from neither point of view. They are easily transferred to the public, and to the extent that they may not be, they are borne by stockholders who in large numbers are without knowledge of the wrong or power to prevent its commission. They do not satisfactorily act as a deterrent because they involve merely the payment of money, the loss of which is widely shared or may readily be repaired.

"The punishment is most salutary when visited upon the guilty individuals. Few men can be hired to go to jail. And if offences which public sentiment recognizes to be of a grave character are punished by imprisonment, the law is more likely to be obeyed and the punishment to have its intended effect."

—Steps for the formation of a new national party were taken at Chicago on the 22d, when a conference of representatives of the Independence League (Mr. Hearst's political organization) was held. A platform was adopted, and the provisional national committee (of which Mr. Hearst is chairman) was authorized to call a national convention, to be held after the Republican and Democratic nominations have been made.—Ex-Secretary Leslie M. Shaw has permitted the publication of his opinion that the election of a candidate pledged to a continuation of Mr. Roosevelt's policies would be harmful and is impracticable. Reports from Denver and other Western cities which he has recently visited show that he is opposing Secretary Taft in various ways. He says he himself is not a candidate.

Naval Affairs The battleship fleet arrived at Callao on the 20th. All the ships were in excellent condition. A most cordial reception has been given to the visitors, who are said to have been welcomed at the Peruvian port with even greater enthusiasm than was shown at Rio de Janeiro. Australia greatly desires that the fleet shall call at Melbourne or Sydney. Replying to the very earnest invitation extended by Prime Minister Deakin, Secretary Root said, on the 21st:

"The eventual movements of our fleet have

not yet been determined. While it is probable that the vessels will return by way of Suez, I would be glad if some of them could be sent by the Australian route, but it would be premature to promise this."

—In the House, last week, Mr. Lilley, of Connecticut, a member of the Committee on Naval Affairs, introduced a resolution calling for the appointment of a special committee to investigate the conduct of the Electric Boat Company in attempting to affect legislation for the purchase of submarines. In published reports of his statements to representatives of the press he severely criticises the company's methods and permits it to be inferred that, in his opinion, the action of the Naval Affairs Committee also deserves criticism. He remarks that while the committee voted for only two battleships instead of the four which the Department desired, and also cut from the list several other ships for which the Department asked that appropriations be made, it gave twice as many submarines as were called for in the Department's recommendations. The movement for an investigation has caused much bitterness of feeling. Two press correspondents have been accused in gossip relating to the controversy and an inquiry as to their conduct is to be made by the press committee.

Relations With Japan

The memorandum of the Japanese Government in reply to that of the United States was handed to Ambassador O'Brien in Tokyo on the 19th. Trustworthy reports say that in its general terms it agrees with a number of suggestions made by our Government, and provides for a further restriction of emigration by a practical prohibition so far as laborers are concerned. Japan points out that the restrictions already enforced, including the closing of emigration to Canada, Mexico and Hawaii, will make further complaints from the United States almost impossible. There is abundant evidence that the Japanese Government has been unsparing in its efforts to avoid further complications with respect to the emigration question, but it is facing a powerful opposition from the emigration companies, which are behind a proposed resolution in the Diet to censure the foreign policy of Viscount

Hayashi, Minister of Foreign Affairs, toward China, America and Canada. Should the resolution be introduced in the Diet it will probably be defeated by a narrow margin. Its passage would certainly entail the resignation of the Cabinet. Should the Cabinet be changed, the best informed Japanese believe that a new administration would closely follow the emigration policy of Minister Hayashi.—Secretary Straus reported to the President last week a notable decrease of the number of Japanese recently arriving at our ports. In January the number, for both the mainland and Hawaii, was only 971, against about 5,000 in January of last year.—Japan is disappointed because the bill pending at Washington for Government expenditures at Japan's World's Fair in 1912 appropriates only \$250,000. Viscount Kaneko points out that Japan appropriated \$360,000 for the Chicago Fair and \$400,000 for the Fair at St. Louis.—The new exclusion law passed by unanimous vote in British Columbia's Legislature, has been pronounced inoperative, so far as Japanese are concerned, by the Chief Justice of the province's Supreme Court. A test was made last week by two Japanese who entered the province from Portland, were arrested and were sentenced to pay a fine and be imprisoned for one year. Their counsel (who is said to represent the Dominion Government) applied for a writ of habeas corpus, with the result mentioned above, the Chief Justice holding that the law was in contravention of the treaty with Japan. Counsel for the province will appeal to the full court.—In a public address at Lowell, Mass., on the 19th, Secretary Taft said:

"As between Japan and the United States, my journey to Japan convinced me that there is not the slightest danger of war. Jingoes in Japan and in America are largely responsible for the war rumors that are in circulation. We are the last Government in the world with which Japan would seek war. Our historical relations and our trade relations have made Japan a very friendly nation. What under heaven do we want to fight Japan for? Should we go into a war with Japan I look to the future with alarm, because we would find it necessary to expend a vast amount of capital and become a warlike nation. And such a condition is bad for any country. Reports of war with Japan should be stamped upon at every opportunity and that is what I am trying to do."

On the same date Ambassador Reid, at the dinner of the Pilgrims in New York, remarked that there was "not the ghost of a probability of war with Japan," any more than there was of "war with Russia, Tibet or Patagonia."

Arbitration With France

The Senate in secret session ratified the new arbitration treaty with France February 19th. Secretary Root appeared before the Committee on Foreign Relations and stated that the seven countries with which arbitration treaties had been made previously had consented to change them in accordance with the wishes of the Senate. The following articles contain the gist of the treaty:

"Differences which may arise of a legal nature or relating to the interpretation of treaties existing between the two contracting parties and which it may not have been possible to settle by diplomacy shall be referred to a permanent court of arbitration established at The Hague by the convention of July 29th, 1899, provided, nevertheless, that they do not affect the vital interest, the independence or the honor of the two contracting States and do not concern the interest of third parties.

"In each individual case the high contracting parties, before appealing to the permanent court of arbitration, shall conclude a special agreement defining clearly the matter in dispute, the scope of the powers of the arbitrators and the periods to be fixed for the formation of the arbitral tribunal and the several stages of the procedure. It is understood that on the part of the United States such special agreements will be made by the President of the United States, by and with the advice and consent of the Senate, and on the part of France they will be subject to the procedure required by the constitutional laws of France."

General Stoessel Condemned

Lieutenant-General Stoessel, who has been on trial since December 10th before a military tribunal for the surrender of Port Arthur, was, on the 20th, found guilty and condemned to death. The court martial was composed of nine veteran generals appointed by the Czar, and its sessions were held in the ballroom of the Army and Navy Club. The chief evidence against him was the testimony of Lieutenant-General Smirnoff, who had been appointed by General Kuropatkin to succeed Stoessel as commandant of the peninsula when the siege began, but Stoessel suppressed the telegram to Smirnoff and remained

in command as before the war. The rivalry and dissension between the two officers continued thruout the siege, and the officers were divided into two factions, Generals Fock and Reiss siding with Stoessel. On the capture of 203-Meter Hill and Great Eagle's Nest, enabling the Japanese to bombard the harbor and town, Stoessel decided that it was impossible to hold the position any longer, and feared that if the Japanese carried the fort by storm they would massacre everybody they found, as they did when they captured it from the Chinese in 1895. Accordingly he capitulated, January 2d, 1905, surrendering over 35,000 troops, 2,000 horses and great stores of provisions and ammunition. Smirnoff, who had charge of the fortifications, protested in the council of war against the evacuation, holding that

General Stoessel, who has been condemned to death for surrendering Port Arthur to the Japanese.

the second and third lines of defense could be held for five weeks longer, and when the other officers surrendered he refused to give his parole and went to Japan as a prisoner of war. The court martial held that sentence of death must be pronounced upon General Stoessel "for surrendering the fortress before

all the means of defense had been exhausted; for failing to enforce his authority, and for military misdemeanors," but it petitioned the Czar to commute the sentence to imprisonment for ten years in a fortress, in consideration of the fact that

"Port Arthur, beset by overwhelming forces, defended itself under General Stoessel's leadership with unexampled stubbornness, and filled the world with astonishment at the heroic courage of its garrison; that several assaults had been repulsed, with tremendous losses on the part of the enemy; that General Stoessel thruout the siege had maintained the heroic courage of the defenders, and, finally, that he had taken energetic part in three campaigns."

General Fock was reprimanded for an offense against discipline. General Smirnoff was held to have done all he could

to prevent the surrender, and General Reiss was found not guilty of the charges of exaggerating the dangers of the situation in order to induce Stoessel to surrender and of sacrificing the interests of Russia in the negotiations. General Stoessel resigned from the army previous to his trial and appeared before the court in civilian dress, wearing the decorations which had been given to him for bravery in his campaigns. He assumed entire responsibility, saying: "If the court finds that the surrender was a crime I ask for the death sentence." It is felt by many in Russia that he has been made a scapegoat for a disaster due more to the bad condition of the Russian military and political system than to his personal deficiencies.

Terrorism in Russia The new régime in Finland, since the appointment of General von Boeckman as Governor, is clearing that country of the revolutionists who have hitherto used it as a basis of operations. Some have been arrested at Viborg and Helsingfors, and many others have escaped to Sweden. A daring Terrorist plot which narrowly escaped being successful has been unearthed by the secret service of the police. The plan was to assassinate Grand Duke Nicholas Nicholaievitch, second cousin of Emperor Nicholas and Commander of the Imperial Guard, and J. G. Chtcheglovitoff, the Minister of Justice, as they past thru the city on their way to the railway station where they were to take the train for Tsarko-Selo on a visit to the Emperor. According to the police report the execution of the assassination was placed in the hands of the Northern Flying Column, a branch of the Terrorist party, organized in Finland last May. At that time some \$40,000 a month was assigned for the execution of the undertaking. Over fifty arrests were made, men and women being included, most young, well dressed and supplied with money. Some of them offered resistance, and ten policemen were wounded and one was killed in making the arrests. Extensive stores of firearms and bombs were discovered in the apartments searched. One fashionably dressed woman was arrested in the

street carrying a muff in which was concealed a quantity of dynamite, while her escort wore under his belt an explosive machine; both opened fire when the police attempted to arrest them, and three of them were wounded. Grand Duke Nicholas was nominal commander of the troops in St. Petersburg, and exerted a reactionary influence on the Czar. The Minister of Justice was officially held responsible for the recent condemnation of the members of the Duma for participating in the Viborg Manifesto. An effort was made by the Monarchists to compel the members of the Duma to commit themselves to resolutions condemning terrorism similar to those which were side-tracked in the two former Dumas. The Octobrists and Constitutional Democrats, however, protested that the Duma itself was the product of revolutionary measures, and that the Government had adopted irregular and illegal methods in defense of authority, just as the revolutionists had used crime as a means to reach worthy ends. A resolution was passed that expressed its disapproval of all violent measures whether they were employed by the Government or against the Government.—The Government for the first time has discussed foreign affairs with the Committee of Imperial Defense of the Duma. The Premier, Minister of Foreign Affairs, and Minister of Finance appeared before the committee in secret session and outlined the Russian policy in Asia and Europe.

The French in Morocco

General d'Amade's troops in the interior of Morocco have had fierce fighting with the tribesmen supporting Sultan Mulai Hafid. The French losses have been heavy, and it was feared at one time that the troops would be cut off from their base of supplies at Casablanca. Mulai Hafid sent a letter to Fez boasting a "massacre of the infidels" and saying that his men are encamped on a stream "overflowing with the blood of the French." General Picquart, Minister of War, in reply to criticisms of the Opposition in the French Senate, stated that the situation was not so serious as had been reported. Additional tribes had gone over to the French and were

fighting on their side. The campaign was being conducted on the most humane lines possible, in accordance with the rules imposed by The Hague Conference. Dispensaries had been established at the military stations for the use of the natives and would be continued as civil institutions after the pacification of the country, an end which was now in sight. France would then restrict herself to organizing the police in the ports as authorized by the Algeciras Convention. Senator Gaudin de Villaine, to whom Picquart replied, had declared that the Premier ought to be impeached for violation of the Algeciras Convention, and that the Government was in the dilemma of evacuating Morocco or of conquering the country. The State Bank of Morocco has decided to advance \$500,000 to Abd-el-Aziz for the maintenance of the soldiers which have been established by the Foreign Board in the ports of Morocco. General Marina, Governor of Melilla, a Spanish port in Morocco, has sent an expedition to occupy the Moroccan town of Marchica. It is explained in Madrid that this measure was necessary for the protection of Melilla, on account of the withdrawal of the Sultan's forces, and does not indicate the adoption of an aggressive policy.

The Turkish Situation

The news of the week has consisted mostly of official contradictions of the alarming rumors of last week. Turkey denies having mobilized troops on the northeastern frontier to threaten Russia, and insists that the activity in Persia was merely for the purpose of repressing the disorderly Kurds. The Russian Government has announced that the reports of mobilizing and dispatching troops to the Turkish frontier or concentrating them in the Caucasus were altogether untrue, and that there is no reason to apprehend a war with Turkey. Baron von Aehrenthal, the Austro-Hungarian Foreign Minister, explains that his project for constructing the railroad thru the province of Novibazar was purely economic and not political, and that he was entirely innocent of any intention of disturbing the peaceful relations of the Powers in regard to Turkey. Berlin regards it as absurd to see in the project any po-

litical significance or animosity toward Russia or any other nation. In spite of these attempts to minimize the importance of the measure, it continues to be the subject of discussion in Russian, British and French newspapers, chiefly in regard to the effect it will have upon the Triple Alliance. When the matter was first broached by Baron von Aehrenthal before the Austro-Hungarian delegation, Count Dzieduszycki, ex-Minister for Galicia, made some pertinent inquiries as to the scope of the Triple Alliance. The number of Great Powers he said had been increased, and it was conceivable that Austria-Hungary might be compelled to send her excellent and glorious fleet to probable perdition in the Pacific in case of war between Japan and the United States. If Germany were to side with the United States and England with Japan, would Austria-Hungary be compelled to join Germany? Baron von Aehrenthal in his reply said that the Dreibund was formed nearly thirty years ago in order to maintain European peace and equilibrium by guaranteeing the territory of all its members. Its provisions had never been published, but it left its members free to advocate their own specific interests outside this important sphere. It had nothing to do with transoceanic enterprises. "In Europe also, he said, "there are questions which do not touch us. If, for example, Germany should have a special interest in the Baltic or in the North Sea, and complications should arise there our engagements would not be affected thereby." Austrian opinion differs in regard to the railroad from the Danube to the Adriatic, which, it is suggested, Russia may claim as compensation for its Austrian concession. The official organs profess to regard it with favor as another effort for promoting tranquillity in Turkey and the development of the country. But the unofficial press denounces it as a purely political measure intended as a direct blow at Austria-Hungary and an invasion of her rights. This second line, starting from Raduievatz on the Danube, and running to Dulcigno on the Adriatic, would serve as a direct outlet to the sea, for Russia has established a line of steamers from Odessa to the Servian bank of the Danube. It would also open

up the interior of Turkey and of the Balkan States to the commerce of Italy and France, and since it crosses the Novibazar railroad, promoted by Austria-Hungary, it would deprive that line of its profits and importance. The cost of this railroad is estimated at \$20,000,000, and the Russian Foreign Office declares it has no money for the project which the Paris press has ascribed to it.

The Open Door in Manchuria

The Paris and London papers published simultaneously reports from their correspondents in the United States that President Roosevelt is about to confer with the Powers with a view of making a joint protest against the policy adopted by Japan in Manchuria of favoring her own commerce to the disadvantage of that of the other nations. Secretary Hay insisted on the maintenance of the "open door" in Manchuria before the Russo-Japanese War, and secured the assent of China and the adhesion of the other Powers to this plan. In how far the Japanese, since they have obtained the control of Manchuria, have violated that agreement it would be difficult to determine, but all governments have received complaints from their commercial representatives there of unjust discrimination by railroad rates, customs regulations and other measures, resulting in considerable loss of trade. It is authoritatively denied from Washington and London that any diplomatic notes have been exchanged in regard to the matter. The cancellation of the British contract for the extension of the Chinese Imperial Railroad in Southern Manchuria, in compliance with the desire of Japan, has caused some irritation to British commercial interests. The Chinese railroad from Peking ends at Hsin-min-tung, 35 miles west of Mukden. To connect this point with Takumen, 50 miles distant, the contract was let by the Chinese Government to a British firm, but Japan refused to permit the construction of the road on the ground that the agreement between China and Japan in 1906 prohibited the construction of any main line which should in any way be in competition with the Southern Manchurian Railroad or any branch which should interfere with it.

Frederik Van Eeden

DR. VAN EEDEN, of Holland—poet, scientist and merchant, and threefold revolutionist—will shortly be in America. He will address the Civic Forum in New York on March 8th, and will spend three weeks in New York and Boston, returning afterward to Holland. His subject before the Civic Forum at Carnegie Hall will be: "Work and Bread; or Practical Communism and What It Has Taught Me."

Frederik Van Eeden, in his versatility, his quality of dauntless enthusiasm and effective idealism, may, without sentimentality, be called the admirable Chrichton of contemporary Europe. Now barely in his forty-eighth year, and almost inspiringly juvenile in spirit, he looks back as a distant memory on a literary revolution of which he was one of three prime movers. Twenty years ago—and even then his distinctly revolutionary work in letters was almost done. He established the first clinic of abnormal psychology in Holland, and stood with Van Renterghem, Janet and Binet, as the index of a new field in medicine. He bridged the '90s with a voluminous output in practically every department of literature; drama, epic and lyrical poetry, symbolic romance, the propaganda of social reform and studies in experimental psychology. He proved the qualities, and the defects of the qualities, of the Dutch tongue, whose very flexibility and extraordinary richness have made it the most

difficult of languages to translate adequately, so that for all his versatility Van Eeden has moved in a comparatively narrow circle, and outside of strictly scientific circles has remained little-known except in Holland and Germany.

In the meantime the literary revolution in which he had worked with Kloös and Van Deyssel, while yet in his early twenties, had thoroly permeated Holland.

Historically this revolution could be classed with the romantic movements of England and France as led by Wordsworth and Hugo. It progressed more rapidly, was more composite, and traversed the romantic stage more swiftly, because Holland was smaller and the times were more modern. It was a breach with conventional mediocrity, a literature of feeling, a quest for the voluptuousness of words, a rediscovery of the beauty of common speech; and it exhibited on one and the same page a Zolaesque

realism and a cloudy and splendid idealism.

In Van Eeden, the movement was richer still. To the leavening salt of a career in laboratory science was added the disposition of a practical man. And so it was that Van Eeden became identified with practical communism, founded a great co-operative enterprise, and elaborated the theory of Christian and Economic Socialism which he throws out vividly and brilliantly as the antithesis of Marxian socialism. Kloös and Van

Deyssel have founded schools of literature, and as representatives of a crystallized revolutionary movement have become themselves classical. Van Eeden, all the time producing voluminously in letters, and constantly evolving, has been swept into the great stream of social experimentation which unites Holland with Europe.

This development he describes in the following article which he has written for THE INDEPENDENT, and it

needs to be added that Walden, Van Eeden's communistic colony—named from his admiration for Thoreau—and The Union, his great co-operative store which ramifies over Holland, are still in existence, still operate along their original lines, and for all their vicissitudes are better grounded than ever before.

Dr. Van Eeden speaks perfect English. Two of his books, "The Quest" and "The Depths of Deliverance," have been translated into English.

Some Experience With the People

BY FREDERIK VAN EEDEN

WHEN THE INDEPENDENT asked me to give the story of my experiences in life and in social work I refused at first, fearing the delicate conflicts, unavoidable in an autobiography, between truthfulness and self-respect or modesty. I wished rather somebody else to do it.

But after reading that most interesting serial of "Undistinguished Americans," published originally in THE INDEPENDENT, I felt I could comply with the editor's wish, if I were allowed to write and be read in the spirit of these stories. I do not belong to the class of "Undistinguished Americans," as this is not a matter of choice. But I can try to relate the principal facts as briefly, as simply and as plainly as they did, in order to add to that valuable collection of "*documents humains*" one specimen of no less than the average value. It will be then a Plain Tale from a Flat Country, and the editor may even add to it, by leaving my own English uncorrected,* somewhat of the exotic flavor which seems delectable to pure American nostrils; as shown in the instance of that worthy and in my eyes highly distinguished "Japanese Servant."

The special interest of my story lies in what Americans will very probably call its perversity. It is indeed in many respects the ordinary Undistinguished

American's story, turned upside down. The typical Undistinguished American spends his youth in some romantic place, on the slopes of the Libanon, the borders of the Ilyssus, the steppe or the puszta, in rural semi-civilization, and by energy, pluck, thrift and hard work brings it to an account of three figures and more on an American bank and dancing parties at Coney Island.

Whereas my life began as unromantic and as commonplace as that of any child of the well-to-do upper middle-class in a well-ordered town of my highly civilized fatherland—and I succeeded, after many years of painful effort, to acquire something of the Bohemian freedom, and to get the account of three figures—and more, alas!—on the wrong leaf of my bank book.

I do not boast of this. By dint of this same hard experience I have learned to appreciate the accumulative instinct, so wonderfully developed in distinguished Americans, and so effectually nursed in the undistinguished ones.

But my great-grandfather was a business man, a bulb grower of Haarlem, Holland; his son, my grandfather, still grew bulbs, but used in his leisure hours to sit among his dear flowers, smoking and dreaming and making dramas and poems—by and by supplanting the accumulative by the poetical and reflective instinct, as he could afford to do so; and my own father grew up to hate anything

*We have not needed to correct the English.—Editor.

like business, sold the bulb gardens straightway, as soon as he came of age, and took to the wild flowers, which he exalted at the cost of their cultivated sisters—becoming a botanist, a poet and a philosopher.

What could be expected from me, in the way of accumulation, with a pedigree like this? Looking back from my point of view on the scale of culture in my own family, I saw money-making at its lowest steps. What could any return to it mean for me but a lowering and shameful retrogression and degradation? I cared for poetry, for music, for painting, for science and philosophy, for anything romantic and beautiful, but not a straw for money.

Yet I remember a curious atavistic revival of the mercantile instinct in my early years. I wanted to go and see London when I was about fifteen years, and my parents would not give me the money. Urged by my keen desire to go, I started at once a little soap trade, buying the toilet soap from a manufactory in the neighborhood and selling it to relations and friends. In a few months I had saved about \$30, and went to see London. But after the achievement of my desire the soap trade was dropped, and this fit of thrift never repeated itself.

When people asked me what would be my career when grown up, I used to say with great decision, "A poet and a painter," even before I was ten years old. Yet there were no instances of such extravagance in my own family who could have stimulated me by their example, my father having an official position as a museum director and using only his spare hours for scientific and literary work. In Holland the outlook for an artist, especially a literary artist, is not very glorious, and the idea of a merely artistic career did not appeal to my parents, nor was my self-confidence sufficient to overcome their doubts.

So it was settled that I should become a medical student. To me, the modest offspring of merchants and bulb growers, this was indeed quite satisfying.

The plan agreed not only with my love for the natural sciences which was very strong, but also with a certain apprehension, a hidden misgiving, I might say, that a man ought to do something more useful, more real, more

serviceable, to the benefit of mankind, than spend his time in seeking for rhymes, filling canvases with fine colors, or inventing the stories of people who never existed.

This apprehension, the erroneousness whereof became only fully apparent to me in the ripper years of manhood, was strongly fostered by the influence of that remarkable man who called himself Multatuli, and whose writings had such great power on the young Holland of my time.

Yet, to do myself justice, I am bound to say that my poetical vocation was too strong to submit practically to Multatulan theories. I even belonged to the foremen of a younger generation who stood up for the good right of poetship, by theory and practice, and on that point I had a rather sharp debate in letters, published afterward, with the haughty master himself.

So I studied medicine, but I did not give up poetry. And thru all of my rather varied occupations I continued steadily, and without interruption, to write verse, drama, novels and essays. About all these productions I will not mention a word in this Plain Tale. That is quite another story, nothing of the sort is done by one of the Undistinguished Americans. So I pray the kind reader to imagine with all that is coming next, an under-current—or rather a super-current—of poetical and scientific effusion.

In the stream of my practical life this was like some safe and elevated rock, to which I could climb at every quiet hour and see below how things were going with me and what could be their meaning. I dare say that without that refuge I should have been drowned long ago and this "*document humain*" had surely never been written.

But, on the other hand, and this is perhaps of greater philosophical importance, that poetical and reflective super-current was constantly fed by the stream of practical life.

So much so that I never could understand how any poet could go on working and producing, without a busy practical life that furnished him with experience, knowledge and ideas, and by which his fancies were corrected and his imagination kept in touch with reality. Was not Sophocles best known as a soldier, and

were Dante and Goethe not statesmen? And is not a poet without a practical and useful life, like a bulb flowering without any fertile soil to root in? But I must stick to the model of the Undistinguished, and not digress.

The two first years of medical practice as a village doctor were very commonplace, and I am sorry to say, very dull. I was prosperous in every respect, had no cares, a happy home-life, no want of money and the Dutch equivalent of the dancing parties at Coney Island. And yet I felt very miserable. Here the perversity comes in. I am afraid this must shock the feelings of the Americans and of my worthy medical colleges very much, and they are bound to think me an ungrateful fool, flying into the face of a benevolent divinity, but it is the truth that I felt hopelessly unhappy in the midst of what the greater majority of mankind would consider and thankfully accept as unclouded happiness.

At the first occasion I broke loose and jumped at something a little more out of the common way of prosperity. I went to Paris and Nancy and studied hypnosis and suggestion. Having seen their great importance as psychical agents and conceived the possibility of a therapeutical treatment entirely based on a methodical and scientific use of these yet nearly unstudied forces, I started with my college chum, Dr. Van Renterghem, the first clinic for psycho-therapeutics in Holland.

In this enterprise I was still more fortunate than in my initial practice. The stream of patients increased daily for years and I had more money than I wanted. But the accumulative instinct seemed entirely lost and I did not care to save. I even hated the idea of money-making in connection with an activity of what I felt my natural instinct to help, to relieve, to do good.

I felt ashamed to ask fees when I had relieved the suffering of some poor human, and I left the financial part of the business gladly to my more practical companion. The same repulsion did I feel in taking money for my verse and books. Both loving help and beautiful art I wanted to give freely, for the pleasure of giving only, like the bird gives its song and the flower its fragrance.

And this repulsion, strengthened by a careless security about money, the want of which I had never known, ended in a second outburst and a more serious one of what an American would call perversity.

I gave up the remunerative practice and clinic at Amsterdam, leaving it entirely to my companion, who succeeded to make it as renowned and prosperous as it is at the time of this writing—and I retired to my country home, devoting myself to art and to the free exertion of my powers to help and to relieve, just as I thought desirable and felt inclined to, without any financial consideration.

Yet these years of psycho-therapeutical practice meant for me a real increase of that inward prosperity, that soul-satisfaction, for which I cared most.

In the first place because they were years of keen fight. We had to struggle against the strong prejudices of the multitude, and against the orthodox doctrines of that most conservative science, the medical science. We had to defend our reputation as scientific men, and the good right of our new method against the imputations of a cautious and distrustful public, and against the angry attacks and sneers of our unbelieving colleagues.

This was stimulating and invigorating. And in the second place they were years of immensely enlarged experience of human nature and human suffering. I began to get a truer insight into the really pitiful and appalling condition of a great part, if not the greater part of the present human race, and to realize the bitter truth, so easily overlooked by the prosperous and the strenuous, that out of a hundred individuals hardly one or two come to a full and healthy development of mind and body. Yea, if we ask something more—if we ask how many succeed in bringing to full bloom their finer and higher latent qualities, how many realize the high aim of reality, of beauty and blessedness, to which they feel in their inward souls themselves born—we come to a far sadder number. I dare say not one in a million reaches that.

This turned my attention to social conditions and to the defective structure of our community. I studied sociology, wrote essays and gave lectures on the subject.

What I said in them, I won't repeat here. That again is another story—a story told so often before a public who listened eagerly, applauded heartily and forgot all about it when they left the room, that I feel rather tired of it. Yet I think I should like to tell it to an American audience, if only to see if the effect will be quite the same.

But I got it into my head, turned as it was by our most deplorable Christian doctrines, that one ought to practise what he preaches. So I resolved to start, on a small scale, a community, whose members tried to find existence in a better way. I sought for some people to join me and to help me, and bought a property of some thirty acres, with a few houses on it—in the neighborhood of the place where I lived.

I readily agree that, seen in the light of history, my undertaking had all the appearance of a very foolish, naïve and clumsy one. Yet I must do myself justice once more. I knew perfectly well the history of the different attempts of the same kind in America and elsewhere. The harm done to me by those ever-preached and never-practised Christian doctrines went not so deep as it did in that venerable but misguided prophet Tolstoy. I never was a Tolstoyan, how often people may have called me so. Nor was I a Ruskinian, how great my admiration for that splendid genius might be. I did not believe in non-resistance, nor did I reject the aid of machinery in the struggle for existence. And the name "Walden," given to my settlement, only proved that I admired Thoreau as an author, not that I shared all his views.

But first of all I wanted to *know*, to learn by my own experience, what was practicable and what not. And nobody could take it out of my head—and surely nobody can do it any more now—that something can be attained by intelligent endeavor to reconstruct the social organization in a more practical and better-working way.

So I had no dogmas, no illusions, no preconceived theories at all. My only aim was clearly and simply, to find a living without falling into the abuses and faults of present social organization.

But alas!—tho I myself was neither the fool nor the fanatic that I seemed to

be, this could not be said of the people who came to my aid and wanted to join me. And I was sorely handicapped by my uncertain position as a poet and a somewhat eccentric physician, having no relation at all in the world of business, and a total want of experience in the selection of people for business purposes.

My colony, as it was generally called, was started in 1899, and came to an end in the year of this writing, but not by its own fault, as I shall presently relate.

The briefness of the Undistinguished model forbids me to enter into full details. They are apparently very much like those of other experiments of the kind. A number of fanatics, semi-cranks, useless or ship-wrecked people, artists who saw only the artistic side of the case, sentimentalists who wanted to go "back to nature," egoists who sought for a cheap and safe refuge, theorists who wanted everything to go along their preconceived lines, well-meaning workers who were not aware of their incapacity—all these people flocked unto me, not to speak of the journalists and the sneering and indiscreetly curious outsiders. The strangest rumors began to spread, among which the story that I had quite gone off my head and lived stark-naked under the ground belonged to the relatively innocent ones. For years my gossip-loving little country amused itself at my cost.

My only part in these difficult years was this: to look out for good workers, to send away the incapable, to try everything that could make the settlement self-supporting. I set down no rules, left the colonists as much as I could to arrange matters among themselves—as became the experimental character of the enterprise—and kept prudently the proprietorship in my own hands. Which, of course, procured me the name of tyrant, deceiver, parasite and so on, by those whom I obliged to leave.

For about five or six years the thing went on in this way, slowly improving. I had destined the revenues of my literary work, amounting to about \$600 a year, as a supply to keep the business going. I had raised no capital, had to pay no rent, and felt in this way pretty safe whatever might happen. By and by a small bakery started on the settlement

in 1902 began to prosper, our whole-meal bread got a good reputation and was sold in the village and all over the country, and, in 1905, the whole concern, principally by market-gardening and bakery, could be called fairly self-supporting. If I had stuck to it, and gone on in the same patient way, it would be now a fine and prosperous business, with net profits of several thousands a year.

But this was not what I had been aiming at or working for, to become a successful baker and market-gardener. This would have been no great improvement on my bulb-growing ancestors.

From the very first I wanted to find the practicable form of social organization that would *spread*. I did not at all aim at the personal satisfaction of living in secluded and cloister-like happiness and purity. I wanted the device that could make an organization grow, grow constantly and infinitely, steadily improving, and enabling at least every well-meaning and able-bodied worker to join it.

In 1902 I had started a society called "The Society for the Common Possession of the Land," with the clear and simple purpose to form a self-supporting organization of workers, who should do, what the political state was obviously unable or unwilling to do, i. e., to keep land and means of production in common possession and to exclude the abuse of parasitism. I wanted this society to do what I had done privately already, try by experiment what was practical and effective in order to realize its purpose.

This society still exists, and its work has been highly beneficial, in my view, principally by showing what was unpractical and impossible, in this way correcting the errors of the mass and the untested assertions of the platform socialists.

I had got a good deal of instruction myself, but not enough. I had lent a hand in all labors on my settlement, and thus experienced the difficulties of earning a living, of selecting good workers, of organizing even a small group of laborers, of making even such a tiny business prosperous and self-supporting.

But the usual presumption of platform socialists is that the workers ought to

take all business, and therewith their liberation from wage-slavery, into their own hands. I didn't accept this for granted, as most socialist workers do, but I wanted eagerly to give them a fair trial.

So I encouraged as much as possible the independent action of the workers, but, in fact, with very poor results. It became clear to me, dreadfully clear, indeed, that with one good manager at the start, with full autocratic power, a better result for all the workers would have been reached than now in five or six years of endless difficulties and tribulations. And at the end, as the concern had grown, and included a dozen families and some fifty persons, it became clear to all that a manager in some form or another was absolutely wanted. After much palavering and discussion the workers came to an agreement that they would submit to the direction of a capable manager. For most of them this meant the collapse of dearly cherished illusions, sown in their minds by socialist, Tolstoyan and other orators, who obviously never dreamt what their doctrines would mean when tried in hard earnest. At last the manager came, a really capable and tactful man, not at all an oppressor, but a declared friend of the workmen, with rather idealistic even anarchistic tendencies and opinions, a well-known speaker at socialistic meetings. But lo!—tho his demands as to his salary were as modest as could be, the workers would not allow him more than the average wages they all got thus far. They received him in such an unfriendly and uncompromising way that he felt himself unable to deal with the difficulties and left the same day.

This was too much for me, and I could offer them only this alternative, to accept the manager or to clear the premises.

The greater part, more heedful of the advice of some of their comrades than of mine and quite indifferent to what became of me and the concern which had cost me so many troubles and sacrifices, chose the latter.

They left Walden and started a new competing business in the immediate neighborhood, taking the customers with them and leaving me alone with a large,

expensive, recently built installation with electric power and machinery—without workers and without customers.

This was a heavy blow to the business, but it could have been easily overcome, if something far more serious had not happened at the same time, something of my own doing, but not immediately connected with "Walden."

From the very beginning of my experiments I had conceived that a body of workers, in order to become independent and self-supporting, must embrace as many different branches of business and produce as many different articles of utility as is compatible with their capacities and with the demands of modern production and competition. The great question of which I had to seek the solution was: what branches of industry or agriculture were the most promising to begin with, and what combinations of different professions were possible to make a strong and self-supporting whole.

Therefore I had not only started a market-garden and a bakery, but also bought a farm of some sixty acres, a few miles distant from Walden, with the aim of making it a dairy farm, or an extension of the market-gardening, according to circumstances. It turned out in the following years to be of best use as a dairy farm, the milk and butter serving for the baking.

But next to this—which thus far had nothing dangerous in it, and would have turned out all right by this time—I took a new and important step—most promising in the onset, but proving in the end fatal to all that I had done.

In March, 1903, the peace of Holland was disturbed by a great railway strike. The strike had begun with a very successful stroke in January, which caused the Government to make in all haste a law against railway strikers. Then came a repetition in March, ending in a general strike of all trades, but failing thoroughly. The Government, taken unawares at the first stroke, was well prepared at the second, and the organization of the strikers proved to be in utterly incapable hands, or, rather, in consequence of the anarchistic tendencies prevailing in Holland among the working classes, in no hands at all.

In a few days all was over, and more

than two thousand families were locked out, breadless, victims of the vengeance of the embittered railway companies.

I had taken an active part in the movement and stood at the side of the strikers, who surely had very serious reasons for complaint, and who, after the modest use of their good hit in January, had won the sympathies of a great part of the people.

After the defeat I did what I could for the victims, the innocent wives and children, for whose miserable fate I held myself partly responsible. After some quite unsuccessful steps at the railway company board and the Government itself, I constituted a commission of assistance for the unemployed.

In this commission I acted as follows: A body of agents was organized out of the locked-out themselves, who went on a daily round in the different quarters of Amsterdam with a subscription list to collect the names and contributors who would pay a few pence a week for a year to come. I held some speeches in different places and succeeded in getting a list of 4,000 names of contributors, who procured us about 400 guilders, or \$160 a week. Not much for the dreadful want, but at least something. After a year the supplies ran short, and, there being still hundreds of families in dire need, we had to seek for new devices. Then it occurred to me that here was an occasion to extend my co-operation scheme in a most effective manner. I wanted to turn these 4,000 contributors into customers of my productive co-operation, and the unemployed into distributive co-operators, thus helping them and helping society, the commonwealth, at the same time.

So I told the contributors that if they would go on paying their weekly contribution they would be provided with stamps equivalent to the money they had given, and after a time, when their contributions had reached a certain amount, they would be able to get their money back in the form of goods, pieces of furniture, clothes and the like. I hired a shop in Amsterdam, filled it with different goods, and used the locked-out as shop attendants, money collectors, clerks and so on.

This scheme was not quite new, but often practised in Amsterdam under the

name of "*saving-cassa*," mostly by swindlers, who used to disappear after a few months of collecting, forgetting the distributing part of the business.

When it was taken up by myself, who was well known and trusted by the laboring classes, the success was far beyond my expectation.

The rush of contributors was so great that I could hardly master the administrative part with my inexperienced staff of clerks and attendants, recruited out of railway guards, engine drivers, street cleaners and the like.

In less than a year I had a list of 40,000 contributors and a weekly amount of more than \$1,500 coming in.

This unexpected success, with all its consequences of difficulties for which I was unprepared, proved to be the cause of my ruin. I could not in a year's time develop the business capacities necessary to manage a huge concern like this enterprise was going to become. I was quite aware of that, and never hoped to turn into a commercial genius at a moment's notice. But I could not, what was worse, find in so short a time the right people to come to my aid.

It is easy to say now, after the defeat, what would have given me the victory. I know it only too well myself. At Walden I had nearly gained the day, because the concern grew so slowly and I proceeded so timidly and carefully that there was ample time to correct every blunder and to recover from every mishap caused by bad rule or incapacity.

If I had taken care, in this co-operation at Amsterdam, to repress with all my might a too rapid growth, to restrain the extension at any cost I would have been able to guide the experimental ship and to pilot it slowly into safe waters. But exactly for this moderation the difficulties were so extreme that I have reason to doubt whether even an experienced business man would have succeeded in mastering them.

I had a number of about 200 employees in a business started about a year ago, and begun with only a few thousand dollars as outlay. Every one of them worked for extension, tried to bring new customers, hoping to bring more locked-out fellow workers into employment. I had 40,000 customers wanting to be

served with all different kinds of goods, just as cheap and as well as in any other shop of old renown and long standing. The very rare old hands at business, who were in the concern, or who advised me, urged on to extension, as standstill meant going backward. And very soon the financial conditions became such that there seemed no choice between constant growth at a quick rate or speedy ruin.

After the first year the losses amounted to about \$12,000, and I was still looking in vain for the right man to help me. The old hands whose incapacity had become obvious had left, or were obliged to leave. And to get new ones raised a peculiar difficulty quite unusual in ordinary business. All my men were socialists, fed by that most unsocialistic of all sentiments, the *feeling of class*, and by the theory of *class struggle*. They trusted in me, but in me alone, not in any man whom I recommended, and hardly in each other.

So when I found, or thought I had found, some promising young man as business manager, I immediately encountered a dumb, mute, but obstinate resistance against the "outsider." The workers wanted me as leader, director, manager, all in one, which I never wished and never intended to be. And this suicidal resistance repeated itself each time when I introduced some new man on whose capacity I built my only hope for the whole matter. These old strikers, experienced in labor meetings and strike tactics, used this experience against me as soon as they believed their own insight better than mine. At the same time not loosening their hold on me, and entreating me passionately not to leave them, as their fate still depended on my name in connection with the business, and on my financial help.

The second year the number of contributors amounted to some 70,000, but the weekly revenues did not increase at the same rate.

There were four shops now in Amsterdam and two others in The Hague and Rotterdam, and agencies all over the country.

We sold all sorts of furniture, manufactured goods, fuel, earthenware, shoes, kerosene oil, etc.

At the end of this second year the loss

was reduced to \$6,000 according to the balance, but I did not trust it, as the stock-taking was done very imperfectly. I gathered the men and told them that there had to be an end of this, and that I left them no choice between an absolute and strict rule, just as despotic and autocratic as that in any other business of the same extent, as the only way to put an end to theft—and disorder—or my immediate leave and consequently the ruin of all.

They submitted unanimously, putting the whole business and their fate meekly into my hands.

At this time, it is my firm conviction, the whole business could have been saved. I had lost some \$20,000 but I had more than twice that sum in reserve, my personal wants being small, and Walden being only very slightly mortgaged.

Then I put the whole affair into the hands of a young man, whom I had learned to know as extremely energetic and accurate, with an unlimited capacity for work, and a good deal of business experience. But he had also, as I learned too late, an immense amount of self-confidence. He was my personal friend, entirely devoted to my cause, ready, if wanted, to sacrifice himself in my behalf. Indeed, as I am aware now, too much of a Christian to be a good business man, too trustful in his fellow-men, too much imbued with the sentiment that it is better to be deceived than deceiver.

He entreated me to leave my unbearable post and go to my literary work. I only too readily complied, went to Germany and wrote what I think to be a very good drama. But this drama cost me \$100,000.

I come to the end of my tale. Allow me, dear reader, to make it short. When I came back from Germany, cheerfully caressing the finished manuscript in my pocket, my new business-manager came to meet me with the glorious news that he had bought up a competing firm, started half a year ago on our own lines, by the old hands who had left us and wanted to run us down by our own methods. They had meekly come to him and surrendered. He had treated them magnanimously and bought them up at the fair price of \$20,000, one-fifth cash down.

Now, magnanimity is a very fine thing. But this is what it comes to in business. The sell proved afterward to be not worth a penny.

After that, a grand new shop was opened, the number of money collectors was doubled, a number of special tradesmen engaged at high salaries. They were not limited in their buying, as men of their standing ought to act independently, and be trusted. We were now on real business lines.

I need not add much more. By the time I had finished my second drama a gathering of creditors became necessary in which the hopeless financial position of the business came to the light. After a painful struggle of a few months, in which all my property became over-mortgaged and the fortune of generous members of my family drawn into the whirlpool, the final crash came, leaving the different branches of the business in the hands of shrewder people, the employees under the old capitalistic rule, and myself worse than penniless, a wiser and a sadder man.

A peculiar and very ominous difficulty presented itself in the failure of this business, as there were, besides the big creditors, about 70,000 small ones, mostly poor people, who had been giving their pence in trust on my name and person. They could not be treated as ordinary creditors, and I had to pay them out, all of them, at my own cost. And then came the unpleasant surprise, that used stamps had been brought into circulation again, by some thievish clerk—to the amount of \$8,000—which I had to pay too.

Exactly in this critical time came the event of the emigration from Walden, leaving that concern worthless, even expensive for the time, and that gave the *coup de grâce*.

At the date of this writing all my property went into public sale, with extremely bad results, as Holland had just undergone an unprecedented bleeding, losing half a milliard in Russian and American speculation; and distrust is general and money very scarce all over the country.

I believe I am justified in saying that tho I have by no means occasion to be proud of my blunders neither have I reason to be ashamed of them, as I sacrificed whatever I had for the benefit of

my country and the common good. Tho the details of my experiment are morally extremely painful, the whole effect on me is no worse than that of a private excursion to some unknown country or to the North Pole, a thing which surely costs not less, and leaves not more tangible results.

Nobody will wonder that what most people would feel as a terrible misfortune, what has driven many to despair or suicide, is, in weaker moments, felt by me as a misfortune indeed! But there are other moments wherein I feel the ennobling power of hard experience, the elevation thru the wisdom got by it, the consolation that I can make it fruitful to others.

And in my new Bohemian career, obliged as I am to defend my bare existence against the grasp of relentless

creditors, I have found friends everywhere abroad, who relieve my difficult position by their kind hospitality—tho I am sorry to say, least of all under my own countrymen, from whom I could expect it first, and after my own perhaps naïve opinion, from whom I should deserve it most.

But this kindness from foreign friends, made by my writings without my knowing it—and the aforesaid considerations in my best moments, will enable me to work on hopefully, use my dearly bought wisdom for the general benefit during the rest of my life, and face the future with a calm and cheerful mind.

Look not mournfully into the Past, it comes not back again.

Wisely improve the Present, it is thine.

Go forth to meet the shadowy Future with a wise and manly heart.

—Wordsworth.

BLOEMENDAAL, HOLLAND.

The Aldrich Currency Bill

BY CHARLES H. TREAT

TREASURER OF THE UNITED STATES

THE Aldrich bill, which is now before the Senate and purposes to supply additional currency to move the annual crops of the country and to provide for panic conditions of the future, is attracting widespread attention.

Of course, those who are opposed to a bond-secured currency see but little if any merit in the proposition; but for those who believe that the national banking system has not only been safe as regards the bill holder and the depositor, but has served a better purpose than any other currency, this bill has awakened renewed hope that the national banking system may be so modified and perfected that their expectation of securing an elastic and safe currency may be realized.

The main provisions of the Aldrich bill are the permission to issue \$250,000,000 of additional currency under the following conditions: Any national bank that has a capital of not less than \$100,000 and \$20,000 surplus, that has invested 50

per cent. of its capital in United States bonds, may apply to the Comptroller of the Currency for additional currency as its proportionate share, on the deposit of State, county, municipal and railroad bonds, against which collateral there will be 75 per cent. of its market value issued to the applying bank at a rate of 6 per cent. per annum. This is in addition to the regular cost of currency that the national banks now pay, which would make the total rate about 8.66 per cent. per annum. This tax, it is expected, would be high enough to drive out of circulation all the additional currency when it ceased to be used for the purposes named.

It is believed among thoughtful men of finance that there should be some important modifications to this bill that would make it more effective to meet all 'round conditions. The use of railroad bonds should be restricted to a fractional amount of the security, not exceeding

one-third; otherwise it would open the gate for the acceptance of other bonds, industrial, collateral, real estate, etc. It is believed by many that no bond issue should be behind a currency circulation that has not a Government power of taxation. Once we depart from this line, we are on an uncharted sea. Some think that the acceptance of railroad bonds would increase foreign demand, as their acceptance in part by the United States as collateral security for bank note circulation would show our confidence in the solvency of such securities; but even if railroad bonds be not accepted in part, there is ample security in State and municipal bonds that have an aggregate value of more than \$1,800,000,000, not including cities of less than 20,000 inhabitants.

It is contended that there should not be so large an advance of currency as 75 per cent. of the market value of securities. This is considered excessive in the light of the fact that the price of Government bonds should be safeguarded so that a larger proportionate issue of currency on bonds other than Government would not be permitted. For instance, a Government bond carries 2 per cent. interest, not including the premium cost. A State bond at 3 per cent. interest should not carry a larger advance of currency on its security than two-thirds that of the Government; otherwise it would be for the interest of the banks to retire a portion of their Government bonds and invest in State and municipal bonds, which might bear a rate of 3 per cent or 4 per cent., which could be utilized for a period of six months in the year, the banks getting more satisfactory returns than by continuing the use of Government 2s as collateral. The banks have already a very large amount invested in Government bonds, and it would be unjust to them to permit more favorable terms in the issuance of currency than is given the 2 per cent. bonds, otherwise a depreciation in their price might follow.

Again, it would seem that there should be a definite time to retire this emergency currency; otherwise a large portion of it might remain out as a permanent inflation of the currency. It should certainly all be retired within a period not exceeding six months, so that the same accommodation might be renewed at every recurring autumnal season for moving the

crops. If not paid at maturity, the bank should be taxed at least 1 to 2 per cent. per month until its amount of emergency circulation be retired. This would insure real elasticity.

It is feared by many that while in the great centers of business 6 per cent. is a rate high enough to retire any such circulation whenever it could not be profitably employed, this does not bear a true relation to other portions of the country where money is scarce and where natural resources are so many and varied that this emergency currency could be used to a satisfactory profit. In the Eastern States 2 to 3 per cent. is paid on deposits, and banks regard it as good business if they can loan the same at 6 per cent. It would, therefore, appear that if 9 or 10 per cent. could be obtained for the use of money in the far Western and Southern States, those banks would prefer to keep this circulation out rather than retire it. Why not make a definite time for the retirement of this currency, as is done in the case of public funds?

There is much discussion that it is necessary to accept railroad bonds because the amount of other securities is inadequate and not easily obtainable. It is quite true that railroad bonds, according to recent statistics, represent more than 40 per cent of the security bonds issued, and by many thoughtful men it is believed that so important a security should not be entirely eliminated from acceptance by the Government, especially as not over 75 per cent. of their market value would be advanced. On the other hand, if the collateral were confined to State, county and municipal bonds, it might cause an advance in the price of these bonds so great as to make them too costly for the banks to utilize as security.

To this I make reply that aside from the millions of first mortgage railroad bonds that meet savings banks requirements, there is an enormous issue of State and municipal securities. The compilation that I have shows that the issues are:

| | |
|-----------------------|-----------------|
| State bonds | \$205,678,475 |
| County bonds | 149,512,043 |
| Municipal bonds | 1,410,530,700 |
| Total | \$1,765,821,218 |

This is against taxable property of \$68,772,103,975.

The holders of securities are fast finding out that for the use of such bonds they can gain $\frac{1}{2}$ to 1 per cent. interest per annum, and the avenues of supply are largely increasing. In fact, as the chairman of the committee on accepting securities for public deposits, I know of no instance where a bank was not able to get the securities that were acceptable for a public deposit, if the latter could be had. Frequently bonds offered were rejected, but the applicant was able to secure other bonds, either by putting those up as collateral, or exchanging for such as would meet the requirements. As soon as it becomes widely known that such securities are in demand by banks, I am told by bankers all over the country that they believe an adequate supply can easily be obtained. Certainly for the issuance of 250 million dollars, we have here almost 2,000 millions of State and municipal securities to choose from, aside from railroad bonds.

As to the percentage of advance that should be made on securities offered, I have kept steadily in view this very important fact that the Government should not allow a larger per cent. of currency issued on other than Government bonds; that the basis of such percentage should be fixed on the Government bond at 2 per cent.; that is, if a municipal bond pays 3 per cent. and a Government bond pays 2 per cent., there should not be issued on bonds other than Government more than 66 2-3 per cent. of the value, which would make an equal ratio and do much to prevent a decline in the price of 2 per cent. bonds.

If a higher rate of percentage of currency is allowed, it will then be for the interest of the banks to sell their 2 per cent. bonds, because supplemental currency can be obtained at least six months

in the year when money is more in demand, and that would practically meet the heavy demands for bank accommodation.

The Aldrich bill also has another very important section which requires that a larger amount of the banks' reserves shall be held in their own vaults. This not only protects the banks locally, but does not hazard so much of their capital in the reserve cities, where, in times of great speculation or panic, it could not easily be withdrawn.

It is my opinion that if the Aldrich bill be past, authorizing the issue of \$250,000,000, but a small part of it will be used this year, for the reason that we have added to the stock of money since the first of October over \$214,000,000, of which more than \$86,000,000 is national bank notes, \$121,000,000 gold and over \$7,000,000 subsidiary silver coin. It would seem that with this addition to our currency there would be enough to supply the needs for crop moving.

It is a very encouraging fact that in formulating the Aldrich bill there has been such a broad spirit of co-operation on the part of the leading members of the committee, who represent both political parties. There seems to be an earnest desire not to attempt to gain any partisan advantage from a financial issue, but to bring forward a bill based on the broadest lines, consistent with adequate security and at the same time affording sufficient relief to business conditions. This is the desire uppermost in the minds of prominent legislators. It is gratifying to know that there never has been a bill before Congress in which the Senate Committee has been more receptive and more desirous of hearing well-matured and experienced views upon the merits or demerits of the measure.

WASHINGTON, D. C.

Request

BY CHARLES L. O'DONNELL

LAY lilies on dead innocence,
Strew roses on the bier of love,
But let my grave of penitence
Be sweet with violets above.

BROOKLAND, D. C.

Cardinal Richard

FROM A FRENCH CORRESPONDENT

ALMOST nine centuries have come and gone since Alexander III laid the cornerstone of Notre Dame. That is the Pope who put his foot upon Barbarossa's neck in the porch of St. Mark's, Venice, and also confirmed the gift of Ireland to England, made by his predecessor, the English Pope, Adrian IV. How great the changes since then! The Church omnipotent and the State in swaddling bands in the eleventh century; while in the twentieth the Church is become the supplicant. During those ages the State in all its civic honors witnessed the interment of the Bishops of Paris, till it came the turn of Cardinal Richard. The new Archbishop, Mgr. Amette, announced formally the death of the venerable nonagenarian to President Fallières, who, in reply, sent his condolences. But when the proper official was asked what part the State would take in the obsequies, he gave the laconic answer: "We know not the Archbishop of Paris"—a new saying in France. If, however, the State did not officially appear at the funeral, its officials received invitations. They were sent to the members of Parliament, the members of the Institute, the Conseil d'Etat, the Court of Cassation, the Court of Appeal, the Chambers of the Civil Tribunals. The State, too, lent its aid in manifold ways. The Chief of Police took charge and had detachments of the Garde Republicaine and the city police in attendance from the day of the Prelate's death till his funeral. The Government granted the use of its property, the ancient Cathedral, for the service, and permitted the remains to be laid in its crypt.

The funeral cortege presented some curious details. The bells of Notre Dame actually chimed until the cortege reached the bridge over the Seine, that leads into the square of Notre Dame. The bells then tolled for the three or four minutes needed to reach the porch. A few clergymen made up the procession with two

servants of the deceased, and the new Archbishop alone leading. He wore his everyday dress and raised an umbrella, handed to him in the street when a few drops of rain fell.

Five Cardinals and forty-six Archbishops and Bishops met the cortege at the door, a way of acting quite unlike that which would take place at a similar burial in the United States. The American hierarchy would be certain to parade the streets in mitre and cope. The French hierarchy, however, gave a very simple funeral to the first Cardinal who died after disestablishment. During the régime of the Concordat Cardinal Richard would have been buried with the greatest military honors.

The coffin was hardly upon the bier, when the master of ceremonies announced: "The first place to the representative of His Royal Highness, the Duke of Orleans," that is, to the pretender to the throne of France. The old Bourbon leaven still ferments! Luckily it was unheard by the hundred thousand who gathered outside and thus far unnoticed by the Government. The interior of the great edifice was bare of mourning, save the cardinal's throne in crape and a large black veil with a white cross upon it before the choir. Again there was no sermon. In a word, simplicity marked the whole ceremony.

This was in accord with the life of the dead Prelate. Friends and enemies alike agree in regard to the simple ways of Cardinal Richard and to his perfect disinterestedness. On entering the priesthood he brought with him an income, varying according to the press from \$8,000 to \$12,000 yearly—no mean support sixty-four years ago. In his last will he declared that the revenues of his see had always been given in charity and that there was nothing from that source. He then made an even division of his patrimony, giving one half in charity and the other half to his legal, natural heirs,

to whom he appealed to accept this arrangement. Some years before the death of Leo XIII, Cardinal Richard was very ill and in danger of death. That learned Pope wrote for him an epitaph, whose first line ran thus:

"Pauperibus largus, miseris solacia praebens."

("To the poor generous, to the wretched comforting.")

No small praise, indeed, in an age when clerics and laics alike are so studiously worshipping the Golden Calf.

Born in 1819 at Nantes, forever famous for its edict of toleration to Protestants, young Richard, like Isaac of old, the offspring of old age, was brought up with the idea that he was to be a priest. Ordained in 1844, he was made Vicar General in 1850. This office he held for twenty years. Here he labored to introduce the Roman Liturgy in place of the Gallican. Pius IX never ceased his labors to uproot the ancient ceremonial of Gaul, and had the satisfaction to see it finally accomplished when Dupanloup abolished it in the diocese of Orleans, but only after the Vatican Council, in 1873 or thereabouts.

Next Vicar General Richard interested himself in the beatification of Frances of Amboise, Duchess of Brittany, a Carmelite, whose life he wrote. To aid her cause he made a journey to Rome (1863) bringing with him \$20,000 as Peter's pence. His Bishop laid many thousand francs at the feet of the Pope and trained his young Vicar General so well that, as Bishop or Cardinal, Richard never went to Rome without at least \$10,000 in Peter's pence.

Yet *Gil Blas* assures us that the late Cardinal, while strongly ultramontane, never loved Rome, and his many trips were void of pleasure. Certainly this is true of Leo XIII's time, but not of Pius X's. Both are too much alike. The Cardinal of Paris, like the Venetian with all his simplicity, was headstrong; so much so that among themselves the Jesuits, for whom he wrought many favors, nicknamed him "The Pious Mule."

Upon the death of the Bishop, Mons. Richard and the other Vicar General, Laborde, afterward Bishop of Blois, called on Mons. Emile Ollivier, Minister of Worship under Napoleon III and

author, moreover, of one of the best histories of the Vatican Council, "*L'Eglise et l'Etat au Concile du Vatican*." They opposed the candidate — Fournier — whom Ollivier appointed in despite of, and even on the same day as, the visit. Of course, Nantes became too small for the two, and the Abbé Richard went into retirement at his patrimonial chateau. Two other works, a book of "Meditations" and "Lives of the Saints of Nantes," belong to this period of his life. They are rich in piety, but as innocent of historical accuracy as the legends of the Roman Breviary.

Meanwhile his former Metropolitan, Mgr. Guibert, had been translated from Tours to the coadjutorship of Paris. Guibert, in 1871, had him named as Bishop of Belley by MacMahon, the President of the Republic, and the Pope confirmed the appointment. Four years later he was made Coadjutor of Paris with the right of succession, and in 1886, upon the death of Cardinal Guibert, became Archbishop, and finally, in 1890, Leo XIII created him a Cardinal.

His career in Paris falls under two heads, political and scientific. And he seems to have been as poor a politician as he was a third or fourth-rate scholar.

During the long official life of Catholicism as the State religion of France, it found its poorest advocate and defender in the very man who deserves a high rank among its most pious and most simple. Upon a world-wide scale Catholicism witnesses in Pius X the same weakness, political and scholarly, and the same piety. One saw his national Church thrown out, and the other sows the seeds which promise to result in her universal rout as a State religion.

Like the present Pope, Cardinal Richard was ever prompt to see the supernatural or, rather, the hidden hand of God; for instance, the rows—common, vulgar rows—over the church inventories were to the pious Cardinal divine intimations of the near reaction in favor of the Church. The election of a clerical candidate thru the support of the Assumptionists to Parliament was the forerunner of the day when France would see a full house of clericals at the Luxembourg, and beyond the Seine at the Bridge of Solferino. To bring Catholics

together Cardinal Richard organized *L'Union de la France Chrétienne*—a medley of Legitimists, Royalists, Boulangists and Republicans. Leo XIII, however, had it dissolved. According to *The Figaro*, a violent enemy, however, of the late Nuncio, Cardinal Richard went to Rome and demanded the removal of Lorenzelli. In vain, as the latter remained till the French Government handed him his passports. At the Conclave which elected Pius X, Richard, with the other French Cardinals, voted loyally for Rampolla, upon whom they might rely to maintain the Concordat. One result of his failure in politics was that he presided over three meetings of the Bishops of France, held without let or hindrance on the part of the State. They were the first ever known in the history of the Church of France.

During his long life the nonagenarian witnessed many political changes in his country—the restored Bourbons, the July Monarchy, the Second Republic, Napoleon III and the Third Republic. At home he saw the steady altho fitful retrogression of the Church. There were days, like those of Charles X or President MacMahon or Faure, when she was the mistress. During his life, till within twenty years or so of his death, she taught the children of France in her schools. And yet the old Cardinal witnessed those children rise up against her and cast her forth.

So when he threw his eyes over the world, he saw the same retrogression with similar fitful advances, Catholic emancipation in Ireland, the Tractarian movement in England, a wide expansion of Catholicism in the United States. In spite of all this, a universal shrinkage—the whole aspect of modern political life ignoring her save in moribund Austria or the decadent Iberian peninsula or insanely ruled Bavaria—disestablishment, where not an established fact, at least on the tongues of men as a near work of the future.

So when we turn to the world of science, Cardinal Richard witnessed its stupendous progress, from the dim lamp of his youth to the electric light of our day; from the sailing boat, which his own hardy Bretons know so well how to manage, to the giant leviathan which

has made the ocean a ferry; from the old-fashioned diligence which brought him a stripling to Paris to the train-de-luxe which carried Cardinal Richard to Rome. And so in every way he saw the progress of science. From it all he stood aloof—at most he used the means it offered. But when science entered the sanctuary, his Breton stubbornness fought hard against its progress.

The Catholic Institute of Paris and his coadjutorship began about the same time. It proved a lifelong thorn in his side. He suspended for one year the lectures of Duchesne, the great Church historian. Later on he granted that scholar his favor and made him an honorary Canon of Notre Dame because he defended the legend of St. Genevieve, the patroness of Paris, whose very existence many scholars, notably Germans, doubt. Loisy, the greatest of French exegetes, he chased, and when, later on, a professor at Sorbonne, the Cardinal gave him no peace till Loisy resigned that office—the only error, perhaps, of that scholar.

Two of the Institute's rectors Richard had to defend. One was Mgr. d'Hulst, who had a controversy in the *Correspondent* with a Jesuit named Brucker on Biblical inspiration. It ended in the Jesuits, when bested, denouncing the victor as a heretic. And Mgr. d'Hulst died of a broken heart in consequence thereof. Against Mgr. Pechenard were made charges, by whom or for what reason, the *Figaro* asserts, no one has ever known. Pechenard was no Modernist, and yet strove to hold aloof from the reactionaries. He is now Bishop of Soissons.

The leakage among the clergy has been enormous, among whom was the president of L'Ecole Fénelon, a priest universally beloved and very dear to the heart of Cardinal Richard. The venerable prelate, in discussing with this thoro scholar the claims of Christianity, declared that if the Church pronounced that to be white which he saw to be black, he would accept the decision. With such blindness there can be no discussion.

In conclusion, there seems a bitter irony in the coincidence that while Cardinal Richard lay dead in another man's house, Loisy, the scholar whom he ban-

ished, should publish from his own home —“*chez l'auteur*,” two works of the utmost importance, “*Les Evangiles Synoptiques*” and “*Simple Reflexions*,” a learned comment on the late Syllabus and the Encyclical on Modernism. Both men seem to be types, Richard and Loisy, Conservatism and Liberalism, or Church and Science. Between the flowing waters of the Seine will remain the forgotten bones of the former, while the living words of the latter will last as long as humanity studies the life of Jesus. Richard marks an epoch, Church disestablishment in France; Loisy also an epoch, freedom in Christian science. The former, a lifeless milestone on the path of human progress, the latter a glorious luminary thereof.

As if to put a final touch to the story of the two men, there appeared also, while his Eminence lay upon his bier in Rue Burgoyne, the last number of Loisy's journal, *La Revue d'Histoire et de Litterature Religieuses*.

It is suspended, so the farewell address runs, because “of a system of inquisition beyond control in Latin countries, threatening the readers as well as the authors.” It has given up in calm and security.

The new Archbishop has already published his first official letter. By some strange freak it is signed, “By command of his *Eminence*.” Coming events cast their shadows before, but he is not yet a Cardinal.

PARIS, FRANCE.

Some Fallacies of Militarism

BY CHARLES E. JEFFERSON, D.D.

PASTOR OF THE BROADWAY TABERNACLE AND CHAIRMAN OF THE EXECUTIVE COMMITTEE OF THE NEW YORK PEACE SOCIETY

PRESIDENT ROOSEVELT'S recent request for four new battle-ships this year, besides “plenty of torpedo boats and destroyers,” is only an incident in the swelling movement of an imperial drama, and shows in what direction the American Republic is just now moving. This sort of thing has been going on during the last ten years with ever-increasing volume and momentum, and it is surprising that comparatively so few people have had anything to say about it. It is the most colossal and far-reaching development which is taking place in our day and generation, and yet with the exception of an isolated protest here and there our people have quietly acquiesced in the adoption of a policy which breaks completely with our most sacred traditions, and launches the Republic upon a course which is fraught at every step with peril and which may lead to unimaginable disaster. A little company of astute and brainy and determined men in Washington City, aided and abetted by keen-witted representatives of large vested interests, and encouraged

and assisted by Mr. Roosevelt, has driven its plans thru one Congress after another amid the tumultuous acclamations of many newspapers, and with loud hosannas from rhetorical after-dinner speakers, until the world is made to believe that the whole American people has suddenly become wildly fond of the pomp and circumstance of war, and is willing to set no limit to the outlay which may be necessary to make us the foremost military power on the planet. Already the prestige of the naval propagandists has become so formidable that when one ventures to lift up his voice against this wild and wicked squandering of a nation's treasure on the implements of blood, he is met with the taunt that all protest or opposition will count for nothing, as the nation has made up its mind that it is not to be outmatched in weight and completeness of armament by any other nation upon the globe. Why is it that men in such surprising numbers have become ardent champions of the big club, or have at least been reduced to silence while the multiplication of bat-

tleships and cruisers goes steadily onward before their eyes? It is because they are the victims of a set of fallacies. They are caught in the meshes of plausible sophistries. They are captivated by a series of assumptions, all of them both specious and false. Let us look at some of these assumptions.

I. "The Navy is simply a police force. Don't you believe in a police force? If you were attacked in the middle of the night, would you refrain from calling the police patrol?" Of course we believe in the police force, both for cities and for nations. A nation must do business on the water as well as on the land. It must have its officers and agents on land and sea. There are robbers on the waters, pirates along certain coasts. There must be armed vessels on all the seas—everybody knows this. The oceans must be policed. But the navy we are building is not a police force. It is not built to look after pirates. One-tenth of our ships could attend to all the pirates which the world can produce. We are building a mighty engine of destruction, getting ready for full grown assassins who are going to break in on us at midnight. Who are these prospective cut-throats? Their names, fortunately, are well known. There are only four of them: England, France, Germany and Japan. No one else could break in on us, no one else could possibly make us afraid. These then must be the assassins. These are the murderers to be afraid of. We are not preparing for pirates, we are getting ready to knock the head off of one of our neighbors. In New York we have a police force, we must have it to direct the traffic, and to keep in subjection the rowdies and the toughs. How many policemen do we need? That depends on the size of the city, and the extent of the lawless population. We do not add to our policemen in order to be able to whip the policemen of Baltimore and Philadelphia, of Boston and Providence. A police force is always a small force because only a small force is necessary to keep the peace. But if New York, in a fit of frenzy, should want to fight the other cities of the country, then the police force would be no longer a police force; it would be a fighting force, an army. Our great and growing navy is not a

police force; it is not built to look after rowdies; it is a huge organization of brute force, bullying force, terrifying force, which can only produce irritation, ugly feeling and everlasting disturbance and commotion.

II. "But if these four nations have great navies we must follow their example. We cannot afford not to do what they do." So men say—but why not? We are not like them. Their situation is different from ours. They have enemies, hereditary enemies; we have not. Everybody says we have not. President Roosevelt says so. All our statesmen say so. All the statesmen of all the other countries say so. Moreover these four nations are our special friends. We are coming closer all the while to England. Germany and America have never been such good friends as now. France and our Republic have always gone hand in hand. Nobody outside of a pack of mischief-makers has ever dreamed that Japan has any feeling toward us but one of good will. We never have been entangled by the international complications of the wild and rude centuries that are gone. Why should we follow the example of nations who became embroiled centuries ago? Why should we squander our money in adopting a fashion which is not needed here, and which is so ruinous that the wisest hearts and heads of the Old World have groaned under it with an agony that is unspeakable?

III. "A nation unarmed is at the mercy of its neighbors." So some men say, but it is not so. Mexico is not armed. She is not at our mercy. We cannot touch her. Suppose the President wanted to harm her; he could not do it. Suppose Congress wanted to wrong her; it could not do it. Suppose that thousands of Americans wanted to rob her; they could not do it. Why not? God is in his world. Something in us would hold us back; God in us would protest. There is no other reason. Russia has no navy. Is she at the mercy of anybody? When she had a navy she was at the mercy of Japan; now that she has no navy she is at the mercy of nobody. Why do not the nations pounce down upon her? Now is their opportunity. They cannot do it. Why not? There is a God. Men are not tigers; men are men. God's

in his world—that's all. If all our ships were at the bottom of the sea we should not be at the mercy of anybody. No nation would attack us; no nation could attack us unless we deserved by our foolishness to be attacked. All the protection that a nation needs in the twentieth century is a disposition in her rulers and statesmen to love mercy and do justly, and walk as a nation ought to walk. A lot of religious people are atheists in their reasonings and policies; God is not in all their thoughts.

IV. "We have colonial possessions, and we must protect them. How can you protect them if you do not gather them under the steel wings of a fleet of battleships?"—so men ask. But this terror is born of a disordered mind. When men become infected with the poison of militarism they have many of the symptoms of a man in delirium tremens. The world becomes filled with snakes, day and night are crowded with horrors, the universe is a hateful, hostile, hissing thing, and every moment gives birth to a new peril. "We have got to protect the Philippines," men say with bated breath, as tho all the nations were looking on with envious eyes and itching hands, eager to snatch away from us our glittering treasure. "We must protect the Philippines!" From whom? Tell us who wants the Philippines? Nobody. They are a white elephant which can be left out over night with safety. Nobody will take them. They are one of the heaviest burdens this nation has ever tried to lift. They have been a drain on us from the day we bought them. They would be a millstone around the neck of any nation. We could afford to pay today any nation a hundred million dollars to take them off our hands, and then we should be a gainer by the bargain. To spend hundreds of millions in protecting a thing which nobody wants—only men driven delirious by brooding always on war are capable of such grotesque and unfathomable stupidity.

V. "To keep the peace we must prepare for war." Some one said that long ago, and men have repeated it as tho it were a word from the mouth of God. Its hollowness is evident to any one who will look into it. The fact is that to keep the peace we must prepare for peace. If you want war, then prepare for war, mul-

tiply your guns, burnish them and make them shine, practice with them, keep the air filled with the reverberations of the roar of cannon. Swing your fleet from one ocean to another just when hearts are most irritated. Fill your newspapers with accounts of what your ships are doing, crowd your magazines with pictures of torpedo boats and destroyers. Set all the young men of the country thinking and talking about war, and then some day war will come. It is inevitable! If a nation does not want to fight it must put up its sword. It is amazing that there is an intelligent man on the earth who cannot see this.

VI. "Our race is a fighting race. Men have always fought, therefore they always will fight, at least for ages yet to come. The process of evolution is slow. International action has always been selfish, it always will be selfish. Washington said: 'It is folly in one nation to look for disinterested favors from another. It has been so, and must be so forever. For generations then wars may be confidently expected. Preparedness is therefore a national duty.'" The nomenclature of all this is modern, but this method of argument is primitive. A man who argues thus has a mind which works exactly like the mind of a South Sea Islander. The islander had always been a cannibal, his parents had been cannibals, and his grandparents, and all his ancestors back for hundreds of thousands of years. He said: "We have always eaten people, and therefore we always will. Our tribe has always been selfish, and it always will be. I propose to keep my knife sharp." Poor islander; he argued thus because he had never heard of Christ. Then one day he heard of him, and he quit eating people, and then his whole tribe quit, and a little later on all the tribes of the island quit, and nobody on the island ever thinks nowadays of eating human flesh any more. Men that tell us that what men have been they must always be, and that what nations have done they must always do, argue up to their light, but they do not possess much, and should the world follow them it will find itself in a ditch.

VII. "But is not this whole business a matter for the military experts? Who are you that you should set yourself above the Naval Board or call in question

the conclusions reached by men who have given their whole life to military problems?" The answer is that the military experts are entirely out of their province as soon as they begin to deal with problems of statesmanship. The naval policy of a nation is a question of statesmanship, and the two indispensable qualifications in those who deal with it are spiritual insight and wide historical knowledge. It is for naval experts to determine how thick the steel plates ought to be, and how far a shell can be thrown, and how fast a steel ship can be driven, and what sort of fortification will render the most effective resistance, but on all questions of national policy they should have no more to say than any other equally competent set of men. It is because the nations of the Old World have given themselves so largely to the guidance of military experts that modern civilization finds itself so handicapped

and plagued. Military and naval boards have never said but one thing, and that is "More, More, More!" They see everything thru the bore of a gun. There are many men in the American Navy who are able in intellect and noble in character, and of whom the nation has a right to be proud, but their education has been technical, their range of experience has been narrow, and their labors have not fitted them to deal with the high and difficult problems of internationalism. It is high time we were listening to our scholars and merchants, our statesmen and prophets, to the men of wide observation and far vision, who, knowing what has been and able to interpret what now is, are best qualified to work out policies which will hold the Republic true to her high destiny, and safeguard her from the perils by which so many Empires have been overwhelmed.

NEW YORK CITY.

MUSIC ART AND DRAMA

Metropolitan Opera

Uneasy lies the head that wears the crown of a grand opera manager. Gustav Mahler, tired of bearing the burdens of the Imperial Opera in Vienna, accepted Mr. Conried's offer to be one of his conductors at the Metropolitan Opera House. Maurice Grau succumbed to the hard work, the worries and perplexities of operatic management, and now his successor, Heinrich Conried, has resigned because his doctor has told him that if he wants to live he must have absolute rest. The rumor that he would retire has been current for some weeks, and the newspapers displayed marvelous versatility in inventing and contradicting assertions relating to his successors. The truth is now known, and the contracts are signed. Gatti-Casazza, of Milan, and Andreas Dippel, of New York, are to be the man-

agers, and their principal conductors will be Toscanini and Mahler.

This is an excellent combination. Gatti-Casazza has been for nearly a decade at the head of the Scala, of Milan, Italy's best opera house, and he is strong where the Metropolitan has been weak, his specialty being stage management. Some years ago he staged Wagner's "Walküre" with such novel mechanical features and lighting effects that operatic managers came to see them from all over Europe. This fact also shows that, though an Italian, he is by no means averse to Wagner, as the Italians of New York seem to be. In Italy Wagner is at present the fashion, three of the leading opera houses having opened their season with his works. Toscanini, too, our coming conductor, is quite as famous for his Wagnerian interpretations as for his con-

ducting of Italian operas. There need be no fear, therefore, that the preponderance of Italian performances, caused by the popularity of Caruso, will be still further emphasized. Dippel and Mahler will hold the balance of power, and will see to it not only that German opera will have its dues, but that French opera, too, which has been neglected during the present régime, will come to its own again. Dippel has already engaged Dalmores (one of the best members of Hammerstein's company) for the French tenor rôles.

Mahler's debut as a Wagnerian conductor was referred to last month. He has since shown his mettle by a splendid production of Mozart's "Don Giovanni," which is his specialty. The audience was immensely delighted with the way in which the evening stars sang together under his direction. These stars were Sembrich, Eames, Gadske, Bonci, Scotti, Chaliapine—an ensemble that no foreign opera house could approach. Mr. Mahler is a purist; he tries to give Mozart's operas exactly as they were given in Mozart's days at Prague and Vienna. He restores the original division of the opera into two acts, leaves out the chorus in the first finale, omits the trombones from the score (tho it is by no means certain that Mozart did not add them to the score) and simplifies the banqueting scene. A pleasing archaic color was imparted by the use, for accompanying the dry recitatives, of a grand piano with paper placed on the strings, which made it sound like the predecessor of the pianoforte, known as the harpsichord. At the third performance Geraldine Farrar made a sensation in the rôle of Zerlina.

Giordano's Siberian Opera

Oscar Hammerstein is the most courageous of operatic managers. While others maintain that it does not pay to produce new operas, he brings out one after another, and most of them prove successful. In the case of Giordano's "Siberia" an extra dose of courage was needed because, only a few weeks before, another opera by the same composer, "Fedora," had proved a dead failure at the rival house, altho the cast included the beautiful Cavalieri and the popular Caruso. "Siberia" was sung at the Man-

hattan by Agostinelli, Trentini, Zenatello and Sammarco, and its reception was remarkably favorable.

In large part this success was due to the scenes presented on the stage. Siberia always has a charm for the public imagination, in which it calls up pictures of romantic tragedies. The heroine of the opera is a beautiful woman named Stephana, for whose favors many men contend. Among them is Prince Alexis, who houses her in one of his palaces. Her heart, however, belongs to a common soldier named Vassili, and when this soldier, in a fit of jealousy, kills the prince and is sentenced to penal servitude for life, she determines to follow him. It is toward the end of the second act that her sleigh catches up with the living chain of prisoners of which her lover is one link. The convicts are encamped on the dreary steppe at a place where their friends and relatives must bid them their last farewell. Touching scenes are enacted, and then the procession moves on to a Trans-Baikal mine. Here, in attempting to escape with Vassili, Stephana is shot and dies in his arms.

Few scenes have ever been presented on the local stage more picturesque than the opening of the second act. For some minutes nothing is visible but the falling snowflakes, to the accompaniment of the orchestra. Then the prisoners are heard approaching—like the chorus of pilgrims in "Tannhäuser"—singing the poignant Russian chant "Ay Ouchnem"; and at the end of the act they depart with the same strains gradually fading away. Other Russian folk tunes are used by the composer—fortunately—for melodic invention is his weak point and this method, which is perfectly legitimate, gives him just what he needs to add to the skill in handling the voices and the orchestra, in which he is not deficient.

Debussy's "Pelleas et Melisande"

When Mr. Hammerstein was called out with the singers after the fourth act of "Pelléas et Melisande," at its first performance in the Manhattan Opera House, he made a short speech in which he remarked:

"If a work of such sublime poetry and musical grandeur meets with your approbation and receives your support it places New York at

KATHARINE GOODSON.

the head of cities of musical culture thruout the world. As for myself, I have had but one object in presenting the opera—to endear myself to you and perpetuate myself in your memory.”

The production of this opera may not endear Mr. Hammerstein to the public, but it will certainly do more to perpetuate his name than any of his other achievements. In Paris, where there is a special Debussy cult, this opera has had sixty-three performances since its first production in 1902, and Brussels has heard it seventeen times; but no successful attempt has been made elsewhere to acclimate a work the composer of which deliberately suppressed all melody in the vocal part and made the orchestral score a tangle of incoherent dissonances for the most part. Mr. Hammerstein not only had the courage to stage this work, but he risked the expense of bringing over practically the whole of the original Parisian cast—Mary Garden, Gerville-Réache, Jean Perier, Hector Dufranne. The last named proved to be a first-class dramatic baritone, and Miss Garden presented a Melisande which places her among the greatest actresses of the day.

To this cast the strange opera will owe much of such success as it may obtain here; yet, with all its studied mediævalism and dissonantal predilection, it must be admitted that it contains fascinating as well as strong pages. The opera is built on Maeterlinck's well-known play, and the most remarkable thing about the music is the way it echoes the elusive spirit of the somber and fantastic drama.

Tetrazzini and Schumann-Heink

Prima donnas used to reserve the right of adorning and embroidering operatic melodies as they pleased. The first efforts of composers to write their own *fioriture* and to insist on having them sung just as written were bitterly resented by the stage tyrants. Rossini was the first who successfully asserted his authority in this matter, but Rossini is dead, and so is Donizetti; they cannot interfere any more when a singer takes the law into her own hands. Perhaps Donizetti would not mind if he lived and heard Tetrazzini providing a new set of ornaments for every performance of his opera “Lucia” at the Metropolitan. It is to hear this colorature that the public crowds the Manhattan at every performance. The mad scene is madly applauded at each repetition, and redemanded, and those who go to hear her twice in the same rôle are rather pleased than otherwise to have her vary her vocal fireworks. In the rôle of Gilda in Verdi's “Rigoletto” she has had less chance to display her brilliant colorature, but she did not fail to charm her audiences by her smooth execution of rapid passages and by the mellow beauty of her voice.

The extraordinary success of Tetrazzini has made it unnecessary for Mr. Hammerstein to enlarge his repertory by adding to it German operas. Mme. Schumann-Heink, however, who was to have been his Wagnerian contralto, did make one appearance, but in an Italian opera—“Il Trovatore.” She not only delighted the audience, but astonished everybody by the revelation of what a wonderfully dramatic rôle that of the gypsy-mother Azucena is when properly interpreted. She sang her part in German, enunciating with a distinctness due

to her Wagnerian training; her beautiful voice she inherited from her Italian mother.

Soloists and Concerts

Mr. Walter Damrosch has been so successful for several seasons traveling about the country with the New York Symphony Orchestra and Mme. Nordica as soloist, giving concerts made up entirely of excerpts from Wagner's operas, that he has come to the conclusion that the future of these operas lies on the concert stage. He has also made an interesting attempt to transplant in the concert hall Tschaikowsky's opera, "Eugene Onégin," which none of our managers has seen fit to stage. Divorced from the operatic surroundings, much of the great Russian's music proved to be dull; but there were gems which redeemed the whole—notably the ball-room scene with the famous waltz, the chorus of country girls, the mazurka, and the polonaise in the third act. Three large and appreciative audiences heard this concert-opera.

Fritz Kreisler has given another recital in Carnegie Hall devoted to eighteenth century music—Bach, Corelli, Gluck, Porpora, Couperin and others. It speaks well for the musical taste of the community that this artist, who never stoops to conquer, is so well patronized and so warmly applauded. He had to add five extras to his long list of pieces, including two which every violinist, amateur or professional, who hears him play will hasten to add to his repertory—a Schubert "Moment Musical" and Dvorák's "Humoreske," both as arranged by Kreisler.

Harold Bauer has given two piano recitals at Mendelssohn Hall which rank among the most enjoyable heard here. His Bach playing was almost a revelation. But what specially distinguished his recitals was the first performance here by any one else but the composer of MacDowell's "Eroica" sonata. Its impressiveness was heightened by the fact that it was played only a few days after America's greatest composer was buried.

Fannie Bloomfield-Zeisler leaves Chi-

cago once a year to give a recital in New York, which is attended by those who object to dull moments. There are none when she plays; she is still "the Sarah Bernhardt of the pianoforte." She has a rival now, however, in emotionalism in the young English pianist, Katharine Goodson, who plays Liszt's rhapsodies with the zest and wild intensity of a gypsy—a new phenomenon in British annals. She can coo gently, too, in a Mozart sonata, and reveal the full melodic beauty of Schubert and Chopin.

It is remarkable that three English players—Harold Bauer, Katharine Goodson and May Mukle—should be among the most prominent soloists in America this season. Does it indicate a musical renaissance in the British Isles? An American pianist, also, has, during the past four weeks, won much praise not only as a player but as a composer. His name is Ernest Schelling. His "Fantastic Suite," as played by himself and the Damrosch Orchestra, is a piece showing striking musicianship in invention and orchestration. Ingeniously interwoven into the score are "Dixie" and "Old Folks at Home."

HAROLD BAUER.

The Month's Exhibitions

Three organizations in whose exhibitions special interests center have had their little day since the last art notes were written—the Architectural League, the American Society of Miniature Painters, and the group of men already popularly known as “The Eight.” The Architectural League made a much less impressive display than usual, probably thru the poor quality of current work in decorative arts, for on close examination the drawings of buildings were seen to include many of distinctly interesting design. Buildings of medium size, such as the First Precinct Police Station for this city, by Hunt & Hunt, and the Brooklyn Municipal Building, by Lord & Hewlett, showed the same tiresome variation of French or Italian styles with which our cities are already over-full, and such church structures as were pictured were also devoid of any expression whatsoever, except in the case of a Pittsburg synagogue, by Palmer & Hornbostel, in which Hebrew symbolism was used in a façade that achieved an ugly sort of impressiveness. The Cleveland Trust Company building, by Post & Sons, is a rich bit of Roman design with a pediment more nearly suited to the rest of the design than any of recent production. The sculpture was from the studio of Karl Bitter. A small building for the School of Applied Design for Women, by Pell & Corbett, looks as if it might make an interesting corner in the city. But it is when our architects are obliged to soar to the clouds that they really use their imaginations nowadays, and besides the Singer Building, with which we are already familiar, a wonderful structure by Howells & Stokes was the competitive design for the uptown terminal of the Pennsylvania tunnel. The architectural sculpture shown included a group by French for the Federal Building in Cleveland, representing in Mr. French’s well-known way “Commerce”—three figures massed, with all the interstices stopped by symbols and attributes. Mr. French will never be a great designer, tho he will doubtless continue long to give us these comfortably good tho uninspired architectural adjuncts.

The only distinguished bit of sculpture shown was the jolly little “boy and

goose” fountain that played in the central gallery. This was by Tonnetti, and, tho of an old motive, had very beautiful treatment. A little nude girl drawing herself together to stand a shower of water formed a fountain motive that made one wish to see more work by the same man, John Gregory. Kenyon Cox’s figure of “Greek Science,” one of a series by several sculptors for the Brooklyn Institute of Arts and Sciences, was a painfully academic thing, with no promise of anything in this direction from the great draftsman, who seems never to become an artist. The largest finished decoration shown was by Albert Herter—“The Attributes of the Arts.” With a great deal of knowledge this painter has no breadth or power of decorative selection, so that, while we like all the parts moderately well, we deplore the result as a whole and become very conscious of the nudes. E. H. Blashfield showed many studies for a decoration in the new College of the City of New York, refined and charming as usual, with no great strength. Louis Mora had a decorative essay of promise.

“The Eight” is made up of Arthur B. Davies, W. J. Glackens, Robert Henri, Ernest Lawson, George Luks, Maurice B. Prendergast, Everett Shinn and John Sloan. One of these men is a poet whose like does not elsewhere exist. For a number of years the few who have eyes to see have been indebted to Mr. Macbeth for occasional glimpses of work by Arthur B. Davies, and each sight showed new developments, and gave rise to new hopes always fulfilled. Why he should show with the apostles of paint who make up the other seven is hard to see, and it is difficult to discuss his work with theirs. The fact that he did show, and that Ernest Lawson, a “high key” landscape painter with a delicate color sense and very true eye for values, also showed, speaks well for the breadth of intention and appreciation among the men. That leaves six to be discussed, and first we take Robert Henri, who strives to be a painter as Hals and Velasquez were painters, and so is what adoring students call “a master.” He is that up to a point. He can paint almost all of a face, all of it except the mouth. He can’t yet paint a particular person so that his canvas be-

comes a human document as a Hals or a Velasquez is, but the very repetition of those hallowed names in connection with his works shows how seriously we must take Henri. Of the others one is tempted to lump Sloan and Glackens, both best in black and white; to say that Luks is a disappointment as a painter beside Henri; that Shinn got his inspiration from some great Frenchman, and that Prendergast is merely a man who laughs and embroiders on coated canvas instead of in softer textiles.

better man, but he cannot always compose. His portrait of Sir Purdon Clarke was over-nervous but good, solid painting. Some entirely despicable pictures, including one of Miss Ethel Barrymore, by André Brouillet, have since been shown at Knoedler's, together with a collection of pictures of Indian subjects by Irving Couse, who does not compare with Dewing in the same field.

At the new Bauer-Folson Galleries were shown the red chalk drawings by Albert Sterner, nearly all of them excel-

AUTUMN BOWER.

By Arthur B. Davies at the Macbeth Gallery.

Portraits

Whatever one felt about "The Eight," they were tonic in effect, and made the simpering affectations of the ladies in Mr. Richard Hall's portraits at Knoedler's and the mannerisms of Mr. Funk's presentations hard to bear. The people who admire Mr. Hall's work stand anything at his hands in the way of bad drawing apparently. Mr. Reginald Vanderbilt's legs telescoped into his body and his hands were of odd sizes, a tall lady in a princess gown had a sadly padded shoulder and one side which the dress-maker or Mr. Hall had neglected to make match the other. Mr. Funk is a much

lent, a few masterly. Here the artist seemed really sensitive to the characters of his sitters, and gave us children, and their learned, or knowing, or reverend, or frivolous elders with all due appreciation for each type or impression it conveyed. The large oil of his young son was not so successful in its field. He is still a man trained to the point rather than the brush.

Landscapes

Alden Weir, then Arthur W. Dow, and then D. W. Tryon and T. W. Dewing together, were Mr. Montross's exhibits since last month. Mr. Weir showed a couple of figure works we have

seen before, and landscapes of the manner into which he seems to be settling, always sincere, this time a little attenuated in color. Mr. Dow was a distinct disappointment. It may be that he puts

MODEL OF BRONZE STATUE OF NATHAN HALE.

William Ordway Partridge, Sculptor.

the best of himself into his earnest teaching, but he gave us little here beyond pleasant impressions of places, very charming but so very slight in importance. His prints in the Japanese method are also very slight.

Paul Dougherty had twenty of his

splendidly vigorous marine pictures at Macbeth's before the exhibition of "The Eight." He is almost alone now in his field, making the literalness of Woodbury and the lack of atmosphere of Homer only too apparent. He is almost greatly romantic in his approach to his subject.

The two young painters, Gifford and Reynolds Beal, whose work has been improving rapidly in the last few years, have an exhibition at Bauer-Folsom's until the 29th. They are distinctly of the school of Henry Ranger, but with personal points of view. Reynolds shows four marines and three landscapes, a trifle more breezy and less obviously "composed" than his brother's, but both have good color sense and Gifford's composition has strength and grace. "The Terrace" and "Still Waters," "Solitude" and "Reflection," were excellent.

The Pennsylvania Academy exhibition has been open during the whole of the month and does not close until February 29th. The Temple gold medal went to F. W. Benson, for his "Portrait of My Three Daughters"; the Lippincott \$300 prize to Hopkinson, for his "Shining Gown"; the Mary Smith prize of \$100 to Elizabeth Sparhawk-Jones, for "Roller Skates," and the Jennie Seaman gold medal for landscape, to E. L. Warner, for "Brooklyn Bridge in a Snowstorm." The exhibition is up to its traditional high standard and contains a number of the best things never seen here except in the one man shows.

William Ordway Partridge has completed the model of his statue of Nathan Hale in heroic size, which has occupied him during the past ten years or more and which the Alumni propose to offer to the University for the Yale campus. A private view of the model was given at the sculptor's studio in New York City on February 13th. Mr. Partridge, as will be seen from the illustration, represents Hale in the dress of a schoolmaster as he was when captured.

Etchings of London, Amiens, Beauvais and Rouen, by Joseph Pennell, were shown at Frederick Keppel & Co.'s from December 4th to 31st. Mr. Pennell has followed Whistler, Rembrandt and Seymour Haden in his reversed Orientation. That is to say he draws his landscapes, his bridges, his buildings and what not

on the copper as he sees it and when the finished plate is printed, of course, the design is reversed and the North is South and the East is West. This is odd but not displeasing after one gets used to it. Eighty-seven examples of Mr. Pennell's work appeared in the Keppel showing.

One hundred prints and drawings by Dürer and Rembrandt, belonging to the collection of Marsden J. Perry, which is to be sold in Germany next summer, were shown at Keppel's for two weeks, to give American collectors a chance to bid. The collection is very choice and it is a pity it has to leave America.

shown here by Mr. Drake. The skill in needlework they exemplified was lavished on hand-made linen by our grandmothers and great-grandmothers. Some of the art appearing in them is at once surprising and delightful. The reproduction shows a typical sampler in the exhibition, which also appeared on the announcements sent out regarding the showing.

The Drama

The past month has produced no new plays of great distinction or permanent

SAMPLER IN THE DRAKE EXHIBITION.

The Drake Exhibition of Samplers

AN exceedingly interesting selection of old time samplers from the collection of Mr. A. W. Drake were on exhibition the last ten days of January at the gallery of Hoggson Brothers, No. 7 East Forty-fourth street. It is quite certain that never before have 120 examples of needlework in sampler form been massed together that surpassed in interest those

popularity. Mrs. Patrick Campbell's presentation of "Electra" had the most novelty and artistic merit, but it was as painful as it was impressive, consisting of one long act without any relief from its tragic tenseness or variation of its somber mood. Altho founded on the Sophoclean theme it is far from Greek in spirit, for the version of Hugo von Hofmannstahl was used in the poetical translation of Arthur Symons. It has a taint of the decadent, of the blood-thirstiness of

Wilde's "Salome." Electra and Orestes in the Greek are the instruments of fate, the agents of divine retribution; here they joy in the acts of cruelty and revenge. But whatever one may think of the conception it is artistically and consistently worked out by Mrs. Campbell with Mrs. Beerbohm Tree as Clytemnestra and Miss Stella Campbell as Chrysothemis. There are pictures in it that one can never forget; Electra crouching by the back door of the rude stone palace of Agamemnon, with clotted hair and muddled dress, the sport of serving women; and, again, denouncing Clytemnestra with her crime; lighting Aegisthus to his doom; pawing up the earth, like a dog, to find the murderer's ax; and telling her story to Orestes. In such scenes Mrs. Campbell's statuesque posing and thrilling voice find their most effective employment. This Teutonic-Greek drama is preceded by a pseudo-Japanese play, quite as bloody and less poetic.

David Graham Phillips, in his first venture in the drama, as previously in his novels, demands attention by his moral earnestness and intensity of purpose rather than by his skill in execution. "The Worth of a Woman" is more of a discussion than a drama. Everybody talks out loud and plain on subjects usually treated in whispers and innuendoes. Into this close and fetid atmosphere of the metropolitan theater it sweeps like a breeze from the Western prairies, bearing a message of equality and freedom and out-shaming by its frankness the conventional immodesties of the stage. The apparent weakness of the inevitable conclusion is due to the failure to realize that the subordination of the individual to the will of society is not a compromise of personal principle, but is rather a proper recognition of the fact that in the production of children more than in any other case society has a right to dictate terms. The scene is laid in Indiana, altho nobody would suspect it from the back drop. Miss Katherine Grey, who made such a success in Schnitzler's "The Reckoning" last year, produces as marked an effect in this by her sincerity and earnestness, while in the contrasting character of her sister, a woman of the world, Miss Jane Peyton does excellent work.

Mr. E. H. Sothorn's revival of his

father's favorite play, "Our American Cousin," attained instant popularity. All the old jokes took and Lord Dundreary's limp and stutter and vacuous stare kept the audience in a roar of laughter as they did the past generation. The play first appeared in 1858, and was on the stage when Lincoln was assassinated. In its original form the part of Dundreary was only a few lines, but E. A. Sothorn expanded it in the course of twenty years by stories and eccentricities until the play was reduced to a mere framework.

Otis Skinner in "The Honor of the Family," a play by Emile Fabre, after Balzac, takes the part of a swashbuckler of the Dumas type, with his usual effectiveness. His voice, wheedling, blustering, sarcastic and nonchalant by turns, always catches the sympathy of his auditors. The play is merely a background for the Napoleonic hero, a combination of Cyrano and Petruchio.

"Irene Wycherley" is a modern three-act society drama by Anthony P. Wharton, a new playwright. The scenes are laid among the English "ignobility," and a more despicable lot of people as portrayed by the cast has seldom been seen on the stage. Divorces, intrigues, three murders and all-round degeneracy make up this charming picture of English high life. The play has all the conventional technique of the conventional society drama and has therefore pleased some of the critics, but internal evidence seems to show that it is written by a man who has the sole ambition to approach as near the eternal sex idea as the public will allow. "Irene Wycherley" is cloudy, unwholesome, and the only redeeming feature of it is that it is well acted.

Henry Ludlowe as Shylock in "The Merchant of Venice" is a creditable performance. The only criticism of his representation that might be put forward is his tendency to overact his part. This is somewhat emphasized by the poor support given him by Tubal in the emotional scene where Shylock is overcome at the loss of his daughter. Mr. Ludlowe is at his best during the original bargain with Antonio and the explanation of his position. Miss Wakeman as Portia carries her part splendidly in the court room, but in the other scenes is undignified. She introduces humor into lines where it certainly was never intended.

Gen. O. O. Howard

GENERAL HOWARD tells in an easy discursive manner the story of his long life and his many activities.* He was born in Maine in 1830, was graduated first from Bowdoin and then from West Point, served for a time in the old army, and was, from 1857 to 1861, an instructor in West Point. He was chosen Colonel of a Maine regiment of volunteers and reached Washington with his troops on the 7th of June. He was in the first Bull Run battle and in the Peninsular campaign, and was wounded at Fair Oaks, losing his right arm. Invalided home, he returned within three months, in time for the second Bull Run battle, and remained with the Army of the Potomac until sent to Chattanooga after the disaster at Chickamauga. For the remainder of the war he was with Sherman in the operations about Atlanta, on the march to the sea and in the Carolina campaign. His work for the Freedman's Bureau followed, then a resumption of active work in the regular army and a term of service as Superintendent of the Military Academy at West Point. He was retired from the army in 1894.

The autobiography can hardly be called a contribution to Civil War history. Little, if any, new light is thrown upon any of the important events of the war. There is an abundance of detail on all sorts of matters, but much of it is trivial, and none of it is systematically arranged and presented. The work is rather a rambling narrative of reminiscences. There is, of course, a defense of the author's action at Chancellorsville; the assertion that he was overwhelmed by Jackson with three men to his (Howard's) one, and that everything was done by himself that could have been done under the circumstances. There is also his reiterated claim that it was he who chose the defensive position at Gettysburg, and some evidence is given tending to confirm it. But aside from a few instances of this kind, there is little upon which a student of campaigns and battles

can fix for definite knowledge. The accounts of engagements are generally unsatisfactory and leave a most nebulous understanding of the thing described in the reader's mind.

A more orderly and comprehensive treatment is given in the chapters on the Freedman's Bureau. General Howard was appointed to organize this bureau within a month after the surrender of Johnston's army, and at once set about his task with energy. The obstructions put in his way by former slaveholders, and the constant interferences with his work by President Johnson and other politicians are related at length. After seven stormy and vexatious years, the Bureau was closed in June, 1872, and General Howard was subjected to a military court of inquiry. The findings of the court, of which General Sherman was president, completely exonerated General Howard of the charges made against him, and this verdict was approved by President Grant.

Tho these pages reveal little historical ability or literary skill, they are yet exceptionally valuable in revealing the character of a high-minded gentleman and patriot. The Civil War saw abler generals than Howard—a searching analysis of his military activities would find much for criticism. But he was an officer who combined in a rare degree resolutions of purpose and fidelity to duty with gentleness of disposition and a lofty uprightness of conduct. He has lived a long and busy life, and few men have so fully won and so amply deserved, as has he, the affection of their fellow men.

The Ancient Law

SINCE Miss Glasgow's new novel* is so radically different from those she has already published, some reference to them is necessary in order to prove the contrast. She was recognized several years ago as one of the popular novelists, and few of her discerning critics expected her to become anything better. Until the appear-

*AUTOBIOGRAPHY OF OLIVER OTIS HOWARD. In 2 vols. New York: The Baker & Taylor Co. \$5.00.

*THE ANCIENT LAW. By Ellen Glasgow. New York: Doubleday, Page & Co. \$1.50.

ance of this last book her stories have been marked by the peculiar weaknesses to be observed in plays, fiction and all forms of art produced merely to please the imagination of the populace—a crude, bedlam faculty that should be disciplined, not humored. The scenes were always laid in Virginia, and to lay the scenes of a story in Virginia, if you know *how*, is to give it a sort of romantic diploma at the start with the cavalier seal upon it. Then it was her custom to spend a chapter in hanging family portraits and in discussing the hero's pedigree until the reader was properly humbled (for, mark you, the average reader still likes to be humbled by his author, and to feel that he is receiving confidences about grander folk). Having effaced the reader, she would begin the story. And we all remember what the character of the story was—always a decayed gentility struggling to rise again. Nothing could be more futile. That kind of gentility never rises again except it is lost in the blood of the common people, as the kernel of corn must fall into the earth and die before it shall live again. And that was the tragedy of Miss Glasgow's stories which neither she nor her readers seemed to recognize. She went on writing them with that dramatic sentimentality which appealed so strongly to the invincible ignorance of her Northern readers concerning the South, and no less flatteringly to the equally invincible pride of her Southern admirers. Also her novels were moral. It is a mistake to suppose that a book must be immoral to be among the "best sellers." The distinction is in how morality is used, and Miss Glasgow grasped it as a sort of quirt with which to belabor insolent parvenues. Nothing could be more popular than a quirt in a modern story, no matter by what name you call it. The populace require an element of cruelty in their entertainment, and if it can be given in the name of righteousness, so much the better.

Now, these are some of the reasons for Miss Glasgow's success; also they show why many believed she would never do anything better.

But Ellen Glasgow has ascended. She has omitted the family portraits and most of the pedigrees in her new story

and made ready for a long, wide sweep of the wings. She has not parted company with the populace. She has simply assumed a nobler attitude to it. Her telepathy is no longer with the past or with some small sectional sense of the present, but it is with the Spirit of Time, not of the times. We make too much of the yawping spirit of the times, a little distracted bird of the mortal mind. And this accounts in part for the ephemeral character of modern fiction. She has founded her story upon the ancient law of self-sacrifice, rather than upon some sentimentality of abnegation. Hugo could have written it better, but Miss Glasgow could not.

Daniel Ordway is the hero, and he is the second convict who, after serving his time in prison for forgery, serves his next term in the year's fiction. Mr. Leroy Scott presented the other in his novel "To Him That Hath." Miss Glasgow has a literary style that is grave and glowing, like the fine plain frame of a grand picture. There is a sort of integrity in her choice of words, a freshness and a charm, as if she had cultivated a vocabulary somewhere in the open air and sunshine among the Virginia lilacs. There is suffering, to be sure—that suffering which comes from perfect comprehension of misfortune, but the reader is not harrowed because the man is so sublimely equal to the situation, so intelligently able to forgive his enemies, so logical rather than morbid in working out his sacrifice according to law rather than sentiment. And his liberation at last is worthy of the ideal upon which the story is founded.

A Champion of a New Catholicism

FATHER TYRRELL'S latest book* contains both an impressive defense and a damaging criticism of Catholicism. His apologetic for the Church consists primarily in this, that Catholicism represents the highest and widest religious experience of humanity, and therefore the Catholic feels a sense of massive solidarity with all past ages, which no other

*THROUGH SCYLLA AND CHARYBDIS; OR, THE OLD THEOLOGY AND THE NEW. By George Tyrrell. New York: Longmans, Green & Co. \$1.00.

form of Christianity can furnish. Father Tyrrell powerfully maintains that this vast, collective, social religiousness is the sole foundation on which any Church can prosperously rest. Religions are not made in a study; they are not the result of a convention of critics and philosophers. They are a life, an inner process, an ever-growing totality of spirit-experiences; and the more numerous the experiences, the more vital the religion. Too much individuality in religion is like too much individuality in the State. It cuts us loose from the splendid traditions of the past, and leads to anarchy. Catholicism best embodies these elements of religion, says our author, and therefore "to my mind secession is unthinkable."

This reasoning, brilliantly as Father Tyrrell constructs it, would gain greatly in convincing power, had he adequately treated the very important matter of the extent to which reason and culture shall control this collective experience of the body of believers, so as to exclude extravagance and superstition to which, of course, the religion of the uneducated is always prone.

Father Tyrrell's animadversions upon dogmatic theology are extremely severe. Revelation, he says, conceived in the orthodox sense, means a special and never-to-be-repeated vision of spiritual realities vouchsafed to a little group of chosen men nineteen centuries ago. As an experience, it is incommunicable, for, as an experience, it ceased with the Apostles. We reach that revelation mediately, thru the imperfect vehicle of language, language which was originally prophetic, picturesque, unscientific. Dogmatic theology seized that vision, that prophetic statement, thrust it into metaphysical formulas, and then demanded for these formulas the obedience and unalterable adherence which only the original revelation deserves. Thereby theology binds us to a past system of philosophy, sets up barriers against our growing into a better philosophy, and shifts the ground of faith from a free movement of the spirit to a sterile assent of the intellect. He does not quarrel with theology for formulating revelation, but for placing the formula upon an equality with the thing formulated. Each age should have its own formula-

tion, since each will have its own philosophy and terminology; and with due regard to antiquity, this may be done with no injury to the essence of revelation.

The volume closes with an astonishingly bold essay in support of the position that the hierarchy of the Church derives its authority not miraculously from God, but ministerially from the body of believers. This, of course, turns the Catholic theology of the episcopate and papacy upside down.

The author of this profound book is disowned by his Church. But the day will come when the Church will recognize that it can survive in the modern world only by accepting the Abbé Loisy's view of Scripture, and Father Tyrrell's conception of dogma.

The Car of Destiny. By C. N. and A. M. Williamson. New York: McClure Company. \$1.50.

After Richard Harding Davis and a dozen others have packed their heroes and heroines into automobiles, tooted on the first page to give the reader a chance to get out of the way—after, we say, the poor pedestrian reader has been exasperated for months with these "red devil" romances, here are the Williamsons running us down with another automobile story. This time the magical car takes the mountains and vales of Spain without speed limits, while the lightly poised inmates ogle the young King of Spain at his courtship. In the old days when persons attended upon the love affairs of kings and queens, the ladies came upon "richly caparisoned palfries," the knights rode equally creditable "chargers," and somehow the general effect when we look back upon it is more satisfying to the imagination even unto this day. However, we may as well submit to the motor car in fiction as we have submitted to steam plows in the fields. It may spoil the romance, but it brings life on the printed page up to date life on the highways and in the factories. The author can change his scenes oftener, get his characters from Dan to Bersheba in less time. Then he can kill the hero by flinging him from the machine if it is necessary and with less strain to his literary faculties than if he had to concoct an

ordinary death trap. There have been several fatal accidents recently in motor-ing fiction, and yet not a heroine has been injured. All these are advantages not to be despised, and in the course of time doubtless even the pedestrian reader will become accustomed to the odor of gaso-line and machine oil in the tenderest love affairs.

✧
The Lion's Share. By Octave Thanet. Indianapolis: Bobbs, Merrill & Co. \$1.50.

This ought to be a good story, but it is not. The author has laid her scenes often enough in different parts of the country to give the fatigued reader the necessary change. She draws her characters with a kind of quizzical life likeness. Among these is a witty old lady, a foolishly grasping one, an excellent elderly bachelor and an equally excellent single woman, and a sort of blood-poisoned villian. She begins with a suicide, conducts a kidnaping expedition offensively and defensively, involves money, and even inserts a sort of solemn-trot love affair—all to no purpose. For she never creates the illusion of reality. From start to finish one can almost see her "making it up." The publishers are positive about the book's "absorbing interest, optimism, vigor and humor," but it will depend upon how simple-minded the reader is whether he concurs in this opinion.

✧
With the Border Ruffians. Memories of the Far West, 1852-1868. By R. H. Williams. Edited by E. W. Williams. New York: E. P. Dutton & Co. \$4.

These reminiscences of a border ruf-fian make interesting reading and good material for history. The author, or rather the narrator (for the fireside talks of his old age gave the editor his material), nothing extenuates nor sets down aught in malice. His frank narrative gives ample justification for the appellation which the Free State men bestowed on his troop, and in looking back at the end of his seventy years from his peaceful English home he admits that he fought on the wrong side in the struggle over "Bleeding Kansas," but he wastes no pages on recrimination or regrets. He was destined for the Church by his parents, but his tastes led him to the life of adventure. Landing in Virginia in

1852, he started two years later for Leavenworth with his "three young niggers, Ann, Shad and Pete." Being a slave owner and consequently "sound on the goose question," he was made a lieutenant in Atchison's "Rangers," and took an active part in searching passing steamers for Free Soilers going to Kansas and in the attack on Lawrence. Mount Oread, where the university now stands, was fortified, but Governor Robinson decided to surrender rather than resist, according to our author, because his army, "being the riffraff of the Northern towns, enlisted by the Emigrants' Aid Society," was afraid to fight. Of his experiences as a saloon-keeper, gambler, vigilante, Knight of the Golden Circle, Captain of the Texas Rangers, cattleman and Indian fighter we have no space to speak.

✧ Literary Notes

....A discerning exposition of St. Paul's Hymn of Love in I Corinthians XIII may be found in *One With the Eternal*, by the Rev. Edgar Daplyn, minister of All Souls Free Church, Hampstead. (New York: Longmans, Green & Co. 35 cents net).

....A good textbook for Bible classes on the age of Saul, David and Solomon, is *Israel's Golden Age*, by Rev. J. Dick Fleming, professor in Manitoba College, Winnipeg (imported by Scribner's. 45 cents net). The period is one of the most profitable and important for the study of Hebrew religion and history, and Professor Fleming has treated it in a scholarly manner.

....Any stray pessimist who hugs the notion that the modern world of business and enterprise is wholly given over to materialism should read a little volume called *The Kingdom of Light*. It is a talk to friends by Mr. George R. Peck, general counsel of the Chicago, Milwaukee & St. Paul Railway, and is as captivating and convincing a plea for devotion to the ideal in the midst of common life as one often runs across. The little book is published in good taste by the Messrs. Putnam.

....The Music Students' Library has been augmented by the addition of a volume, *Music Club Programs from All Nations*, by Mr. Arthur Elson. (Oliver Ditson Company, Boston, \$1.25.) As the title implies, it is especially adapted to the needs of amateurs who wish concisely arranged material ready at hand for club programs. The book deals with various national schools of music, and gives brief sketches of composers with vignette portraits. Belonging to the same series is an unpretentious but valuable little volume, *The Commonplaces of Vocal Art*, by Louis Arthur Russell. (Oliver Ditson, Boston, \$1.00.) The distinct

value of this publication lies in its direct appeal to common sense and ordinary intelligence. Stripped of the mystifying "shibboleth" of the average singing master, the treatise well deserves study from either professional or amateur.

....A welcome contribution to the literature of craftsmanship is *Vasari on Technique*, "being the Introduction to the Three Arts of Design, Architecture, Sculpture and Painting, Prefixed to the Lives of the Most Excellent Painters, Sculptors and Architects by Georgio Vasari, Painter and Architect, of Arezzo," now for the first time translated into English by Louisa S. Macle hose and edited with introduction and notes by Prof. G. Baldwin Brown. (New York: E. P. Dutton & Co. \$4.00 net.) Every student of Italian art knows

and relishes Vasari's "Lives," and while these introductory chapters to that familiar work are somewhat dry in comparison with its frank and engaging human narratives, it is surprising that translators hitherto have neglected them, for they aid materially to a realization of the atmosphere in which the old Italian masters worked and constitute a veritable encyclopedia on the materials, tools, and methods of artistic processes in the Renaissance period. The translation is good, and its serviceableness is enhanced by Professor Brown's introductory essay and his copious notes, which are both learned and interesting. A fine frontispiece in color of the rarer kinds of stone mentioned by Vasari and other good illustrations add to the value of the book.

Pebbles

WITH perfect apathy the village resident listened to the city visitor's account of the joys and excitement of life in town. "We get everything here that is worth seeing," said the villager. "Why, last week, we had the champion brass band here, the week before the greatest cornet player in the country, and this

week we are going to have a great production of the drama, 'Lewis the Cross-Eye.' I tell you that is going to be tiptop." "What did you say was the name of the play?" asked the visitor. "Here, have a look for yourself," said the proud villager, as he pulled out a grubby, much-folded program announcing "a grand production of 'Louis XI.'"—*Le Temps*.

THE VIEW OF A CONTEMPORARY.

The Independent

Entered at New York Post Office as Second Class Matter.

Publisher, Clarence W. Bowen.

Owner, The Estate of Henry C. Bowen,
130 Fulton Street, New York.

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, \$2.00 Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, \$1.75 a year extra; to Canada, \$1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with \$1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Another Railroad Investigation

PRESIDENT ROOSEVELT does not propose to let the Interstate Commerce Commission be caught napping if the proposed reduction of wages by the railroads of the country should lead to strikes. He would have it begin immediately to look up the conditions of the companies and be ready to give prompt information as to the facts if, under the law, the Chairman of the Interstate Commerce Commission and the Commissioner of Labor should be required to act as a board of mediation and conciliation. Equally the President proposes that in case of a strike the strikers shall be warned that disturbance of the public peace will not be allowed.

Of course the persistent critics of the President will declare that he gives the country no peace, that he is everlastingly stirring up things and disturbing public confidence in the management of great corporations. We can see no justice in such criticisms of his letter to the Commission. It was written after full conference with Chairman Knapp, of the Commission, and Commissioner Neill, of the Labor Bureau. In it there is not a

word of unfairness. The President does not presume that the railroads ought not to reduce wages; he only wants to know whether such is the fact; and this not to satisfy his own mind, but because the public is vitally concerned in the matter. It is the public that wants to know whether receipts have been so reduced that reduction of wages is justified. If receipts have been reduced the public also wants to know what has caused this falling off of business. One of the railroads which has declared the cut in wages announces that the reason for the loss of income is the enactment of hostile legislation by Congress and the States. If this is true then the President will see that the public and Congress and the State legislatures shall know it. The Interstate Commerce Commission could make an impartial investigation. There is, unfortunately, a somewhat widely spread suspicion that the reduction of wages is not necessary, but that its purpose is nothing less than a reprisal, a stroke back at the President, the Congressmen and the legislators, with a view to compelling the authorities to take their hands off. We do not say this is true; the President does not say it is true, but it is evident that he thinks there may possibly be something in it, and he insists on learning whether the cuts in wages are really necessary. This very investigation made so promptly will serve to prevent any other railroad from reducing wages out of any such motive of pique or revenge.

It is perfectly easy for the enemies of the President and his policies to assert that some hidden political motive lies behind this letter, that it is meant to help some Presidential candidate, to threaten somebody, or once more to endanger public confidence and prolong the panic. But the purpose is plain on the face of it. There is real danger threatened; for some railroad companies have reduced wages, and others have announced their intention to do so; and, on the other hand, the railroad labor unions are already planning resistance. It is, therefore, no more than common prudence that inspires and requires this act. If there should be a general railroad strike, that would make financial conditions

much worse than they are now, would do vastly more evil than any anxiety caused by this letter could create, and would long delay industrial recovery and prosperity. It is the wise man who foresees the evil and provides against it; and this is what the President has done.

The Philippines Not for Sale

PERHAPS the stupidest, most ignorant and most malicious of all the rumors, reports and lies invented at home or abroad to account for the despatch of our battle-ships to the Pacific is one just launched from Paris on the asserted authority of distinguished, but unnamed diplomats. It asserts that an agreement has been made between our own Government and that of Germany for the sale of the Philippine Islands to Germany, for a price that will pay all our expenditures there, and that the fleet is sent to Manila to meet and overawe any indignant demonstrations that might be made by Japan. That is the substance of the story, shorn of all its embellishments and plausible details, stript down to its naked nonsense. Are the hangers-on of foreign kitchen cabinets, or even of clubdom, so utterly, so inventively ignorant of American methods and affairs?

Can it be imagined that so momentous a secret could have been kept so closely all these months? If that were possible in the German Foreign Office would it be possible in Washington, where the President and Secretary Root well knew that they must consult with leaders of the Senate before they can hope to have any treaty ratified? To keep such a secret would have been impossible.

But this is not the chief absurdity of the story. It entirely misapprehends the feeling of the American people, their purpose and their policy as to the Philippine Islands. The story declares that the Islands have been only an expense to the United States, and that the people are utterly tired of caring for them, and that, when the time comes to spring the treaty on the Senate, a rousing message from President Roosevelt will carry the country and the Senate, and over the Islands will go to Germany.

This would be a pretty reversal of American policy. We have bought ter-

ritory from France, from Russia, from Spain, but have never sold. But it is not sentiment or precedent that stands in the way of such a sale; it is the moral sense of the nation, for ours is a nation controlled by a sense of what is right and wrong.

It may or may not have been a great blunder, an excess of indignation at wrong and of brotherly helpfulness to a suffering neighbor people, but it was a creditable sympathy for the weak that induced us to free Cuba, at the cost of war, from Spain. The blowing up of the "Maine" hastened the war, but was not the occasion for it. The war gave us the Philippines. We could not help taking them. We had captured Manila, had found the people begging us to free them from Spanish oppression, and we could not withdraw. It was generous of us—quite beyond the ordinary customs of war—that we paid Spain for the Islands which we held at our mercy, ready to grasp them. From that moment we had a duty to the Islands which we could not escape. That duty our people desire and are determined to fulfil. We will give them peace and liberty. We are doing an absolutely new thing in colonial history. The Islands are to be taught the doctrine of freedom, taught by the experience of its blessings and its perils. We give them freedom to choose their rulers and administer their affairs farther than any other nation on the face of the earth believes to be safe or wise. We give the people the public school; we build railroads, we develop commerce and safe industry. We transfer to the people the control of their own affairs just as fast as we can, and we ever tell them—Mr. Taft tells them—that if, after a period of tutelage in liberty, they desire to become absolutely independent of us that desire may be granted. This is our policy, our purpose, our great and chief object in holding the Philippines, that we may develop a self-governing people, trained in the lesson of liberty. And this we do consciously, for a people of another race not Anglo-Saxons, not Caucasians, but for a race untaught in the traditions of freedom.

Now can it be supposed that the people of the United States are going to weary so soon of this task and give up the most

glorious experiment of modern times? The American people could not be persuaded to listen to such a proposition as has been cabled to us from Paris. Democrats and Republicans alike, the Senate and the House, men of all politics and all religions, would almost unanimously protest. What would Germany have to offer us? Nothing but money; and we have more money to spend than has Germany. What could she offer to do for the Philippines that would excuse us for giving up the task given us there? Germany's war in her West African colony is the answer. Germany rules with her iron fist. It would be no policy of hers to teach the Filipino people to choose their own rulers and make their own laws. For us to throw down our task would be so cowardly, so pusillanimous, that no statesman could think of proposing it; no President could dare to suggest it.

But the gossipers of courts do not understand a purpose so high as ours, and they think of our people as selfishly given to money-getting, and glad to get rid of a burden. What do they know of the conscious mission of America for the world?

Grieving

PROBABLY nothing is sadder in life than the thought of all the hours that are spent in grieving over what is past and irretrievable. Sorrow is a quality of human nature which none of us would want to leave out of our make-up and which, indeed, to a great extent distinguishes us from the animal. The old scholastic philosophers were wont to define man as a laughing animal, and used to emphasize the fact that this was a complete definition because it stated a differential quality that was exclusive to the race. It would be quite as appropriate to say that man is a grieving animal, for while the lower animals cry and give manifestations of pain their supposed grieving, tho made much of in certain nature studies, is much more imaginary than real. It is only man that allows his sorrow so to overcome him that he spends hours calling up the pictures of past happiness which cannot be brought back. He knows this very well; yet, in-

stead of devoting himself to things that might make others happy if he cannot be happy himself, he nurses his grief and finds almost happiness in being sad. "Grief fills up the room of the absent" so that they seem to have reason to be fond of it for its own sake.

In recent years when the question of psycho-therapeutics and of the influence of suggestion in ameliorating many ailments has been brought much more prominently before the public mind, this question of doing something for grief when it exists to a certain degree, has been one of the prominent features in medical discussions. The question may still be asked, "Canst thou minister to a mind diseased," and the presumption may be that most of the forms of mental trouble are incurable; but many of them are undoubtedly merely functional in character, that is, not due to any organic lesion and consequently quite amenable to treatment of various kinds. The most important element in this treatment has long been recognized to be the good will of the patient's own self. Without this very little that is permanent can be accomplished. With the firm persuasion that there is a physical basis for many forms of melancholic feelings and that this can be wisely removed, the firm persuasion that all will yet be well makes the outlook for such patients ever so much better at once and usually leads eventually to their complete cure.

It is a difficult matter to determine just what is excessive grief. If a mother loses an only son, who has been the pride of her heart, or an only daughter, whom she has idolized and to whom she has looked confidently as the companion of declining years, it is easy to understand that her grief will be very deep. For weeks she will take no interest in the ordinary things of life and for months she may not smile. Such a condition is not morbid for many people, but is only a proper expression of the depth of affection in their hearts and the wrench to their being which has been occasioned by the hand of death. If, however, after several months have past such a mother still continues to cherish her grief, still continues to refuse to take an interest in the things about her, and obstinately persists in solitude and finds her only consolation in

tears, then there is something morbid either mental or physical in the case. Normal people allow time to console them to some extent at least; and tho it is sad to think that the passage of time should be the best source of consolation, still other motives like the realization of the loss that others have suffered like her own and the suffering round about her in the world that she may console, proves sufficient to rouse her and gives her new courage once more to face the trials that may come to herself in life.

When a woman cannot rouse herself in this way from her grief there is need of the care of a physician. We often hear of people dying of grief. Most of the people who grieve much are rather well on in years, that is to say, if fifty or above can be brought under that designation in this age of enduring youngsters. Often at this age some serious but insidious disease is already sapping the constitution. At times it is a latent tuberculosis. More often it is an insidious kidney disease. Not infrequently as our modern statistics show so closely it is an unrecognized heart affection or a developing degeneration of arteries. All of these affections make it extremely difficult to react after any serious ailment or even disturbance of mind. When the reaction fails then to come as it normally should there is need carefully to look for each and every one of these affections. Most of them are likely to be fatal before many years anyhow, but at least a prolongation of life for several years, and sometimes up to the natural term of existence, can be brought about by proper attention to such cases, and not considering them merely as manifestations of over-poignant grief.

The old idea of heart-break was a very consoling thought when the deaths of those who were near and dear followed one another closely. Many a young wife and young husband, however, have died from a decline consequent upon the contagion acquired from a dead spouse, when the decline was thought to be the result of grief rather than of the transmission of the bacillus tuberculosis. This may seem a very crude and heartless way to look at such a subject, but it is eminently practical and above all has

the merit of being satisfactorily therapeutic. Nothing is more calculated to arouse people from the poignancy of their grief than the realization of a necessity to care for their health. It may seem to indicate a pessimistic lack of confidence in human nature to say that a selfish motive like this is the most powerful, but one thing is confessedly true that it is the most general in its application. Those who grieve over much then must be awakened to a saving sense of the probability that they are suffering either from some physical ailment which is a very common thing, or else from some mental condition that needs quite as much the care of a physician.

Grief, like worry and poverty, we shall probably always have with us. There is no doubt, tho, that like its two companions much can be done to mitigate it by physical means. On the other hand it must not be forgotten that nothing is more prominent in the medical world at the present time than the recognition of the fact that spiritual and mental means of healing are eminently important tho they were very seriously neglected during the nineteenth century. Professor Oppenheim, one of the most distinguished authorities in nervous diseases in Germany, declared not long since that for his melancholic patients the best feature of the prognosis was a confidence in the Almighty and in an over-ruling providence, and the most important portion of the treatment of such cases was an appeal to the spiritual side of their natures, and a definite recommendation of prayer as one means of securing that composure of mind which means so much and without which all our physical remedies are prone to fail in these cases. We are not living in the best of worlds but we are living in one the events of which even to the smallest all have a meaning and a place in a Divine plan usually not recognized till long after, but none the less constantly present for all that. This is the thought that makes of grief in excess a contradiction in the universe, an attempt on the part of a drop in the sea to prevent the tidal progress of the ocean of life of which it is so small a part, yet every atom of which is meant to serve a wise purpose in all its events.

The Arbitration Treaties

THE arbitration treaties, which were the cause of a conflict between the President and the Senate three years ago, have been modified by negotiations with the several Powers to obviate the objections raised by that body, and will all probably now pass without difficulty. One of them, that with France, has already been ratified by the Senate. When they were presented for ratification three years ago some of the Senators feared that they would open the way for suits to be brought by foreign nations against the several States; others had constitutional scruples against a general arbitration treaty; all were reluctant to relinquish any of their control over the acts of the executive. The Committee on Foreign Relations, altho it had approved with only two opposing votes the text of the treaties before they were signed, reported unanimously in favor of amending them by substituting the word "treaty" in place of "agreement" in the sentence providing that the conditions of arbitration shall be made the subject of a special agreement in each case, and thus amended they were ratified by a vote of 50 to 9. According to this, the preliminary arrangements defining the matter in dispute and the scope of the powers of the arbitrators, being regarded as a "treaty," would have to be approved in advance in each case by a two-thirds vote of the Senate. President Roosevelt somewhat too hastily declared that the amended treaties were a step backward rather than forward in the cause of general arbitration and "a specific pronouncement against the whole principle," and he refused to reopen negotiations with the nine Powers to see if they would consent to the modification.

The arbitration treaties in their new form, as given in our "Survey of the World" this week, are in the nature of a compromise. The word "agreement" is retained, but such special agreements are to be made by and with the advice and consent of the Senate, tho apparently the two-thirds majority will not be required.

The new treaties are very far from what we ought to have and are even inferior to those that now bind together

almost all the other civilized nations of the world. Altho general and compulsory in wording, they really leave it quite optional with the President and the Senate whether any particular question shall be a subject of arbitration or an occasion of war. Instead of being automatic and invariable in their action, they depend on the state of public temper at the moment. They only apply to "differences of a legal nature or relating to the interpretation of treaties" where these questions "do not affect the vital interest, the independence or the honor of the two contracting states and do not concern the interests of third parties." There are comparatively few misunderstandings of sufficient importance to be liable to lead to war that could not be regarded as coming under one or even all of the excepted categories.

The countries with which these new treaties have been negotiated are France, Great Britain, Germany, Italy, Spain, Portugal and Switzerland. Austria-Hungary, Sweden, Norway and Mexico will also, it is said, be included, but we see no mention of Japan, altho a treaty with Japan was among those negotiated three years ago, and it is especially important that it be included now.

Notwithstanding the inadequacies of these treaties, we are far from regarding them as a step backward. They involve another and still more definite recognition of The Hague tribunal and of the principle of arbitration in general. They create a presumption in favor of legal procedure in place of a resort to arms, and throw the burden of proof upon the country that wishes to disregard it.

But the chief advantage of all such measures is that they enforce deliberation and so gives time for the sober second thought to bear upon the cause of quarrel. Hot temper speaks quick and loud. Cool counsel often comes too late. "When angry count a hundred" is a good rule for nations as for individuals, and it takes a long time for 80,000,000 of people to count a hundred. Here is a case where the law's delay may be advantageous. The peace movement in this country is now so strong and well organized that it may exert a decisive influence in a crisis if it has time to make itself felt.

Our Readiness for War

It may have been only coincidence, or it may have been by previous understanding, that both Secretary Taft and General Grant celebrated Washington's Birthday by telling the American people that they are in no fit condition to go to war. Secretary Taft spoke at Buffalo and General Grant in this city. The Secretary reminded the Ellicott Club that at the close of the Civil War we had an army of 1,000,000 men that were as good as ever carried a gun, and the General told the Society of the Cincinnati that we ought to have an army of at least 1,000,000 well drilled soldiers now.

THE INDEPENDENT believes that the movement for international arbitration is full of promise, and that every year the peace sentiment is gathering strength and volume thruout the world. But we are not so blind as to suppose that the provocations of war have disappeared, or that the passion for bloodshed has died out in the human race. No nation, however peaceful its skies at the present moment, can rest assured that it may not again be invaded or, by reason of some other adequate cause, be forced to fight for its existence. When, therefore, two men as sober-minded as Secretary Taft and General Grant, speaking under a sense of responsibility, tell us that we are drifting along nonchalantly when we ought to be drilling and equipping soldiers, we must ask whether there is sufficient occasion for their warning.

Both men spoke in general terms. War would find us unready, was the substance of Secretary Taft's argument. We should need at least a million well-drilled men to repel the army that Japan could land on our Pacific Coast if our navy should be defeated, was General Grant's proposition. The American people are intensely practical in certain ways, the Secretary said, "and in other ways they are as dreamy and irresponsible as if born under the tropic sun." They forget that it took three years of stupendous effort to create the army of the Civil War, and that there is no reason to suppose that in a shorter time we could create a similar army to repel foreign invasion.

Now the pertinency of all this obvious-

ly turns upon the probability of invasion. If there were no reasonable doubt that before 1910 Fighting Bob's fleet would be in Davy Jones's locker, and that even 50,000 Japanese soldiers would be conducting field operations somewhere this side of the Golden Gate, the American people would not waste time in getting together an army of one million, or of two or three million men for that matter, to "poke the heathen out." But nations, like individuals and insurance companies, in the absence of scientifically certain forecast, must base their policies upon the mathematics of chance, and the permutations and combinations of adverse luck that would have to be completed before the military forces of Japan, or of any other foreign Power, could find lodgment "in our midst," is considerable.

It is not probable, to begin with, that Japan will mobilize an army for service in the United States in the present state of the money market. Japan strained her financial resources in the war with Russia, and those gilt-edged gold bonds that she floated in the United States and elsewhere are not the highest-priced securities that one can invest in today. To raise another enormous war loan, in the understanding that it was for the purpose of fighting the United States, would be, on the whole, a more strenuous undertaking than the siege of Port Arthur. And if Japan should undertake to finance such an enterprise by internal taxation she would have more than a foreign war to take care of.

In the second place, our battleship fleet in the Pacific will probably not be sunk as easily as Dewey and Sampson despatched the fleets of Spain. Our navy doubtless has some of the serious defects that lately have been alleged, but it is reasonably safe to say that Japan is not the power which could put it out of business.

Supposing, however, for the sake of argument, that a typhoon or other form of natural wrath should destroy our vessels as completely as a certain famous tempest destroyed the Spanish Armada, it would still not necessarily follow that Japan could land her troops upon our continental territory. There is plenty of evidence that the United States is not the

only power which is prepared to resist anything like a general movement of the Oriental peoples to command by force an outlet in western lands for their multiplying millions. Germany is building more battleships than the United States, and Great Britain, with the largest navy in the world, is preparing to make it larger. Those alarmists are probably mistaken who believe that the western nations are making these gigantic preparations for naval struggle in the expectation of fighting one another. Back of them lies the growing conviction that it is prudent to be ready to defend "white civilization" in general against possible encroachment when China, Japan and India shall think the time ripe for concerted action. Until that time comes no one of the Oriental powers will hastily declare war against any western nation.

We share Secretary Taft's opinion that Washington was wise and far-seeing when he counseled the American people to be at all times ready for defensive war. We believe in maintaining an adequate navy and a well organized, well drilled nucleus of an army. But we are not prepared to agree with General Grant that we ought at present to maintain a standing army of a million men. We do not think it necessary even to require two or three years of military drill from every citizen, after the manner of Germany and France. It is another thing to establish a system of general militia training, like that which was kept up with popular approval in the early years of the nineteenth century, and substantially like that which is maintained in Switzerland. That might be a good thing in certain ways. It would not only be a preparation for defensive war, but it also might teach a certain loose-minded and loose-jointed type of the American citizen how "to keep his rifle and himself just so."

Southern Pacific Rebating

INTERSTATE COMMERCE COMMISSIONER LANE went to California, in October last, and for three days heard testimony about rebates on the Southern Pacific road. He had read the assertion of President Harriman that on all the roads with which he was connected rebating ceased

before the enactment of the Hepburn Rate law. This statute became effective in August, 1906. Incidentally it may be pointed out that rebate discrimination was forbidden by statute during many years before that date. Commissioner Lane, as we have said, was familiar with this assertion about the just and lawful methods of the several railroad companies in which Mr. Harriman exerts a dominating influence. But he also heard that rebating was a common practice on the lines of the Southern Pacific Company (of which Mr. Harriman is president), and he proceeded to take the testimony of the company's officers and other persons.

He thus ascertained that the Southern Pacific for a long time had paid, and even then was paying, unlawful rebates to more than one hundred favored shippers in California. Proof of this was found in the company's books and in the statements of its officers. There were indications that certain corporations and persons had enjoyed rebates or preferential secret rates for many years, but the records prior to April, 1906, could not be examined because they had been destroyed in the great San Francisco fire of that month. The Commission published a report about Mr. Lane's discoveries. While a majority of the rebates had been paid upon traffic within the State, there were some which related to interstate business. Among the findings of the Commission was this:

"That the voucher books containing the so-called refunds on State shipments also contained records of refunds given upon interstate shipments."

It was evident that in some cases the large rebates on intrastate traffic were in effect allowances upon the interstate shipments of the same shippers. But it is unnecessary now to consider all the details of the report. We direct attention to the evidence that an "extensive system of secret preferential rates," as the Commission said, had long been in use, under the direction of officers of the Southern Pacific, and that it was then in use, more than a year after the Hepburn Rate law went into effect.

Some may have expected that after this exposure of the company's unjust and unlawful practices, its officers would
